

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

Six Laboratories are open to Students for practical work. Students can reside in the College. A Course of Ten Lectures for Teachers on Elementary Physical Measurements, followed by a class for practical work, will be given by Miss EDITH AITKEN on Saturday mornings at 10 a.m. beginning on January 21st.

Further information on application to the PRINCIPAL.

F. MABEL ROBINSON, *Secretary.*

BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department—Miss HANNAH ROBERTSON, B.A.

The Session for 1899 opens on Thursday, January 19th. The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in September.

MABEL ROBINSON, *Secretary.*

HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

TRAINING COLLEGE FOR SECONDARY TEACHERS, with School for Girls and Kindergarten.

HIGHBURY HILL HOUSE, LONDON, N.

Principal—The Rev. DAVID J. THOMAS, M.A.

Vice-Principal—Miss FENSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers' Diploma of the College of Preceptors.

A Cambridge Higher Local Class for intending Teachers.

ST. GEORGE'S TRAINING COLLEGE, FOR WOMEN TEACHERS.

—This College provides a complete course of training for well-educated women who intend to become Teachers. The Course includes attendance at Professor Laurie's Lectures on Education at the University of Edinburgh, and practice in Class-Teaching in several schools. Several Bursaries of £30 are offered annually. The College year begins in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

THE

FROEBEL EDUCATIONAL INSTITUTE,

TALGARH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Mr. W. MATHER.

Treasurer—Mr. C. G. MONTEFIORE.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

Principal—Madame MICHAELIS.

KINDERGARTEN AND SCHOOL.

Headmistress—Miss M. BOYS SMITH.

Further particulars may be obtained on application to the PRINCIPAL.

FROEBEL SOCIETY'S CLASSES.

THE FROEBEL SOCIETY propose to hold four COURSES of CLASSES on Friday

Evenings and Saturday Mornings at St. Martin's Schools, Charing Cross, beginning on January 15th and 14th. The subjects taken will be:—(1) CHILD NATURE, illustrated by the principles and methods of Froebel and Pestalozzi; (2) ZOOLOGY; (3) CLAY MODEL-LING, and its Educational Value; and (4) BLACK-BOARD DRAWING. Fees: 15s. for each subject (12 Lectures) taken separately; 25s. for any two subjects; 35s. for any three subjects; or 3 guineas for the four subjects.

As the above Classes will not be held unless a sufficient number join, it will be necessary for intending students to send in their names to the SECRETARY of the Froebel Society, 4 Bloomsbury Square, W.C., not later than Thursday, January 5th, stating clearly which courses they wish to take.

MR. H. A. NESBITT (joint-author of "The Science and Art of Arithmetic," by A. SOMMERSTEIN and H. A. NESBITT, M.A.) has a few hours at his disposal for Lessons in Ladies' Schools in Mathematics, History, and Literature. Mr. Nesbitt also gives Lectures on the Teaching of Arithmetic.—16 South Hill Park Gardens, Hampstead, N.W.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant-Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfer are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.

Incorporated Association of Headmasters.

College of Preceptors.

Teachers' Guild.

Welsh County Schools' Association.

Private Schools' Association.

Association of Headmasters of Preparatory Schools.

Association of Headmasters of Roman Catholic Schools.

Assistant-Masters' Association.

Association of Technical Institutions.

Oxford Appointments Committee.

Cambridge University Scholastic Agency.

The rates of commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

KELLAND TRAINING COLLEGE FOR TEACHERS, HIGH SCHOOL, AND KINDERGARTEN, THE FOSSE, LEICESTER.

Principal: Miss MORGAN, N.F.U.

Head English Mistress: Miss J. MORGAN, B.A. (Lond.).

Head Kindergarten Mistress: Miss JOHNSON, N.F.U.

(Assisted by a staff of Trained and Certificated Teachers.)

Boarders have every comfort. Maternal care. Preparation for usual Examinations. Foreign pupils received.

The College is a handsome new structure standing in its own grounds, which include tennis courts, sand, and other playgrounds, garden, &c.

Prospectus, with particulars of Entrance Scholarships, on application.

Spring Term commences about Jan. 24th.

Resident GOVERNESS-STUDENT required.

BIRKBECK INSTITUTION, BREMBS BUILDINGS, CHANCERY LANE, E.C.

Principal—G. ARMITAGE-SMITH, M.A.

DAY AND EVENING CLASSES.

TERM COMMENCES 4TH JANUARY, 1899.

Winter Meeting for Teachers

(JANUARY, 1899)

CONDUCTED BY THE

COLLEGE OF PRECEPTORS,
BLOOMSBURY SQUARE, LONDON, W.C.

THE success of the last Winter Meeting has encouraged the Council to make arrangements for another similar Meeting to take place at the College of Preceptors in the first fortnight in January, 1899.

The Meeting will extend over two weeks, and the Programme will comprise an Inaugural Address by Sir Joshua Fitch, Lectures on educational subjects, Visits to educational institutions, a Conference on the Training of Modern Language Teachers, a Conference on Science Teaching, and a Conversazione at the Clothworkers' Hall.

The Lectures will deal with the Training of Teachers; the Practice of Education (including Discipline and Formation of Character, and the Teaching of History, of Geography, of Shorthand, and of the "Life Sciences"); Psychology applied to Education; Physiology applied to Education; School Hygiene; the Training of the Speaking Voice; the Corporate Life of School; Leisure-hour Pursuits of Children; the Use and Abuse of Athletics; and Greek Ideals of Education.

The Fee is 20s. for the whole Meeting, or 10s. for either week.

Tickets (not transferable) will also be issued at HALF FEES (i.e., ten shillings for the Tickets may be obtained from the Secretary of the College of Preceptors, whole Meeting, and five shillings for each week) to members of the following Teachers' Societies:—The Teachers' Guild (Central Guild and Branches), The Birmingham Teachers' Association, The Liverpool Teachers' Guild, The Training College Association, The Private Schools' Association, The Assistant-Masters' Association, The Association of Assistant-Mistresses, The Froebel Society.

Tickets at half fees (ten shillings and five shillings) will also be issued to candidates at the Diploma Examination of the College of Preceptors (January 3-7).

Members of the College of Preceptors will receive a ticket (not transferable) without charge, on applying for it to the Secretary of the College.

Tickets, price one shilling, for any single Lecture may also be had at the College on the day of the Lecture, if the available seats are not already occupied.

LIST OF LECTURES.

Inaugural Address. By SIR JOSHUA FITCH, M.A., LL.D.

The Training of Teachers. By PROFESSOR REIN, of Jena.

The Corporate Life of School. Two Lectures. By J. J. FINDLAY, Esq., M.A., Ph.D., Headmaster of the Carlisle Intermediate School for Boys.

Leisure Hour Pursuits of Children. By F. ANDREWS, Esq., B.A., Headmaster of the Friends' School, Ackworth.

The Practice of Education. Three Lectures. By P. A. BARNETT, Esq., M.A., H.M. Assistant Inspector of Training Colls.

The Study of Psychology in relation to Education. By PROFESSOR LLOYD MORGAN, F.R.S., Principal of the Bristol University College.

The Teaching of Geography. Three Lectures. By H. J. MACKINDER, Esq., M.A., Reader in Geography in the University of Oxford, Principal of Reading College.

The Teaching of History. Three Lectures (with Demonstrations). By H. L. WITHERS, Esq., M.A., Principal of the Borough Road Training College, Isleworth.

Methods of teaching the "Life Sciences." Two Lectures. By PROFESSOR WOODS HUTCHINSON, M.A., M.D., University of Buffalo, U.S.A. (To be followed by a Discussion.)

A Lesson in Shorthand. By SIR EDWARD CLARKE, Q.C., M.P. (To be followed by a Discussion.)

Physiology applied to Education. Three Lectures, dealing with defects of the Eye, the Ear, and the Vocal Organs. By W. S. COLMAN, Esq., M.D., F.R.C.P., Assistant-Physician to the Hospital for Sick Children, Great Ormond Street, W.C.

The Essential Conditions of Healthy Life in Schools. By A. NEWSHOLME, Esq., M.D., Medical Officer of Health for Brighton.

The Use and Abuse of Athletics. By the Rev. Canon the Hon. E. LYTTELTON, Headmaster of Hailybury College.

The Training of the Speaking Voice, with special regard to Teachers. By MRS. EMIL BEHNKE.

The Greek Ideals of Education. By ARTHUR SIDGWICK, Esq., M.A., Reader in Greek in the University of Oxford.

Schulreform in Deutschland (in German). By PROFESSOR REIN.

All the Lectures announced above will be delivered at the College of Preceptors.

A Conference on the Training of Modern Language Teachers

(in conjunction with the Modern Language Association) will be held at the College of Preceptors, on Thursday, January 5, at 8 p.m. The Chair will be taken by M. E. SADLER, Esq., M.A.

Conference on Science Teaching in connexion with the Technical Education Board of the London County Council.

(UNDER THE DIRECTION OF C. W. KIMMINS, Esq., M.A., D.Sc.)

Following up the series of Lectures on Science Teaching delivered by Dr. Kimmins at the last Winter Meeting, an opportunity will be afforded for a thorough discussion of the whole subject, in a Conference, extending over two days, to be held at the South-West London Polytechnic, Manresa Road, Chelsea (Sloane Square Station). In connexion with the Conference there will be an Exhibition of Apparatus used in schools for Practical Science Teaching.

Visits to Educational Institutions, &c.

Visits (to take place during the afternoons) will be made to University College (Physical and Engineering Laboratories, &c.); the Technical Institute, Leonard Street, E.C.; the British Museum Library; the Regent Street Polytechnic Workshops (Engineering and Woodwork); the Hampstead Gymnasium; Pitman's Metropolitan School; the North London Collegiate School for Girls; St. Paul's School; and to some London Antiquities.

THE WORSHIPFUL COMPANY OF CLOTHWORKERS

will receive the members of the Winter Meeting at a

CONVERSAZIONE

At the Clothworkers' Hall, Mincing Lane, E.C., on Wednesday, January 11, at 8 p.m.

C. R. HODGSON, B.A., Secretary.

UNIVERSITY EXAMINATION POSTAL INSTITUTION.

PENDLEBURY'S NEW ARITHMETICS.

Ready in January. Small crown 8vo. 192 pp. 1s.
Or with Answers, 1s. 6d.

A

Shilling Arithmetic.

BY

CHARLES PENDLEBURY, M.A., F.R.A.S.,
Senior Mathematical Master of St. Paul's School,

AND

W. S. BEARD, F.R.G.S.,

Headmaster of the Modern School, Fareham.

THIS book is intended for the lower and middle forms of Secondary Schools. It will be found adapted especially for the use of candidates for the Oxford and Cambridge Junior Local Examinations, the Scotch Universities' Locals, County Council Scholarships, and for Examinations conducted by the College of Preceptors, the Board of Intermediate Education for Ireland, &c., &c.

Throughout the book fully worked-out examples have been inserted to illustrate the theory explained in the text, and to serve as models for the pupil. The examples for exercise are numerous and are carefully graduated. The sets of miscellaneous examples are mostly taken from examination papers set at the Examinations referred to above. Questions involving unnecessarily long and tedious calculations have been excluded from the book, as unsuitable for the Junior Students for whom the book is intended.

By the same Authors.

Commercial Arithmetic.

SECOND EDITION. Crown 8vo. 250 pages. 2s. 6d.

REDUCTION IN PRICE.

Crown 8vo, cloth, 1s.

Compiled with Special Reference to the Society of Arts Examination.

Bookkeeping BY DOUBLE ENTRY,

Theoretical and Practical; including a Society of Arts Examination Paper fully worked out.

BY

J. T. MEDHURST, A.K.C., F.S.S.,

Fellow of the Society of Accountants and Auditors (Incorporated),
Lecturer in Bookkeeping at the City of London College
and the Northern Polytechnic Institute.
Author of Examination Papers in Bookkeeping.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

WILLIAMS AND NORSGATE'S LIST.

THE FRENCH LANGUAGE.

DELBOS.—THE STUDENT'S GRADUATED FRENCH READER, for the use of Public Schools. I. First Year:—Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., late of King's College, London. Eleventh Edition. 186 pp., crown 8vo, cloth, 2s.

DELBOS.—THE STUDENT'S GRADUATED FRENCH READER, for the use of Public Schools. II. Second Year:—Historical Pieces and Tales. Edited, with Notes, by LÉON DELBOS, M.A., late of King's College, London. Sixth Edition. 180 pp., crown 8vo, cloth 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.

"The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times*.

DELBOS.—LITTLE EUGÈNE'S FRENCH READER. For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Second Edition. Crown 8vo, cloth 1s. 6d.

VICTOR HUGO.—LES MISÉRABLES. Les Principaux Épisodes. Edited, with Life and Notes, by J. BOÏELLE, Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s. 6d.

"A worthy addition to our stock of French reading books, which will be welcomed by numberless masters. . . . M. Boïelle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education*.

VICTOR HUGO.—NOTRE DAME DE PARIS. Adapted for the use of Schools and Colleges. By J. BOÏELLE, B.A., Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s.

"Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school book."—*Scotsman*.

FLEURY'S HISTOIRE DE FRANCE, racontée à la Jeunesse. Edited for the use of English Pupils, with Grammatical Notes, by AUGUSTE BELJAME. Second Edition. 12mo, cloth, 3s. 6d.

GRAMMARS AND EXERCISES.

FOR PUBLIC SCHOOLS WHERE LATIN IS TAUGHT.

EUGÈNE'S THE STUDENT'S COMPARATIVE GRAMMAR OF THE FRENCH LANGUAGE, with an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises by G. EUGÈNE FASNACHT, late French Master, Westminster School. Nineteenth Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum*.

EUGÈNE'S FRENCH METHOD. Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. Sixteenth Edition. Crown 8vo, cloth, 1s. 6d.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

EUGÈNE'S COMPARATIVE FRENCH-ENGLISH STUDIES, GRAMMATICAL AND IDIOMATIC. Being an entirely Re-written Edition of the "French Exercises for Middle and Upper Forms." Fifteenth Edition. Cloth, 2s. 6d.

BOÏELLE (James).—FRENCH COMPOSITION THROUGH LORD MACAULAY'S ENGLISH. Edited, with Notes, Hints, and Introduction, by JAMES BOÏELLE, B.A. Univ. Gall., Senior French Master, Dulwich College, &c., &c. Crown 8vo, cloth.

Vol. I. *Frederick the Great*. 3s.

Vol. II. *Warron Hastings*. 3s. 6d.

Vol. III. *Lord Olive*. 3s.

"This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review*.

DELBOS (Prof. Léon).—THE STUDENT'S FRENCH COMPOSITION, on an entirely New Plan. With Introduction and Notes. (In use at Harrow, Eton, &c.) Crown 8vo, cloth, 3s. 6d.

DELBOS (Prof. Léon).—NAUTICAL TERMS IN ENGLISH AND FRENCH. With Notes and Tables. By LÉON DELBOS, of H.M.S. Britannia, Dartmouth. Third Improved and Enlarged Edition. Crown 8vo, cloth, 6s. net.

ROGET (F. F.).—AN INTRODUCTION TO OLD FRENCH. By F. F. ROGET, of Geneva University, late Tutor for Comparative Philology, Edinburgh. History, Grammar, Chrestomathy, and Glossary. Second Edition, with Map of French Dialects. Crown 8vo, cloth, 6s.

ROGET (F. F.).—FIRST STEPS IN FRENCH HISTORY, LITERATURE, AND PHILOLOGY. For Candidates for the Scottish Leaving-Certificate Examinations, the various Universities' Local Examinations, and the Army Examinations. Crown 8vo, cloth, 5s.

THE GERMAN LANGUAGE.

WEISSE'S COMPLETE PRACTICAL GRAMMAR OF THE GERMAN LANGUAGE. With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Rewritten. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German Grammar yet published in England."—*Journal of Education*.

WEISSE'S SHORT GUIDE TO GERMAN IDIOMS. Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.

MÖLLER (A.).—A GERMAN READING BOOK. A Companion to Schlutter's "German Class Book." New Edition. Corrected to the Official German Spelling. With a complete Vocabulary. 12mo, cloth, 2s.

HEIN'S GERMAN EXAMINATION PAPERS. Comprising a Complete Set of German Papers set at the Local Examinations in the four Universities of Scotland. By G. HEIN, Aberdeen Grammar School. Crown 8vo, cloth, 2s. 6d.

A SHORT SKETCH OF GERMAN LITERATURE. Prepared for the Scottish Leaving-Certificate Examinations. By VIVIAN PHILLIPPS, B.A., Fettes College. Thoroughly Revised. Second Edition. Pott, 8vo, price 1s.

ULRICH'S GERMAN SERIES.

REVISED BY JOHN GIBSON, M.A.

Part II. SYNTAX. Crown 8vo, cloth, 1s.

Part III. COMPOSITION. Containing Thirty-Two Pieces from the best English Authors, and their Translation into German. Crown 8vo, cloth, 1s.

ULRICH'S GERMAN CLASSICS:—

Schiller's *Wilhelm Tell*.

" *Jungfrau von Orleans*.

" *Wallenstein's Tod*.

" *Heffe als Onkel*.

Sewed, 9d. net; cloth, 1s. net.

Goethe's *Faust*.

" *Götz von Berlichingen*.

Lessing's *Nathan der Weise*.

Cloth, 1s. 6d. net.

ULRICH'S GERMAN PROSE, with Notes on Syntax and Translation, followed by a Complete Vocabulary. By ANTON J. ULRICH, Master of Modern Languages at the King's School, Warwick. Revised by JOHN GIBSON, M.A. Crown 8vo, cloth, 2s. 6d.

"A cheap and useful little volume."—*Journal of Education*.

"This is a distinctly good composition book."—*Guardian*.

"The selections for translation are admirable in every way."—*Educational Review*.

NOTE.—Mr. Ulrich's School Books obtained a Silver Medal at the Antwerp Exhibition.

ARMY SERIES.

EDITED BY J. T. W. PEROWNE, M.A.

LE COUP DE PISTOLET, &c. By PROSPER MÉRIMÉ. 2s. 6d.

"The first two volumes are an excellent choice, and we advise any one, whether candidate or lay, to purchase the volume of Mérimé."—*Journal of Education*.

VAILLANTE. By JACQUES VINCENT. 2s. 6d.

"The books are well got up, and in 'Villante' an excellent choice has been made."—*Guardian*.

AUF VERLORNEM POSTEN, AND NAZZARENA DANTI.

By JOHANNES V. DEWALL. 3s.

"The two stories by J. v. Dewall are well suited for their purpose; the style and diction are not too difficult for those whose acquaintance with German is not extensive, and ample explanatory annotation is provided."—*Saturday Review*.

CONTES MILITAIRES. By A. DAUDET. 2s. 6d.

"Written at fever heat immediately after the great 1870 war, they show Daudet's power in many ways at its highest. . . . We there'ore do more than recommend—we urge—all readers of French to get the stories in some form, and the present one is both good and cheap. The paper is excellent, and the type clear and bold. . . . A neat map of Paris will assist the reader in following the movement of the stories."—*The Schoolmaster*.

ZÄHLUNGEN. By E. HOEFER. 3s.

SCHOOL DICTIONARIES.

Uniform in Binding. Price 3s. 6d.

JAMES (William) and C. STOFFEL.—GERMAN-ENGLISH AND ENGLISH-GERMAN DICTIONARY. Complete Grammatical Dictionary of the German and English Languages. 1,009 pp. 8vo. 34th Edition. Special cloth binding.

LARSEN (A.).—DANISH, NORWEGIAN, AND ENGLISH DICTIONARY. Third Revised and Enlarged Edition. 683 pp. Large 8vo, strongly bound, half roan. Price 12s. 6d.

WILLIAMS & NORSGATE,

14 Henrietta Street, Covent Garden, London; 20 South Frederick Street, Edinburgh; and 7 Broad Street, Oxford.

Mr. MURRAY'S SELECTED LIST.

A NEW SERIES.

SIR WILLIAM SMITH'S SMALLER HISTORIES.

NEW EDITIONS, thoroughly Revised and in great part Re-written.

Crown 8vo, 3s. 6d. each.

"The reputation of Sir William Smith's school histories, tested as it has been by thirty years' continuous success, needs no advertisement."—*Literature*, Dec. 1897.

I.

A SMALLER HISTORY OF ENGLAND. From the Earliest Times to 1887. Revised by RICHARD LODGE, Professor of Modern History in the University of Glasgow, formerly Fellow of Brasenose College, Oxford. With 4 Coloured Maps, 14 Plans, and 68 Woodcuts.

In the new edition especial attention has been devoted to the Maps and Plans. The volume contains Coloured Maps, and a large number of New Plans of Battles, &c., have been added.

II.

A SMALLER HISTORY OF GREECE. From the Earliest Times to the Roman Conquest. Revised by G. E. MARINDIN, M.A., sometime Assistant-Master at Eton College. With 2 Coloured Maps, 12 Plans, and 5 Illustrations.

"Most excellently suited to its purpose and distinguished above all things by its lucidity. Altogether the book is excellent."—*Guardian*, Jan. 1898.

III.

A SMALLER HISTORY OF ROME. From the Earliest Times to the Establishment of the Empire. Revised by A. H. J. GREENIDGE, M.A., Fellow of Hertford College, Oxford. With Coloured Map, 6 Plans, and 66 Illustrations.

"Teachers owe a debt of gratitude to Mr. Murray for having provided such admirable revisions. The result is a pair of school books which are really wanted and really admirable."—*Guardian*, Jan. 1898.

Dr. William Smith's *Smaller Histories of England, Greece, and Rome* have for nearly half-a-century met with remarkable and continued success, and have now been so thoroughly revised and brought up to date, that they appear almost as new books based upon the excellent system which obtained for Sir William Smith's works so great a popularity.

The *Smaller Histories of England, Greece, and Rome* have all been thoroughly revised and reprinted with new type.

It is believed that these Books are now in all respects the best of their kind and price which can be found.

NEW EDITIONS.

A CONCISE DICTIONARY OF GREEK AND ROMAN ANTIQUITIES. A New Work. Condensed from the larger volumes and Edited by F. WARRE CORNISH, M.A., Vice-Provost of Eton College. In One Volume. With Coloured Plates and upwards of 1,150 Illustrations. 8vo, 21s. [Just out.]

A New Edition, practically a new work, most fully illustrated by reproductions of objects at all the principal museums, coupled with a Text containing all the latest information.

"An admirable contribution to the resources of classical education in schools."—*Standard*.

"No sixth form boy should be without it."—*Journal of Education*.

"It would be difficult to find a better book for a school prize."—*Manchester Guardian*.

"A convenient and thoroughly up-to-date dictionary, such as scholars may with confidence rely on."—*Speaker*.

With Illustrations, crown 8vo, 7s. 6d.

SIR WILLIAM SMITH'S SMALLER CLASSICAL DICTIONARY. A New Edition, thoroughly Revised and in part Re-written. Edited by G. E. MARINDIN, M.A., formerly Fellow of King's College, Cambridge, and Assistant-Master of Eton College. [Just out.]

A THEOLOGICAL ENCYCLOPÆDIA.

A Revised, Enlarged, and Cheaper Edition of

SIR WILLIAM SMITH'S THE DICTIONARY OF THE BIBLE.

By VARIOUS WRITERS.

Edited by

SIR WILLIAM SMITH, D.C.L., LL.D., and the REV. PROF. J. M. FULLER, M.A.

With a large number of New Illustrations and Maps of Special Districts.
3 Vols., medium 8vo, £4. 4s.

REDUCTION IN PRICE.

This work has hitherto been sold at £5. 5s. Although the Revised First Volume extends to nearly double its former dimensions, the PRICE OF THE WHOLE WORK IS NOW REDUCED TO FOUR GUINEAS. The New First Volume (in 2 Parts, 1853 pp.) is sold separately for TWO GUINEAS, and Vols. II. and III. (1862 pp.), TWO GUINEAS TOGETHER.

The object of the new edition is to bring the first volume abreast of the requirements of the present day, and to make it conform in fullness and scholarship with Volumes II. and III. With this end in view the volume has been revised, many of the more important articles have been re-written, and those included in the Appendix (added to Volume III. some years ago) have been inserted in their proper place.

Among the writers of new articles in the present edition are the late Bishop LIGHTFOOT, Dr. WESTCOTT (the present Bishop of Durham), Prof. DRIVER, Dr. EBBS, Prof. KIRKPATRICK, Prof. LUMBY, M. NAVILLE (the Egyptologist), Prof. RYLE, Dr. SALMON, Prof. SANDAY, Dr. SANDYS, Prof. SAYCE, Prof. STANTON, Canon TRISTRAM, Major-Gen. Sir CHARLES WILSON, and others.

A SELECTION

From Mr. Murray's Student's Manuals.

Post 8vo, 7s. 6d.

THE STUDENT'S HUME: A History of England from the Earliest Times to the Revolution in 1688. By DAVID HUME. Incorporating the Researches of recent Historians. New Edition, Revised, Corrected, and Continued to the Treaty of Berlin in 1878, by J. S. BREWER, M.A. With Notes, Illustrations, and 7 Coloured Maps and Woodcuts. (830 pp.)

. Also in Three Parts. 2s. 6d. each.

I. From B.C. 55 to the Death of Richard III., A.D. 1485.

II. Henry VII. to the Revolution, 1688.

III. The Revolution to the Treaty of Berlin, 1878.

. Questions on the "Student's Hume." 12mo, 2s.

Post 8vo, 7s. 6d.

STUDENT'S MANUAL OF ENGLISH LITERATURE. By T. B. SHAW, M.A. A New Edition, Revised. (510 pp.)

Post 8vo, 7s. 6d.

STUDENT'S HISTORY OF GREECE. From the Earliest Times to the Roman Conquest. With Chapters on the History of Literature and Art. By Sir WM. SMITH, D.C.L. With Coloured Maps and Woodcuts. (640 pp.)

. Questions on the "Student's Greece." 12mo, 2s.

Post 8vo, 7s. 6d.

STUDENT'S HISTORY OF ROME. From the Earliest Times to the Establishment of the Empire. With Chapters on the History of Literature and Art. By Dean LIDDELL. With Coloured Map and Woodcuts. (686 pp.)

Post 8vo, 7s. 6d.

Post 8vo, 7s. 6d.

STUDENT'S GIBBON: An Epitome of the History of the Decline and Fall of the Roman Empire. By EDWARD GIBBON. Incorporating the Researches of Recent Historians. With 100 Woodcuts. (700 pp.)

Post 8vo, 7s. 6d.

STUDENT'S HISTORY OF MODERN EUROPE. From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Professor of Modern History, University of Glasgow. (800 pp.)

"Mr. Lodge has treated this wide subject in a broad and intelligent spirit. While his pages abound in facts, he has not been content to give a mere crowded summary of events: he presents us with many sound and thoughtful remarks on the tendencies of each of his periods. His grasp is firm, and he never loses his way amidst a multitude of details; . . . above all, we believe that we are justified in saying that it is minutely accurate."—*Journal of Education*.

- DESCHANEL'S NATURAL PHILOSOPHY. An Elementary Treatise.** By Professor A. PRIVAT DESCHANEL, of Paris. Translated and edited by Professor J. D. EVERETT, D.C.L., F.R.S. *Fourteenth Edition.* Medium 8vo, cloth, 18s.; also in Paris, limp cloth, 4s. 6d. each. Part I. Mechanics, Hydrostatics, &c. Part II. Heat. Part III. Electricity and Magnetism. Part IV. Sound and Light.
- ELEMENTARY PERSPECTIVE.** Arranged to meet the Requirements of Art Students preparing for the Elementary Examinations of the Science and Art Department, South Kensington. By LEWIS E. CROSSKEY, Director of the Department of Industrial Arts, Glasgow Technical College. Super-royal 8vo, 3s. 6d.

COMPLETE LIST OF BOOKS FOR CAMBRIDGE LOCALS POST FREE ON APPLICATION.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY.

Pitman's Shorthand

ABSOLUTELY UNEQUALLED.

Over 60 years the standard, and to-day is used by 98% of writers; the small balance of 2% being distributed among all the other systems.

Highest Awards wherever Exhibited.

Specimen free to Head Teachers and further information readily given. Send for D.P. (Descriptive Pamphlet and Catalogue), post free on application.

PITMAN'S "RAPID" SERIES OF MODERN LANGUAGE BOOKS.

An Inspector writes:—"The French Books are admirably suited for Day and Evening School use, and I am strongly recommending them."

NOW READY.

Pitman's French Course, Part I., 96 pp., 6d.; limp cloth, 8d.
Easy and Advanced French Conversation, each 32 pp., 6d.
French Business Letters, 32 pp., 6d.
Economie Domestique, with three coloured plates, 48 pp., 6d.
German Business Interviews, each forming a complete commercial transaction, 96 pp., 1s.; cloth, 1s. 6d.
Easy and Advanced German Conversation, each 32 pp., 6d.
German Business Letters, 32 pp., 6d.
Examinations in German and how to pass them, 32 pp., 6d.; and 15 other new and interesting works, pronounced by Teachers and the Press as being the best, most up-to-date and useful modern language books ever published. Send for L.F. (Full List and Testimonials), post free on application.

SIR ISAAC PITMAN & SONS, Ltd., 1 Amen Corner, London, E.C.

DR. DAVIS'S

ARITHMETICAL EXAMPLES, Part I. Pp. 128.

Cloth, 8d. (Book of Answers, 1s.)

The sales of this work having now reached upwards of *half a million*, the Author will be happy to send, post free, a specimen copy to any School Principal who may not have seen it, but who may wish to examine it with the view of introducing it if found suitable for his or her pupils. It is confidently believed that no other work of a similar kind contains so large a number and variety of *original* examples, and the paper, printing, and binding will be found exceptionally good.

For specimens, address—Dr. DAVIS, St. Germain's, Cheltenham.

LONDON:

SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.;

And through all Booksellers in Great Britain and the Colonies.

BLACKIE & SON'S PUBLICATIONS.

The Warwick Library

OF ENGLISH LITERATURE.

General Editor—Professor C. H. HERFORD, Litt.D.

Each volume deals with the development in English literature of some special literary form, illustrated by a series of representative specimens, slightly annotated, and preceded by a critical analytical introduction.

Crown 8vo, decorated cloth, 3s. 6d.

ENGLISH PASTORALS. Edited by EDMUND K. CHAMBERS, B.A., formerly Scholar of Corpus Christi College, Oxford.

ENGLISH LITERARY CRITICISM. Edited by C. E. VAUGHAN, M.A., Professor of English Literature at University College, Cardiff.

ENGLISH ESSAYS. Edited by J. H. LOBBAN, M.A., formerly Assistant Professor of English Literature in Aberdeen University.

ENGLISH LYRIC POETRY, 1500-1700. Edited by FREDERIC IVES CARPENTER, M.A., Lecturer in English Literature at Chicago University.

ENGLISH MASQUES. Edited by H. A. EVANS, M.A., Balliol College, Oxford.

The Warwick Shakespeare.

General Editor—Professor C. H. HERFORD, Litt.D.

In fcap. 8vo volumes, neatly bound in cloth.

AS YOU LIKE IT. Edited by J. C. SMITH, M.A. 1s. 6d.

CORIOLANUS. Edited by E. K. CHAMBERS, B.A. 1s. 6d.

CYMBELINE. Edited by A. J. WYATT, M.A. 1s. 6d.

HAMLET. Edited by E. K. CHAMBERS, B.A. 1s. 6d.

HENRY THE FIFTH. Edited by G. C. MOORE SMITH, M.A. 1s. 6d.

JULIUS CÆSAR. Edited by A. D. INNES, M.A. 1s. 0d.

MACBETH. Edited by E. K. CHAMBERS, B.A. 1s. 0d.

MERCHANT OF VENICE, THE. Edited by H. L. WITHERS, B.A. 1s. 6d.

MIDSUMMER NIGHT'S DREAM, A. Edited by EDMUND K. CHAMBERS, B.A. 1s. 6d.

RICHARD THE SECOND. Edited by C. H. HERFORD, Litt.D. 1s. 6d.

RICHARD THE THIRD. Edited by GEORGE MACDONALD, M.A. 1s. 6d.

TEMPEST, THE. Edited by F. S. BOAS, M.A. 1s. 6d.

TWELFTH NIGHT. Edited by ARTHUR D. INNES, M.A. 1s. 6d.

The Oxford Manuals

OF ENGLISH HISTORY.

General Editor—C. W. C. OMAN, M.A., Fellow of All Souls College, Oxford.

In fcap. 8vo volumes, with Maps, Genealogies, and Index; cloth, 1s.

No. I.—THE MAKING OF THE ENGLISH NATION; B.C. 55-A.D. 1135. By C. G. ROBERTSON, B.A., Fellow of All Souls College.

No. II.—KING AND BARONAGE; 1135-1328. By W. H. HUTTON, B.D., Fellow and Tutor of St. John's College.

No. III.—ENGLAND AND THE HUNDRED YEARS' WAR; 1327-1485. By C. W. C. OMAN, M.A.

The Athenæum says:—"A decidedly good addition [No. III.] to the school text-books of English history. It is brightly and attractively written, the facts are as a rule well chosen, unnecessary names are nearly always avoided, the chief events stand out in due prominence, and there is a real thread of connexion between incident and incident."

No. IV.—ENGLAND AND THE REFORMATION; 1485-1603. By G. W. POWERS, M.A., late Scholar of New College.

No. V.—KING AND PARLIAMENT; 1603-1714. By G. H. WAKELING, M.A., Fellow of Brasenose College.

No. VI.—THE MAKING OF THE BRITISH EMPIRE; 1714-1832. By ARTHUR HAMBALL, M.A., Student and Tutor of Christ Church.

Blackie's Latin Series.

General Editor—R. Y. TYRRELL, Litt.D., D.C.L., late Regius Professor of Greek in the University of Dublin.

A new Series of Latin Classics, edited for the use of Schools. Each volume will be illustrated from Antique Art, and will be provided with Introduction, Notes, Maps, Appendices, English Exercises (in the case of prose authors), and complete Vocabulary. Special attention will be paid to the get-up of the several volumes, which will be set up at the Clarendon Press, and bound in a cover designed by Mr. TALWIN MORRIS. The first volume is now ready.

Now Ready.

HORACE.—THE ODES. Book I. Edited by STEPHEN GWYNN, B.A., late Scholar and Hulmeian Exhibitioner of Brasenose College, Oxford. Crown 8vo, cloth, 1s. 6d. (Books II., III., and IV. in preparation).

The Pall Mall Gazette says:—"The introductory notice of Horace's life and literary characteristics is charmingly concise and bright. In five short pages Mr. Gwynn neatly compresses a taking and just piece of criticism. 'The Clubman among Poets' is good. His notes are concise, but ample and scholarly."

CICERO.—THE FIRST CATILINE ORATION. Book I. Edited by C. HAINES KEENE, M.A., Professor of Greek in Queen's College, Cork. Crown 8vo, cloth, 1s. 6d.

THE MEDEA OF EURIPIDES. Edited by P. B. HALCOMBE, M.A., King's College, Cambridge. Illustrated. Crown 8vo, 1s. 6d.

* * * This edition is specially suited to candidates in the Examinations of the College of Preceptors, the lyrical parts being omitted from the Greek text, but the omission being supplied by a rendering into English prose.

French and German Courses.

A FIRST FRENCH COURSE. By J. J. BEUZEMAKER, B.A. Crown 8vo, cloth, 1s. 6d.

A SECOND FRENCH COURSE. By J. J. BEUZEMAKER, B.A. Crown 8vo, cloth, 2s. 6d.

A FIRST GERMAN COURSE. By A. R. LECHNER. Crown 8vo, cloth, 1s. 6d.

A SECOND GERMAN COURSE. By H. BAUMANN, M.A. Crown 8vo, cloth, 2s. 6d.

The Victorian Era Series.

The Series is designed to form a record of the great movements and developments of the age, in politics, economics, religion, industry, literature, science, and art, and of the lifework of its typical and influential men.

Crown 8vo, cloth, 2s. 6d. each.

New Volume.

RECENT ADVANCES IN ASTRONOMY. By A. H. FISON, D.Sc. Lond.

On January 15th.

CHARLES KINGSLEY AND THE CHRISTIAN SOCIAL MOVEMENT. By the Very Rev. C. W. STUBBS, D.D., Dean of Ely.

THE RISE OF DEMOCRACY. By J. HOLLAND ROSE, M.A.

THE ANGLICAN REVIVAL. By J. H. OVERTON, D.D., Rector of Epworth and Canon of Lincoln.

JOHN BRIGHT. By C. A. VINCE, M.A., late Fellow of Christ's College, Cambridge.

CHARLES DICKENS. By GEORGE GISSING.

THE GROWTH, &c., OF THE BRITISH COLONIES, 1837-1897. By the Rev. W. P. GRESWELL, M.A.

THE FREE-TRADE MOVEMENT AND ITS RESULTS. By G. ARMITAGE SMITH, M.A., Principal of the Birkbeck Institution.

ENGLISH NATIONAL EDUCATION. By H. HOLMAN, M.A., formerly Professor of Education in Aberystwyth Univ. Coll.

PROVIDENT SOCIETIES AND INDUSTRIAL WELFARE. By E. W. BRABROOK, C.B., Registrar of Friendly Societies.

LONDON IN THE REIGN OF VICTORIA. By G. LAWRENCE GOMME, F.S.A.

CLARENDON PRESS, OXFORD.

- SHAKESPEARE.—RICHARD II.** Edited with Introduction and Notes, by W. G. CLARKE, M.A., and W. ALDIS WRIGHT, D.C.L., 1s. 6d.
- MILTON.—PARADISE LOST. Books I. and II.** Edited by H. C. BEECHING, M.A., and E. K. CHAMBERS, M.A., 2s. 6d.
- OLD TESTAMENT HISTORY FOR SCHOOLS.** By T. H. STOKOE, D.D.
PART I.—From the Creation to the Settlement in Palestine.
PART II.—From the Settlement to the Disruption of the Kingdom.
PART III.—From the Disruption to the Return from Captivity.
2s. 6d. each. With Maps. Part III. completes the work.
- THE GREEK TESTAMENT,** with the Readings adopted by the Revisers of the Authorised Version and Marginal References :—
(1) Pica type. Second Edition. Demy 8vo, 10s. 6d.
(2) Long Primer Type. New Edition. Fcap. 8vo, 4s. 6d.
(3) The same on writing paper, with wide margin, 15s.
- AESCHYLUS.—PROMETHEUS BOUND.** With Introduction and Notes, by A. O. PRICKARD, M.A. Second Edition. 2s.
- HOMER.—ILIAD XIII.—XXIV.** With Notes by D. B. MORRO, M.A. 6s.
- XENOPHON.—ANABASIS. Book IV.** With Introduction, Analysis, Notes, &c., by J. MARSHALL, M.A. 2s. 6d.
- AN ELEMENTARY LATIN GRAMMAR.** By J. B. ALLEN, M.A. 2s. 6d.
- CAESAR.—THE GALLIC WAR. Books III.—V.** By CHARLES E. MOBERLY, M.A. 2s. 6d.
- VIRGIL.—AENEID I.—III.** Edited with Introduction and Notes, by T. L. PAPILLON, M.A., and A. E. HAIGH, M.A. 2s.
- FERRAULT'S POPULAR TALES.** Edited from the Original Editions, with Introduction, &c., by A. LANG, M.A. 5s. 6d.
- GOETHE.—IPHIGENIE AUF TAURIS.** Edited with Notes, &c., by C. A. BUCHHEIM, Phil.Doc. 3s.
- BOOK-KEEPING.** By Sir R. G. C. HAMILTON, and JOHN BALL. Cloth, 2s.
- EXERCISES IN PRACTICAL CHEMISTRY.** By A. G. VERNON HARCOURT, M.A., and H. G. MADAN, M.A. Fifth Edition. 10s. 6d.
- PRACTICAL WORK IN GENERAL PHYSICS.** By W. G. WOOLLCOMBE, M.A., B.Sc. 2s.
- PRACTICAL WORK IN HEAT.** By the same Author. 2s.
- PRACTICAL WORK IN LIGHT AND SOUND.** By the same Author. 2s.
- AN ELEMENTARY ENGLISH GRAMMAR AND EXERCISE BOOK.** By O. W. TANCOCK, M.A. 1s. 6d.
- AN ENGLISH GRAMMAR AND READING BOOK.** For Lower Forms in Classical Schools. 3s. 6d.
- FIRST STEPS IN ANGLO-SAXON.** By HENRY SWEET, M.A. 2s. 6d.
- A MANUAL OF CURRENT SHORTHAND, Orthographic and Phonetic.** By HENRY SWEET, M.A. 4s. 6d.
- CLASS-BOOK OF CHEMISTRY.** By W. W. FISHER, M.A., F.C.S. Second Edition. Crown 8vo, 4s. 6d.
- GEOMETRY FOR BEGINNERS.** An Easy Introduction to Geometry for Young Learners. By G. M. MINSCHIN, M.A. 1s. 6d.
- ELEMENTARY PLANE TRIGONOMETRY.** By R. C. J. NIXON, M.A. 7s. 6d.
- EUCLID REVISED.** Containing the Essentials of the Elements of Plane Geometry as given by Euclid in his first Six Books. Edited by R. C. J. NIXON, M.A. 6s.
- SUPPLEMENT TO EUCLID REVISED.** 6d.
Sold separately as follows :—Book I., 1s. Books I. IV., 3s. Books I. and II., 1s. 6d. Books V. and VI., 3s.
- ELEMENTARY POLITICAL ECONOMY.** By EDWIN CANNAN, M.A. Stiff covers, 1s.
- NOTES ON THE GOSPEL OF ST. LUKE.** By E. J. MOORE SMITH. 1s. 6d.
- A FIRST LATIN EXERCISE BOOK.** By J. B. ALLEN, M.A. 2s. 6d.
- BRACHET.—HISTORICAL GRAMMAR OF THE FRENCH LANGUAGE.** Translated by G. W. KITCHIN, D.D. 3s. 6d.
- GERMAN POETRY FOR BEGINNERS.** Edited, with English Notes, and a complete Vocabulary, by EMMA S. BUCHHEIM. 2s.
- ELEMENTARY GERMAN PROSE COMPOSITION.** With Notes, Vocabulary, &c. By the same Editor. Cloth, 2s.; stiff covers, 1s. 6d.
- MODERN GERMAN READER.** A Graduated Collection of Extracts in Prose and Poetry from Modern German Writers. Edited by C. A. BUCHHEIM, Phil.Doc.
PART I.—With English Notes, a Grammatical Appendix, and a complete Vocabulary Seventh Edition. 2s. 6d.

The Educational Times.

A Year of Discussion.

Last year saw no actual advance towards the organization of secondary education—unless the drafting and introduction of the Duke of Devonshire's Bills, as a pledge of the intentions of the Government, may be regarded in the light of material achievement. However that may be, we are far from thinking that the year has been lost to progress; nor have those who are keenest for legislation any good reason for lamenting the delay. At the present moment there is every probability that the Bills will be reintroduced next Session. In that case, they ought to be passed into law, always assuming that the fairies who preside at their birth do not kill the twins by excess of controversial zeal. Reform is always more expeditious in the long run by the avoidance of raw haste. It is better to keep dinner back for half an hour than to dish up a half-roasted joint. Will any one deny that the discussion of the past year has brought us to a clearer conception of what we really need and want? Part, at any rate, of our most urgent wants has been conceded by the Government; and on that part which the Government propose to defer—including the statutory creation of Local Authorities—there has not been so near an approach to universal conviction and consent as there has been in regard to the main provisions of the drafted Bills. Unquestionably the teaching profession and the country as a whole have come very far during the year 1898 towards a definite conclusion in favour of a Central Authority for all education, with a special Department for secondary education, of a Central Council within or by the side of this Authority, and of representation based upon a Register. Give us these, as we have said before, and all the rest will follow. But, as for the Local Authorities, do those who clamour for them "immediately" know precisely what kind of Authorities they desire? Are they all agreed as to the pattern? Have they settled in their own minds how these Authorities ought to be constituted and how they ought to be elected? What are to be the proportions of County Councillors, School Board members, educational experts, and women? Above all, what are to be the powers of the Authorities as to expenditure, creation of new schools, control over existing schools, responsibility to their electors and to the Central Authorities, and the right of appeal? Can we be sure that legislation on these points during the Session of 1899 would be cool, wise, and safe? If not, would it not be better to wait—to take the Government

Bills as a foundation, and think a little more about the design for the superstructure? That question about the guarantees of freedom, variety, and elasticity is a great deal too important to be risked on a Parliamentary scramble, or even on a Parliamentary deal.

If, then, the year 1898 has been marked rather by industry in discussion than by actual progress and irrevocable conclusions, we shall be none the worse for it in the end. Let us take encouragement from the fable of the wise father who, on his deathbed, having nothing to leave to his sons but a little vineyard, and fearing that they might begin by neglecting it, told them that there was a treasure hidden somewhere underground. When the old man died the sons began to dig, and, though they found no gold, after turning over the whole of the soil, the increased yield of the vineyard in succeeding years was a veritable treasure to them. There was never a time in England when the problems of secondary education were more thoroughly discussed. We have been digging hard for treasure; and nothing is more certain than that the turning of the educational soil will be, after all, our greatest gain.

The Headmasters' Conference at Shrewsbury spoke the last word of the year on the Government Bills, and it spoke, on the whole, judiciously. In the resolutions which it passed, in those which it amended, and even in those which it declined to accept, it may be taken as having reflected the general desire of the profession to follow a practical and prudent course. Its counsel is (1) to advance at once, and, for that purpose, to put a certain pressure on the Government by closing with the offer of their Bills, and not pressing the demand for "immediate" Local Authorities; (2) to strengthen the Bills on their own lines, especially in respect of the Charity Commission and the Consultative Council. It is understood that the Government are at least as much disposed as ever to insist upon and carry out their educational policy, but they have not shown any inclination to make the Education Bill more comprehensive, and to provide facilities for protracted discussions on points of special controversy. In one or two respects, within the scope of the Bill as it stands, there is ground for believing that the Government are open to persuasion; and it is possible that they may begin by making some concession to the expressed opinions of the educational bodies when re-introducing the measure. It may be that those who desire the greatest possible comprehensiveness—who think that the whole question is ripe for settlement, and that it is their duty to try and settle it—will fight for the immediate creation of the Local Authorities. But we cannot help thinking that such an effort would be premature.

NOTES.

THE action of the Medical Council in respect of the examinations which it has hitherto recognized as a preliminary test has, in one sense, been deliberate enough; but, in another sense, it is impossible to close one's eyes to the fact that the Council has allowed itself to be hurried into a course which is anything but logical. It resolved, in November, 1897, to confine its recognition to examinations intended for "students who have at least attained the age of sixteen years"—a limit which excludes the Oxford and Cambridge Junior examinations and the Second Class of the College of Preceptors' examination. The Council has now, by adopting a report drawn up by a member of their body who is also a member of the Cambridge Local Examinations Syndicate, excluded the College Second Class after Jan 1, 1900, while retaining, for a time at least, the Oxford and Cambridge Juniors. The statements which have been put before the Council, and on which it has acted, have been impugned in almost every particular; but they have prevailed. The Council of the College has not yet had an opportunity of discussing the communication of the Medical Council; and, for the present, we abstain from drawing the inferences which the facts above mentioned seem inevitably to suggest.

SOME of our daily contemporaries have, we think, been a little unreasonable in their criticisms on the Headmasters' Conference. One bases a charge of inconsistency on the fact that the Conference, on Thursday, welcomed the Government Education Bill "as marking an important step towards the organization of secondary education," and on Friday indicated various particulars in which it is capable of improvement. Is it an unusual thing in England to accept a measure in principle, and then go into Committee for the purpose of amending it? Another daily paper chaffed the Headmasters for passing from educational politics to such questions as school hymnals and boxing in schools. But the business of a conference is to confer, and, if the Headmasters are interested in proposed legislation, they cannot forget that in the meantime each of them has a school of his own. The talk on boxing was very sensible and helpful. The "knock-out blow" is virtually an importation from the prize-ring, and the Headmasters are quite right to put it in the school taboo. Mr. Lyttelton's boxing anecdote is worth preserving:—

A very curious exhibition of the blow was given last summer at Haileybury. A distinguished stranger from the Far East was being entertained, and, among other things, a display of boxing was given by the professional teacher and some of the boys. One of the boys, quite a small fellow, was engaging in trying to hit the professional on the face as often as he could, and the professor was, of course, merely playing with him. All of a sudden the professional tumbled straight upon the ground. At first it was thought to be a joke, but on inquiry it was found that he had been touched very gently on the tip of the chin by the boy, and had been for a second or two incapacitated. This was a very significant incident, because it showed what an astonishingly vulnerable point had been struck.

THE second day of the Modern Language Conference at Cambridge—when Professor Skeat entered on his term of office as President—produced a very interesting and useful discussion on the subject of examinations. The President himself declared that most of the examination papers he saw were absolutely unmerciful. The student was supposed to know all kinds of

things which were entirely beyond him. He suggested that the examiners should try to put themselves in the place of the examined, and see whether they could answer the questions themselves. Replying to Mr. Milner Barry, Dr. Keynes (Secretary to the Cambridge Local Examinations Syndicate) said that the Syndicate would carefully consider any suggestions which might be made to them. Mr. E. J. Gross, on behalf of the School Examinations Board, and the representative of the Oxford Local Examinations Syndicate, made similar replies. It would thus seem that the Association has a congenial task before it. Every one will be glad if the accepted models of examination papers can be successfully revised.

THE informal conference between the London School Board and the County Council on the question of Local Secondary Authorities has not succeeded in bringing about an understanding. The desire of the School Boards throughout the country is to secure adequate representation on the secondary Authorities. We print this month in our Summary the resolutions passed by a special meeting of the Association of School Boards, in which the arguments for cooperation are vigorously set forth. It seems that, whilst a deputation from the London School Board were exchanging views with certain members of the County Council, the latter body had come to the resolution to apply for recognition as an Authority under the famous Clause VII.; and the Board, considering that this action prejudiced the whole question, has sent a protest to the Lord President and the Secretary of the Science and Art Department. The fact is that there is no machinery to create a composite Education Authority, and, until such machinery is provided, the alternative for the County Councils lies between adopting Clause VII. and doing nothing for secondary institutions.

WILL there ever be a systematic and uniform pronunciation of Latin in England? We very much doubt it. The *Preparatory Schools Review* printed a "more correct" system in its July number, and the editor wrote to the headmasters of all our public schools, asking them (1): "Are you in favour of the preparatory schools adopting this pronunciation?" and (2): "If the majority of preparatory schools will use it, are you prepared to adopt it in your school?" The December number of the *Review* contains the result of the inquiry. Both questions are answered in the affirmative by the headmasters of Marlborough, Clifton, Bradfield, Haileybury, Rossall, Uppingham, Fettes, Blackheath, King William's College, Christ's Hospital, Dover, University College School, King's College School, Nottingham, Glenalmond, Ipswich, Weymouth, Birmingham, St. Peter's, York. Partial or qualified affirmation comes from the headmasters of the City of London, Winchester, Shrewsbury, Wellington, Rugby, Brighton. It is a strong array. An "unqualified No" comes from the headmasters of Harrow, Cheltenham, Manchester, Radley, Loretto, Dulwich, Merchant Taylors', Malvern, Bromsgrove. "The High Master of St. Paul's" writes very kindly, but is not prepared to make any change." Clearly that was *not* an unqualified No. Eton, Westminster, Charterhouse, and many other schools, do not appear in the list. On the whole, the majority of the preparatory schools, which favour the so-called Continental pronunciation, may feel reasonable encouragement.

A SUBJECT which has been exercising the attention of prominent men in Wales of late is the teaching of English. Many are beginning to feel that the county schools will be rendering more real service to the cause of Welsh education by giving the children a thorough and systematic training in the use of the English language than by imparting to the child a smattering of various subjects, the very text-books upon which the child is not always able fully to understand. It is often the case, too, that some of the children, from an imperfect acquaintance with English, do not completely grasp the meanings of the English words used by the teacher, and, consequently, can form but a vague idea of the subject taught. There are some districts in which English must be taught as a foreign language, both as a spoken and as a written language. In such districts, unless English be taught systematically, the children obtain very little acquaintance with the language, beyond the use of certain expressions connected with school life. Much, too, could be done to teach Welsh children to pronounce English with an English accent, as this is far more important for them in life than to make futile attempts at acquiring the correct pronunciation of French. One of the great dangers of Welsh education arises from a tendency to attempt building an imposing superstructure before the foundation has become firm enough to bear it. The result is that the whole educational machinery is hampered by the necessity of teaching much that should have been thoroughly learnt in the years of childhood.

A GREAT deal of genuine secondary work is done by the county schools, and it is only fair to state that the University colleges do a considerable amount of work of a University character; but, so long as English is imperfectly learnt in childhood, we shall see the spectacle of secondary schools, and even University colleges, teaching some of the most elementary facts of English. It is most important that those who have the guidance of the schools should, in framing their curricula, not follow blindly what may do admirably in English secondary schools, but is unsuitable to the schools of Wales. The Central Board and the governing bodies, in concert with the masters and mistresses of the schools, would do well to ascertain from the reports upon the schools the underlying defects in the work of the children, and proceed to remedy them, even at the cost of doing much elementary work. It is not improbable that much of the weakness shown in languages such as Latin and French arises from insufficient training in the principles of grammar, as illustrated by the grammar of English, or from an inability to grasp the meanings of words used in their best books.

THE conference which took place in Manchester during the first half of December ought to help considerably towards reducing the number of half-timers. It was well attended and produced a number of interesting letters, all of course, condemning the half-time system, from members of Parliament and others interested in the question. Half-time, however, must be considered in the light of all the facts which are being collected with regard to the employment of elementary school children out of school hours, a subject now engaging the attention of the Education Department, which will shortly, no doubt, give us the result of its inquiries. The recently published minutes of the Hull School Board show that 1,248 children

were working from five to twenty-five hours weekly in addition to their school attendance. Besides these, 98 were working from thirty to sixty-five hours, for a wretched pittance of, say, "9d. and food" up to the magnificent sum of 5s. In one instance, where a cowboy of eleven worked sixty-two hours, the return states the weekly wage of the parents as *nil*. The custom of working children long hours over and above school attendance is common enough in the South. It would be ridiculous to legislate for the half-timer, whose hours are, at least, known and regular, and leave untouched a state of things which is none the less deplorable because it is unsystematic and very difficult to deal with. One is reminded of Dr. Lawrence's dictum at the Education Congress in 1897: "Do not suppose that you have convinced the people of this country of the need of education. . . . The great problem of education has not yet been solved."

A CORRESPONDENT writes to us: "It is just a hundred years ago this Christmas that Pestalozzi began his wonderful work among the orphans at Stanz. 'Imagine my position,' he wrote afterwards, 'I alone—overseer, paymaster, almost servant-maid, in an unfinished house, surrounded by ignorance, disease, and poverty of all kinds. The number of children increased gradually to eighty, all of different ages—all, except a few, wholly ignorant. What a task to form and develop these children! What a task!' And yet, in a spirit of simple faith and utter self-surrender, he undertook it. Nothing daunted him. Opposition, hatred, misrepresentation, squalor, poverty—all were braved for the love of the children. And love conquered all foes. More than this, it was at Stanz that there broke on Pestalozzi the first clear conception of the true method of teaching little children, and of following nature in the development of the child's mind and character. Every infant school in England is a happier place to-day because Pestalozzi went to Stanz." A meeting to commemorate this educational centenary will be held at the College of Preceptors on Wednesday, January 4, at 8 p.m., when it is hoped that Prof. Rein, of Jena, will speak.

LIVERPOOL is about to raise £1,000 for a memorial to the late Miss Anne J. Davies, for many years a member of the School Board of that city. Miss Davies was an enthusiastic believer in the training of teachers, and in an unostentatious way she assisted many pupil-teachers to meet the expense incidental to training, even when a Queen's Scholarship has been gained. In a day training college, such expense might include board and lodging. Some years ago a pupil-teacher in whom Miss Davies was interested, and who came out third of all England in the scholarship list, would have had to forgo training but for her wise help. Thenceforward she kept floating a small sum of money, £40 in all, and lent it in two sums to those requiring help, on condition that it should be repaid within five years out of the trained teacher's earnings. This condition was always honourably fulfilled, and some prominent citizens of Liverpool, including the Lord Mayor and Lady Mayoress, Mr. Wm. Rathbone, M.P., and Mrs. Alfred Booth, have decided that Miss Davies's scheme shall be placed on a permanent footing. The wonder is that there should be any great city where help is not forthcoming to train those who need training. Women are still educationally in the day of small things.

SUMMARY.

THE MONTH.

THE Headmasters' Conference met at Shrewsbury on December 22 and 23, under the presidency of Prebendary Moss. Amongst those present were the Hon. and Rev. E. Lyttelton (Haileybury), the Rev. Dr. Rendall (Charterhouse), the Rev. W. H. Keeling (Bradford), the Rev. Dr. Baker (Merchant Taylors' School), Mr. J. E. King (Manchester), Rev. G. C. Bell (Marlborough), Mr. H. W. Eve (University College School), the Rev. R. de Courcy Laffan (Cheltenham), the Rev. R. D. Swallow (Chigwell), the Rev. M. G. Glazebrook (Clifton), Mr. J. D. McClure (Mill Hill), Mr. W. G. Rushbrooke (St. Olave's), and Dr. Gow (Nottingham). The Conference proceeded to the consideration of a series of resolutions relating chiefly to the Government Board of Education Bill.

MR. LYTTELTON moved the first resolution: "That this Conference heartily welcomes the Board of Education Bill, introduced by the Duke of Devonshire on August 1, as marking an important step towards the organization of secondary education in England." He said that it certainly was a moment of importance to all of them when they realized that the expectations of many years seemed now to be nearer fulfilment than ever before; and the prospect of a Bill intended not only to be brought in, but passed, in the next Session gave them a stimulus in the labours before them.

As a humble member of the Royal Commission, it was certainly interesting for him to feel that the labours of that Commission were not to be thrown away. In 1896 a Bill was brought in which dealt with the great educational organization problem from a totally different point of view from that of the Bill brought in by the Duke of Devonshire last summer. The Bill of 1896 dealt with the problem of Local Authorities, whereas the latter Bill left that subject alone, and proposed the establishment of a Central Authority. Perhaps the method adopted in 1896 was the more practical, but he hoped the votes on this subject would not be divided by any such feeling as that, because, whether they agreed with it or not, it was necessary to bear in mind that the Government were showing a willingness to meet what was in the main a professional need and a professional demand with regard to the organizing of secondary education. The grave difficulties which beset any Government proposing to deal with the problem of Local Authorities had been felt to be so serious by the present Government that they left it on one side, wishing to pass the less contentious portion of the subject first, and proceed to the more difficult portion later on. The prospect seemed to be that, though the establishment of Local Authorities was delayed for a time, it was not delayed permanently, and the question was whether the Conference would not be wise in supporting the Government in their endeavour to provide the Central Authority next Session.

This resolution was supported by Mr. Laffan, Mr. Phillpotts, and Mr. Vardy, and carried by 27 votes against 5. Mr. Swallow moved a resolution which led to a lively discussion: "That this Conference wishes to express its conviction that immediate legislation is needed to establish strong Local Authorities for the management of secondary education, as well as a strong Central Authority." He said that County Councils were beginning to show that they recognized the great importance of the trust reposed in them, and were ready to act for the higher interests of secondary schools. With regard to the word "immediate" in the motion, he took it that it meant that the Legislature should deal with the Central Authority first and with the Local Authorities afterwards. It was of great importance to let the County Councils know that they cordially welcomed the appointment of Local Authorities. Mr. Keeling said that there was almost entire unanimity as to the necessity of establishing Local Authorities. He urged the necessity for the creation of statutory Local Authorities willing and able to consider the claims, not only of commercial and technical education, but of a literary and liberal culture. Dr. Rendall thought that the passing of the resolution would increase, not diminish, the danger of having that form of Local Authority which would be unwelcome to the main body of the Conference. The whole point of the proposal lay in the word "immediate." The present Board of Education Bill changed the aspect of the question as regarded the immediate creation of Local Authorities. Before that Bill was introduced this matter did seem urgent, but he thought the right policy now was rather to wait than press forward the creation of these Local Authorities. They hoped that, if the Bill were passed, and the Consultative Committee constituted, one of the first problems with which that committee would deal

would be this one. Mr. Field supported the resolution. Mr. Eve proposed the substitution of the word "early" for "immediate." This was seconded by Mr. Lyttelton, who said that, if the Government were forced to bring forward both Bills in the next Session, both would probably fail. The amendment was carried by 32 votes against 9, and the resolution was then carried unanimously.

The third resolution was moved by Dr. Fry: "That, in the opinion of this Conference, the Consultative Committee to be appointed under the Act should be a permanent Committee." The Headmaster of Berkhamstead said that there was no point in the report of the Royal Commission on which they were more emphatic than the need of a Consultative Committee. If any such body was contemplated by the Government, the terms in which it had been suggested in the Bill were singularly inadequate.

The Bill did not define the constituent parts of the Committee, as the Commission did. They might be all nominees of some partisan or some faddist. There was to be no permanency in the body, but it was to be created from time to time. It was a sort of in-and-out clause which could be used by one Minister and discarded by another. Further, there was no definition of sphere. "Any matter" was far too wide and weak an expression. His resolution proposed a permanent body, which would be not a master, but a friend, because only a permanent body could have continuity of principle, could be backed by public opinion, and could not be packed. The backing of public opinion was essential. He spoke without distrust of the personnel of the present Education Department.

Mr. Phillpotts seconded the resolution. Dr. Bell hoped the Conference would give a decided majority in favour of the opinion that the Consultative Committee should be permanent and not liable to the discretion of individual Ministers, who might totally alter the powers from time to time. Canon Armour proposed as an amendment: "That, in the opinion of this Conference, it is essential to the national interests involved in a proper organization of secondary education that the Consultative Committee of the Board of Education Bill (1) should be a permanent body, containing representatives of the Universities and of the teaching profession; and (2) should have a constitution and duties assigned, and, if necessary, varied from time to time, by Order in Council." Mr. Dyson seconded. After some discussion, the amendment was lost by 28 votes against 7. The original resolution was then carried unanimously.

MR. KEELING proposed: "That, in the constitution of Local Authorities, provision should be made for the adequate representation of the governing bodies and teachers of secondary schools." He said that the difficulty was how to secure an adequate representation of secondary schools. The recommendations of the Royal Commission were that in the counties the majority of the members of the Local Authority should be taken from the County Councils, and that the other members should either be nominated by the Central Authority, or should be co-opted by the whole number; that in the boroughs one-third of the representatives should be taken from the County Councils, one-third from the School Board, and one-third should consist of members nominated or co-opted, who might be taken to represent secondary schools. The Bill of 1896 proposed that the Local Authority should be composed wholly or in part of members of the Councils themselves, and the election of additional members was, therefore, entirely optional. The resolution having been passed unanimously, Mr. Vardy moved a fifth resolution: "That, in consideration of the fact that the questions which will be referred to the Consultative Committee will be almost exclusively questions affecting secondary education, this Conference regards it as important that the interests of secondary schools should be adequately represented upon the Committee." He said that the Education Minister would often be anxious to seek the advice of the Consultative Committee, and the Local Authorities would need guidance. The questions referred to the Committee would be almost exclusively questions affecting secondary education, because primary education did not need further organization at the present time. Dr. Baker seconded the resolution. Dr. Bell proposed to add as a rider "and also that its duties should be prescribed, and, if necessary, varied from time to time, by Order in Council." Mr. Eve seconded. Mr. Swallow said that they should do everything to keep as close as possible the connexion between the Universities and newly organized secondary schools. The resolution was carried unanimously, the rider being agreed to by 22 votes against 3.

AFTER the carrying of one or two resolutions of minor importance, and one moved by Mr. Laffan, in favour of "a Secondary Education Department proper, distinct from the Department for Elementary Education," Mr. Eve proposed: "That the registration of schools, as well as of teachers, is imperatively necessary in the interests of education." He said that

among the conditions for the registration of teachers it was almost certain that one would be a stated amount of service in an efficient school, and among the conditions for the registration of an efficient school one would be that among its staff there should be a certain proportion of teachers registered as efficient. It would, therefore, be difficult to register teachers without registering schools at the same time. Another point of view was that of the private schoolmaster, who, as far as he could gather, dreaded most that public money should be used to establish schools that came directly into competition with private schools doing good work—a result assuredly to be very much deprecated. The best protection these schools could have was some means by which their schools could be registered as being efficient for the work required by the district where they were. Anything that would win them to the support of legislation in the direction of organization would be a very distinct gain, not only for their own sake, but also for the sake of the country and of the Government, who were very anxious to pass a measure.

Mr. Dyson seconded the resolution, saying that, as far as he knew, all private schoolmasters who were interested in education were quite as anxious as public headmasters could be to have some means by which inefficient schools could be kept down. Mr. Eve, in reply to a question, said that, as far as he could judge from the Bill, registration would at first be voluntary. The resolution was then carried unanimously.

THE last resolution of the series dealing with proposed legislation was moved by Mr. Lyttelton, to the effect "That in the registration of teachers a distinction should be clearly drawn between persons qualified to teach in (1) secondary and (2) elementary schools." The question as to the nature of the register had excited, Mr. Lyttelton said, a great amount of interest among both elementary and secondary teachers, as to whether the register was to be inclusive or not, whether it was only to deal with secondary teachers, or whether it was to embrace all members. He had great sympathy with the sentiment that the registration should be inclusive as far as it went. They ought to lay down distinctly that the register, whether exclusive or inclusive, should be useful. He imagined that what was wanted was a list which would enable anybody looking for a teacher to ascertain at a glance what was the nature of the qualification which would place the name on the register, and whether the qualification was one which applied to elementary or secondary teaching. Mr. Hobhouse (Durham) seconded the resolution. Dr. Rendall said that, if the resolution went out in its present form, it might be taken to mean separating elementary and secondary teachers. He therefore proposed a rider modifying the resolution so that admission to the one register should not exclude admission to the other. Dr. Field (Rudley) seconded. The resolution and rider were both carried unanimously. It was also decided to forward copies of the series of resolutions to the Lord President of the Council.

THE Modern Language Association held its annual meeting on December 22 in the debating hall of the University Union Society. Mr. A. T. Pollard, Headmaster of the City of London School, presided, and about a hundred members and friends were present, including Dr. Peile, Master of Christ's, Mr. Chawner, Master of Emmanuel, Prof. Skeat, Dr. Reid, Dr. Postgate, Dr. Keynes, Dr. Hobson, Rev. E. S. Roberts, Mr. E. J. Gross, Mr. Gerrans, Mr. Sadler and Mr. Morant (Education Department), Dr. Breul, Dr. Fiedler (Birmingham), Prof. Priebsch (University College, London), Mr. F. Heath, Prof. Borsdorf (Aberystwyth), Prof. Schüddekopf (Leeds), and Mrs. Henry Sidgwick (Newnham College). The Secretary (Mr. W. G. Lipscomb) read the annual report, which spoke of the continued prosperity of the Association. The number of members was now 317, an increase of 52. The Committee appointed to consider the question of a phonetic alphabet suited to the requirements of English pupils, and of the use of phonetics generally in modern-language teaching, had not yet completed its labours, but would present an interim report. The President, in his address, said:

It seemed to him more natural that they should proceed in teaching from modern languages to the ancient. For this utility appeared to him the strongest argument. It was only because he thought the

teaching of modern languages did not sacrifice training to utility, either immediate or remote, that he strongly advocated for them a more conspicuous place in our educational system. The opinion of his colleagues who taught on the modern language side at the City of London School was that modern languages were of high educational value, and for those who did not stay at school till eighteen or nineteen were as good a training, everything considered together, as the older languages were. But the question presented a broader aspect. He should not only like to see modern languages taking a more prominent place, but he should like to see the teaching of the classical languages put later in the school course. This specially merited consideration at the time when the problem of secondary education seemed likely to come before Parliament. The State was forced to consider how boys of talent might pass from the public elementary school to the secondary school, whether first grade or second grade. If there were a sequence more or less defined of school subjects applied to first grade, second grade, and public elementary schools alike, the transfer of boys from school to school would be comparatively easy. He hoped that the Universities would adapt themselves to the conditions under which modern languages were likely to be taught in schools in the future, and he was glad that this meeting had been held in Cambridge. It showed, at any rate, that the teachers of modern languages would like to associate themselves with the Universities, to whom he for one looked to secure that the modern side of first grade schools retained the real spirit of education, and the second grade schools approximated as nearly as might be to the high standard to be maintained in higher schools under the dominating influence of the Universities.

Dr. Breul, Cambridge (local secretary), subsequently opened a discussion on the mutual relations of schools and Universities in regard to the study and teaching of modern languages. Prof. Schüddekopf (Leeds), Prof. Fiedler (Birmingham), Dr. Heath (London), Mr. Howard Swan, Mr. A. Tilley, Mr. A. A. Somerville, Mr. W. Rippmann, and Mr. de V. Payen-Payne took part in the debate. Prof. E. A. Sonnenschein afterwards contributed a paper on "Terminology."

THE following resolutions, as approved by the Council of the Incorporated Association of Headmasters, are to be moved at the annual meeting of the Association:—

(1) That this Association cordially welcomes the Board of Education Bill as a first step towards the organization of secondary education in England, and is of opinion that the Consultative Committee proposed therein ought to be permanent and to contain representatives of the Universities and of bodies of teachers. (2) That this Association records with satisfaction the statement made by the Lord President in introducing the Board of Education Bill—viz., that the proposed Education Office would probably be so organized as to consist of three Departments, dealing with primary, secondary, and technical education respectively. (3) That, in the opinion of this Association, the Secondary Education Department of the Education Office should include inspectors, appointed by the Education Office, for the inspection of secondary schools. (4) That, in the opinion of this Association, the Education Office should recognize *pro tanto*, as an alternative to the inspection required under Section 11. (4) of the Board of Education Bill, a system of inspection and examination conducted by any University in England or Wales, and approved for the purpose by the Consultative Committee of the Education Office. (5) That this Association is strongly of opinion that the Government should proceed, at an early date, to provide for the establishment of Local Authorities for secondary education; and that in no case should the area administered by such Authority be less than that of an administrative county or county borough.

THE "Joint" Committee of the Association of Headmasters has resolved (as we have already stated in substance): "That, in the opinion of this Committee, it is essential to the national interests involved in a proper organization of secondary education that a Consultative Committee of the Board of Education should be instituted; that such Committee (a) should be a permanent body containing representatives of the Universities and of the teaching profession, and (b) should have a constitution and duties assigned—and, if necessary, varied from time to time—by Order in Council." The Committee has also recommended that the Memorandum as to registration of teachers—indicating causes of previous failures in legislation, and suggesting that "the framing of rules for registration be in the hands of the Consultative Committee made statutory for registration purposes, and the application" of these rules be in the hands of the Education Office—should be revised and communicated to the proper authorities.

A CONFERENCE on secondary education took place at Owens College, Manchester, on December 3, under the presidency of Dr. Bodington, Principal of the Yorkshire College. Discussion had

reference mainly to the Board of Education Bill laid before the House of Lords by the President of the Council in the last Session of Parliament. Resolutions were passed urging that a Minister of Education, of Cabinet rank, should represent the Education Department in Parliament; that the creation of the Consultative Committee should be obligatory, and that the Committee should be competent to advise on technical as well as on secondary education; that immediate provision should be made for the institution of Local Authorities for secondary education; and that the relations of the proposed Board of Education to the Charity Commissioners should be more clearly defined in the Bill. The resolutions will be communicated by a deputation to Lord Salisbury, Mr. Balfour, and the President and Vice-President of the Council.

THE Association of School Boards (England and Wales) held a special meeting on December 6. The Dean of Manchester presided. The following resolutions were adopted:—

That, provided the School Board for the County of London and the School Boards in the county boroughs have one-third of the total membership of the proposed Secondary Education Boards, and that these Secondary Education Boards are independent of any external Local Authority in their administration, the Association of School Boards is willing that the County Council boroughs shall have one-half the representation. That in administrative counties the County Councils shall nominate a majority of the members of the Local Authority for secondary education, and that of the remainder a portion up to one-third of the whole be allocated to the School Boards in the county. The Education Department shall determine how many members shall be allotted to the School Boards, and, in doing so, shall have regard to the proportion the population under School Boards bears to the whole population, and shall determine how, if necessary, School Boards shall be grouped for the purpose of electing representatives. Provided always that the Education Department may, on application from the locality, constitute on similar lines a separate Local Authority for any part of an administrative county, if satisfied that such area has separate educational interests or that it is otherwise desirable. That the Association of County Councils be asked to co-operate with the Executive in promoting a deputation to the Lord President of the Committee of Council for the purpose of representing to him the desirableness of so extending the scope of the Board of Education Bill as to include proposals for the creation of Local Authorities for secondary education on the basis of the foregoing resolutions.

IN view of the reconstitution of London University, the Council of University College have passed the following resolution:—

That a deputation be appointed to represent to the Statutory Commission that, inasmuch as (1) University College, London, was founded as the University of London, with the object of providing a complete University education in London of the highest type, (2) the intention of the founders and benefactors of University College will only be carried out by the incorporation of the College in the University, so that its resources shall still be utilized for the furtherance of the highest educational work and for research, the Council of University College are prepared to summon a general meeting of the members of the College, and to propose to them that such steps should be taken as may be necessary for placing the site, land, buildings, and endowments of the College at the complete disposal of the reconstituted University. In making this offer the Council do not desire to throw any obstacle in the way of any other institutions in London which may be disposed to place their resources at the disposal of the governing body of the University. It will be necessary, in accordance with the precedent afforded by the Universities Act (Oxford and Cambridge), to protect the interests of the existing teachers and executive staff of the College. The existing teachers are, however, to have no claim as such to any rank in the reconstituted University, or to any vested interest other than that they now have in the College. Special provisions will probably have to be made as to the boys' School and its endowment, and, perhaps, for appropriate buildings on another site being provided for this department of the College work. Arrangements will also have to be made with regard to the Hospital and its funds, of which the College is now the trustee.—Signed, on behalf of the Council, T. GREGORY FOSTER, Acting Secretary.

THE twenty-fifth annual report of the Oxford and Cambridge Schools Examination Board has been presented to the Convocation of the University of Oxford and the Senate of the University of Cambridge, and it states that inspections under the authority of the Board were held at 101 boys' schools, the number in the previous year having been 94, and at 82 girls' schools as against 76 in 1897. In the examination for Higher Certificates held in July, there were in all 2,027 candidates, 1,357 boys and 670 girls,

of whom 1,070 obtained certificates, and 308 of these obtained distinction in one or more subjects. Out of the 2,027 candidates 416 had already obtained certificates in a former examination, and of these 167 gained a certificate with distinction in the present year. Of the girls 424 were candidates for letters only, and 288 were given letters.

MISS E. P. HUGHES, Principal of the Cambridge Teachers' College, delivered an address in her native town (Carmarthen) on December 14. She accepted the cordial welcome accorded to her as one given to her father's daughter, Dr. John Hughes having resided in their midst for half a century. She said it was twelve years since she crossed the Dyke of Offa and invaded the land of the Saxon, but she must confess that the English had been very good to her. Speaking generally on the education movement, Miss Hughes stated that, although the Welsh had made a good start in secondary education, and secondary schools had been planted all over the Principality, still, the work of education was really only beginning, and, as compared with England, and, still more, as compared with Scotland, Wales was an uneducated country.

DURING the past month a fund of over £100,000 has been subscribed, on the suggestion of Lord Kitchener, in order to establish a college at Khartoum for the "civilization" (by way of education) of the Soudan. The decision to make the Gordon College a purely secular institution is used by Archbishop Walsh (in a letter to the *Times*) as an argument for giving Irish Roman Catholics the kind of University they want. Englishmen, he says in effect, without being necessarily secularists, are setting up a secular college at Khartoum, simply because they fear that, if they insisted on its undertaking religious instruction, it would fail to accomplish any educational object whatever. In Ireland the case is exactly reversed, for, unless education is allowed a religious environment, the majority of the people will have nothing to do with it. Practical common sense, therefore, suggests one treatment for the Soudan and another for Ireland. By refusing to look this fact in the face, Englishmen "are ruining the utility of more than one institution which has been set up and is being maintained in Ireland at a heavy cost to the public taxpayer, ruining, I mean, the utility of those institutions as regards the main object for which they exist—the conferring of the boon of higher education upon the people of Ireland."

YET another Education Bill. The Executive Committee of the Scottish Association for the Promotion of Technical and Secondary Education has presented a report, in which it urges that a Bill should be introduced into Parliament providing, amongst other things,

(1) That the available technical and secondary education grants shall be apportioned and paid to Local Authorities representing the counties and the following urban areas:—Edinburgh, Glasgow, Aberdeen, Dundee, Leith, and Govan—to be administered by them upon a general plan for the promotion of secondary and technical education. (2) That the Local Authorities for these areas shall be the several County and Burgh Councils; that these Councils shall each appoint an Education Committee, two-thirds of the members of which shall be members of the Council, and one-third additional members. These additional members of the Committee shall be persons possessing experience in connexion with education, especially secondary and technical, and shall be nominated for appointment by the Council. Women shall be qualified for appointment as additional members of the Committee. (3) That, subject to the approval of their educational schemes by the Scotch Education Department, these Local Authorities shall have administrative powers in regard to secondary and technical education in their areas; that the several Councils may delegate to their Education Committees all their powers in regard to education; that adequate arrangements shall be made for the efficient inspection and careful examination of all schools and classes carried on under the schemes of County and Burgh Education Councils. (4) That an Advisory Council be appointed by the Secretary for Scotland; that to this Advisory Council the Scotch Education Department shall refer all questions as to the limits of primary, secondary, and technical education, or with regard to the classification of schools, or to the regulation of the inspection and examination of secondary and technical schools and colleges, and that the Education Department shall not decide on any matter so referred to the Council until they have considered the report of the Council in relation thereto.

THAKORE SAHEB, the ruler of Gondal, one of the Kathiawar States, who received his education in England, has signaled his

return to India by instituting various large-minded domestic reforms. From the *Times of India* we take the following account of his new Girasia College at Gondal, which was formally opened by Lord Sandhurst, Governor of Bombay, on November 26:—

An indication of the spirit which characterizes the administration of the Thakore Saheb was afforded by the nature of the institution, to open which was the principal reason for Lord Sandhurst's brief visit to this interesting State. The Girasia College is a bold and enterprising attempt to grapple with one of the most serious problems affecting the welfare of Kathiawar. The position of the Girasias, the cadets of the ruling and wealthy landowning families, has become one of the most serious concern. Formerly noted for mental and physical superiority, they have sadly deteriorated. A false notion of family pride has led them to be extravagant when the cruel process of division and subdivision of estates enjoined frugality. They often become the prey of fraudulent money-lenders, and their lack of education renders them peculiarly open to fraud and chicanery. They are too proud to send their children to the ordinary schools, and too poor to afford a special institution like the Rajkumar College and the Talukdari Girasia School at Wadhwan. Realizing that the first step towards raising the Girasias to their former position must be the giving to them of a sound education, the Thakore Saheb has founded the Gondal Girasia College, a noble building, completely equipped in every respect at a cost of three lakhs, and has placed it in charge of Mr. Moor, a gentleman of large educational experience. A feature which differentiates Gondal College from similar institutions is the attempt that is made to run it upon the lines of an English public school. There is a common dining-hall, and boys are lodged in large airy dormitories. All boys, except under the doctor's orders, fare alike, and no private servants are allowed. Physical culture occupies a prominent position in the curriculum. A swimming bath has been made in the river, and a rowing club is in contemplation. At the present time about forty young Girasias are under instruction, but there is accommodation for several times that number.

Certain Oxford students have determined, in conjunction with a number of young residents there, to place, as far as they may be able, the advantages of Oxford at the disposal of men of small means. They find that a poor man who can afford £25 a year for board and lodging, and can pay in addition £6 a year for tuition fees, will be able to spend that period as a University student. But there are two conditions attached. One is that he shall supplement his year of residence with three years of home reading on the University Extension principle, and the other is that he shall join the "Ruskin Hall." To meet the case of promising young men who may not be able to make the initial outlay of £25, a generous donor, who wishes to be anonymous, has given a hundred free bursaries of £6 each. Among the University Extension students there are, no doubt, many who will avail themselves of this unique advantage. Those desiring to know more of the scheme should communicate with Mr. Beard, 41 Banbury Road, Oxford.

OUR Welsh Correspondent writes:—"During December there was issued to the Central Welsh Board and its examiners a report on the inspection and examination of the county schools for the year 1897-98. The report, which is confidential to members of the Board and to examiners, is a bulky volume printed at the Clarendon Press, and contains a mass of information which will be invaluable to the future historian of Welsh education. A smaller document, containing for the most part the general reports of the examiners in their various subjects, has been issued to members of the various county governing bodies. A general report upon the work of the schools for the past school year will shortly be published.—The Welsh county schools seem for the most part to be holding their prize distributions in December. At several of these meetings addresses have been delivered by prominent Welshmen and others. These meetings will doubtless do much to create an interest in education in the districts where they are held, but their chief value, it is hoped, will be in showing to parents that the home-training of the child should proceed hand-in-hand with the school training.—Mr. Edgar W. Jones, M.A. Lond., the new Headmaster of the County School, Barry, Glamorganshire, has already attained to a distinguished position among the headmasters of Welsh county schools, being a member of the Central Welsh Board, and of its Committees on Welsh Text-books, on Pensions, and on Oral Examinations. He is also a member of the Court of the University of Wales, and of the Standing Committee of the Guild of Graduates, as well as a Governor of the University College of Wales, Aberystwyth."

UNIVERSITIES.

(From our Correspondents.)

Cambridge. The Senate has now definitely approved the scheme for holding the Little-go four times a year, namely, at the end of each term, and at the beginning of the October term also. All who are entered for admission at a college are eligible as candidates, while in the case of women they must have been actually entered at one of the recognized colleges—Girton or Newnham. It is believed that the effect of the new regulations will be to make the Little-go practically an entrance examination. The colleges will now be able to say to the schools: "The University prescribes a definite test of proficiency in ordinary school work, which can and ought to be satisfied before entry; a candidate who is not up to this standard will be wasting his time by coming to Cambridge." It remains to be seen, however, whether all the colleges will be sufficiently self-denying to adhere to this rule.

A report of the Financial Board recently published makes it fairly clear that the system of borrowing money from external sources for the purpose of erecting new buildings is one which must be strictly limited in the future. The Board points out with great cogency that not only has the capital debt to be repaid in a fixed number of years, but also the new buildings will entail increased charges for maintenance and repair. The needs of the scientific side are urgent and unsatisfied, yet during the past few years we have seen one most important professorship suppressed, and two others instituted in subjects already well equipped with teachers.

A suggestion might be thrown out on the following lines. Why should not the University take a hint from other places of learning—create a readership in any subject, make the appointment for two or three years only, and give a nominal salary? The distinction conferred by the appointment would attract the best men. At present a life appointment of professors means that the statutory number of lectures must be delivered, but beyond that the University has no guarantee that effective work is done. A record of the attendance at certain professors' lectures would open the eyes of the Senate and the public.

The special examination in Political Economy, as remodelled some years ago, has been found to be too thorough and searching a test for the average pollman. It is now to have its rigour mitigated with a view to encouraging candidates. Doubtless the changes will be for the best, as the names of the signatories to the new scheme command respect.

The authorities at the Observatory have recently completed the erection of a new polar reflecting photographic telescope, which it is hoped will lead to highly important results.

The discussion on the report of the Library Syndicate was of a somewhat acrimonious character. It was proposed to make structural changes of a somewhat extensive character in the Library itself, and also to enlarge the numbers of the Library staff by the addition of a paid secretary. In the course of the debate, the Regius Professor of Physic, Dr. Allbutt, took occasion to pronounce the scheme to be emphatically mischievous; he spoke of the antiquated and chaotic state of the Library, and stated that to scientific men it was practically useless. Members of the Syndicate disagreed with the professor, but there is no doubt the proposed changes will meet with opposition when the necessary grace comes before the Senate.

The Vice-Chancellor has now published for the information of the Senate the full text of certain documents bearing on the entrance scholarship question. On October 20 the Committee of the Headmasters' Conference addressed a letter to the Chancellor setting forth the following facts:—(1) The academical and school year runs from autumn to autumn, and all scholarship examinations are held early in the academical year, twelve of the most important colleges this year having fixed their examinations between November 2 and December 7. (2) The elected candidates do not go into residence till the following October. A boy whose nineteenth birthday falls in December would be nearly twenty before commencing residence. (3) Elected scholars naturally become remiss during their last term at school. (4) The last year at school, in the case of the stronger candidates, is a time of rapid development in intellect as well as in character, and any interruption to work at the beginning of the year is disastrous. The Headmasters suggested as a remedy the shifting of the examinations to a later period in the academical year; for example, not earlier than January, or later than the Easter Vacation. In 1894, and again in 1896 and 1898, the views of the Headmasters were accepted in principle at Cambridge, but the

Oxford authorities would not co-operate. Now again a memorandum, signed by all the Cambridge tutors, reaffirms a resolution passed by the representatives of the Cambridge colleges on May 24, 1894. So the matter stands at present. It remains to be seen how the Oxford tutors will deal with the matter.

The University lately lost the services of one of the most promising teachers in the Medical School, Dr. E. H. Douty, of King's, who was urgently bidden to recruit his health on the Continent. Dr. Douty has now taken up his residence at Davos Platz, and is going to utilize his enforced absence from Cambridge in founding an institution for the treatment of phthisis on the Nordrack system. All Dr. Douty's friends and pupils in Cambridge wish him success in re-establishing his own health and that of others, while students will be interested to learn the results of his researches on the subject of the origin and treatment of tubercular disease.

Personal items of the month:—Crosse Scholarship: C. E. Garrad, Jesus; W. Outram, Pembroke (*eq.*). Walsingham Medal: J. G. Kerr, Fellow of Christ's College. Seatonian Prize: Rev. G. W. Rountree, M.A. Clare College. Whewell Scholarship: (1) J. E. R. de Villiers, LL.B. St. John's; (2) H. M. Adler, B.A. St. John's. Cobden Prize: S. J. Chapman, Trinity.

A CURIOUS state of affairs has arisen out of the London question of housing the new University. The real origin of the question is to be found in the inadequacy of the building in Burlington Gardens to the requirements even of the existing University. The Senate of above thirty years ago and the Office of Works of that day thought they were putting up a building for all time. They did not foresee the rapid spread of middle-class education, or, and more especially, the effect of throwing open all examinations and degrees to women on the same terms as to men; and, indeed, if they had foreseen, not much more could have been done than was done on the limited site at their disposal. Anyhow, for ten years past, at least, in the case of the larger examinations, notwithstanding that towards half the total number of candidates have been provided for at provincial centres, for a large proportion of the remaining number accommodation has had, and still has, to be found outside of, and generally at a considerable distance from, the University; while the absence of proper and adequate laboratories has reduced the authorities to all sorts of shifts for meeting, as nearly as may be, the ever-advancing demands of practical science.

But, at the end of November, the Government came forward with a proposal that the University should shift its seat to the building of the Imperial Institute at South Kensington; and the official memorandum of the Government further proposed to appoint a Committee, representing the University, the Treasury, and the Office of Works, to consider and report on all requirements. The offer of such a home, accompanied, as it is, by other liberal provisions, seems to the unprejudiced outsider an excellent one. The building is spacious and imposing; the situation is open and healthy; and there are some acres of ground attached, offering ample room for future extensions. Moreover, the building stands almost ready for occupation, so that there will be no waiting to find a new site and rear another building. Various trifling objections have been raised; but it seems that nothing short of a fatal disadvantage should prevent the acceptance of the Government's liberal offers.

There are two points, however, connected with the official memorandum which have roused more serious opposition in some quarters. In the first place, no provision is made for a representation of the Colleges upon the Committee of Inquiry. This is no doubt a genuine grievance, and a remonstrance on the subject was forthwith lodged by University College with the Government and with the present Senate. In the second place, the claim at the end of the remonstrance, to a voice in regard to "the purposes for which any proposed buildings will be used," is believed to be specially aimed at a clause in the memorandum proposing to provide "accommodation for the teaching side of the University." But such a claim can hardly be allowed. It is true that, when the present University was founded, there was an understanding that it should not interfere with the work of the College, which, on its side, had desisted from its efforts to become a University; and that understanding has been carefully maintained. But the new University will not be so bound. In fact, the recent agitation, in which the College itself was a leader, was for a teaching University; and the Government

obviously thinks and expects that it *will* teach. Nevertheless, it is undesirable that the University should interfere with college work; it might, however, meet a want in London by instituting post-graduate courses and facilities for research of the very highest order; and there is no reason why college professors of adequate attainment and reputation should not also be appointed University professors for organizing and performing such high and honourable service.

It would seem that these or other considerations must have raised some doubts in the College as to its own future position in the new University; for its next move was as strange as it was unexpected out of doors. The Council propose to place all they have and are, "site, land, buildings, and endowments, at the complete disposal of the reconstituted University." The object clearly is to make the College the centre of the "teaching side" of the University, and presumably the headquarters of the administration. For the latter purpose the College buildings, apart from their daily occupation, are as inadequate as the one in Burlington Gardens; and, as to the general proposal, it is one that the University is hardly likely to entertain. It would probably be followed by other similar proposals, and would thus involve the control and working of a heterogeneous group of colleges—a task for which the University, as framed by the Cowper Commission and modified by the recent Act, would be quite incompetent.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council took place at the College, Bloomsbury Square, on December 10. Present—Dr. Wormell, Vice-President, in the Chair; Miss Bailey, Mr. Barlet, Mr. Baumann, Mr. Bidlake, Mr. Brown, Dr. Buchheim, Mr. Butler, Mr. Charles, Mr. Chettle, Miss Dawes, Mr. Eve, Mr. Harris, Miss Jebb, Rev. G. P. Pearce, Mr. Pinches, Mr. Reynolds, Rev. Dr. Scott, Mr. Sergeant, and Mr. Armitage Smith.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the number of entries for the Certificate and Junior Forms Examinations, which had taken place on December 6th-9th, was about 9,500. The number of entries for the Diploma Examination was over 200.

The use of the College Lecture Hall was granted to the Private Schools' Association, for holding their annual meeting, on January 12, and to the Geographical Association, for holding theirs, on January 11.

The Report of the Examination Committee was adopted.

The Draft Report of the Council to the General Meeting was considered, and referred to the President, Vice-Presidents, and Dean, for final revision.

The following persons were elected members of the College:—

- Miss S. A. Arnold, A.C.P., Madras Collegiate School, Ucepery Square, Madras.
- Miss M. E. Baillon, A.C.P., Convent of the Ladies of Mary, Coloma, Croydon.
- Mr. C. D. Baxandall, A.C.P., 46 Balmoral Road, Lancaster.
- Mr. A. Beer, A.C.P., Ivel Bury School, Gloucester.
- Miss A. E. Coates, Glenholme High School, Basingstoke.
- Miss A. L. Firmin, A.C.P., Convent of the Ladies of Mary, Coloma, Croydon.
- Miss R. M. Girling, A.C.P., Pembroke House, Norwich.
- Miss E. Hill, A.C.P., The High School, Maidenhead.
- Miss M. F. Preston, A.C.P., 5 Iverson Road, Brondesbury.
- Mr. A. A. Thorne, B.A., 77 Robb Street, Georgetown, British Guiana.
- Mr. A. H. Ulyett, A.C.P., Sandgate School, Folkestone.
- Mr. W. Whiteside, A.C.P., 75 Clifton Street, Brook's Bar, Manchester.
- Miss E. M. Winniffrith, A.C.P., Prospect House School, Hythe, Kent.

The following books had been presented to the Library since the last meeting of the Council:—

- By BLACKIE & SON.—Anderson's Latin Unseens; Evans' Shakespeare's King Lear.
- By W. B. CLIVE.—London University Guide and University Correspondence College Calendar, 1898-1899; Briggs and Bryan's Tutorial Algebra, Part II.
- By KEGAN PAUL & Co.—Soleil's French Commercial Correspondence, Preliminary Course.
- By MACMILLAN & Co.—Bayley's Wachenhusen's Vom Ersten bis zum Letzten Schuss; Goldberg's De la Bete's Mon Oncle et Mon Cure.
- By the SCRIPT SHORTHAND Co.—Script Phonography in one vol., and School Edition in three parts with Keys.
- By the UNIVERSITY EXAMINATION POSTAL INSTITUTION.—Cambridge Higher Local French Papers; Dodd's Synopsis of French History, 1180-1314.
- Calendars of University College, London, 1898-99; Trinity College, London, 1898-99.

MACMILLAN & CO.'S NEW BOOKS.

NEW EDITION OF GREEN'S ENGLISH HISTORY.

SHORT HISTORY OF THE ENGLISH PEOPLE. By JOHN RICHARD GREEN, M.A. Edited by Mrs. J. R. GREEN and Miss KATE NORGATE. With Fourteen Hundred Illustrations. New Edition in Three Vols. Super royal 8vo, half leather binding, 40s.

* * * This book can be purchased on the instalment system. For particulars apply to the Booksellers.

EDWARD THRING, Headmaster of Uppingham School. Life, Diary, and Letters. By GEORGE R. PARKIN, C.M.G., M.A. With Portraits. In Two Vols., extra crown 8vo, 17s. net.

Guardian.—"He has so edited Thring's letters and diaries that they make a sort of book within the book, giving us side by side with the objective portrait of the narrative the reflection of his life as he knew it in his conscience before God."

Literature.—"The educational world will be the better for having had put on record the life's work of a generous, unselfish, fearless headmaster."

Journal of Education.—"It gives us the very form and presence of the man."

MON ONCLE ET MON CURÉ. Par JEAN DE LA BRÈTE, Ouvrage couronné par l'Académie Française. Adapted and Edited by E. C. GOLDBERG, M.A., Headmaster of the Modern side of Tonbridge School. Authorised Edition. Globe 8vo, 2s. 6d. [*Siepmann's Advanced French Series.*]

PETITES AMES, par EMILE POUVILLON. Edited by STÉPHANE BARLET, B. ès Sc. Univ. Gall., F.C.S., Senior Assistant-Master at the Mercers' School, &c. Globe 8vo, 2s. 6d. [*Siepmann's Advanced French Series.*]

VOM ERSTEN BIS ZUM LETZTEN SCHUSS: KRIEGS-ERINNERUNGEN 1870-71. Von HANS WACHENHUSEN. Edited by T. H. BAYLEY, M.A. Authorised Edition. Globe 8vo, 2s. 6d. [*Siepmann's Elementary German Series.*]

CORNELIUS NEPOS. Vol. I. Edited with Introduction, Notes, and Vocabulary, by HERBERT WILKINSON, M.A., formerly Postmaster of Merton College, Oxford. Pott 8vo, 1s. 6d. [*Macmillan's Elementary Classics.*]

SPHERICAL TRIGONOMETRY, THEORETICAL AND PRACTICAL. Exemplified by the Solution of a large number of Spherical Triangles. Adapted for the use of Students preparing for the following Examinations:—B.A. London; Lieutenant R.N.; Royal Military Academy; Intermediate Department of Science and Art, Mathematics, Fourth Stage. By W. W. LANE, B.A., Naval Instructor R.N., H.M.S. "Britannia." Demy 8vo, sewed, 2s. 6d. net.

INTRODUCTION TO THE THEORY OF ANALYTICAL FUNCTIONS. By J. HARKNESS, M.A. (Cambridge), Professor of Mathematics Bryn Mawr College, Pennsylvania, and F. MORLEY, Sc.D. (Cambridge), Professor of Pure Mathematics, Haverford College, Pennsylvania. Demy 8vo, 12s. 6d. net.

AN INTRODUCTION TO THE SCIENCE AND PRACTICE OF QUALITATIVE CHEMICAL ANALYSIS. Inorganic. By CHAPMAN JONES, F.I.C., F.C.S. (London and Berlin), &c. Crown 8vo, 6s.

Educational News.—"It maintains throughout an unvarying degree of excellence. We have little doubt that it will take its place as one of the best books on the subject."

PRACTICAL INORGANIC CHEMISTRY FOR ADVANCED STUDENTS. By CHAPMAN JONES, F.I.C., F.C.S. (London and Berlin), &c. Globe 8vo, 2s. 6d.

AN INTRODUCTION TO PRACTICAL PHYSICS, for use in Schools. By D. BINTOUL, M.A., Assistant-Master at Clifton College, and sometime Fellow of Corpus Christi College, Cambridge. Globe 8vo, 2s. 6d.

Nature.—"The book is especially suitable for the modern sides of public schools. As a physical laboratory manual for use in schools of this character it can be highly commended."

PUBLIC SCHOOL PROTRACTOR SCALE. Twelve in a packet. Price 6s.

NEW BOOK BY PROFESSOR SAINTSBURY.

A SHORT HISTORY OF ENGLISH LITERATURE. By GEORGE SAINTSBURY, Professor of Rhetoric and English Literature in the University of Edinburgh. Crown 8vo, 8s. 6d.

Times.—"Appears to us destined to take an important place in the higher educational literature, a place to which the author's immense erudition and clearness of view undoubtedly entitle it."

NEW VOLUME BY STOPFORD A. BROOKE.

ENGLISH LITERATURE FROM THE BEGINNING TO THE NORMAN CONQUEST. Crown 8vo, 7s. 6d.

St. James's Gazette.—"He has produced a single volume of handy size, containing the cream of his more elaborate study, and admirably adapted for the use of schools."

THE LIFE AND WRITINGS OF ADDISON. With Notes and Appendix by R. F. WINCH, M.A. Globe 8vo, 2s. 6d. [*Macmillan's English Classics.*]

Educational Times.—"Much care has evidently been given to the preparation of this work. The notes are so complete that the student can dispense with a history-atlas and etymological dictionary."

MACAULAY'S ESSAYS ON WILLIAM PITT, EARL OF CHATHAM. By R. F. WINCH, M.A., Author of "Notes on Macaulay's 'Essay on Boswell's Life of Johnson,' and 'Essay on Addison.'" Globe 8vo, 2s. 6d. [*Macmillan's English Classics.*]

CAMBRIDGE LOCAL EXAMINATIONS, 1899.

THE GOSPEL ACCORDING TO ST. MATTHEW.—THE GREEK TEXT. With Introduction and Notes. By Rev. A. SLOMAN, M.A. 2s. 6d.

MACAULAY.—LAYS OF ANCIENT ROME. With Introduction and Notes. By W. T. WEBB, M.A. 1s. 9d.

CAESAR.—THE GALLIC WAR. Book IV. With Notes and Vocabulary. By C. BRYANS, M.A. 1s. 6d.

OVID.—EASY SELECTIONS FROM OVID IN ELEGIAC VERSE. With Notes and Vocabulary. By H. WILKINSON, M.A. 1s. 6d.

PERRAULT.—CONTES DE FEES. Edited by G. E. FASNACHT. 1s. 6d.

HAUFF.—DAS WIRTSCHAUS IM SPESSART. Edited by G. E. FASNACHT. 3s.

SHAKESPEARE.—RICHARD II. With Introduction and Notes. By K. DRIGHTON. 1s. 9d.

MILTON.—PARADISE LOST. Books I. and II. With Introduction and Notes. By M. MACMILLAN, B.A. 1s. 9d.

VIRGIL.—AENEID. Book II. With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d.

CAESAR.—DE BELLO GALLICO. Book V. With Notes and Vocabulary. By C. COLBECK, M.A. 1s. 6d.

LIVY. Book XXII. With Notes and Vocabulary. By W. W. CAPES, M.A., and J. E. MELLISSH, M.A. 1s. 6d.

CICERO.—DE AMICITIIS. With Notes and Vocabulary. By E. S. SHUCKBURGH, M.A. 1s. 6d.

KENOPHON.—ANABASIS. Book IV. With Notes and Vocabulary. By Rev. E. D. STONE, M.A. 1s. 6d.

AESCHYLUS.—PROMETHEUS VINCTUS. With Notes and Vocabulary. By Rev. H. M. STEPHENSON, M.A. 1s. 6d.

— Edited by E. E. SIKES, M.A., and ST. J. B. W. WILLSON, M.A. 2s. 6d.

HOMER.—ILIAD. Books I., IX., XI., XVI.—XXIV. The Story of Achilles. Edited by J. H. PRATT, M.A., and WALTER LEAF Litt.D. 5s.

HERODOTUS. Book VI. Edited by Prof. J. STRACHAN, M.A. 3s. 6d.

THUCYDIDES. Book VII. Edited by E. C. MARCHANT, M.A. 3s. 6d.

— Books VI. and VII. Edited by Rev. P. FROST, M.A. 3s. 6d.

GOETHE'S IPHIGENIE AUF TAURIS. Edited by C. A. ROBERT, Ph.D. 3s. 6d.

Some Reasons Why Cassell's Dictionaries Are the Best.

CASSELL'S FRENCH DICTIONARY (515th Thousand, price 3s. 6d.) is the best because it contains more words and more idiomatic phrases than any other French Dictionary of the same price, because it is printed in bold, clear type; and, lastly, because it is thoroughly revised according to the latest Dictionary of the French Academy.

CASSELL'S GERMAN DICTIONARY (222nd Thousand, price 3s. 6d.) is the best because it not only contains the exact meaning of every word, but also copious Explanations and Illustrations of the different ways in which each word may be used.

CASSELL'S LATIN DICTIONARY (102nd Thousand, price 3s. 6d.) is the best because it contains everything that a Student of Classical Latin can require. It contains a large number of quotations to illustrate Construction and Usage, Historical and Geographical Notices, and Interesting and Authoritative Etymologies.

CASSELL'S ENGLISH DICTIONARY (price 3s. 6d.) is the best because—

"In addition to the clear arrangement, legible type, and other advantages of the book, it is provided with a common-sense scheme of pronunciation, includes a large number of scientific words, and does not neglect Americanisms, Provincialisms, Archaic Words, Phrases and Noun-words, or words coined for a special occasion. An excellent dictionary."—*Pall Mall Gazette*.

CASSELL'S RECENT PUBLICATIONS.

A HISTORY OF ENGLAND. Second Edition. Revised. From the Landing of Julius Caesar to the Present Day. By H. O. ARNOLD-FORSTER, M.P., Author of "The Citizen Reader," "This World of Ours," &c., &c. Extra crown 8vo, 852 pages, copiously Illustrated, 5s.

The *Spectator* says:—"No one by whom or to whom this book is read will fail to realize, if he has a normal amount of reason and imagination, the continuity of English History, the connexion with the present and the past, and the profound abiding significance of the internal and external struggles of our forefathers."

CASSELL'S POETRY FOR CHILDREN. Six Books, each containing sixteen pages in wrapper, with Notes and short Biographies of the Authors, 1d. each; or complete in one Vol., cloth limp, 6d.

"Your 'Poetry for Children' will, I feel sure, become very popular. In selection, paper, type, and general 'get up,' the series is a distinct step in advance on anything I have seen, and I have examined most in the market."

(Signed) J. OYENDEN, The School, Colton, Rugeley.

A PRACTICAL METHOD OF TEACHING GEOGRAPHY. (England and Wales.) By J. H. OVERTON, F.C.S., of the Municipal School, Banbury. (Twenty-two Maps, interleaved with tracing paper.) 6d.

CHEAP EDITION. JUST PUBLISHED.

A COMPLETE MANUAL OF SPELLING ON THE PRINCIPLES OF CONTRAST AND COMPARISON. With numerous Exercises. By J. D. MORRELL, LL.D. 113th Thousand. Price 6d.

BLACKBOARD DRAWING. Some Hints on Sketching Natural Forms. By W. E. SPARKES, Art Master, Borough Road Training College, and Certificated Art Master, South Kensington; Author of "How to Draw from Models and Common Objects," and "How to Shade from Models, Common Objects, and Casts of Ornament." With Fifty-two Full-page Illustrations by the Author, containing 345 Figures. With a Preface by Principal WITHERS. Demy 4to, cloth, price 5s.

CASSELL'S SONG BOOKS.

Edited by JOHN FARMER, Musical Director of Balliol College, Oxford, late of Harrow School.

SCARLET AND BLUE; or, Songs for Soldiers and Sailors. Extra crown 4to, cloth, 5s. Words only, royal 32mo, 6d., paper; 9d., cloth.

GAUDEAMUS. A Selection of Songs for Colleges, Schools, and the Home. Extra crown 4to, cloth, 5s. Words only, 6d., paper; 9d., cloth.

DULCE DOMUM. 134 Songs for Children. Crown 4to, (Old Notation and Words), 5s. Also issued in crown 8vo size, in Two Parts (Tonic Sol-fa and Old Notation and Words), 6d. each. For Infant Schools and Kindergartens.

Cassell's Educational Catalogue will be sent post free on application.

FORECASTS AND COMMENTS.

January 1, 1899.

THE Winter Meeting for Teachers will be Fixtures. opened on Tuesday next, January 3, at the College of Preceptors, when Sir Joshua Fitch will deliver an address in the Lecture Hall at 10 a.m.

* * *

WE understand that both the number of teachers who have paid for tickets and the number of members of the College who have applied for free tickets for themselves (not transferable) largely exceed last year's entries. The success of the Winter Meeting would seem, therefore, to be assured beforehand.

* * *

THE Conversazione at Clothworkers' Hall will be held on Wednesday, January 11.

* * *

THE Association of Headmasters holds its annual general meeting on Jan. 13, 14. Mr. Vardy, of Birmingham, has been selected as President for 1899, and the Private Schools' Association will meet at the College on January 12.

* * *

A PESTALOZZI celebration will be held at the College of Preceptors on Wednesday evening, January 4, under the auspices of the Pestalozzi Society.

* * *

At the Royal Institution Sir Robert Ball began his course of astronomical lectures for young people on December 27. On January 17 Prof. Ray Lankester will give the first of a series of lectures on "The Morphology of the Mollusca." On January 19 Mr. Savage Landor gives the first of three lectures on "Tibet"; on January 20 Prof. Dewar lectures on "Liquid Hydrogen"; and on January 21 Sir A. Mackenzie will give the first of three lectures on "Liszt, Tschaiakowsky, Brahms."

* * *

THE Association of Technical Institutions will hold its annual meeting at Haberdashers' Hall on January 12. The Earl of Spencer, K.G., has consented to be nominated as President for the year 1899; and, in the unavoidable absence of the President, Sir Bernhard Samuelson, Bart., F.R.S., the Vice-President, Mr. Henry Hobhouse, M.P., will preside.

* * *

THE Incorporated Society of Musicians will hold its annual conference at Plymouth during the first week of January.

Education Gossip. THE benefactions of the month include the impulsive endowment of Gordon College, Khartoum, with over £100,000—a happy impulse on the part of Lord Kitchener's countrymen, who are doubtless glad to show that they can build up a new nation where they wiped out an old one. Of course, the plan of Gordon College is to teach the natives of the Soudan through their own language, and with due regard to their own ideas and convictions.

* * *

IN Greater Britain—not yet in Great Britain—the six-figure pious founder has appeared in the person of Lord Strathcona and Mount Royal, now High Commissioner for Canada. He has endowed the Victoria College for women at Montreal with

a sum of one million dollars (£200,000). We may, however, record the gift of £250,000 by Lord Iveagh to the Jenner Institution, for research in bacteriology.

* * *

It has been affirmed that the suggestion made to the Senate of the University of London to the effect that the buildings of the Imperial Institute would be available without rent for the central administration of the University was accompanied, or reinforced, by the offer of an annual grant of £40,000. But statements and figures of this kind must be a good deal more definite before we can deduce much from them as to the future constitution of the University.

* * *

As our London correspondent has discussed the thorny question of headquarters, we shall not for the present add anything to what he has said. So far as we can see, it matters very little where the public offices and the examination schools are to be, provided that they are very grand and very roomy. We are more curious as to what the Statutory Commission is doing. The fixing of the headquarters will doubtless assist its work of organization.

* * *

THE canvassing committee under the Birmingham University scheme state that the total sum promised up to the date of the public meeting in the Council House in July last (£95,658) had already been increased to about £115,000. Mr. Frank McClean, M.A., F.R.S., of Tunbridge Wells, has announced his intention to contribute the sum of £2,000 to the fund. The Lord Mayor of Birmingham announces a donation of £1,000 from Alderman T. S. Fallows, J.P. The committee will hold their next meeting on January 25, after which a second list of donations will be published.

* * *

A "WARRANT OF INCORPORATION"—whatever that may mean has been granted for a branch of the Navy League at Bradfield College, with the following committee:—The Rev. H. B. Gray, D.D. (Warden of Bradfield, a Vice-President of the League), Frederick Jacob, Esq., B.A., Mr. A. M. C. Nicholl, Mr. L. F. Goldsmid, Mr. G. R. Barker, Mr. R. Master, Mr. C. G. Ling, Mr. R. L. Chambers. The "Mr."s, we presume, are boys in the school.

* * *

THE Council of the Cambridge Senate has recommended that the completion of the fiftieth academic year of the tenure of the Lucasian Professorship of Mathematics by Sir George Stokes be formally celebrated by the University on June 1 and 2, 1899, and that a sum of £400 be placed at the disposal of the Council for the necessary arrangements in connexion with the celebration.

* * *

DR. ISAMBARD OWEN thinks that the Welsh Intermediate schools present sundry object-lessons to English secondary schools. Sir William Harcourt, in his recent speech at Aberystwyth, said: "Proud might Wales be that she had given the lead to England in educational efficiency." Dr. Maenamara, speaking to a Welsh teachers' gathering at Merthyr, took a different view. He contended that in many vital respects Wales made a bad third to England and Scotland, and the Chairman of the Merthyr School Board endorsed the statement.

* * *

AN International Conference on Child Study will be held in Buda-Pesth next September.

* * *

ON December 20, the President of Magdalen College, Oxford, unveiled a memorial tablet in Bath College in honour of Mr. T. W. Dunn, who was Headmaster from 1873 to 1897. Mr. Warren had been a pupil of Mr. Dunn's at Clifton.

* * *

MR. ALEX. RITCHIE, J.P., chairman of the Schools Committee of the Corporation, has been presented with a testimonial by the masters of the City of London School, in recognition of several important improvements effected in their position during

his year of office. The presentation, which was made on behalf of his colleagues by Mr. R. F. Charles, one of the senior masters, consisted of an illuminated address, together with a handsome board's head mounted in silver, and surmounted by a silver snuff-box.

* * *

AN address has been presented to the Rev. C. G. Gull, Headmaster of the Grocers' School, Hackney, as a token of confidence from parents and scholars. In making the presentation, Archdeacon Sinclair said they were giving a prize to the Headmaster, who deserved it as much as, if not more than, anybody. The opportunity for the presentation arose through some adverse criticism of an act of Mr. Gull in maintaining the discipline of the school, and the parents have recognized that the whole standing of a great school like this must rest on the judgment and ability of the headmaster. In one sense, Dr. Sinclair said, they felt gratified that the gentleman, who had acted under a mistaken sense of duty, had given them the opportunity of showing their appreciation of the efforts of Mr. Gull, who for the past seventeen years had controlled the destinies of the school.

* * *

It has become necessary, on financial grounds, to give notice of the closing, next June, of Codrington College, Barbadoes, which is affiliated to the University of Durham.

* * *

DURING last session the following new departments were created at University College, London:—the Laboratory of Experimental Psychology, the Pender Chair of Electrical Engineering, and the Edwin Chadwick Chair of Municipal Engineering, and the French and German departments were completely re-organized.

THE BISHOP OF LONDON has nominated the Rev. T. W. Sharpe, M.A., C.B., who was recently elected Professor of Theology, to be the Principal of Queen's College, Harley Street. Mr. Sharpe was a Double First and Wrangham Medallist of Trinity College, Cambridge, Fellow and Lecturer of Christ's College, and Inspector of Schools and Training Colleges. This year he retired from the public service in which he was chief inspector and head of the Administrative Division of the Education Department. Mr. Sharpe is also a member of the Council of the College of Preceptors.

* * *

THE Professorship of Pathology in Cambridge University is vacant by the death of Prof. A. A. Kanthack, M.A., M.D. It was only last year that Dr. Kanthack succeeded the late Dr. C. S. Roy in the Professorship. He went up to Cambridge about eight years ago, having gained the John Lucas Walker Studentship. He was B.A., B.Sc., and M.D. of London, and was for some time Lecturer in Pathology at St. Bartholomew's Hospital, and Jacksonian Prizeman, Royal College of Surgeons. Prof. Kanthack was educated at Liverpool. He was appointed deputy to Prof. Roy during his illness, and succeeded him at his death.

* * *

MR. T. L. BULLOCK, M.A. of New College, Oxford, has been elected Professor of Chinese, in succession to the late Dr. Legge.

* * *

THE Council of University College, London, have appointed Dr. S. Shechter to the Goldsmid Chair of Hebrew, vacant by the resignation of Prof. Marks.

* * *

MR. STANLEY LANE POOLE has been elected Professor of Arabic at Trinity College, Dublin. There were thirteen candidates. Dr. James Little has been appointed Regius Professor of Physic in the same College. The Rev. M. Kaufmann has been appointed Donnellan Lecturer for 1899-1900.

* * *

THE University Court of St. Andrews has resolved to found new Chairs of Anatomy and Physiology (which will duplicate

similar Chairs at Dundee) in the United College at St. Andrews. The stipends will be respectively £500 and £425.

* * *

MR. G. F. STOUT, M.A., Anderson Professor of Comparative Psychology at Aberdeen, has been appointed Wilde Reader in Mental Physiology at Oxford.

* * *

A LECTURER in Mathematics is required for Mason University College, Birmingham. Applications by January 2.

* * *

MR. J. L. PATON, assistant-master at Rugby, was selected (in lieu of Mr. Barnard) as successor to Mr. H. W. Eve in the Headmastership of University College School.

* * *

IN place of the Rev. Dr. Wood, the new Headmaster of Harrow, the Rev. C. C. Tancock has been appointed Headmaster of Tonbridge School. There were upwards of fifty candidates for the office. Mr. Tancock was educated at Sherborne School and Exeter College, Oxford; took a first class in Classical Moderations in 1872, and a first in Greats in 1874. After being an assistant-master at Charterhouse for eleven years, he was elected to the Headmastership of Rossall School, in Lancashire, in 1886, where he remained until 1896, when he resigned on account of ill-health. Soon afterwards he accepted the living of Leek, near Manchester. He will take office at Tonbridge in January.

* * *

THE REV. EDMUND HENRY ELWIN, M.A. of Merton College and Wycliffe Hall, Oxford, has been appointed to the Principalship of Fourah Bay College, Sierra Leone, vacant by the death of the Rev. W. J. Humphrey, who was murdered by savages in the discharge of his duty some months ago.

* * *

MR. E. W. JONES, M.A. Lond., Headmaster of Llandilo Schools, has been appointed to the Headmastership of Barry Intermediate School; Mr. A. Thornton, M.A. Camb., Headmaster of Bridlington.

* * *

THE death is announced of Miss Belcher, Headmistress of Bedford High School.

* * *

THE second and third volumes of the "Special Reports on Educational Subjects" reach us together from Cannon Row. We must look for early opportunities of returning to some of the more interesting numbers in these two solid books, each of which contains 700 pages, and which are sold respectively for 6s. 2d. and 3s. 3d.

* * *

THE contents of Vol. II. include a valuable statement on the origin and working of the Welsh Intermediate Act, contributed by the Charity Commissioners; a paper by Mr. Sidney Webb on "The London Polytechnic Institutes" (with illustrations which have strayed into the preceding paper); an account of the London School of Economics, by Professor Hewins; "The Curriculum of a Girls' School," by Mrs. Bryant; a series of papers on physical education in various elementary and secondary schools; with many other more or less attractive features.

* * *

THE third volume contains very readable articles on Swiss organization, by Mr. Morant; on the higher schools in Prussia, by Mr. Lipscomb, and in Baden, by Mr. H. E. D. Hammond; on educational tendencies in Germany, by Prof. Rein; and on the teaching of modern languages in various parts of Germany, by Mr. Fabian Ware, Miss Brebner, and Prof. Hausknecht. But the most important contribution to this volume is a study of "Problems in Prussian Secondary Education for Boys, with special reference to similar questions in England," by Mr. M. E. Sadler, which calls for closer attention than we can pay to it this month.

PROF. G. W. PROTHERO, with whose work in the domain of history, whether as a teacher or as an editor, our readers will be familiar, has assumed the editorship of the *Quarterly Review*, on the retirement of Mr. R. E. Prothero from that position.

* * *

THE WARDEN OF RADLEY strongly supports a proposal for a cheap series of facsimiles of interesting historical documents. He writes:—

Some time ago I endeavoured to procure copies of the facsimiles of classical manuscripts published by the Palaeographical Society. I found it impossible to get those I wanted without buying the whole publication, the cost of which, of course, is considerable, while by far the greatest part is quite useless for school purposes. If, however, one could obtain facsimiles of the great codices of the Greek Testament, the Medicæan *Æschylus*, the Palatine *Virgil* (and possibly *Euclid*), a privilege would be secured for which I think all schools where the classics are taught would be grateful. Similarly, I cannot doubt that some of the facsimiles now published would be useful for schools if they could be bought at moderate cost.

* * *

A MEMORIAL volume of "Nature Studies, with Critical Essays and Lectures," by Mr. W. J. C. Miller, B.A., late Registrar of the General Medical Council, and the original conductor of the special "Mathematics" section of the *Educational Times*, is being prepared by Mr. H. Kirke Swann. It will include a biographical notice and a portrait, and will be published about a month hence (on subscription) by Messrs. Bale & Son.

* * *

POLITICS generally fail to retain the whole heart of a man who has made literature his first pursuit. There is always a divided allegiance, even when the truant does not return for good to his *premier amour*. Mr. Justin McCarthy, since he retired from the Irish leadership, has made up for lost time by two or three books in the old vein, one of which, "Modern England (1800-1840)," in the "Story of the Nations Series," we reserve for further notice. It is the forty-ninth volume of this comprehensive series, and we feel inclined to congratulate the publisher on the discovery of the English nation.

* * *

THE QUEEN has accepted a copy of Lieut.-Colonel A. O. Green's "Hindustani Grammar," published in two volumes, by the Clarendon Press, and has commanded Mr. R. R. Holmes to return thanks to the author "for this interesting addition to the Royal Library."

* * *

MESSRS. RIVINGTONS will issue the following books in January:—"An Elementary History of Greece," by C. W. C. Oman, M.A.; "Elementary Hydrostatics," by Charles Morgan, M.A.; and "Hercules Furens," from "Euripides," edited, with Introduction and Notes, by A. F. Hort, M.A., assistant-master at Harrow School—a new volume of Rivingtons' "Middle-Form Classics."

* * *

THE "Intermediate Text-Book of English Literature" was commenced some years ago by the late Mr. W. H. Low, and has now been completed by Mr. A. J. Wyatt, whose experience in lecturing and examining at more than one English University has fitted him for the task. The work will be issued in two parts, the first dealing with English literature from its earliest beginnings to 1660, the second covering the period 1660-1832. Beyond that date "it is considered that English literature cannot yet satisfactorily form a subject of instruction" (!)

A RECORD B.Sc.

THE functions and utility of examinations have been discussed from, I suppose, well-nigh every point of view, and I do not intend to review the whole matter. I wish merely to relate the experience of a much-examined individual, whose career, I fancy, is almost unique. The person to whom I refer must have pretty nearly established a record as regards English examinations, and cannot be very low down in international lists, even if we include the Heathen Chinese. Everybody has heard the story of the man who "went up" year in year out to "have a shot" for his Little-go; how, in process of time, he married and had a

son, who also underwent that ordeal, and returned home saying: "It's all right; I'm through, but the Gov'nor's ploughed again." Such tales are evidently "yarns." Internal evidence condemns them.

The examinations of the London University are reputed hard, the standard is alleged to be high, the examiners are said to be lacking in feeling. These charges may, or may not, be true. I am not going to maintain or dispute them. Dr. Bain, of Aberdeen, would call it a question of relativity, which is true. Relatively to my friend the examinations were "hard," the standard was "high," the examiners have been "cruel." To descend to particulars.

Mr. Dash from his earliest childhood showed a preference for natural science, which resulted in a determination to possess the legal right to place the mystic letters B.Sc. after "Dash." So he proceeded to matriculate at London University, and with a light heart paid his fee, and presented himself at Burlington Gardens. But, if his heart was light, so were the contents of his head. He was rejected in Latin, French, Mathematics, Natural Philosophy, and Chemistry. (Failure No. 1.)

Undaunted, he entered again, paying a smaller fee, which privilege, by the way, appears to be evidence of one spark of humanity in this hard-hearted Body. A marked improvement is to be observed. He failed only in Latin, French, Mathematics, and Natural Philosophy. Chemistry was conquered. (Failure No. 2.)

Did he despair? No. Again he paid the reduced fee, only to be ruthlessly "plucked." He was too weak in French. Modern languages were evidently not his forte, though paper knowledge only was required. Having a scientific bent, this is, perhaps, but natural. High mental development in one direction entails, *ceteris paribus*, a corresponding starving of the other parts. (Failure No. 3.)

I may mention incidentally that Mr. Dash did not receive his quietus in French calmly, but proceeded to interview the Registrar or his representative, and gently but firmly requested him to look out his French papers, to make sure there was no mistake. There was no mistake. But it is a long lane that has no turning, and the tide in his affairs, to change the metaphor, was taken at the flood at the next examination. He got through, and became, *ipso facto*, an undergraduate of the University of All the Talents.

Matriculation is fondly supposed to give proof of a good general education, whatever that may mean; and Mr. Dash, having shown himself generally well educated, was free to specialize in science. But his inclinations pointed to natural science, and the obdurate Body prescribed an Intermediate Examination in Science, which, unfortunately for our subject, was not natural, but highly unnatural. All roads lead to Rome, but there was only one pass to the B.Sc., and that consisted in "satisfying the examiners" in Pure Mathematics, Mixed Mathematics, Experimental Physics, Chemistry, and General Biology. It looks a lot, and so he found it. He was "spun" in each and every subject. (Failure No. 4.)

This would have daunted most men—and women, for London University is asexual, or rather bisexual—but Mr. Dash remembered his matriculation experience, and plucked up heart. The Inter. Sci. is not like the Derby. You may have as many shots as you please. The result of the next essay surprised no one more than the examinee. He passed. How, is to this day a mystery to him. He has never been able to understand it, but regards it as one of the many inexplicable phenomena connected with examinations "*quorum pars magna fuit*." The goal of his wishes and endeavours now loomed large and tangible before his eyes, for, the Rubicon of unnatural science and general knowledge being crossed, the rest would be a labour of love. His heart had always fondly turned to natural science. From his earliest youth beetles and frogs had been his constant companions, to break stones and gather fossils were occupations of pleasure unalloyed with pain, to gather buttercups and daisies had ever been associated in his mind with pure idyllic bliss. Therefore, with a light heart, he selected Botany, Zoology, and Geology from the numerous subjects written plain for all folk to see in the syllabus of the London University.

Visions of high honours floated before his eyes, and already in fancy he placed himself among the Owens and Huxleys, the Darwins and Spencers, of science. But Mr. Dash must have overrated his ability, or underrated the standard of the examination.

Now, when success seemed like a fruit well within his grasp, he was to give the lie to the psychological law that interest determines attention, and attention conduces to the setting up of "lines of least resistance," which, in their turn, are essential to a good memory. "Twas not to be." The nymph was coy, and not to be lightly wooed or easily won. "The passing of Dash" was fated to be a long, long lane. Perhaps the simile of the lane is not the best—we may rather call the course a cross-country one with frequent obstacles.

The obstacles that caused the first spill were Botany and Zoology. (Failure No. 5.)

He practically dropped Geology and went for the other two. Again they proved a stumbling-block. (Failure No. 6.)

He persisted. They once more appeared as joint hindrances to his further progress. (Failure No. 7.)

His next essay was less unsuccessful. Zoology alone stopped his onward course. (Failure No. 8.)

He murmured: "Botany is conquered." Alas! he was "shot" in Botany next time. (Failure No. 9.)

With logical acuteness he dropped Zoology to a great extent, with the result that he next failed to satisfy the examiners in that. (Failure No. 10.)

"Nil desperandum" was his motto, and, girding on his armour, he went forth once more to battle with these Philistines. But the ways of examiners are indeed inscrutable. He was ploughed in Botany and Zoology. (Failure No. 11.)

To any one not of scientific habits of thought this would have seemed a case of degeneration. Far otherwise with Mr. Dash. He tempted Providence once again in 1896. He failed. (Failure No. 12.)

What stumped him on that occasion I do not know, nor have I been told whether he entered in 1897. Probably he did. But 1898 brought him to the desired end. He passed; and he may well be pardoned if he spends the greater part of his waking hours in scribbling the hard-won letters B.Sc. after his name. A little sum in simple addition, with the help of the theory of probability for the last two failures, will tell the reader how many times he has passed the final B.Sc. examination.

This is not the record of the man who is always "going to" read, who "goes in" on the off chance of lighting upon an "easy year," or of finding a less than ordinarily cruel set of examiners. It is the true history of a consistent, continuous, and continual worker. It goes without saying that he is lacking in ability to pass examinations, but, withal, he is a splendid teacher. There are, it seems, no other available means of testing qualifications, and, if any one chooses to take up the position that the man who is unable to pass these examinations is unable and unfit to teach, his argument is unassailable. But inability to pass examinations is not proof of lack of knowledge. To a great extent it was due in this particular case to nervousness. When on the morning of his examination a man's knife and fork bent a tattoo on his plate, it is at least open to question whether that man's condition is normal.

As I have said above, the advantages and disadvantages of examinations have been urged times without number, and the arguments *pro* and *con* are pretty well known. Every one admits their badness—no one denies their usefulness. They are a compromise, and, as such, must stand until a better system can be devised.

At any rate, the above is a true account of a man who has spent some twenty years in trying to pass examinations, whose life has been one long misery therefrom, whose general health is probably impaired, as his nervous system most certainly is. He is a woe-begone specimen of the result of over-inoculation with the examination virus.

One cannot but admire the grim and dogged determination of the man, though there is something sad, too, in the spectacle. He resolved never to cease trying, and I had thought that future years would see a careworn, decrepit old man toiling up the steps of the London University, his mind *une idée fixe*. I am glad it is not so. In conclusion, I may add that I am violating no confidence in giving these details. Mr. Dash gave me full permission to make his case known.

W. T. K.

CORPORATE LIFE AND GAMES IN SECONDARY SCHOOLS.

ON December 7, Mr. F. P. B. SHIPHAM, of St. Olave's Grammar School, read a paper on this subject at the College of Preceptors, the Chair being taken by Mr. C. C. Cotterill, M.A. The lecture, and the discussion which followed it, were of a very interesting character.

In the early part of this year a number of assistant-masters attended a course of lectures, given by Mr. J. J. Findlay, at the College of Preceptors, on "The Organization of a Secondary School." After each lecture, papers on topics arising out of the lectures were read by different members and discussed; and, frequently, at the end of the week, visits were made to schools of interest in or near London. Out of these discussions and visits arose a desire to find out what was being done in day schools, especially in large towns, to overcome the difficulties of fostering games and creating a corporate life. A joint inquiry was, therefore, instituted by the College of Preceptors' Training Department and by the Assistant-Masters' Association.

The circulars of inquiry were answered by 66 schools, containing nearly fifteen thousand pupils. Of these schools, 4 are girls' day schools, and the rest boys' schools. Of the 62 boys' schools, 12 are boarding schools, or schools in which boarders are in the majority, and 50 are day schools, or schools in which day boys are in the majority. Of the 50 day schools, 15 are in London, 18 in other large towns, and 17 in small towns. The schools vary in other ways, being rich and poor; public, proprietary, and private; small and large; and they may, I think, be accepted as representative of the different types of secondary day schools prevailing in England.

The circular of inquiry contained questions relating to reading-rooms and libraries, school magazines, and societies for chess, photography, and natural history, Debating Clubs, and Old Boys' Clubs. Of these there is no mention in this paper.

The following table of statistics will be useful for reference to those reading the essay:—

Description of Schools.	Number of Schools.	Total Number of Pupils.	Day Pupils.	Boarders.	Living more than 14 miles from School.	House System.	Gymnasiums.	Fee for Gymnasium.	Drill.	Athletic Sports.	Systematic Training for Sports.	Physical Measurements.	Boys allowed to belong to Local Clubs.	Compulsory Games.
Girls'	4	1,254	1,168	86	534	0	4	1	4	3	2	2	0	0
Boarding..	12	2,030	434	1,596	86	8	12	10	9	10	2	8	0	10
Day.....	50	11,493	10,614	879	4,259	11	38	8	42	46	8	12	20	12
Total	66	14,777	12,216	2,561	4,879	19	54	19	55	59	12	22	20	22
London ...	15	4,322	4,023	299	1,919	3	14	4	15	15	2	1	*	4

* Information on this point is rarely given in regard to London schools; it is, however, admitted that 1,066 pupils—one-fourth of the total—take no part in the school games.

THE PUBLIC-SCHOOL PRODUCT.

If we review the history of education from the earliest times—I add in haste that I do not to-night propose to make such a review—and among all nations, we find the English “public school” unique in its methods and in its results. Its system of athletics produces men whose physique equals or surpasses in grace, dexterity, and in strength the finest athletes of ancient Greece. “Good heavens! Why are not our boys like that?” exclaims the envious foreigner; and well may he envy and emulate, if, indeed, the race is to the swift and the battle to the strong—if, indeed, M. Gambetta was right when he deplored the physical inferiority of the French nation as the cause of the *déché* of 1870—if, indeed, the passion for athletics run through all classes, and save us from degeneration.

Again, by its anticipation of the battle of life, the “public school” rears men to be makers and rulers of empire. To this let an Etonian Prime Minister bear witness. “Of the last six Viceroy of India,” said Lord Rosebery the other day, “all but one were Etonians, the best part of whose education was not the education of the brain, but the education of character, and it is character that has made the Empire and its rulers.” By its corporate life it helps to intensify that consciousness of nationality and of imperial destiny which answers to the ever-increasing strain. “Among the strong passions of these latter days,” says a former Headmaster of Harrow, “the *esprit de corps* of our public schools is more or less new in man’s history. There is, of course, no trace of this feeling in ancient life, whether Hebrew, Oriental, Greek, or Roman. In modern life there is little or no trace of it on the Continent, or, except quite latterly, even in America. Nay, even here in England you will scarcely find it as an active, visible power till, say, the last century and a-half.” But it has come to remain with us and to increase, because it is valued and fostered. Every strong attachment to a community is a force which makes against egotism. This *esprit de corps*, however, is not a mere sentiment, but a passion fruitful in works and strengthened by works. *Esprit de corps* implies all that we mean by corporate life, that community of life in which each so takes part, and by which each is so influenced, that the school is itself one living organism, and not a mere assemblage of individuals.

These results, then—fine physique, and good health, character, and *esprit de corps*—are becoming more and more the aims of day schools also, and it is the object of our meeting this evening to consider how far, how much further, the unique success in these directions of the public boarding schools can be achieved in secondary day schools.

I.—THINGS AS THEY ARE.

My paper is divided into three parts. The first part is an attempt to review what is accomplished with regard to physical measurements, gymnastics and drill, athletic sports, swimming, cricket, and football clubs. The second deals with the causes of failure, and the third with remedies and sources of success.

PHYSICAL MEASUREMENTS.

From only four schools have we received the report that all the particulars mentioned in our circular of inquiry are recorded under the direction of a physician and reported to parents. Of these, two are girls’ schools, one a boarding school, in which one expects to find more solicitude than in a day school, and the fourth a London day school. Only twelve day schools out of the fifty, or 24 per cent., concern themselves systematically with this matter, and, of these, one merely takes a few measurements “occasionally,” another “optionally,” and another “irregularly.” The intervals of making observations vary, being monthly, terminal, or annual; in one boarding school they are

taken at the beginning and end of term, with a view to comparing the physical results of school life and life at home. Most of the schools report to the parents either regularly or in special cases of defect; and in one case each boy is provided with a printed copy of the report. It would appear, then, from our inquiry, that the importance of systematic measurements is very little realized, and that schoolmasters rely upon their own powers of observation to detect deficiencies of eyesight and hearing, and are unwilling to make a complete physical examination, as being either useless or more properly devolving upon parents.

Our reports show, however, that very practical use is made of the information acquired. The headmaster of a school belonging to the Society of Friends informs us that “boys who are not up to the average in height, weight, drawing power of arm, girth of biceps, girth of empty chest, and breathing capacity of chest, are compelled to practise suitable exercises to bring them up to the standard.” Dr. Dukes, also, in “Health at School,” speaks of a headmaster who, by a careful system, established three conclusions: firstly, that a boy’s chest might be developed by suitable exercises to a high standard; secondly, that a steadily increasing chest is a sign of sound lungs; and, thirdly, that a stationary chest at the growing age demands medical examination. Dr. Dukes further points out that a medical examination shows the boy’s capacity or incapacity to join in the various school games.

In another school, with which I am acquainted, a boy was recently reported by his class-master as falling off seriously in his work. The headmaster, however, discovered that he was also falling off in weight, and hygienic, not penal, remedies were, of course, adopted. With this may be compared the following from a recent publication, entitled “Work and Play in Girls’ Schools”:—“If a girl was found to be persistently idle and inattentive, though apparently in good health, on consulting the weight-book it would usually be found that she was under weight for her age, and a cure was easily effected by cutting off some of her work, and giving her extra nourishment and more time for exercise in the open air.”

For further confirmation one may study the published statistics of the Westminster Training College. Here it was found that in the three weeks preceding the annual examination in a certain year all the students, with two exceptions, decreased in weight, the average decrease amounting to 3 lbs. In schools at which the measurements are taken before and after the holidays, it is frequently found that boys increase in weight during the holidays, and decrease during the term, and the conclusion has been forced upon the authorities that, in many cases, the decrease is due not to underfeeding, but to overwork.

We have, then, three important facts:—a physical examination reveals capacity or incapacity for various games; observed defects may be remedied by suitable exercises; loss of weight is the most characteristic symptom of overwork; to which I will add, without comment, a fourth—that a rapidly growing boy or girl is apt to be dull.

Another aspect of this question is presented by a report which we have received from a large London school. The most important results for the year are tabulated, and compared with those of the average English “public-school” boy according to the table in Dr. Dukes’s book (“Health in School”). It appears from this that in height there is little difference, but in weight the boys in the London school fall considerably short of the “public-school” boys. Again, special averages were taken for twenty-five boys coming from elementary schools in height, weight, and chest girth, and were found to be considerably less than the average for the rest of the school. Secondly, in the matter of eyesight, the boys in the London school were examined by a physician, and it was found that 30 per cent. had defective sight. This must be compared with the statement that in London Board schools 60 per cent. of the pupils have defective sight, and the statement made by a physician in a recent letter to the *Times*, that only 20 per cent. of the boys entering a certain great public school had defective sight. By the way, he added that many were suffering from other unsuspected physical defects and infirmities, indicative of parental neglect and overpressure in the preparatory schools from which they had come. A full discussion of this question to-night is impossible; but I trust I have said enough to suggest the important bearing that these measurements have upon health and gymnastic exercises and intellectual progress, whilst the differences between boys of the upper and lower classes possess special interest for the student of sociology.

Some of you, admitting the utility, might be disposed to dispute the expediency of throwing this burden upon the schoolmaster; but I would urge, in reply, that it is the science of education which, more than any other, lacks a firm foundation of fact and law, and that it is only in the school, where children are assembled in large numbers that statistics can be collected on a scale adequate for purposes of comparison and inference.

GYMNASTICS AND DRILL.

Of the 66 schools which have reported to us, there are 12 which use no gymnasium, and all of them are day schools. Some of these give free instruction in drill, and there are only 11 schools out of 66 in which neither drill nor gymnastic exercises are compulsory, all being day schools. Moreover, in 4 of these 11 schools drill is compulsory for

the lower classes; in other 5 drill and gymnasium practice is voluntary, and in 2 it is significant that games and swimming are strongly and successfully encouraged. I think this alone is an indication that the place of physical culture is more widely recognized in day schools than was the case twenty years ago.

We find that a fee is charged in 19 schools out of 66 for the use of the gymnasium. In most of these gymnastic exercise is optional, and must be pursued in the pupils' free time.

In one-third of the schools which have a gymnasium, the instruction is given in school time; in one-fourth it is partly in school and partly in free time, and in the remainder it is given in free time. It must be remembered that, if an instructor is engaged for a large day school, the greater part of the instruction must be given in school time; but the pressure of studies in the upper classes will often render it necessary to send them to the gymnasium in the dinner hour or at the end of the afternoon.

In about two-thirds of the schools drill is compulsory for all classes, and in one-seventh it is compulsory only for the lower classes. In most cases the military system is adopted; but in three boys' schools, and in the four girls' schools from which we have received reports, the German or Swedish system of drill is practised. In one school Sandow exercises are practised for ten minutes every morning, and one school speaks of using McFadden's system. At three of the day schools Volunteer corps are established.

ATHLETIC SPORTS.

The athletic sports are, if I may be pardoned an extravagant metaphor, the champagne of physical culture, by which we celebrate the apotheosis of individualism. Sometimes, it is true, the prestige of a class is sought, or the competitor may strive that the credit of the school may be maintained in the eyes of the spectators, or may not suffer by a comparison of its records with those of other schools. But, for the most part in day schools, the motive forces are the public applause of individual excellence and the acquisition of glittering prizes. This motive is as defensible as the endeavour to carry off prizes for class-work, and the sports-day is often a day of consolation to those who do not shine in intellectual activity. Their popularity is shown by the fact that in only seven schools out of sixty-six does it appear that no athletic sports are held; two of these seven being preparatory boarding schools, and another holding an annual swimming competition.

To our question whether there is any organized training for the events only twelve schools—less than one-fifth of the whole—give an affirmative answer, and, with regard to them, we have, of course, no knowledge of the thoroughness of the training adopted. One correspondent, for example, says: "There is a good deal of training done"; another says: "Organized by custom"; and a third: "Traditional and watched by myself and masters." The absence of organized training is a serious drawback; without it many exercises which are essential to the perfect development of the body are almost entirely neglected, whilst the regular games of cricket and football may languish by being overdone. Secondly, the interest of the competitions is much reduced, because the race is often given away to those whose reputation augurs success, or to some discreet individual who, having entered for only one event, is pitted against his betters already exhausted by previous efforts. Lastly, without preliminary training for the events which entail violent exertion, great mischief is likely to occur especially to the heart and lungs, the danger of which is painfully apparent to all who have witnessed these annual competitions.

The sports are popular with parents. "They contribute gifts of money and prizes with extraordinary generosity," writes one of our correspondents, "and they even turn out to watch the competitions, or, rather, to see Archibald in his running costume; but real interest in physical culture is practically non-existent." Many others complain that this is often the limit to the interest which parents take in physical education. Even this degree of interest is not to be despised, and, besides this, the athletic sports constitute the most pleasant social function which a school can hold, bring together boys, masters, and parents, and, as a striking witness to the unity of a school, help not a little to foster *esprit de corps*.

SWIMMING.

From one-sixth of the schools the report is that all the boys either can swim or are learning. These are mostly boarding schools, and in only three are day boys in the majority. From three-fifths of the day schools we have received an answer as to the proportion of those who can swim, from which it appears that in only one-eighth can as many as 40 per cent. of the boys swim, and, including these latter, in only two-fifths of the schools are 20 per cent. or more of the boys able to swim.

Two of the day schools have a swimming bath of their own. The small number may be accounted for when one considers that a swimming bath is costly to construct and expensive to maintain, and that it is only for large schools far from a public bath that the expense is justifiable. The problem is simplified if the bath is converted into a gymnasium for the winter, as is done at one school in London. In most

cases it would appear that in day schools governors who wish to encourage swimming choose to supply boys with free tickets to a public bath rather than to build a bath of their own.

Swimming is a useful art and a healthy exercise if practised with discretion; but it does not as a rule contribute much to the development of the corporate spirit in schools. It may, however, serve this purpose in at least three ways. Classes or houses may easily compete with one another; each school may hold an annual swimming competition; and competitions may be arranged between the different schools in a town or district. In London this last is attempted by means of the Public Secondary Schools' Swimming Association, now in the fourth year of its existence, to which nineteen schools are already affiliated. A headmaster of one or other of the affiliated schools has acted each year as president, and the affairs of the Association are managed by a committee, consisting of one representative from each school. The third annual competition, at which sixteen schools were represented, took place last July, and was very successful. The work of the Association is being vigorously prosecuted by Mr. J. King, of the Latymer Upper School, Hammersmith.

CRICKET AND FOOTBALL CLUBS.

Let us consider for a moment why we value cricket and football clubs apart from the healthy exercise which the games afford. We value them, firstly, because they are games in which success is impossible without combination or co-operation on the part of the players, who must play not in splendid isolation for their own amusement, but according to the rules, in obedience to a captain, with a view to the success of the team. Secondly, we are not content that the players should learn to combine and obey, but that they should render obedience to a freely elected captain, chosen from among themselves, and that the organization and management of the club should be in the hands of popularly elected committees. We desire this, first, because training in self-government is a preparation for the duties of citizenship in after-life; and, secondly, because we believe that, unless boys take a full share in the management, the games themselves, as a means of healthy exercise, will lack one condition of complete success.

Believing, then, that self-government is an art to be acquired in process of time; that the boys in a new school, for example, must not be entrusted with the complete working of a new club; and that in an old school, in which new boys are ever succeeding to positions of influence and responsibility, some degree of regulation is required, we must consider carefully how far the freedom of action of the boys is to be restricted by the authorities. Their freedom may be restricted in two ways: the committee may be partly composed of masters, and the resolutions of the committee may be revised by the headmaster. In two girls' schools we find that the committee is composed entirely of girls, "fresh regulations, however, being submitted to the authorities for consideration." In a few boys' schools we are told that the committee consists of boys, with a master as treasurer or the headmaster as president, exercising a controlling influence and right of veto, especially in matters of finance. The number of masters on the committee varies, being one, two, or three in some schools, whilst in others all the masters are *ex officio* members of the committee.

I will now quote a few opinions received from those of our correspondents who consider that the *game* itself cannot be entirely entrusted to the boys:—

(a) "It is not well to leave the choice of cricket and football events to boys only, as their judgment of a boy's capabilities is so very frequently warped by their personal predilections."

(b) "Very few boys are able to govern in games. They are too fond of popularity to be successful."

(c) "Boys under sixteen quarrel and complain of unfairness."

No doubt with younger boys the difficulties are greater; but many of the schools which we are considering contain boys of seventeen, eighteen, or nineteen, whose influence should be beneficial.

Next, let me submit a few opinions regarding the financial and business management of the club:—

(a) "Boys cannot govern themselves without help; all departments are sure to get out of order."

(b) "I think masters aiding and watching essential. Boys have little judgment, and less perseverance, taken *en masse*. I retain a veto on everything."

(c) "Unless the boys are a good age they require stiffening with masters. The masters are only advisory; but, naturally, though not by any means always, get their suggestions adopted."

This last statement puts very well the nature of the influence which masters should exert. It should be their aim to stimulate as much, and to restrain as little, as possible. "It is my opinion," says one, "that the boys should regard themselves as responsible for the management, and that the masters' influence should be, as far as possible, unseen, and directly felt only by the senior boys."

Many seem oppressed with the difficulties of the task, and set them forth in the tone of men saying the final word. But the boy's incapacities are the master's opportunities. We find a boy deficient in judgment and incapable of accurate statement and correct reasoning, and we train him by means of mathematics and language. We find

boys, individually and collectively, deficient in powers of government, and we must make it our business to draw forth the latent capabilities by means of clubs, societies, and the monitorial system. And the thing is done. Three reports speak of masters and boys having equal voting power, and three state that the action of the committee is in no way restricted by the authorities; whilst, from a country school, 30 per cent. boarders, but with no other special aid to success, we learn that "the *ex-officio* members now find it almost practicable to leave the control of games entirely to the boy-members; this is after six years' training, during which a tradition has grown up. The financial control will be handed over to the boys next term."

All that I have said so far only confirms the belief, were confirmation needed, that the work done in secondary day schools is not confined to class instruction. Physical culture, the art of recreation, the duty and art of corporate action—in short, the art of complete living—is manifestly the goal in view. But the goal is far from being reached, and it remains, therefore, to consider to what causes we may trace the comparative neglect of these features of a complete education. Perhaps, however, it will be well to reconsider briefly what is our idea of success and failure, and in particular what we mean by corporate life and *esprit de corps*. If, then, a school is a success, each boy will be ready to act, not always in his own interest, but for the good of the community to which he belongs. Each will feel that his own conduct affects the welfare of the school, and will grieve or rejoice when the school does ill or well. His devotion will be proved not only by his private conduct, but by his readiness to play his part in the common life; he will become a paying and acting member of the various clubs and societies, and he will be rigidly faithful to all his public engagements. A school that is a failure will present features the reverse of these: it will be an unorganized collection of units, units indifferent to the well-being of the whole: clubs will languish, promises to take part in the common life will be reluctantly given and lightly broken if any sacrifice of personal convenience is thereby entailed.

Throughout the country there are many day schools which, from this point of view, must be classed as failures, and many in which the measure of success is painfully distant from the ideal.

"SMUGS."

At the Universities men who are unduly immersed in their studies, who neglect physical exercise and stand aloof from social life, are termed "smugs." We have endeavoured to discover the number of "smugs" in day schools by asking for the percentage of those who play cricket, football, or other club-games, and the percentage of those who take no share in out-of-school life apart from the unorganized play pursued in short intervals. These percentages are in many cases complementary. Leaving for future consideration the question of compulsory games, which affects twenty-five of our schools, I will give a few facts concerning the remaining forty-one, all of them day schools. In three large and important schools we are told that "most" hold aloof, it being definitely stated in regard to one that only one-third of the boys play cricket and one-sixth football. Altogether, in one-third of the day schools in which games are not compulsory, it is admitted that at least 60 per cent. of the boys take no part in the games and corporate life of the school, and, including the latter, in two-thirds of the schools the percentage holding aloof is at least 25. In estimating the reliability of these figures, it must be borne in mind that the tendency would be to underrate rather than exaggerate; and I think, therefore, that their significance cannot be ignored.

II.—CAUSES OF FAILURE.

We have endeavoured to elicit, especially from headmasters, an expression of opinion as to the causes of failure. These opinions will be set forth under the following heads:—(1) Overpressure; (2) lack of funds; (3) the lack of available fields and the dispersedness of pupils; (4) the bicycle; (5) the masters; (6) the boys; (7) the governors and parents.

OVERPRESSURE.

There are one-fourth of our informants who believe in the existence of overpressure. A high-school mistress, for example, speaks of "the undue prominence given to intellectual development," and adds: "The pressure is lessening as the golden mean is aimed at." The headmaster of a London school, where games are a success, points out that "a school which aims at giving a complete education will probably fail to gain for itself a conspicuous position in the matter of examination successes." Another headmaster says: "This excuse is absurd." Personally I am inclined to agree with the former. There are many parents who will send their children to the school which can chronicle the largest number of examination successes. Success of this kind is only purchased by some sacrifice of the claims of a liberal education, and by lavish outlay of time on the part of boys and masters; for boys entering for examinations must be taught by much practice to express themselves quickly on paper, and this entails the correction of a large amount of work out of school.

COST OF GAMES; LACK OF FUNDS.

In seven schools only—less than one-ninth of the whole—we are

told that pupils bear the entire cost of the games, including the rent of the ground, and in most of these the games appear to be a failure. In regard to one-seventh of the schools, it is expressly stated that governors make grants in aid, or that parents and friends subscribe. Some are helped by profits from entertainments and sale of confectionery. In the majority the members of the club, including the masters, bear the cost of the games, with the exception of the ground, which is provided by the school. Probably in many cases the subscriptions are inadequate for the purpose, especially if a ground is to be provided on which all can play at once; and nearly one-fourth of our correspondents assign lack of funds as the cause of failure. This may be partly due to the poverty of parents, especially in the case of exhibitioners from elementary schools, but it is more probably due for the most part to parental indifference. A case in point is that of a country grammar school, where the parents cannot afford to pay for the rent of a good field; but most of them contrive to supply their sons with good up-to-date bicycles, renewed as occasion or fashion requires.

LACK OF FIELDS; DISPERSEDNESS.

A distinguished headmaster writes to us: "The real cause of failure seems to me to be the difficulty of creating an *esprit de corps* among boys living in scattered homes. The house system (as at Clifton) is the only palliative." No less than one-half of our day-school correspondents are in agreement with him, emphasizing either the distance of the field from the school, or the dispersedness of pupils' homes, or the expenditure of time and money involved in reaching the field. Besides the house system, another palliative—that of boarding-houses both for boys and masters—has been suggested to us, with which I will deal later on. They can be but partial remedies. Steam, as a writer in the *Spectator* tells us, has brought us into large towns, and we must wait patiently for electricity to take us back to the country.

THE BICYCLE.

Many of our correspondents are of opinion that the bicycle exercises little or no influence on the school games, either for good or for evil—some consider it a help, some a hindrance. Those who consider it a help emphasize the fact that it diminishes the difficulty of distance, and boys "can no longer plead in excuse that their physique is unequal to the strain of a long walk followed by a game of cricket or football." The headmaster of a school in a large town writes: "In this district the use of the bicycle is one of the few ways in which you can feel sure that a boy gets any outdoor exercise. I think it will largely take the place of cricket, and may, by club-runs, prove useful." The headmaster of a small country school complains that bicycling is only another form of loafing, that his boys only take runs of two or three miles, and do not visit the interesting places in the neighbourhood. From a girls' school the report is: "Among girls, so far, each new athletic sport tends to stimulate others. Bicycling has had a very useful influence on girls' dress."

There are eleven schools, one-sixth of the whole, from which we have opinions adverse to bicycling, e.g.: "it affects games very seriously in summer"; "it is very bad for games, selfish and disorganizing"; "it is disintegrating"; "it is beginning to damage the games, especially among smaller boys." In a school magazine I read: "Forty-five cycles were counted one afternoon on the school premises. . . . As to the tennis-courts, they are quite unapproachable, a veritable nightmare of wheels twisting and twining about a small indiarubber ball. We are told that this is bicycle polo, and even cricket does not seem to detract from the ardour of its devotees." A London informant says: "We have 72 cyclists, of whom 47 play no cricket, 49 no football, and 40 neither." In seven schools cycling is either forbidden, or strictly regulated, or "it is vigorously discouraged, no event being provided for it in the athletic sports."

THE MASTERS.

Some assistant-masters lay much blame on the headmaster. I dare not quote for fear the headmaster, seeing the quotation, might find that the cap fitted uncomfortably well, and might vent his displeasure on the hatter. But they are supported in their opinion by some headmasters themselves, who consider that "it very largely depends on the kind of headmaster you have." On the other hand, some headmasters are profoundly impressed with the importance of assistant-masters doing their duty. Now, what are the services which the assistant-master can render? He can serve on committees and help in the management of the club; he can be present at the games, stimulating, coaching, and acting as referee; or he may himself take an actual part in the practices, and sometimes in the outside matches. He can perform similar services for the social clubs and for the school magazine, if there is one.

Now I ask you two questions. First, has he the time to do all this? We must remember that in some cases he, like the boy, is hindered by the distance of his home from the school, or the distance of the school from the playing-fields. He is hindered, as some correspondents tell us, by "the large amount of correction work which has to be done out of school, especially in the case of town schools closely competing with each other." He is hindered by the absolute necessity of doing extra work in order to eke out his often miserable salary.

This leads to my second question. Is he paid to do all this? Many assistant-masters consider, and rightly consider, that their salary is well earned, and much more than earned, when they have efficiently discharged their duties in the class-room. The future of secondary education appears to me to turn very largely upon the payment of assistant-masters. Their efficiency as teachers is more imperatively demanded than ever, if the secondary school is not to suffer in comparison with the higher-grade and technical schools; and, if we are to add the duties of taking an active part in all the multifarious activities of social and corporate life, it is clear that the post can be well filled only by a man of high character and intellectual ability, to whom an adequate salary must be paid. And what is an adequate salary? Perhaps the reply will come with more force from a headmaster. In his admirable pamphlet on "The Future of Day Schools," to which I am largely indebted, Mr. Hendy, speaking of junior masters, says: "£150 to £200 ought to be the minimum price paid to an educated gentleman." I know a few schools in London in which £150 is the minimum, but judging from not a little knowledge of salaries actually received, I believe that, if we make a gratifying exception of a few schools, we shall find that in the remainder the average salary—I do not say of junior masters, but of junior and senior masters taken together, not the minimum, but the average salary—is less than £150 per annum. I believe, moreover, that the tendency for some years has been in a downward direction, and the result will show itself in an inferior type of master. No doubt in this, as in other walks of life, much good work ought to be done, and is done, for which no remuneration is received; but good work is not done for many generations by martyrs; and it is a short-sighted policy which lavishes money on bricks and mortar and machinery, and denies to men the means of leading the life which their education and faculties require.

THE BOYS.

Some attribute the failure to the boys themselves. Many are the forms of accusation brought against them. We need not take them *au grand sérieux*, but rather heave a sigh of sympathy with the plaintiffs, "boy-rid, worn out with perpetual boy." The boy, then, is charged with inertia, want of pluck, love of loafing, inordinate love of change. Poor boy! School-rid, worn out with perpetual school, he seeks distraction in his hobbies at home, or amid scenes of rural bliss, or in the busy haunts of men. Then, of course, he has an undue love of freedom, lacks *esprit de corps*; and, when at last the climax is reached in a charge of downright inverted-comma-individualism, we suspect that the onslaught is made by some sincere socialist. Let me illustrate by classified quotations:—

(a) *Laziness and want of pluck.*—"Boys shirk the drudgery of early attempts. In the boarding school they must learn to catch and to stand a charge at 'footer.' When he has learnt the elements he loves games, but too many give up because they think they are bullied." Another writes: "Boys have a natural distaste to exert themselves except for some ulterior end, e.g., applause or a prize; the love of exercise for exercise comes later."

(b) *Vicariousness.*—"Boys like to take their exercise vicariously, by attending matches rather than by playing."

(c) *Short duration of school life.*—"Boys change so rapidly that they do not feel attached to the school." In some day schools the average duration of school life is only two years, and in many not more than three.

(d) *Local clubs.*—"In two-fifths of the boys' day schools boys are allowed to belong to local clubs, and in none of these is the condition of the games satisfactory. One headmaster of a school in a large town writes: "Very few belong to local clubs. I think it is regarded as a bit disloyal. It is well known that I look upon it as such." Mr. Findlay, of Cardiff, forbids it in his school. The magnitude of the evil is not measured by the mere number of the "disloyal." The toleration of such a practice must be fatal to *esprit de corps*, and it seems desirable that it should be either forbidden or strictly regulated.

PARENTS AND GOVERNORS.

Last, and greatest, parents. Fathers, mothers, children—these are the three causes of our success and of our failure. Governors, being often parents, are no doubt meant to be caught in the showers of blame which descend upon the latter, and many of our informants single them out for separate reproof. I have classified a few out of the numerous complaints made against them.

(a) *Narrow view of education.*—(1) "In this district they require educating in what education is. To pass examinations seems to them the chief reason for sending a boy to school." (2) "The parents are most to blame. If they knew the importance of these things, governors would have to supply the means." (3) "Parents do not sufficiently force their boys to play; they let them potter in the streets or do anything rather than join in school games. Our failure is due to parents' ignorance of healthy manly traditions, and to want of compulsory powers in headmasters, who cannot add to their burdens (at least, I cannot) by fighting a perpetual battle against foolish parents and lack of public spirit in boys, who would be all right if compelled."

(b) *Exaggeration of danger and domestic inconvenience.*—(1) "It is

no uncommon thing for a parent, who has subscribed generously to our athletic sports, to forbid his son competing, from fears—obviously groundless—lest he should overstrain himself. Similarly a parent, who was president of the leading local football club, and rarely missed attending a match, refused to let his two sons play football at my school because it was too dangerous. In order to succeed, the headmaster should be in a sufficiently strong position to override objections by saying: 'All right; take your boy elsewhere.' Where is such a happy man to be found?" (2) "Parents understand nothing at all in most cases about the advantages of corporate life, and give us no support. All boys cannot play at the same time without clashing with the family arrangements. In a place like Bedford the difficulty is surmounted because the town is one large school, and everything is subordinate to the children's needs."

(c) *Desire for his (or, rather, her) sons' company, or for their assistance in business.*—This sums up the opinions, which are, therefore, not fully quoted.

(d) *Individualism.*—"They value these things if organized for them. Day boys' mothers and maiden aunts vary, and failure is due to the corrupting influence of 'individualism' among day boys, and to the undermining influence of some parents who wish 'Tommy' to do as he likes."

(e) *Social status.*—(1) "Only those parents who are University men desire these things." (2) "In small towns I find much opposition from parents who do not wish their boys to mix with other boys in the district." (3) "Our great difficulty is the increasing proportion of exhibitioners of various kinds and of lower-class day boys. Their parents view games with suspicion for three reasons—supposed expense, fear of accidents, fear of hindrance to studies. 'Exercise!' exclaimed a parent who objected to his son being compelled to play football; 'he can get enough of that running about the street.' Another objected because his boy got his boots so dirty, and football made him late for meals."

(f) *A house divided against itself.*—(1) "Fathers take a good deal of interest; mothers none." (2) "A mother came to me the other day, and said: 'You must talk to my husband. He doesn't want the boys to play football.'"

(g) *A house united.*—"Parents give us every possible assistance, and teams of fathers and mothers play the boys at cricket."

Many of these remarks are the pathetic expression of much weariness and vexation, of baffled hopes and unsatisfied aspirations. To what conclusion do they point? In the first place, our demands must not be too great, nor too sudden. It is our aim to combine the advantages of home-life with the corporate life of a great school, in such a way that the claims of the one do not override those of the other. If the parents desire the company of their children, so much the better for both. If boys are addicted to hobbies, or like country rambles, that also is to the good. If we crush "individualism," we must not stamp out individuality, nor force the boy to surrender his whole being to the claims of public life. I once knew a boarding school in which the public-school system was by no means completely developed, but Dr. Jowett said to the headmaster: "Send me more of your boys; they are not all of one mould." But the pivot-idea of this essay is that the claims of corporate life in our day schools are not sufficiently recognized by the parents; and the cause of this is clearly indicated by Mr. Tarver in a recent publication. "Upon what," he asks, "does the tone of a good public school depend? Entirely upon this, that teachers and boys alike in the large majority belong to families which have for generations been in the habit of continuing the education of their children to a comparatively late period of life. They are not necessarily more learned than other families, but they are better trained. Their members have not been set to think solely of self-interest from the age of fourteen or fifteen; they have been given time to observe life before practically engaging in its struggles. In the matter of making money they would be knocked out of the field by the next American. But how about making a country; about maintaining a standard of private and public obligation, which holds society together?" Now, many of the boys in day schools do not come from the class which he here describes, but from a class in which commercialism and individualism are particularly strong forces, and not a few from the lower class, which is able to put forth few activities but such as keep body and soul together. That is their misfortune, it is part of our social system, and we must meet with not a little sympathy those parents who desire above all for their boys an education which will enable them to earn a living.

Moreover, to the picture we have had of parental indifference and incompetence there is another side. Some say: "It is rare for parents not to desire a complete liberal education," or: "As a rule, parents desire those things except when, as sometimes in the case of curative gymnastics, the girls persuade them to a contrary mind." It is true that some tell us that parents need educating as much as the boys; but others let in a ray of hope by affirming that parents prove amenable to education. One of the significant results of our inquiry is the conclusion forced upon us that parents are often ready to follow a strong lead, and in particular I shall point out shortly that compulsory games, when adopted in a school, are often accompanied by the active interest and support of parents. A teacher

once reported on a boy at the end of term, "Slow, but sure—would make a good parent." Let us take heart from this, and remember also that the parents of the future are now passing through our hands, and that whatever measure of success we achieve in this generation will be the stepping-stone to a higher degree of success in the next.

III.—REMEDIES.

In disclosing the causes of failure, the sources from which success must spring have, at the same time, been discovered. If the parents—that is, the public—can be converted, nearly all the difficulties in our path can be surmounted. But several practical remedies have been suggested, the consideration of which will bring this essay to a close.

BOARDERS.

There is a consensus of opinion among our correspondents that boarders are an invaluable nucleus for corporate life. The advantage is modified, however, as four correspondents point out, by the absurd antagonism between the two classes, or, as one puts it, "the eternal day-boy-versus-boarder attitude." But the "eternal attitude" will be ridiculous when the gulf between a boarding school and a day school yawns less widely. The value of a nucleus of boarders being once accepted, it is worth our while to consider the suggested possibility of establishing in connexion with day schools in large towns a boarding house in close proximity to the playing fields. The boys should be for the most part weekly boarders, so that they might still retain the advantages of home life, whilst the house-master would enjoy the much needed relief of a day's rest. He should have a fixed salary commensurate with the difficulty and responsibility of his task; but no attempt should be made to derive profits from the boarding house. Part of the cost, initial and permanent, might in some cases be met by a grant from the endowment, and residence in such a house might be a condition attached to a proportion of the free scholarships, if any exist.

MASTERS IN RESIDENCE NEAR THE FIELDS.

It has also been suggested that the masters might all live either in one house or in separate houses, in the district in which the playing fields are situated. Whilst the salary of assistant-masters remains what it is, I should be very sorry to suggest an arrangement which would entail inconvenience and sacrifice; nor do I wish to import into the day school the semi-monastic system of the boarding school; but it is quite possible that in certain cases such an arrangement would be economical and agreeable, and, if undertaken spontaneously, a much-needed spur would be given to the games in connexion with schools whose fields are four or five miles distant.

COMMON MEALS.

The mid-day dinner should be regarded not as an irksome responsibility, but as a valuable means of strengthening the social bond. In one school it is a practice for the different forms to invite each other to tea in some room on the school premises, with admirable results.

The setting apart of Friday evenings for lectures and other entertainments is very useful. Apart from the value of the entertainments, it is often necessary for the boys to remain at school, and have tea and spend a social hour together before the lecture commences.

COMPULSORY GAMES.

To some the very phrase is almost a contradiction in terms; but even they would probably admit that compulsory games are better than no games at all, whilst those of us who believe in an education which touches mental, physical and social life may, perhaps, protest that arguments against compulsion in any one province are also, if not equally, applicable in the others. Indeed, the mischief of compulsory studies is far more obvious and more nearly inevitable than that of compulsory games.

Leaving out of consideration the boarding and preparatory schools, I find that games are compulsory in nearly one-fourth of the day schools from which we have received reports. In this connexion two points must be noticed: first, that they often exist along with a kind of house system, to which the possibility and success of the experiment is, no doubt, partly due; secondly, that in many cases the experiment has the hearty approval and support of the parents. Fortune favours the brave. I select a few typical instances:—

1. The Grocers' Company's School at Clapton.—420 day boys; no boarders; 40 per cent. of the boys live at a distance from the school of more than a mile and a half. Ground at a distance of twenty-one minutes by rail. The Company makes an annual grant towards the cost of railway tickets, and the railway company is liberal in its terms. The ground is large enough for one match and twelve set-games being played simultaneously. The school is divided into four divisions, according to the district in which the boy is living when he enters the school, and the games are played partly according to these geographical divisions and partly according to sets arranged, as far as possible, by class-rooms. Cricket is compulsory every half-holiday, and the first two elevens are expected to go down to practice twice a week. Drill, Swedish and military, is compulsory, and the battalion is inspected on the sports day by some well known

officer. Gymnastics, in the boys' free time, is compulsory, except in summer, when the gymnasium is turned into a swimming bath. Three-fourths of the boys can swim, and all learn. The parents are interested to a large extent, as is partly shown by an attendance of five thousand on sports-day.

2. A large London school with no boarders; 33 per cent. of the boys live at a distance of more than a mile and a half from the school. Large L.C.C. ground close to the school. Organized football is compulsory once a week. Nearly every boy in the school is very keen on the game. Matches between forms are keenly contested. The boys are interested in the results of first and second eleven matches. Gymnastics and drill are compulsory. The parents are interested to a considerable and very gratifying extent.

3. A small country school: boarders 20 per cent.; 25 per cent. more than a mile and a half distant. Good field near school. Games compulsory if parents offer no objection. Nearly all play cricket, about two-thirds football. No gymnasium; occasional Swedish drill. As a rule, parents second the efforts of masters in this direction.

4. Country school: boarders 16 per cent.; 20 per cent. more than a mile and a half distant; adequate ground near school; games compulsory two or three times a week, but a parent may formally object at the beginning of season, and 12 per cent. do so. Gymnastics compulsory in school time. The idea is quite novel, and parents care very little.

5. The Cardiff Intermediate School for Boys.—The following is a quotation from the prospectus:—"The regular school games will be football in the autumn term, hockey and athletic sports in the spring term, cricket in the summer term. It is not intended to compel every boy to play these games during every season throughout his school career, but the house tutor, assisted by the prefects, will hold himself responsible for ensuring that every boy in his house spends proper time in the fresh air and in exercise, so necessary to growing boys in a large city; and that every boy gains opportunity for a share in the corporate, out-of-school life of the society. In exceptional cases, such as sometimes occur, where a boy does not benefit by the regular school games, he will not be compelled to join, but alternative pursuits will be permitted by the house tutor after consultation with the parents. Saturday is a half-holiday; Tuesday and Thursday afternoons will be devoted to games, and call-over will be on the playing fields." Mr. Findlay informs us that parents show surprising readiness to accept the whole scheme of houses and compulsory games.

THE HOUSE-MASTER, OR CONSULTING TUTOR, SYSTEM.

Is the key-stone of our great English boarding schools to be fitted into the structure of the day school? The house system serves three main purposes:—(1) The house-master stands *in loco parentis* to the members of his house; (2) stimulus is given to games by the competition which arises between the different houses; (3) streams of *esprit de corps* spring up in the several houses, and often merge in one larger stream of devotion to the whole school.

In day schools we have little reason to fear the idolatry of athletics or the tyranny of the body corporate, and are therefore prepared to welcome any well considered method of imparting more vigour either to games or corporate life; but a system of tutors *in loco parentum* is indisputably less imperative, because the pupils are in daily touch with their parents; and, if only the parents' ignorance, indifference, or hostility can be converted into wise interest and active support, the day school has a vantage-ground which the boarding school lacks. But, given even a wise and watchful guardian, the real life and character of a school are but dimly revealed to the outside spectator, however wise and watchful he may be; nay, the most experienced schoolmaster may fail to trace accurately the progress of his son in a strange school. Each pupil should therefore be entrusted to some one man during the whole of his school career. This task in a small school may be efficiently discharged by the headmaster; but, if the number of pupils exceeds, say, 150, the difficulty or impossibility of the task is removed by division of labour and delegation.

The impossibility may be denied; and I have heard of headmasters who do know four hundred boys, not only by sight or by name merely, but not a little of their character and career. Such headmasters, however, are few, and, perhaps, their energies might be more profitably expended in other ways. The class-master, *qua* class-master, cannot fill the gap; still less can the set-master. I say little of the difficulty arising from the aspect which he presents to his pupils of lecturer, instructor, or task-master, for a competent man will not let this be the dominant aspect. But the class-master, *qua* class-master, is unfitted for the task by reason of the frequent changes in classification due to the bad system of admitting pupils at any time of the year, and, in London especially, to the short average duration of a day-boy's school course. The same reason lessens the value of a class as a centre of *esprit de corps*. It is, perhaps, almost unnecessary to point out that where a threefold or fourfold classification prevails for different subjects, where the class and the class-master have disappeared, a consulting tutor system is even more necessary in order to secure the efficient oversight of each individual. Of this house system, or consulting tutor system, as established in day schools, I will give a few instances,

1. *Intermediate School for Boys, Cardiff.*—This school was opened in September, and the following extract from the school prospectus, kindly supplied to me by the Headmaster, Mr. Findlay, will show clearly what is meant by the house system in day schools:—"For the purpose of social and corporate life, every boy on entering the school becomes a member of a 'house,' which is governed by a house tutor and by prefects, and he remains a member of his house until he leaves the school. Each house will finally contain about forty boys, who reside, more or less, in the same neighbourhood. The houses will compete against each other in games and sports, squad drill, swimming, singing, and other pursuits which can be pursued by a number together. The houses will be distinguished by their colours, chosen from those of the Welsh flag. It is intended, by the development of this house system, to foster in the miniature life of the school those qualities of character which are so desirable in the future citizens of a great city and a great country—public-spirited devotion to the society, self-denial for the common good. Our great English boarding schools have contributed to education a unique tradition in this field of character-training, and there is no reason why an intermediate day school should not maintain the same bracing and invigorating corporate life without depriving a boy of that home-environment which is equally needed for the full development of the character. This combination of 'public school' discipline with home-shelter at night is recommended by the best schoolmasters and physicians of the present day, and it is hoped to give our Cardiff school the advantage of the experience thus gained."

2. *University College School.*—Here the consulting tutor system is established. The boys are allotted to the consulting masters by the headmaster or by choice of parents. The consulting master concerns himself mainly with diligence and progress in studies. Games are played to some extent according to "houses," there being an annual competition for a cricket challenge shield and a shield for the "house" that scores the highest number of points in the athletic sports.

3. *The Godolphin School, Hammersmith.*—In this school there are geographical divisions and division tutors, who concern themselves both with the conduct of their pupils and with games. The competition between the different divisions is very keen, and a boy is expected to represent his division at the athletic sports if required. It is worth noting how our great enemy, disperseness, is thus impressed into our service.

There are four other day schools in which we are told this system prevails, with the twofold object of stimulating games and corporate life. There are besides four day schools in which for the purpose of games only houses, or divisions, have been instituted. At Birmingham a somewhat different system is in vogue. We are told that, "in order to provide matches between the junior boys, each of the four boys' schools on the foundation (one high school and three grammar schools) is divided into three divisions. Matches are arranged between each division in every school and the corresponding division in the other schools. This appears to be a convenient alternative to the 'house' system of the public schools, and is capable of extension to a group of day schools geographically connected. The matches are arranged by a committee representing all the schools, and are considered to be obligatory on the schools."

The increase of work and responsibility thrown upon the man who acts as the "house-master" ought to be counterbalanced by a corresponding advance in salary and status; and there are reasons for welcoming the creation of a class of assistant-masters occupying this intermediate position between the headmaster and the rest of the staff. The feverish race for headmasterships would become less feverish, and the occasional unscrupulous bidding for the same would become still rarer. As a member of the Assistant-Masters' Association, I believe that it is rendering great service to the cause of education—by asserting the rights of its members and protecting their interests, by directing their attention to the study of educational questions, and enabling them to approach their task with a more intelligent view of the nature of their work. I submit to you, however, that we cannot accept the existence of two independent associations of headmasters and assistant-masters as the ideal, though for many years it may prove to be the only possible arrangement; and that there are many reasons for believing that an association of teachers in secondary schools, consisting of headmasters and house-masters, or consulting tutors, might be safely entrusted with the interests of the whole profession.

I said at the beginning of this paper that it was our object to consider how far the unique success in certain directions of the public boarding schools could be achieved in the public day schools. Success so complete we cannot hope to have, for it must be limited by the greater demands of the home. But, if we miss the highest results, we may haply escape the evils of excess—the abuse of athletics, the insularity of cliqueism, the loss of home life. So that I have written this paper with a desire, not unmingled with hope, that the English genius for converting theory into practice, working in successive generations, may make a further contribution to the science and art of teaching, and realize in the English day school of the next century the ideal house of education.

The CHAIRMAN was surprised to learn that only four girls' schools had answered the questions, for he considered that in the best class

of girls' schools the scientific physical training was in many respects superior to anything with which he was acquainted in the great public schools of England. The product of the public schools was, undoubtedly, a fine one, a noble one. But that was due only to a small extent to the scientific way in which the education of the boys was carried on. The English public-school master, speaking generally, was a very poor craftsman as compared with the secondary-schoolmaster of any other nation which was forward in the history of our own time. One point the lecturer had omitted to mention, which he considered as likely to encourage the corporate life of schools, and that was the encouragement of Old Boys' clubs. One serious drawback in London was the want of adequate playing fields in the near neighbourhood of the school. It was a fact that there was something quite inexplicable to the outsider in the playing of our great national games, which had a most extraordinary effect on the boys who played them thoroughly. He did not believe that it was in the smallest degree explicable to any one who had not himself at some time taken part in those games. He entirely disagreed with the extent to which professionalism was carried in athletics; but he believed that the noble and manly playing of cricket and football had an influence on character that was simply marvellous in its greatness and in its extent; and he also believed that there frequently sprung up in the minds and hearts of the boys who played those games together an *esprit de corps* and a love and affection for the scenes in which those games were played, without which no school could hope to arrive at a very high pitch of corporate life. He did not, of course, wish to criticize English secondary education in a general and wholesale manner; but he earnestly deprecated any attitude towards our own schools other than an attitude of sincere inquisitiveness as to whether we could not make them better. He had been associated with public-school masters for a large portion of his professional career, and he regarded them as beyond praise in their devotion to their schools and the interests of the boys under their charge—a devotion which certainly could not be surpassed by the schoolmasters of any nation; but he felt that he should not be doing his duty if he did not say that, with all their devotion to their schools and their boys, we English schoolmasters were not in his opinion equal to the schoolmasters of some of the leading nations in civilization in the rest of the world in regard to our scientific knowledge of our profession and our skill as craftsmen in it.

Mr. THORNTON remarked that he had spent a great many years in the active duties of the teaching profession, and yet it seemed to him, as he listened to the lecture, that the development of such schools as he had been connected with was only just beginning. The paper seemed to indicate the lines on which that development should proceed. It was interesting to see how the Continental schools looked with longing eyes on our English games. In Denmark there was actually a society for the better understanding and introduction of school games in that country.

Mr. DANIELL said that a very small proportion of boys learned to swim. He thought they ought to do what they could to promote the objects of the Swimming Association, and so help on a useful piece of work. With regard to the question of the publication of results of school matches in sporting papers and school magazines, he was not sure that it was good to call such great attention to athletes at school. One other point he would like to call attention to was the danger of too much centralization in school societies. Every society probably necessitated a secretary and three other officers. If that were so, three boys were being trained with the idea of working for the public good. He thought that Old Boys' clubs should be able to help. He knew of some institutions where the old boys made an annual subscription to the school sports, or contributed a prize, but he was afraid such action was confined to very few schools indeed.

Mr. BROWN remarked that he had had no experience of compulsory games. In his school it had always been open to the boys to do as they liked. The most popular branch was swimming, between 30 and 40 per cent. of his boys being able to swim, and more interest was taken in the annual swimming entertainment than in any other sport. This was, perhaps, due to the fact that the athletic sports occurred in the busiest part of the school year, when the boys had been in for a public examination and were rather fagged, while the swimming came in the commencement of the following term, when school work did not interfere. Football was not nearly so popular as cricket; but this might be due to the condition of the ground in the North of London. More than half the boys entered for cricket, and not more than one-sixth for football. With regard to swimming, although the Germans were supposed to be far behind in the matter of sports, they were very far ahead in this branch; 50 or 60 per cent. of the boys, even in the inland towns, were able to swim, and swim well. In London there were now excellent baths, and, although they could not do much in the way of outdoor sports on account of the character of the ground, yet a great deal might be done for swimming if the idea of a coalition of schools could be carried out. In his own school they held an invitation race, in which other schools were invited to compete; and, although other schools generally won the race, his own boys nevertheless took great interest in it.

Mr. LIPSCOMB had been very much struck by the statistics the

lecturer had given with regard to the growth of boys and so on, but thought it a little dangerous to entrust the drawing up of such return to any but experts. He did not desire to say a word against games, but, at the same time, he deprecated the undue importance that was in many cases attached, in the appointment of masters, to proficiency in this particular. It was equally necessary to cultivate taste in recreation. Musical societies, debating societies, reading, chess, and scientific societies were valuable for this purpose; and public spirit could be cultivated in this way as well as by the more popular games' clubs. As to the question of the bicycle interfering with the games, it ought to be remembered, on the other hand, that the bicycle helped boys to get to the ground who would not otherwise go. London schools were placed in a different position from that of country schools. It was a common thing for boys to come twenty miles to school, and they could not then be expected to devote Wednesday or Saturday afternoons to games. He would suggest three half-holidays instead of half Wednesday and whole Saturday, and a call over on the field, as at Cardiff. There was one very great danger in games which did not attend other societies, viz., excessive competition, which led to the games being played more for the sake of the intrinsic reward, or for the notoriety outside the school walls, which was given by the result. This was a danger to be guarded against. The practice of giving challenge cups by way of stimulus should not be carried too far.

Mr. JEMMETT remarked that he was the secretary of an Old Boys' club in connexion with a school which had suffered from a great lack of corporate life. Boys took too little interest in the school. It was simply a place where they wanted to get their money's worth, and, having got it, they took no further interest in it. It was noticeable that those who took the most active part in the Old Boys' club were those who had played in the football team at school. He thought sports were very useful in fostering a spirit of comradeship, and those who played football together were likely to hang together and respect the school in after life.

Mr. HAMPSON was engaged on the staff of a school in the East of London in which there were two hundred boys ranging from fourteen to fifteen years of age. For boys of this age there was some difficulty in instituting chess clubs, debating societies, and the like. They were unfortunately situated as regards playing grounds, the nearest being Victoria Park and Wanstead Flats. The parents of the boys were poor and objected to the expense of getting to these grounds, and therefore the games languished, except in the case of swimming. They had adopted a custom which he would like to see tried in other schools, viz., that of "form teas." The boys themselves did the organizing, and paid for the teas. During the evening a programme was drawn up. It was, of course, of a modest description, and the items would include a few songs and recitations, and probably a gymnastic display and a few round games. Considering the age of the boys and the difficulties under which they laboured, they found this plan of considerable assistance in getting the boys to know each other well, which was useful for the election of monitors and captains, &c.

Mr. SHIPHAM having briefly replied, a vote of thanks to the lecturer concluded the proceedings.

REVIEWS.

A CHAPTER OF HISTORY.

The Renaissance of Girls' Education. By Alice Zimmern.
(A. D. Innes & Co.)

In this summary of the last half century of progress in girls' education we have, in addition to the narration of events, both comments and forecasts, and these latter, though short, are exceedingly practical and helpful to those who are striving to form a clear idea of what a girl's education should be, as distinct from that of a boy. The impression left by the book is that hitherto our girls have been thankful enough to get something of what their brothers enjoy—very slightly modified—and that no serious attempt has been made to mark out a career specially adapted to their needs. The chapter dealing with the state of affairs before 1848 is so interesting and important for a just appreciation of what follows that it might well have been expanded. It is exceedingly difficult for a modern girl to have any conception of the darkness that reigned in her grandmother's young days, and she ought to know something of it, for there are still battles to be fought and the work is only well begun. As Miss Zimmern points out in her closing chapter, the chief victories for the future pioneers lie in reactionary work—in the direction of *home*—in pointing girls to the immense field of work that lies within their own doors, calculated to inspire as much enthusiasm as the most independent life now led. Her suggestion that a parent should

pay his daughter for work at home is startling, but that he should provide her a separate room "to live her own life" and receive her own friends, in return for domestic labours, is in no way extreme, and would keep many a daughter from helping to overcrowd the teaching or other professions, and keep her, too, where she is sorely needed. In all this, however, there is a danger of overlooking the fact that the unit of human society is the family, and not the individual, and that the give and take of family life is one of the finest elements in a good education. As for money transactions between relations, they are proverbially difficult, creating endless friction, and, while a mother's care can never be repaid, who would undertake to measure the amount of a daughter's duty?

Between these opening and closing chapters Miss Zimmern relates the events which have brought girls' education to its present state, dealing separately with the high schools, private schools, technical schools, colleges, and so on. She evidently has spared no pains to gain first-hand acquaintance with all our great schools and colleges, and describes their respective origins and developments, praising, blaming, and suggesting in an exceptionally fair-minded way. Although the "general reader" is chiefly addressed and an average ignorance of the whole subject assumed, the work is solid, and, as far as it goes, thorough, and will form a useful book of reference to all who care for education. Indeed, we think that such books as this should be put within easy access of all that increasing number of persons who serve on educational boards and committees throughout the country. For the general reader the pages are here and there somewhat overloaded with statistics—evidently the notes taken at the various institutions have proved a little unmanageable, and we think it would have been better to describe one or two typical schools, in the style of Matthew Arnold's "French Eton," with a mere enumeration of similar ones.

In dealing with the high schools, Miss Zimmern raises the question, which promises soon to be a serious one, as to how far the modern day school is really becoming a boarding school in all but name. "Where," she asks, "does the home influence come in? The girls might as well be weekly boarders for all the share they have in the real life of home. Saturday may see a cricket practice, or a work party, or a school committee, or a sketching expedition, or a match with some distant school. The numerous clubs, charities, old girls' meetings, &c., fill up all the time the girls can spare from their lessons. Girls who do not live quite near frequently become day boarders, though the word is not used, and take dinner, and sometimes even tea, at school. In some few cases the school even undertakes to supply medical supervision and the general direction of the pupil's health, thus relieving parents of one more responsibility."

The description of the colleges is the ablest portion of the book—the authoress has got to the bottom of her subject and "come up again"; whereas in the parts relating to technical instruction and State aid for girls she seems to be still at the bottom.

The chapter on the Intermediate Schools of Wales is especially interesting to all readers, because here we have the problem of education in a simpler form than in England, not complicated with traditions and endowments. The thorny question of the co-education of the sexes is touched on briefly, but well, while the treatment of the alternative between frequent small day schools and a fair sprinkling of larger boarding schools shows an appreciation of the peculiarities of Wales and a true insight into the needs of the people; but we think the force of class distinctions has been underestimated, and the religious difficulty is ignored. Miss Zimmern's enthusiasm for Wales has not led her to the correct spelling of Eisteddfod.

There is a strange omission of any adequate reference to the training of teachers in this volume. Is it because in this case we have had a *naissance* rather than a *renaissance*? Considering the frequent mention of the difficulty the early pioneers found in obtaining good teachers, we think the authoress should have spared some space, if not a complete chapter, for a description of the efforts to improve them, especially as this movement (so far, at least, as secondary education is concerned) has been practically confined to women teachers.

Considering the number of facts in this volume, it is singularly free from mistakes: the only slip we have noted is that both Queen's and Girton are spoken of as "the first women's college in England." There is no mention of the Church of England High Schools Company, which is doing excellent work, though on a small scale, and is to be distinguished from the Church Schools Company.

SCRIPTURE LESSONS.

The Teaching of Christ on Life and Conduct. By Sophie Bryant, D.Sc. (Swan Sonnenschein.)

There is probably no school subject that varies so much in its method as the Divinity lesson. Relegated by one teacher to the back-ends and by-ways of time, by another it is pushed into the best hours of the week. It is often reserved as his special province by "the Head" himself. Its substance varies as the school. Here it may approximate to a Catechism lesson and be largely doctrinal; elsewhere, in schools where it is essential that non-controversial matters alone should be treated, where the Conscience Clause doth make cowards of us all, the lesson is apt to run on historical and geographical lines, and, as a Cambridge poet sang, to confine itself to such questions as

... the names of Jewish Kings,
And whether shawms had strings.

To the teacher who has more than the fear of examinations before his eyes, the Divinity lesson presents many opportunities and many difficulties. He anxiously desires to influence the children under his care, to instil some right principles to action, some feeling for the things that are good, which may act as motive forces; yet how is he to proceed? He must not preach—at least, not often. He must not teach—at least, not much; for such things are not to be taught dogmatically. He can but suggest and indicate. "I will bring you first to Jesus Christ," said Dr. Butler in his sermon to the boys of King's School, Canterbury. "But that," says one perplexed teacher, "is to state the difficulty, not to solve it. How are we to do this? If we may not touch upon any theological or metaphysical problem, if we are to avoid dogma as though it were an unclean thing, how are we to give our lessons a religious content, and make them spiritually useful?"

One answer would seem to be to take the practical aspect of Christ's teaching and try to build up the ethical scheme of the Gospels; to find the principles on which this scheme is based, and to test them and interpret them by applying them to some of the social problems of to-day.

A very suggestive and probably useful little book on this subject has been published by Mrs. Bryant, founded on actual lessons given in the North London Collegiate School. The object is to present the practical teaching of Christ as a whole, as an ethical system; to ascertain the principles on which it is based; to interpret it by examining its relation to the local conditions under which it originated, and the universal conditions under which it has now to act. First are collected all the passages in the Gospels that bear directly on each characteristic element of Christ's ethical system, such as the nature of the Kingdom, the Fatherhood of God, the Brotherhood of Men, Forgiveness and Self-Surrender. From these, the principles they illustrate and enforce are deduced and briefly expounded, and the mutual relation of these principles in the system is explained. Their living force is happily illustrated by application to social problems of to-day. Thus, speaking of the Tradition of the Pharisees, and of their attempt to develop righteousness by regulating all the minutiae of life, and, again, of the Messianic expectation of the Jews, Mrs. Bryant says:

Just as the extreme legalism of the Scribes and Pharisees represents that tendency to excessive reliance on righteousness by forms and ceremony, or by Act of Parliament, which is always with us, so does the Hebrew Messianic expectation stand for all forms of State-regulated Utopias, from the ideal of medieval Catholicism to the schemes of State-socialism of to-day. Against all these is directed in the same sense the Messianic disclaimer: "The Kingdom of God cometh not with observation: neither shall men say: Lo here! or Lo there! for, behold, the Kingdom of God is within you."

And again, when speaking of the power of Meekness, the author points out that there may be occasions when the use of violence to stop wrong-doing would be allowable—

There is a justification, obvious enough, for criminal law and punishment wisely conceived. But there is no justification for a social system which deals with its criminals only by those means. All punishment should aim at reform.

A course of ethical studies based on this method and carried on in this spirit could hardly fail to be of great value in training, and would, undoubtedly, impart to the Divinity lesson a reality and living interest which it is sometimes apt to lack. We have only one further comment: Mrs. Bryant modestly says in her Preface that "the sole merit" of her book "is in the fewness of the commentator's words." We regard the methods of the book as of a most distinguished "merit"; with

regard to the statement itself, we feel that the words may well be few, seeing that they are weighty.

A LOVER OF CHILDREN.

The Life and Letters of Lewis Carroll (Rev. C. L. Dodgson).
By S. D. Collingwood. (Fisher Unwin.)

Probably no one but a relative could have written a life of Lewis Carroll. Mr. Dodgson was a curious combination of the Oxford don and the playmate of children, of the mathematical tutor and the genial teller of fairy tales; and Mr. Collingwood has done as much as was possible to make the world of readers familiar with a personality which it barely knew in his lifetime. He was one of the most ingenious, methodical, dignified, approachable, serious, and entertaining men; and the contradictions of his moods afford a not unnatural parallel to his paradoxical humour. He will live for ever in English literature by his "Alice in Wonderland" and his "Alice through the Looking Glass"; and no man need wish for a better sort of memorial.

Mr. Collingwood gives us many interesting details of his uncle's life at Oxford and in the country, of his friendship for young people, and of the production of his books. After the first "Alice" had proved to be so wonderful a success, the author conceived the idea of writing a sequel, in which the heroine was to continue her adventures on the other side of the looking-glass.

The first difficulty, however, was to get her through, and this question exercised his ingenuity for some time before it was satisfactorily solved. The next thing was to secure Tenniel's services again. At first it seemed that Mr. Dodgson was to be disappointed in this matter. Tenniel was so fully occupied with other work that there seemed little hope of his being able to undertake any more. He then applied to Sir Noel Paton, with whose fairy pictures he had fallen deeply in love; but the artist was ill, and wrote in reply: "Tenniel is the man." In the end, Tenniel consented to undertake the work, and, once more, author and artist settled down to work together. Mr. Dodgson was no easy man to work with; no detail was too small for his exact criticism. "Don't give Alice so much crinoline," he would write, or "The White Knight must not have whiskers; he must not be made to look old"—such were the directions he was constantly giving.

In his subsequent books, he was assisted by Mr. Henry Furniss, Mr. A. B. Frost, and other artists, with all of whom he claimed the same privilege of deciding what his characters were to look like.

Both the "Alices" were translated into various foreign tongues, and the task cannot have been an easy one. This is how Henri Bué managed the pun on "tortoise" and "taught us" in "Alice in Wonderland":—

"La maîtresse était une vieille tortue; nous l'appelions chélonée." "Et pourquoi l'appeliez-vous chélonée, si ce n'était pas son nom?" "Parce-qu'on ne pouvait s'empêcher de s'écrier en la voyant: 'Quel long nez!'" dit la Fausse-Tortue d'un ton fâché; "vous êtes vraiment bien bornée." At two points, however, both M. Bué and Miss Antoine Zimmermann, who translated the tale into German, were fairly beaten. The reason for the whiting being so called, from its doing the boots and shoes, and for no wise fish going anywhere without a porpoise, were given up as untranslatable.

Many of Lewis Carroll's readers have preferred the "Looking-glass" Alice to Alice in "Wonderland." We will not venture on a comparison; but the "White Knight" and the "Jabberwock" are very hard to beat. Some time ago we printed a few lines from Mr. Vansittart's very happy rendering of "Jabberwocky," sent to us by a correspondent who had retained a copy of the original leaflet. Mr. Collingwood supplies the entire version, with the translator's notes. Here they are:

Coesper¹ erat: tunc lubriciles² ultravia circum
Urgebant gyros gimbeulosque tophi;
Moestenni visae borogovides ire meatu;
Et profugi gemitus exgrabrere rathae.

O fuge Iabrochium, sanguis mens³ Ille recurvis
Unguibus, estque avidis dentibus ille minax.

Ububae fuge cantus avis vim, gnate! Neque unquam
Faedarpax contra te frumiosus eat!

Vorpali gladio juvenis succingitur: hostis
Manxumus ad medium quaeritur usque diem:
Jamque via fesso, sed plurima mente prementis,
Tuntumiae frondis susserat umbra moram.

Consilia interdum stetit egnia⁴ mente revolvens:
At gravis in densa fronde susuffrus⁵ erat,
Spiculaque⁶ ex oculis jacientis flammea, tulscaam
Per silvam venit burbur⁷ Iabrochii!

Vorpali, semel atque iterum collectus in ictum,
Persnicuit gladio persnacuitque puor :
Deinde galumphatus, spernens informe cadaver,
Horrendum monstri rettulit ipse caput.

Victor Iabrochii, spoliis insignis opimis,
Rursus in amplexus, o radiose, meos !
O frabiosæ dies ! CALLO clamateque CALLA !
Vix potuit læctus horticulturalæ pater.

Coesper erat : tunc lubriciles ultravia circum
Urgebant gyros gimbiolosque tophi ;
Moestenui visæ borogovides ire meatu ;
Et profugi gemlts exgrabuere rathæe."

A. A. V.

¹ *Coesper*, from *coena* and *vesper*. ² *Lubriciles*, from *lubricus* and *graciles*. See the commentary in Humpty Dumpty's square, which will also explain *ultravia*, and, if it requires explanation, *moestenui*. ³ *Sanguis meus*: cf. Vergil, "*Aeneid*," VI. 836, "*Projice tela manu, sanguis meus!*" ⁴ *Egnia*: "*muffish*" = *segnis*; therefore "*uffish*" = *egnis*. This is a conjectural analogy, but I can suggest no better solution. ⁵ *Susuffrus*, "*whiffing*"; *susurrus*, "*whistling*." ⁶ *Spicula*: see the picture. ⁷ *burbur*: apparently a labial variation of *murmur*, stronger but more dissonant.

We trust that our quotations will send many of our readers to the volume from which they are taken. It is full of entertainment, and Mr. Collingwood is to be congratulated on his performance of a pious duty.

MODERN LANGUAGE TEACHING.

The Teaching of Modern Foreign Languages in our Secondary Schools. By Karl Breul, Litt.D., Ph.D. (Cambridge University Press.)

The teaching—not as it is, but as it should be. Dr. Breul has reprinted these papers opportunely. A few months ago we reviewed Miss Brelner's valuable report on "*Methods of Modern Language Teaching in Germany*"; and yet more recently the publication of several books based on the well known Hölzel pictures, and embodying the principles of the "*new method*," has aroused considerable interest. Dr. Breul appears to be in essential agreement on all important points with the spokesmen of the reform movement; indeed, his suggestions are like variations on the theme of Miss Brelner's book. He has had an exceptionally wide experience as examiner, and is thus able to speak with authority on the disastrous effects of the methods in vogue, and also to show in what respects the examiners themselves are to blame and what changes are desirable in the style of the examinations. We agree with all Dr. Breul says on this point, particularly when he insists on the importance of oral tests.

We shall enumerate some of the leading features. Teachers must receive a better training (pages 4, 7). The modern languages should not be treated like Latin or Greek (pages 4, 8). Pronunciation must be most carefully taught from the beginning (page 8). The vocabulary should be as large and as useful as possible (page 9). We should prefer to omit the first "*as*." Reading, and not translating, should be placed in the foreground (page 11). Very little ordinary composition—i.e., translation from English into the foreign language—should be done, and only with the most advanced pupils (page 11). Dr. Breul rightly stigmatizes this as "*the greatest mistake made in our schools*," and yet an exceptional number of books for French and German composition have appeared during the last year. During a modern language lesson no English appellation should, as far as possible, stand between the objects and their foreign names (page 12). It will be seen that Dr. Breul adopts the results of the Continental reform movement, and it is to be hoped that these will soon receive the earnest attention of all our English teachers.

As we consider it important that this cheap little book should be read, we shall not go into further detail. The hints on teaching German are valuable. It is a pity that so little is said about French, a language far more generally studied in our schools. A few statements, however, we cannot allow to pass unchallenged. The difference in the vowel sound in *fee* and *vieh* is not merely one of length (page 14). Prof. Vietor has now adopted the transcription of the Association Phonétique Internationale (page 14). Why should a teacher not confine himself to one method when he considers it the best available? (page 23). On page 22 the use of pictures is advocated; on page 23 a simplified "*Gouin*" method, and on page 25 a specimen of the "*national peculiarities*" method, which is suitable enough for adults, but quite out of place with children. It would never do

to introduce into the very first lesson the attributive forms of the adjective and the use of *in* with the accusative. The German alphabet should certainly be taught (page 44); but why from the beginning? It is quite enough to have to teach the pronunciation and the conventional spelling. When that has been mastered, and a fair vocabulary acquired, the pupils have little difficulty in learning the German script, and there is far less danger of their confusing the letters and getting wrong word-pictures into their mind. The beginning of the second year is quite early enough. Pages 48 to 50 are the least satisfactory part of the book; but we have not sufficient space here to criticize at length. The bibliographical appendix is very valuable and tolerably complete. We miss Veyssier's interesting volume and Passy's "*Abrégé*." An article on "*The Reference Library of a School-Teacher of German*" is reprinted from the *Modern Quarterly*. Happy the school-teacher who can call such a library his own!

THE FATHER OF THE ESSAYISTS.

(1) *Michel de Montaigne, a Biographical Study.* By M. E. Lowndes. (Cambridge University Press.) (2) "*Foreign Classics for English Readers.*"—*Montaigne.* By the Rev. W. Lucas Collins. (Blackwood.)

Montaigne has of late taken a new lease of public favour; and one does not wonder at the successive revivals of his popularity. He is one of the masters of literature, for in him there is always something new. The world has found him an inexhaustible spring of wisdom and of wit. His trenchant aphorisms still greet us from time to time, generally in poorer guise. His intellect plays over an infinite variety of subjects. He has inspired not his own compatriots alone, but ours too. Bacon owes him no mean debt; Ben Jonson, Butler, Pope, Sterne, and Swift have all come under his influence. And Montaigne the essayist is Montaigne the man. "*All the world*," he tells us, "*knows me in my book, and my book in me.*" We turn with pleasure to the reprint of Mr. Collins's work, and still more to the newer volume in which Miss Lowndes has given us the pith of what has been written on Montaigne in recent years, by Bonnefin, Payen, Walter Pater, and other competent critics. Montaigne, indeed, is, practically, his own biographer. From his *Essays* we glean each detail of his life. In guileless self-revelation, in delightful garrulity, he emulates Pepys of the "*Diary*" and Cicero of the "*Letters*." But, as Mr. Collins points out, it is the public that he makes his confidant. Transparently simple, he conceals nothing. Detractors have much to say as to his affectation, his egotism, his love of appreciation (and no literary man is devoid of this last foible). But they cannot deny his charm. Egotist he was to the core, but of vanity in one sense he had no trace. His faults he exposes without mercy, if he does find them easy to condone. And he disarms our criticism because he is the first to deride himself. Often we seem to see him smiling as he writes.

We have interesting accounts of his early training under the direction of a devoted father, for whom he held always an affection and an esteem that were Horatian. Steeped in Latin from his cradle, he never really mastered Greek. He has been taken to task for his faulty scholarship; but few professed scholars have done so much to familiarize to unlearned readers the great thoughts of the ancients. We read of his life at the Guienne College and at Court, of his marriage, his close friendship with La Boétie and Mlle. de Gournay, whom he terms his "*filie d'alliance*." We have, too, an amusing description of the travel taken for his health, in Italy, Switzerland, and Germany. His account is as naïve as the Roman poet's famous "*Journey to Brundisium*." He tells us of his tenure of the mayoralty of Bordeaux, which was brief, and scarcely a success. To a man of his nature the chains of office were irksome to a degree.

As to the *Essays* themselves, Mr. Collins judiciously says: "*He is rather the companion for an hour's delightful gossip, to which we return with fresh appetite from time to time, than the author to whose work we devote ourselves, from the first page to the last, with a continuous interest and attention.*" They are the conversation of a cultured man, the "*table-talk*" of later days. The essay, as a definite form in literature, originates with Montaigne. And, as it is with all innovators, his public was slow to appreciate him. But posterity has amply paid the debt. He was undoubtedly in advance of his age. His ideas were not akin to the sixteenth-century spirit, but many of them have since penetrated into modern legislation and action. To every question he brought the search-light of a keen and original mind, crystallizing his thoughts into gems

in a language of which he had perfect command. Politically, as socially, he was something of the conservative, essentially an upholder of the established order of things.

Characteristically a lover of ease, by his own confession he was extremely selfish: "My principle is to centre and wholly confine myself within myself. . . . I would as soon lend any man my blood as my pains." But we have evidence to prove that when he chose he could be warm-hearted and sympathetic. We find in him a hatred of cruelty, a true feeling for the poor and oppressed, a considerable tolerance. To irresolution, also, he confesses. We can trace it throughout his philosophy. In an age of fierce political and religious struggle he shows a noticeable moderation and detachment from party. It is true that the discursiveness of his style involves him not seldom in inconsistencies. As he tells us, he never met with "such a monster or such a miracle (in the sense of a compound of contradictions)" as himself.

His religious views have been a point of debate. Was he a Christian, if an undogmatic one; was he a sceptic out and out, or an enemy of the faith? Mr. Collins inclines to think that his was a mind in which Christianity had no part. If he does not absolutely reject it, yet practically he ignores its power. As in his philosophy, his creed is one of doubt. His motto, "Que sais-je?" is typical of the man. True, Sainte-Beuve, divesting him of his mask of calmly philosophical inquirer, would stamp him as a subtle foe to Christianity. But Sainte-Beuve was not an unprejudiced critic. In any case, we fancy that most of his readers will endorse the dictum of Mme. de Sevigné on the Sieur de Montaigne: "What a charming man! what good company he is!"

THE RECORD OF THE ROCKS.

"The Progressive Science Series." Edited by F. E. Beddard, M.A., F.R.S.—*Earth Sculpture*. By Prof. James Geikie, LL.D., F.R.S. (Murray.)

Under the title of "Earth Sculpture," Prof. Geikie, in a book of some three hundred pages, describes the genesis of the earth's surface-features for the benefit of the non-specialist, who is, we presume, the general reader in his intellectual mood. Hitherto the subject has not, in English geological literature, been treated as a distinct branch of the science requiring separate treatment. In any case, the line has not been drawn so clearly as Prof. Geikie has drawn it. Stated shortly, the subject is embraced in the question: What are the forces which have moulded the earth's surface into its present form, and how do they operate? It is thus seen that it bears the same relation to general geology that the anatomy and physiology taught in art schools bear to those of the dissecting room.

The number of agents at work producing a resultant effect on any given area are so numerous, and the rock and soil formation so diversified, that an adequate treatment of the subject is, perhaps, only possible in such a large work as that of Prof. A. Penck. Again, there are books dealing with the geological history of particular areas—the memoirs of our own Geological Survey being notable examples—to which students must turn for the complete solution of problems relating to particular areas.

Prof. Geikie's work seems a satisfactory introduction to either of these. He deals very fully and thoroughly in the earlier chapters with the effects of denudation and erosion; and separate chapters are devoted to volcanic, glacial, and wind action, while the various forms due to rock character and stratification are exhaustively treated. Illustrations are plentiful. English readers, perhaps, would have preferred that more of these were drawn from places nearer home, and that the plates of the Geological Survey had been used rather than some of the imaginary diagrams.

The treatment of rock erosion would, perhaps, gain in clearness from a fuller discussion of the folding of strata and its effect upon the formation of joints and cleavage. Indeed, there is no explanation of the important phenomenon of slaty cleavage given, and the difficult question of the formation of coral islands and barrier reefs is also untouched. The necessity of keeping the book within a moderate compass doubtless accounts for these and some other omissions. They do not, however, sensibly detract from its value, which lies chiefly in the clear enunciation of principles, with full and apt illustrations of the chief phenomena bearing upon them. A useful glossary is appended, and the diagrams are plentiful and good. The lettering, however, of the illustrations on page 204 seems to have no reference to anything in the text. The work is in no sense a school text-book; but it can be heartily recommended to a teacher who knows his subject for the planning out of a syllabus and for adding to the interest and fullness of his lessons.

WESTMINSTER SCHOOL.

Annals of Westminster School. By John Sargeant. (Methuen.)

Mr. Sargeant shows such pride and delight in Queen Elizabeth's foundation at Westminster as an old boy and present master might be expected to feel. This is one of the best school histories which we have seen: genial throughout, imbued with the very spirit and genius of the place, recording all its vicissitudes, and dwelling with just warmth on its past glories and services to the nation. No English school is more characteristic of the English nation than Westminster; for, avoiding any idle or invidious comparison, we may point out that the shelter and associations of the Abbey, the constant absorption of the atmosphere and vital circulation of London, and the tradition of generations of masters and boys who came to the school partly because it was in London under the Abbey walls, have conferred on Westminster a heritage distinct in its kind from that of Eton and Winchester. St. Paul's, and even Charterhouse, has had somewhat similar advantages; but Colet could not do for his school what Elizabeth (carrying out the intention of her father) did for hers; the Cathedral was not the Abbey, nor was the City influential in the same way as the Court and Parliament; and St. Paul's was not a boarding school before all things. Westminster, again, was peculiarly happy in its earlier literary life and models, and in its relations to Christ Church and Trinity. Udall and Camden were amongst its headmasters in the sixteenth century; Ben Jonson, Cowley, Cartwright, and Dryden left their stamp upon it; many generations of Westminsters have sucked in their intellectual milk from Latin comedy, epigrams, and traditional wit. The author dwells lovingly on the literary fame of the school, and on the great men whom it has contributed to the Church, the law, the Army, and the State. More statesmen in the third quarter of the eighteenth century seem to have come from Westminster than from any other public school. Mr. Sargeant does not omit to commemorate the services of Westminster to school sports and athletics.

To no family did early cricket owe so much as to the Sackvilles, and from the brilliant wit of King Charles's Court to the last of the line the Sackvilles were Westminsters. Lord Middlesex left school about 1728, and seven years later was captain of an eleven of Kent against All England. The match was for £1,000 a side, and the All England eleven, captained by the Prince of Wales, lost it. Lord Middlesex's younger brother, Lord John Sackville, also learned his cricket in Tuttle Fields, and played in 1746 in the first match, whose score is preserved. The "Cricketalia," instituted by him in Twitnam Meadows, disturbed the unsympathetic pen of Horace Walpole.

For many years Westminsters combined with Eton "wet bobs" to maintain the glory of Third Trinity at Cambridge; but London has overgrown Westminster and left it far behind. "Water," which had already been driven from Roberts's to Putney, came practically to an end with the reign of Dr. Scott.

GENERAL NOTICES.

SCIENCE.

Chemistry for Schools. By C. Haughton Gill and D. Hamilton Jackson, B.Sc., Ph.D. (Stanford.)

As now revised, this book covers the requirements of the London Matriculation Chemistry, with considerable extra matter placed in separate chapters, which can be omitted without injury to the general plan. That plan is one of a kind which we have continually protested against, since the book starts with dogmatic statements about elements and compounds, and the following note appears on page 2:—"The names and symbols [of thirty elements] should at once be committed to memory." After this preliminary twist of the scholar's mind in the wrong direction, however, the book becomes scientific in its treatment, and for that we must be thankful. Numerous laboratory experiments are described and practical advice given, though we noticed one (the preparation of red phosphorus) which must have been "rote sarkastic," since the teacher is expected to "maintain it at that temperature for thirty or forty hours, taking especial care that it never rises as far as 250° C." The scientific staff of an ordinary school is not usually so numerous as to provide a double shift. There are some useful appendices—that on the purchase of apparatus and chemicals should be particularly useful to many isolated young teachers; but that on crystallography is worse even than the usual maltreatment of that subject in works on chemistry, since one gathers from it that all crystalline substances have a cleavage, and that crystallographic axes are always axes of symmetry. What the chemical student wants is not abstract geometrical treatment of ideal crystals, but figured examples of *actual* crystals and brief explanations

of the law of constancy of angle, and that of the simple ratios of parameters.

"Organized Science Series."—*First Stage Inorganic Chemistry (Practical)*. By F. Beddow, D.Sc., Ph.D. (Clive.)

This is an excellent guide for the beginner in practical laboratory work. The instructions that we have sampled are very clear and lay stress on just the most necessary points. The work includes the preparation of some common substances, simple systematic analysis, and simple quantitative experiments. The illustrations are mostly clear, and it is unfortunate that such an important one as that of the chemical balance should be so very foggy.

First Lessons in Modern Geology. By the late A. H. Green, M.A., F.R.S. Edited by J. F. Blake, M.A. (Clarendon Press.)

This pleasantly written little book should succeed in giving its readers true notions of geology as an essentially out-door science, if they have any eyes for nature and do not live in the fens. The plan of the work is very similar to that of another one reviewed at length by us some months ago, but it is even simpler in its method, covers less ground, and has comparatively few illustrations. The reader is made to examine sandstone and slate for himself and find what they are made of, and from the questions raised in this manner he is led on step by step even to such abstruse questions as glaciation, thrust-faulting, and the origin of igneous rocks. The editor is to be congratulated on his success in completing a work left unfinished and unarranged, without producing any effect of patchwork.

FRENCH.

Scenes of Familiar Life in Colloquial French, and Scenes of Child-Life in Colloquial French. By Mrs. J. G. Frazer. (Macmillan.)

As these books are by this time well known, it will suffice to say that the new edition is issued in a pretty cover, and that the older volume ("Familiar Life") is rendered yet more attractive by a number of excellent pictures by Mr. H. M. Brock, whose illustrations to "Child-Life" we commended on their appearance. Mrs. Frazer has done a real service to children, and teachers will be duly grateful for these bright scenes, which make it easy for them to combine amusement with instruction.

Jean de la Brète, Mon Oncle et Mon Curé. Edited by E. G. Goldberg, M.A. (Macmillan.)

An amusing tale in which, according to the editor, "both old and young people of both sexes will find interest and delight." It may, however, reasonably be doubted whether the adaptation will have the same effect on this large audience as the complete novel had on Camille Doucet (*attendri jusqu'aux larmes*); Reine figures a good deal as *le petit démon*, very little as *un ange*. She relates the story herself, and lets us into her confidence in a very charming manner. It is evident on every page that "Jean de la Brète" is a lady. The notes are distinctly good. The appendices call for no special remark; they are similar to those in the other volumes of Mr. Siepmann's series. In No. III. the English is occasionally in need of revision.

First Exercises in French Prose. By H. C. Benbow, B.A. (Livingtons.)

The object of the book is "to give boys in preparatory schools and the lower forms of public schools a fair vocabulary and a knowledge of common French constructions." There is not much beyond the excellent printing to commend this book. The lessons are arranged in the old way: rules, vocabulary, detached sentences for translation from and into French. In the statement that "the verb has been taken as the groundwork of the earlier portions of the book," we seem to hear an echo of Gouin; but, when we look into the matter, we find that there are no "series." Perhaps, however, Gouin may be held responsible for the numerous vocabularies scattered throughout the book. The learning of word lists is a painful process, and the results are unsatisfactory; constant repetition of a more limited number of words is of real value. We cannot recommend the book; it is too long, and very dull. The children are to be pitied who have to make their way through this mass of detached sentences, unrelieved by a single connected story.

French Conversations. By Mlle. Dehors de St. Mandé.

Books I. and II. (Sonnenschein.)

For girls only. This will be evident when it is pointed out that in Book II. two-thirds of the lessons deal with the process of going to bed and of getting up and dressing, *je* being a young lady. The author rightly refuses to the verb the place of supreme honour claimed for it by Gouin; but in her "series" prints the verbs in black type, so that she seems to agree with him after all. There is very little matter (sixty-three pages) in these two books. The publisher has therefore printed the text on one side only, and on very thick paper.

GERMAN.

H. Wachenhusen, Vom ersten bis zum letzten Schuss. Edited by T. H. Bayley, M.A. (Macmillan.)

The modern language teacher who regards it as a duty to be a messenger of peace and good will is not likely to welcome this book as tending to make his work easier. It is a brief account of the Franco-Prussian War, written very obviously from the German point of view. The allusions to the French are just what we expect from a journalist; they do not read so well after a quarter of a century, when their crudity is manifest. The style is poor. The book is, therefore, suited

only for cursory reading with the boys of an Army class, who will probably derive some advantage by learning a large number of military terms, and who will be interested in the plans of battlefields. Some popular songs (with music) are added; and appendices by Mr. Siepmann, containing words and sentences for *visa voce* drill, and passages for translating into German, based on the text.

Zschokke, Das Goldmacherdorf. Edited by S. Hein. (Hachette.)

A slightly old-fashioned tale of village life, wholesome and pleasantly written. It will make an excellent German reading-book for junior classes; the number of such books is so small that teachers will be glad to know of it. The notes are brief and satisfactory; the vocabulary seems to be almost complete. In some cases the text might have been "cooked" with advantage; e.g., *sich einander* (page 28, line 15, and page 54, line 17), *als wolle* (page 51, line 16, better *wollte*), *was* (page 5, line 7, better *das*), *niemandem* (page 43, line 24) and *niemanden* (page 38, line 23, better *niemand*), *entfernt wären* (page 37, line 26, better *sein*), &c. There are slips in the following places (we give the correct form): *einer* (page 1, line 3), *Mutwillen* (page 14, line 12), *tiefer* (page 25, line 28), *herzlieber* (page 25, line 20), *meisten* (page 28, line 18), *Schönes* (page 36, line 20), *gibt* (page 46, line 15).

MISCELLANEOUS.

"Monographs on Artists."—*Raphael*. By Prof. H. Knackfuss; translated by Campbell Dodgson, M.A. (H. Grevel & Co.)

This is the first of a new series of monographs on the great artists, which, when complete, will constitute a history of the great periods of art, carefully written (if we may judge by the volume before us), copiously illustrated, and very reasonable in price. The "Raphael" has 132 pages and 128 illustrations, admirably reproduced; it is bound with much taste in limp covers, and protected by a case. The succeeding volumes will deal with Holbein, Rubens, Rembrandt, and Michael Angelo. This should become a most popular library of the works of the supreme artists. We certainly know of none so thoroughly good which is at the same time so moderate in cost. The translation is a very good one.

Travels and Politics in the Near East. By William Miller. (Fisher Unwin.)

Mr. Miller gives us the impressions derived from four visits to the Balkan Peninsula within the last five years, and, whether his impressions agree with our own or not, we have no difficulty in giving him full credit for the candour with which he records the outcome of his personal observations and inquiries. He is certainly impartial, having no apparent preference for one Balkan people over another; and he is quite entitled, if he chooses, to put aside what might seem a natural preference for a Christian race over a Mohammedan, or for the modern representatives of the pioneers of civilization over races which have not hitherto made any great contribution to civilization. Mr. Miller is not an advocate, but an intelligent traveller recounting what he saw, and expressing his personal opinions. We have found the book thoroughly entertaining. It is well illustrated from photographs, and has a large pocket map of the Balkan countries. It may be recommended as very good reading to all who are fond of travel records.

"The Badminton Library." Edited by the Duke of Beaufort and A. E. T. Watson.—*Athletics*. By Montague Shearman. New edition. (Longmans.)

There is no sign of diminished interest in or cultivation of athletics, and the value of physical training has certainly never been more frequently or seriously discussed than it is to-day. It was, therefore, quite worth while to print this new edition of Mr. Shearman's interesting and wholesome volume of the "Badminton Library." The records are brought down to 1898.

The Poetical Works of John Greenleaf Whittier. Edited by W. Garrett Horder. (Henry Frowde.)

This is a complete "Oxford" edition of Whittier's poems, uniform with the same publisher's editions of Shakespeare, Burns, Byron, and others. Waiving the question as to Whittier's title to rank with poets of undoubted originality, we welcome this first collected edition of his poems published on this side of the Atlantic. In the matter of typography the "Oxford" edition is all that could be desired.

Herbart's Letters and Lectures on Education. Translated by H. M. and E. Felkin. (Swan Sonnenschein.)

The bibliography of Herbartian books in Germany and Switzerland alone mounts up to 2,234 works by 141 authors—an average of nearly sixteen ventures per man. Prodigious fecundity! How the matter stands in America and England we cannot say. Mr. Oscar Browning, who writes a preface for this volume, tells us that Herbart already "dominates the training college," and that he is "the only educational writer in modern times who has promulgated a complete system of education, and who has vindicated that place for the science of education in the nineteenth century which Comenius desired for it in the seventeenth." That is high praise. We observe that Mr. Browning goes on to say that "there is much in the letters which is not especially remarkable, and which might have been written by any tutor in a similar position." Also that the translation "is not always easily intelligible to the ordinary English reader."

Colour in Nature: a Study in Biology. By Mariou I. Newbigin, D.Sc. (John Murray.)

Dr. Newbigin was happily inspired when she took it in hand to deal with the physiology of colour. Every one with an inquiring mind must have wanted to know more about the causes of colour, and too little of a definite character has been said about them by those who might have been supposed to know. It is a fascinating subject; and, though this volume is essentially scientific, and intended for the serious student, it contains much that will interest the artist and the general reader. Dr. Newbigin treats of natural and artificial pigments, structural colours, the effects of the reflection and refraction of light, and then examines systematically the varying elements of colour in animal and vegetable life. In a final chapter she reviews the main theories as to the origin of colour; such as those of Poulton, Wallace, Eimer, Cunningham, and Simroth. The author may be congratulated on this admirable elucidation of a selected compartment of science.

WE HAVE ALSO RECEIVED the following publications and new editions:—

The Calendar of the University of Wales, 1898-9 (Mullock, Newport); of University College, London (Taylor & Francis); of the University College of North Wales (Bangor); of the University Correspondence College ("London University Guide"); and *The Baptist Handbook* or 1899 (James Clarke & Co.).

Graded Lessons on the Gospel according to St. Matthew, by William Taylor, and *Christ and the Catechism*, a series of lessons, with instructions and questions (Church of England Sunday School Institute).

In His Steps: What would Jesus do? by Charles M. Sheldon (Ward, Lock, & Co.).

Richard II., and *Supplement to Richard II.*, by Stanley Wood, M.A. (John Heywood, "Dinglewood Shakespeare Manuals").

The Growth and Greatness of our World-wide Empire, by the Rev. C. S. Dawe, B.A. (Educational Supply Association)—a spirited historical Reader; *The Patriotic Historical Reader*, Books I. and II. (Collins & Sons)—thoroughly good for its declared purpose; *Alternative Geography Readers*, Standard VII. (Chambers's)—dealing with the British Possessions.

The Dictionary of Dainty Breakfasts, by Phyllis Browne (Cassell)—a serviceable shilling handbook for housekeepers.

Studies and Questions in Book-keeping, and Advanced Accounts, by Alfred Nixon (Longmans)—with notes and answers: a simple and helpful half-crown volume.

On the Sprung and Adjusting of Watches, by F. J. Butten (Spon)—a technical, three-shilling manual, plainly set forth, with many illustrations.

Big-Type Arithmetic, Books III. (3d.) and IV. (4d.) (Collins & Sons)—a very good idea, which must save the eyes and help the feebleness of children.

Races of Mankind, by F. Ratzel, Part XXX. completing a very attractive and important work (Macmillan).

GIFT-BOOKS AND PRIZES.

III.

Dr. Gordon Stables contributes a story of promiscuous adventure: *Frank Hardinge: from Torrid Zones to Regions of Perpetual Snow* (Hodder & Stoughton). The word promiscuous tells everything—it would really be difficult to mention any kind of adventure possible to be met with by a boy, or conceivable by the reader of a Christmas story, which does not fall to the lot of Frank Hardinge and his companions.—In *Hubert Ellis: a Story of King Richard's Days the Second* (Ward, Lock, & Co.), Mr. Francis Davenant gives us an account of Wyclif and some of his contemporaries, of the last days of Edward III., and of the Peasants' Revolt. It is told in plain English, without affectations, and is a very good story in its way.—*The Son of a Hundred Fathers* (Blackie) is a story of "daring deeds in dangerous days," by Robert Overton; full of spirit, and with many illustrations. We commend it as distinctly engrossing.

One of the most delightful stories of the season, especially for girls, though we cannot imagine the reader who would not be charmed by it, is Mrs. Edwin Hohler's *For Peggy's Sake* (Macmillan). It is a romance in which both Peggy and her father play a leading part; and the pleasantness of the telling, combined with the happy unravelling of the plot, leaves us quite uncritical as to the probability of one or two of the incidents.

The Dormitory Flag (Nelson & Sons) is a schoolboy story, as its name implies. Mr. Harold Avery is on sure ground with a tale of school, and his new volume is thoroughly interesting. It deals largely with football and cricket, with the mischief of small boys and the authority of prefects; and we do not doubt that it will be found attractive by a great majority of its readers.

Fights for the Flag (Smith, Elder, & Co.) is by Mr. W. H. Fitchett, author of "Deeds that Won the Empire." It tells of Blake, Marlborough, Anson, George II. at Dettingen (!), Rodney, Howe, Moore, Wellington, Codrington, and men of the last half-century. There are portraits and plans, but no battle pictures. The book is very well

written, and for some readers will be vastly interesting.—*Britain's Roll of Glory* (Cassell & Co.) is an account by Mr. D. H. Parry of the heroes of the Victoria Cross. This is a new and revised edition of a popular book, and it includes a complete list of all who have won the cross, brought down to the year 1898.—From Messrs. Collins & Sons we have four volumes of *Graphic Stories*, "From Great Authors," "Of Kings," "Of Soldiers," and "Of Sailors." They are illustrated, and make very good reading.

A good book of military biography, dealing with Piedmont in the revolutionary period of 1847-9 and with the long story of the unification of Italy, is *The Autobiography of a Veteran* (1807-93), by General Count della Rocca, translated by Janet Ross (Fisher Unwin). It is full of reminiscences of a stirring and important period, and, though it might not have much attraction for the majority of boys and girls, it contains a good deal which should interest an adult.

A pleasant picture-book of somewhat mixed intentions, to which a writer of rhymes, a maker of music, and a dainty designer and figure drawer have contributed, is *Lessons in Line for Little Learners*, by A. H. S. (Elliot Stock). In the hands of a mother or nurse the book will amuse the little ones, at any rate by its pictures.—*The Boys' and Girls' Companion*, a little annual budget of simple tales, verses, and pictures, will be a welcome present for a youngster.

From Messrs. Hachette we have a parcel of very attractive New Year's gifts, mostly well bound in red cloth and lavishly gilt. First among them is Pierre Mael's *Seulette*, with fifty-eight capital illustrations by E. Zier, a touching story of a little girl who is rescued from a wreck, and sternly brought up until she runs away from school, and falls into the hands of a kind-hearted lion tamer.—*Le Démon des Sables*, by Gustave Toudouze, illustrated by A. Paris, is a story of '98, full of life and incident, with scenes on the Nile, in which Bonaparte figures.—*Beau-Frères* is another good story, domestic and romantic, by B.-A. Jeanroy, illustrated by A. Robaudi.—The annual volume of *Mon Journal* is full of entertainment for boys and girls, including stories, anecdotes, and numberless illustrations.—Two pretty stories in the "Bibliothèque Rose" are *Mademoiselle Cœur d'Ange*, by Albert Cim, and *L'Enfant des Pyrénées*, by Paul Junka.—*Les Retours du Cœur*, by J. H. Rosny, in the "Petite Bibliothèque de la Famille," is a grown-up romance of love and misconception.—The *Almanach Hachette* for 1899 is more crowded than ever with useful information of every kind, with a record and pictures of the year, and a budget of tickets for all the Paris theatres thrown in.—From the same publishers we have two pretty children's picture-books, *Le Petit Chaperon Rouge et Cendrillon* and *Nos Bons Animaux*, artistic and well coloured.

MATHEMATICS.

13955. (Professor NEUBERG.)—On construit sur les côtés d'un triangle ABC trois triangles isocèles semblables A'BC, B'CA, C'AB. Les droites BA', BC' coupent AC en B₁, B₂; les droites CB', CA' coupent BA en C₁, C₂; enfin, les droites AC', AB' coupent CB en A₁, A₂. Cela posé, les droites B₁C₂, C₁A₂, A₁B₂ enveloppent trois hyperboles, qui touchent deux des côtés du triangle ABC et ont pour asymptote le troisième côté; ces courbes ont pour tangente commune la droite de LEMOINE de ABC.

Solution by Professor A. DROZ-FARNY.

Soit A₀ le point milieu de BC; le lieu géométrique du sommet A' est la médiatrice correspondant au côté BC; elle rencontre AC et AB respectivement en β et γ.

Les rayons BA' et CA' décrivent deux faisceaux perspectifs, donc les ponctuelles B₁ et C₂ sont homographiques; la droite B₁C₂ enveloppe une conique tangente aux côtés AC et AB.

En faisant coïncider A' avec β ou γ, on constate qu'au point β de la série B₁ ou qu'à γ de la série C₂ correspond chaque fois dans l'autre série le point A; il

en résulte que βγ est la polaire de A. Si A' coïncide avec A₀, B₁ tombe en C et C₂ en B; la conique est donc tangente aux trois côtés du triangle, et, d'après un théorème connu, le conjugué harmonique de A₀ par rapport aux points B et C, c'est-à-dire le point infini de BC, sera le point de contact sur cette droite. La conique est donc une hyperbole dont BC est une des asymptotes. Comme il est facile de le voir, la seconde asymptote correspond au point infini de la médiatrice, et les trois centres des hyperboles sont en ligne droite.

En faisant coïncider A' avec le pôle de BC par rapport au cercle circonscrit ABC, la tangente B₁C₂ devient évidemment la droite de LEMOINE du triangle.

[The rest in Volume.]

13935. (J. TIMMER.)—Construct a triangle ABC, having given the side BC, the angle B, and the length of the bisector of A.

Solution by I. ARNOLD.

Let AD be the given bisector, and describe the circle ABD containing the angle B = given angle and E the centre. Take a point B on circumference and join BD, BA. Produce BD, and make angle DAC = DAB. If BC = given base, the thing is done. Take other points B' and B'', and do the same as in case of B, which will give the points C' and C''—this can evidently be done till we get a line B'C' or B''C'' equal to the given base. Consequently the points C, C', C'' are on some curve, and the question is solved by inflecting through D a line of given length and terminated at one extremity by the curve, and the other extremity on the circumference of the circumcircle ABD.

The question appears to be one of those which can only be solved conditionally.

[Supposing the above curve to be drawn, the difficulty is scarcely lessened, because the line, of length equal to given base, has yet to be drawn through D, meeting the said curve at one extremity and the circle at the other. The problem seems to resist the ordinary methods of geometry and algebra. But there are some interesting facts to be noticed in connexion with it. Thus, having AD and triangle B given, we can find the relation to AD of P, the circumcentre of ABD; and we know that BP (produced) intersects the perpendicular bisector of BC on AL, which is at right angles with AD; also that N, the point of intersection, is on the circumcircle of ABC, and that CN contains Q, the circumcentre of ADC. Moreover, P and Q are equidistant from O, the circumcentre of ABC, and NE and AD intersect at M on the circumcircle of ABC.

Knowing that BC passes through D, we can allow C₁ to coincide with D (if BC be less than a diameter of ABD) and the other extremity to be at B₁; N₁ will then coincide with P. For B₂, the intersection will be at N₂, and so on, the origin of the curve formed by N₁, N₂, &c., being at P on the line B₁P produced, and the polar equation being $\rho = \frac{1}{2}BC/\sin(\lambda - \frac{1}{2}\theta) - k$, where k = circum-radius of ABD and $\lambda = \angle B_1PE_1$. The intersection of this curve with AL determines N, and the line NPB determines B.]

13889. (G. H. HARDY.)—Sum $1 - \frac{1}{2^2} + \frac{1}{3^2} - \frac{1}{4^2} + \dots$ ad inf.

Solution by ANNIE CHARTRES; Rev. T. ROACH, M.A.; H. W. CURJEL, M.A.; PROFESSOR SANJANA, M.A.; and others.

$$1 - \frac{1}{2^2} + \frac{1}{3^2} - \frac{1}{4^2} + \dots = \int_0^1 \frac{dx}{(1+x^2)^2} = \frac{1}{2} + \frac{1}{2} \int_0^1 \frac{1}{1+x^2} dx = \frac{1}{2} + \frac{1}{2} \sqrt{2} \{ \log(\sqrt{2}+1) + \frac{1}{2}\pi \}.$$

See TODHUNTER'S *Integral Calculus*, p. 36.

[It is uncertain which sign precedes the term at infinity. The respective results, however, differ by $\frac{1}{4}$. The value given in the above solution is the mean.]

13886. (JOHN F. WILKINSON, B.A.)—If equilateral triangles be described on the sides of a right-angled triangle whose hypotenuse is given in magnitude, the locus of the middle point of the line joining their vertices is a circle. (By First Book Euclid, CASEY'S *Sequel to Euclid*.)

Solution by R. TUCKER, M.A.; and C. JOSS, M.A.

Describe the equilateral triangle ABH on the hypotenuse, and bisect the altitude HO in G, and complete the figure as in diagram. Since the

triangles EAH, ABC, BDH are congruent, therefore
EH = CB = CD and HD = AC = CE;

hence ECDH is a parallelogram; therefore, if CH be drawn, it passes through F and is bisected at F. Hence

$$FG = \frac{1}{2}CO = \frac{1}{2}OB = \text{constant,}$$

therefore, &c.

[Mr. CURJEL further observes that the theorem holds good when the equilateral triangles are described on the sides diversely: Let the triangles be described one on the same side and the other on the opposite side to the right-angled triangle.

Then $\triangle FAE = \triangle BAC$ in all respects. Also $\angle FOE$ is a right angle, since FO and OE are perpendicular to AB, AC. Hence it may easily be shown by Euclid, Book I., that a circle, centre P, passes through FOAE; therefore

$$OP = \frac{1}{2}FE = \frac{1}{2}BC = OC;$$

therefore locus of P is circle ABC.]

14037. (I. ARNOLD.)—From a given point within a triangle, to draw three right lines trisecting the triangle.

Solution by G. W. PRESTON, B.A.

Let ABC be the triangle, and P the given point within it.

Draw PS any line cutting AC in S. Join PA.

Draw SF parallel to PA, and meeting BA produced in F.

Then, clearly,

$$\triangle PFA = \triangle PSA.$$

Cut off FH = $\frac{1}{2}$ AB.

Through C draw CG parallel to AB, meeting FP produced in G.

Join PH, and draw GQ parallel to PH and meeting AB in Q. Join PQ. Then QPSA is one-third of the triangle. For join GH. Then, clearly,

$$\triangle PHQ = \triangle PHG. \text{ (Euc. I. 37)}$$

To each add PAH; therefore

$$\text{figure PAQ} = \text{figure PAHG} \text{ and } \triangle PSA = \triangle PFA.$$

Therefore figure PSAQ = $\triangle GHF = \frac{1}{3}\triangle ABC$,

since its base is $\frac{1}{2}$ AB and its altitude is the same.

Similarly, by joining PB and going through a like process, we can find R on BC, such that figure PQRB = $\frac{1}{3}$ of triangle.

The same method would divide the triangle into any number of equal parts by lines drawn from P.

[The rest in Volume.]

14030. (H. MACCOLL, B.A.)—Show that in any triangle the bisector of the less of two unequal angles is greater than the bisector of the greater.

Solution by R. F. DAVIS, M.A.; C. JOSS, M.A.; and many others.

Let ABC be a triangle; BM, CN the bisectors of the angles at the base. Then, if C > B, it is required to show that BM > CN.

Upon AB take Am = AM. Then

$$\angle AMI = AMI = C + \frac{1}{2}B > B + \frac{1}{2}C > ANI.$$

Therefore AN > AM, and perp. from N on AC (or BC) > perp. from M on AB (or BC). Hence $\triangle BNC > BMC$, or $\triangle BNI > CMI$, or $BN > CM$.

Complete the parallelogram MBNP. Then $\angle MCP > MPO$ and $\angle NCM > NPM$. Hence $NCP > NPC$ and $NP(BM) > CN$.

The above proof only involves the first book of Euclid. [The Rest in Vol.]

14033. (R. KNOWLES, B.A.)—Prove that the $(r+1)$ th term in the expansion of $\frac{1}{(1-x)^n}$ is $\frac{(r+1)(r+2)\dots(r+n-1)}{n-1!} x^r$.

Solution by F. H. PEACHELL, B.A.; and Rev. T. MITCHELSON, B.A.

The $(r+1)$ th term of $(1-x)^{-n}$

$$= \frac{n(n+1)\dots(n+r-1)}{r!} x^r = \frac{n+r-1!}{r! n-1!} x^r = \frac{(r+1)(r+2)\dots(n+r-1)}{n-1!} x^r.$$

[The PROPOSER adds:—

$$(1-x)^{-n} = 1 + \frac{n}{1}x + \frac{n(n+1)}{1.2}x^2 + \&c.,$$

and each term of this is evidently obtained by putting $r=1, 2, \&c.$, in the formula in the question.]

14009 & 14024. (G. HALE PUCKLE, M.A.)—(14009.) The angle between the positive sides of a pair of intersecting straight lines, represented by $\phi(xy) = 0$, is greater, equal to, or less than a right angle, as $a+b$ is greater, equal to, or less than 0.

(14024.) If $\phi(xy) = 0$ represents a pair of real intersecting straight lines, then (with the conditions of Quest. 13535, No. 437) the equations

$$a(ax+by+g) + b(hx+by+f) = 0 \dots\dots\dots (1),$$

$$b(ax+by+g) - a(hx+by+f) = 0 \dots\dots\dots (2),$$

represent the bisectors of the angles between them; and (1) or (2) is the bisector of the acute angles, as $a+b >$ or < 0 .

Solutions by the PROPOSER.

(14009.) All hyperbolas of which the lines are asymptotes, and which lie in this and the opposite angles, are represented by $\phi(xy) = p$, where p is a positive quantity; and the discriminant of all these is positive. Hence the eccentricity of all, corresponding to real foci, is determined by $e^2 = 2R/(R-a-b)$. [See Quest. 13535, *Educational Times*, No. 437.] The lines are one of these hyperbolas, and their eccentricity is evidently $= \sec \theta$, where 2θ is the angle between the positive sides, since the intersection of the lines is the focus, and the conjugate axis of the hyperbolas the directrix. Hence

$$\cos^2 \theta = (R-a-b)/2R, \quad \cos 2\theta = -(a+b)/R, \quad \&c.$$

(14024.) For (2) is the transverse axis of all hyperbolas drawn in the angle between the positive sides of the lines $\phi(xy) = 0$, as asymptotes, &c. [See Quest. 14009.]

QUESTIONS FOR SOLUTION.

14071. (Professor G. B. MATHews, M.A.)—Prove that the envelope of the line $\lambda\xi(\mu\eta^2 - \nu\zeta^2)x + \mu\eta(\nu\zeta^2 - \lambda\xi^2)y + \nu\zeta(\lambda\xi^2 - \mu\eta^2)z = 0$, subject to the condition $\eta\zeta + \xi\zeta + \xi\eta = 0$,

is, in general, a curve of the third class and fourth order; and investigate the relations connecting λ, μ, ν in any exceptional cases.

Show how this analytical problem is connected with the following:—The sides BC, CA, AB of a triangle inscribed in a conic meet a fixed line u in the points α, β, γ ; P is any point on the conic, and Pa, Pb, Pc meet the conic again in A', B', C'. It may be proved that AA', BB', CC' meet in a point Q on u ; it is required to find the envelope of the line PQ as P moves round the conic. [A special case is the envelope of the axis of a parabola which touches three given lines.]

14072. (Professor NEUBERG.)—Résoudre le système
 $\sin(y+z+u) = a \sin x, \quad \sin(x+u+z) = b \sin y,$
 $\sin(u+x+y) = c \sin z, \quad \sin(x+y+z) = d \sin u.$

14073. (Prof. S. SIRCOM, M.A.)—If n is a positive integer, prove that

$$\int \frac{\sin^n \theta}{\theta^n} d\theta = \frac{1}{(n-1)! 2^n} \left\{ n^{n-1} - n(n-2)^{n-1} + \frac{n(n-1)}{1.2} (n-4)^{n-1} - \frac{n(n-1)(n-2)}{1.2.3} (n-6)^{n-1} + \dots \right\} \pi.$$

[I have only seen this question worked for low values of n .]

14074. (Prof. E. J. NANSON.)—Calling the expression

$$a^m \left(\frac{m}{m+n} \right)^{m+n}$$

the parameter of the parabolic curve $y^{m+n} = a^m x^m$ where the axes are rectangular, show that the product of all the finite normals which can be drawn from any point to an algebraic curve is equal to the product of the finite tangents of the finite perpendiculars on asymptotes and of the parameters of the parabolic approximations to the parabolic branches of the curve.

14075. (Professor A. DROZ-FARNY.)—Le cercle inscrit du triangle ABC touche les côtés en D, E, F. Soit S le point de contact de ce cercle avec le cercle d'EULER. Démontrez que la droite de SIMSON de S par rapport au triangle DEF est parallèle à la droite d'EULER de ce triangle. Théorème analogue pour les cercles ex-inscrits?

14076. (Professor THOMAS SAVAGE.)—Show that, n being greater than 2, and s (an integer) a perfect n th power,

$${}^n C_1 x^{n-1} + {}^n C_2 s x^{n-2} + {}^n C_3 s^2 x^{n-3} + \dots + {}^n C_{n-1} s^{n-2} x + s^{n-1}$$

cannot be a perfect n th power, when x is any positive number (whole or fractional). Also ascertain if the theorem be true for negative values (integral or fractional) of x .

14077. (Professor SANJANA.)—If the arcs joining the mid-points of the sides of a spherical triangle be each 90° , the sum of the squares of the cosines of the half-sides of the triangle shall be unity. (Suggested by Quest. 13661.)

14078. (Professor UMES CHANDRA GHOSH.)—Show that

$$\Gamma\left(\frac{1}{2}(2m+1)\right) = (2m-1)(2m-3)(2m-5)\dots 5.3.1 \cdot (\sqrt{\pi})/2^m,$$

where m is any integer. Hence show that

$$\Gamma\left(\frac{1}{2}\right) + \frac{\Gamma\left(\frac{1}{2}\right)}{\Gamma(2)} + \frac{\Gamma\left(\frac{1}{2}\right)}{\Gamma(3)} + \frac{\Gamma\left(\frac{1}{2}\right)}{\Gamma(4)} + \&c. \text{ to } \infty = 0.$$

14079. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Exhibit the product of the two series

$$1 - 8 + 27 - 64 + 125 - 216 + \dots \text{ and } 1 - 16 + 81 - 256 + 625 - 1296 + \dots,$$

each to n terms, as a function of the roots of a quadratic equation.

14080. (D. BIDDLE.)—Prove that N is factorizable ($N = 6n \pm 1$) when $(N-1)^2 - 576\lambda = \square$ and $(N+1)^2 - 576\lambda = \square \dots\dots (\alpha, \beta)$,

provided $\lambda > 0$ and integral, of the same value in each equation. [(α) represents the square of the difference of the factors, (β) represents the square of their sum. When N is prime, both equations hold good only when $\lambda = 0$.]

14081. (Rev. Dr. FREETH.)—AB is the diameter, and AC, the half of AB, the radius, of the generating circle ADB. Assume any chord AD. Join CD, and produce AD to p so that Dp is equal to DC. Thus p is a point in a trisectrix. Join Cp, producing it to p_1 , so that Ap is equal to pp_1 . Join Ap_1 . Hence p_1 is a point in a supertrisectrix. Produce Ap_1 to P so that Pp_1 is equal to Cp_1 . Thus P is a point in a bisupertrisectrix. Bisect AC in E, and join PE. Let the angle APC = θ , AC = r , CP = R , AP = R' . Then

$$R = r \frac{\sin 10\theta}{\sin \theta}, \quad R' = r \frac{\sin 11\theta}{\sin \theta}.$$

Show that (1), in the isosceles position, APC is an isosceles triangle having each base angle the decuple of the vertical angle APC; (2) regarding the angle PAC, the curve is a decasectrix; (3) adopting the angle PCB, the curve is an undecasectrix; (4) on AC (in the isosceles position) by means of the isosceles triangle APC, a regular icosahenagon is describable; (5) trace the curve; (6) find its area, and enunciate its rectangular coordinates.

14082. (R. TUCKER, M.A.)—With the notation and convention of Quest. 14021, prove

- (1) $\Sigma a \cdot PP' = k^2$ ($k \equiv a^2 + b^2 + c^2$);
- (2) $\Pi (PP') + abc = 8R^2 \sin^2 2\omega$;
- (3) $\Sigma c^2/a (PP') = 0$;
- (4) $\Sigma (\Delta APP') = \Delta ABC (e^2 + 4)$.

If AP, AP' cut BC in l, l' , &c., then the conic through U, mm', nn' is $a^2 b^2 c^2 \Sigma a^2 = \Sigma (a^4 + b^4 c^2) bc \beta \gamma$.

Show also that a new (P) form for the "T.R." circle is

$$k^2 \Sigma a\beta\gamma = \Sigma aa \cdot \Sigma bca (b^2 + c^2). \quad (\text{August, 1897.})$$

14083. (C. E. HILLYER, M.A.)—Show that the collinearity of the mid-points of the diagonals of a complete quadrilateral is an immediate deduction from MENELAUS' theorem, viz., that the ratio compounded of the ratios of the segments into which a straight line divides the sides of a triangle is -1 , and its converse.

14084. (G. HALB PUCKLE, M.A.)—With origin transferred to a real focus, and with parallel axes, the equation $\phi(xy) = 0$ becomes (Quest. 13535, No. 437)

$$p^4 (ax^2 + 2hxy + by^2) - 2p^2 \Delta^{\frac{1}{2}} (ax + \beta y) + \Delta = 0,$$

and the equation to the directrix becomes

$$p^2 (ax + \beta y) - \Delta^{\frac{1}{2}} = 0.$$

14085. (Rev. W. ALLEN WHITWORTH, M.A.)—Prove the following rules:—To find $\square = \Delta$.—(1) Form the convergents to $\sqrt{2}$, thus:

$$\frac{1}{1}, \frac{3}{2}, \frac{7}{5}, \frac{17}{12}, \frac{41}{29}, \frac{99}{70}, \text{ \&c.}$$

Then write down the product of numerator and denominator of each fraction thus: 1, 6, 35, 204, 1189, 6930, &c.

These are the bases (*i.e.*, the square roots) of all square numbers which are also Δ .

(2) Write down the numerator of the first convergent the denominator of the second, the numerator of the third, and so on, alternately, thus:

$$1, 2, 7, 12, 41, 70, \text{ \&c.}$$

Square the *odd* terms, and take twice the square of each *even* term of this series, thus 1, 8, 49, 288, 1681, 9800, &c.

These are the bases of the triangular numbers which are identical with the square numbers found by Rule 1.

To find $\Delta = 2\Delta'$.—(3) Take the product of every two successive terms in the first series of Rule 2, thus:

$$2, 14, 84, 492, 2870, 16730, \text{ \&c.}$$

These are the bases of triangular numbers whose doubles are also triangular.

(4) Write down the numerator of the second, fourth, sixth, &c., convergents, thus: 3, 17, 99, 577, &c.

Take the sum of this series to one term, two terms, three terms, &c., thus 3, 20, 119, 676, &c.

These are the bases of the triangular numbers which are the doubles of the triangular numbers found by Rule 3.

14086. (B. N. CAMA, M.A.)—Show that the asymptotes of the curve whose r - p equation (the so-called "pedal" equation) is

$$(a - 3p^2)r^4 + 4r^3p^2 - 6r^2p^2 + 4rp = 1$$

all touch a circle of radius $(\frac{2}{3}a)^{\frac{1}{2}}$.

14087. (R. F. DAVIS, M.A.)—Extract from the *Life and Letters of Lewis Carroll*, by S. D. COLLINGWOOD. (Fisher Unwin, 1898).—"Dec. 19th, 1897 (Sunday). Sat up last night till 4 a.m. over a tempting problem sent me from New York—to find three equal rational-sided right-angled triangles. I found *two* whose sides are 20, 21, 29; 12, 35, 37; but could not find *three*."—Prove that the missing triangle was $7\frac{1}{2}$, 56, and $57\frac{1}{2}$, and find general formulæ for such triangles.

14088. (Rev. T. ROACH, M.A.)—OP and OQ are tangents to a parabola; prove $OP^2 : OQ^2 = SP : SQ$.

14089. (D. EDWARDS, B.A.)—Prove that

$$\int_0^{\pi} \sin x \log \sin x \log \cos x \, dx = 2 - \log 2 - \frac{1}{2}\pi^2.$$

14090. (G. H. HARDY.)—Evaluate

$$\int_0^{\infty} \tan^{-1}(p \operatorname{sech} u) \, du \quad \text{and} \quad \int_0^{\infty} \tan^{-1} \left\{ \frac{1}{2} \left(\alpha - \frac{1}{\alpha} \right) \operatorname{sech}^2 u \right\} \, du.$$

14091. (H. MACCOLL, B.A.)—Let α and β be the premisses of a syllogism, and γ the denial of the conclusion. Prove the two following canons of validity:—

(1) The syllogism is valid when two of the statements α , β , γ are implications (or universals) and the third a non-implication (or particular), provided that each term be distributed in one of the statements α , β , γ , undistributed in another, and absent in the third.

(2) If α , β , γ be three implications, if one term be twice distributed, while each of the two others is (as before) once distributed and once undistributed, the syllogism is valid provided we join to our premisses the assumption that the term twice distributed is a possibility.

[NOTE.—The second of these canons implies the syllogisms *Darapti*, *Felapton*, *Bramantip*, *Fesapo*; the first implies the other fifteen.

14092. (Rev. J. CULLEN, B.A.)—Prove that (1) the system of circles

$$(3 \tan \theta - \tan \phi) \Sigma a\beta\gamma - (\tan \theta - \tan \phi) \Sigma aa \Sigma a \cos A = 0,$$

where θ is variable and $\tan \phi = -\tan A \tan B \tan C$, includes the circum-N.P.-polar and orthocentroidal circles and also the circle through the associated "S" points; (2) the centre is $a \sin 2A / \sin(A + \theta) = \dots = \dots$, *i.e.*, the inverse of the point in Quest. 13921; (3) the join of the centre

and a sec $(A - \theta) = \dots = \dots$, *i.e.*, a "T" centre, touches a conic inscribed to the triangle formed by EULER'S line, the S-point axis, and the circum-B-axis; (4) the polar of G, with respect to this conic, is the join of the inverses of the N.P. centre and the point of intersection of the circum-B-axes of ABC and DEF the orthocentric triangle; (5) if a circle of the system cuts BC, &c., in D, D', &c., then

$$AF \cdot AF' : BD \cdot BD' : CE \cdot CE' = \cot A : \cot B : \cot C.$$

14093. (Rev. T. MITCHESON, B.A.)—PQ, a tangent to an ellipse at P, is equal to a diameter parallel to itself: find the locus of Q.

14094. (ROBERT W. D. CHRISTIE.)—In my factorization table (*vide* Vol. LXIX., p. 99) prove the law $a = 10t + u$, $b = Mu + t$, where t signifies the tens digit, u the units, and M the multiplier.

Ex. gr.—Under prime 79 we have

$15 = 10 \times 1 + 5$ and $41 = 8 \times 5 + 1$, $12 = 8 \times 1 + 4$, $17 = 8 \times 2 + 1$, &c., where $1501 = 41001 = 120001 = 1700001 = 79(M)$, &c., *ad lib.*

14095. (R. KNOWLES, B.A.)—

$$ax^2 + bxy + cy^2 + ey = 0, \quad a'x^2 + b'xy + c'y^2 + e'y = 0$$

are the equations to two parabolas, touching at P, referred to a tangent and normal at P as axes; if F, F' are the foci, prove that, if $b : c = b' : c'$, F, F', P are collinear.

14096. (G. W. PRESTON, B.A.)—If a chord of an ellipse make a constant angle with the major axis, show geometrically that the sum of the excentric angles of its extremities is a constant.

14097. (J. J. BARNIVILLE, B.A.)—Having $u_{n-1} + u_{n-2} = 3u_n$, prove that

$$\frac{1}{10+11} + \frac{1}{13+11} + \frac{1}{29+11} + \frac{1}{74+11} + \dots = \frac{1}{7} \frac{\sqrt{5}}{7+\sqrt{5}}$$

$$\frac{1}{2^2+1} + \frac{1}{3^2+1} + \frac{1}{7^2+1} + \frac{1}{18^2+1} + \dots = \frac{\sqrt{5}+1}{10}$$

$$\frac{1}{1^2+9} - \frac{1}{4^2+9} + \frac{1}{11^2+9} - \frac{1}{29^2+9} + \dots = \frac{1}{15}$$

$$\frac{1}{7+3} + \frac{1}{18-3} + \frac{1}{47+3} + \frac{1}{123-3} + \dots = \frac{1}{2}$$

14098. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Show that the sum of any number (> 2) of cubes can always be resolved into *three* (algebraic) factors.

Ex.—Resolve the sum of the 8 million cubes from 1,000,001 to 9,000,000 into its prime factors.

14099. (H. W. CURJEL, M.A.)—In a given quadrilateral inscribe a quadrilateral similar to a given quadrilateral.

14100. (Professor ELLIOTT, F.R.S.)—ABC, A'B'C' are two triangles incised in a conic, and PQR is the PASCAL line of the hexagon AB'CA'BC, P being the intersection of B'C and BC, Q of C'A and CA', and R of A'B and AB'. Prove that, if XYZ be an inscribed triangle which is copolar both with ABC and A'B'C', with vertices homologous in the order named, then XP, YQ, ZR intersect on the conic, and the two poles lie on the line PQR. Prove also that all inscribed triangles XYZ which are copolar both with ABC and A'B'C' can be constructed by joining P, Q, R to any the same point of the conic, and taking for vertices the second intersections of the conic with the joining lines.

14101. (Professor COCHERZ.)—Lieu des points d'où l'on peut mener à une ellipse deux tangentes telles que la bissectrice de leur angle passe par un point fixe.

14102. (R. F. MUIRHEAD.)—Show (1) how a study of the parabola

$$(y-x-1)^2 = 4(x-3) \quad \text{or} \quad y^2 + x^2 - 2xy - 2x - 2y + 13 = 0,$$

which is symmetrical with reference to its axis $x = y$, throws light on the peculiarities under change of sign of the function

$$\phi(x) = x + 1 - 2\sqrt{x-3};$$

and (2) how an indefinite number of functions having properties similar to that of $\phi(x)$ may be obtained from the equations of other conic sections having $y = x$ as axis.

14103. (Prof. CROFTON, F.R.S.)—If $u = x^2 + ax + b$, a solution of the equation $u(d^2y/dx^2) = n(n+1)y$ is $y = D^{n-1}u^n$; and another solution is $y = D^{-n-2}u^{n-1}$. Also, if $u^2(d^2y/dx^2) = n(n+1)(n+2)(n+3)y$, one solution is $y = D^{-n-1}u^{n+1}$.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXIX. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, December 8th, 1898.—Lt.-Col. Cunningham, R.E., Vice-President, in the Chair. Fifteen members present.

The following gentlemen were elected members of the Society:—R. J. Aley, A.B., A.M., Ph.D., Professor of Mathematics, Indiana University, Bloomington, Indiana; E. W. Barnes, B.A., Fellow of Trinity College, Cambridge; J. H. Grace, B.A., Fellow of St. Peter's College, Cambridge; F. Morley, Sc.D. Camb., Professor of Mathematics, Haverford College, Pennsylvania; C. A. Rumsey, B.A., formerly Scholar of Trinity College, Cambridge; J. T. Walley, M.A., Assistant Professor of Mathematics, Aberystwyth.

Major MacMahon, R.A., F.R.S., communicated a discovery he had recently made in the Theory of Compound Partitions.

Mr. J. E. Campbell, M.A., read a paper "On Simultaneous Partial Differential Equations." Messrs. J. Hammond, M.A., and A. Berry, M.A., made remarks on these communications.

The following papers were briefly abstracted:—

"On Hyperplane Coordinates," Mr. W. H. Young, M.A.

"Two Problems of Wave Propagation at the Surface of an Elastic Solid," Mr. T. J. Bromwich, B.A.; and "The Influence of Gravity on Waves in an Elastic Solid, with especial reference to the Earth," by the same author.

"On a Theorem in Determinants allied to Laplace's," Prof. W. H. Metzler, Ph.D.

Lt.-Col. Cunningham (Mr. Tucker *pro tem.* in the Chair) drew attention to the three following exceptionally high numbers:—

$$N_1, N_2 = [2^{213} (2^{209} \pm 1)^3 \mp (2^{211} \pm 1)^3] = (2^{210} \pm 1)(2^{210} \mp 1)^3,$$

$$N_3 = [\{ (2^{105} + 1)^4 - 2^{108} (3 \cdot 2^{104} + 1) \}^2 + \{ (2^{105} + 1)^4 - 2^{212} (2^{106} + 3) \}^2] \\ = 2 (2^{210} + 1)^4.$$

The complete factorization of the numbers $(2^{210} \pm 1)$ being known (see Lucas, *Sur la Série récurrente de Fermat*, Rome, 1879), the three large numbers (N) are also completely factorizable into their prime factors. The two N_1, N_2 are of order 2^{240} , and therefore contain 253 figures; whilst N_3 is of order 2^{841} , and therefore contains 254 figures. The largest number hitherto completely factorized into its prime factors (so far as known) is $(2^{210} + 1)$, which contains 64 figures.

SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French. Price 2s. 6d. cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly*.

"The English Idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.

"The exercises in the use of idioms are specially good."—*Bookman*.

"Will be found serviceable for rapid drill in the hands of a judicious teacher."—*Educational Times*.

"Would afford useful practice for intending candidates."—*Education*.

"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints, and one or two slips that we have noticed."—*Journal of Education*.

"We are great advocates of abundant exercises, hence our immediate approval of this book."—*School Guardian*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

THE PUBLIC SCHOOL SPELLING CARD.

By the same Author.
Twenty-fourth Thousand. Price 6d.

Containing nearly 1,000 words in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than 15 years, with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

French Essentials and French Conversation Sentences.

Second Edition. Price 2s., cloth; 1s. 6d., boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous." *Journal of Education*.

"Students preparing for examination in French Grammar and Composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

London: RELFE BROTHERS, Ltd., 6 Charterhouse Buildings, Aldersgate, E.C.

THE NAVY LEAGUE MAP OF THE WORLD. Illustrating British Naval History and Dedicated to the Children of the British Empire. Size of Map, 72 by 63 inches. Prices: on cloth, stained rollers and varnished, £1. 1s.; on cloth, mahogany rollers and bound with silk up the sides, £1. 11s. 6d.; on cloth, folded up in Four Divisions, and in titled box case, £1. 11s. 6d.

ILLUSTRATIONS OF GEOMETRY. On an entirely New Principle—the Problems being given in Different Colours on a Black Ground. By THOMAS J. MENZIES, M.A., B.Sc., &c., Hutcheson Grammar School, Glasgow. Sheets I. and II. ready; Sheet III. in preparation; size 50 by 42 inches. Price 7s. 6d. each, on cloth and rollers.

HISTORICAL ATLAS. New Edition. Containing 35 Maps, Printed in Colours, with Index, Notes, &c. Crown 8vo, full-bound cloth, gilt, price 2s. 6d.

THE MULTUM IN PARVO ATLAS OF THE WORLD. Fourth Edition, containing 96 Maps, Political, Physical, &c. Useful Statistics and Index. Crown 16mo, full-bound cloth, price 2s. 6d.

New Edition, Revised to date, at press.

THE UNRIVALLED ATLAS. Twenty-second Edition. Containing 40 Full-coloured Maps, Indexes, &c. Full-bound cloth, price 3s. 6d.

Just published. Entirely New Edition of the

IMPERIAL SCHOOL WALL MAP OF THE WORLD ON MERCATOR'S PROJECTION. Size 72 by 63 inches. Price 21s., on cloth, rollers, and varnished.

Just published. Entirely New Edition of the

LARGE SCHOOL WALL MAPS OF AFRICA AND THE UNITED STATES. Size 50 by 42 inches. Price 12s. each, on cloth, rollers, and varnished.

OBJECT LESSON PICTURES. Entirely British Productions. Over 200 subjects.

Complete Catalogue and Illustrated List of Object Lesson Pictures free on application.

EDINA WORKS, EASTER ROAD, AND 20 SOUTH ST. ANDREW STREET, EDINBURGH;

5 White Hart Street, Warwick Lane,

London, E.C.

MESSRS. METHUEN'S LIST.

WORKS BY A. M. M. STEDMAN, M.A.

Initia Latina: Elementary Lessons in Latin Accidence. Third Edition. Fcap. 8vo, 1s.

First Latin Lessons. Fifth Edition. Enlarged. Crown 8vo, 2s.

First Latin Reader. With Notes adapted to the Shorter Latin Primer and Vocabulary. Fourth Edition. Revised. 18mo, 1s. 6d.

Caesar.—The Helvetian War. With Notes and Vocabulary. Second Edition. 18mo, 1s.

Livy.—The Kings of Rome. With Notes and Vocabulary. Illustrated. 18mo, 1s. 6d.

Easy Latin Passages for Unseen Translation. Fifth Edition. Fcap. 8vo, 1s. 6d.

Exempla Latina: First Exercises on Latin Accidence. With Vocabulary. Crown 8vo, 1s.

Easy Latin Exercises on the Syntax of the Shorter and Revised Latin Primer. With Vocabulary. Seventh and Cheaper Edition. Revised. Crown 8vo, 1s. 6d. Issued with the consent of Dr. KENNEDY.

The Latin Compound Sentence: Rules and Exercises. Crown 8vo, 1s. 6d. With Vocabulary, 2s.

A Vocabulary of Latin Idioms and Phrases. Second Edition. 18mo, 1s.

Notanda Quaedam: Miscellaneous Latin Exercises on Common Rules and Idioms. Third Edition. Fcap. 8vo, 1s. 6d. With Vocabulary, 2s.

Latin Vocabulary for Repetition: Arranged according to Subjects. Seventh Edition. Fcap. 8vo, 1s. 6d.

Steps to Greek. 18mo, 1s.

A Shorter Greek Primer. Crown 8vo, 1s. 6d.

Easy Greek Passages for Unseen Translation. Third Edition. Fcap. 8vo, 1s. 6d.

Greek Vocabulary for Repetition. Second Edition. Fcap. 8vo, 1s. 6d.

Greek Testament Selections. With Introduction, Notes, and Vocabulary. Third Edition. Fcap. 8vo, 2s. 6d.

Steps to French. Fourth Edition. 18mo, 8d.

First French Lessons. Fourth Edition. Crown 8vo, 1s.

Easy French Passages for Unseen Translation. Third Edition. Fcap. 8vo, 1s. 6d.

Easy French Exercises on Elementary Syntax. With Vocabulary. Second Edition. Crown 8vo, 2s. 6d. Key, 3s. net.

French Vocabulary for Repetition. Sixth Edition. Fcap. 8vo, 1s.

NEW BOOKS.

Annals of Eton College. By W. STERRY, M.A. With Numerous Illustrations. Demy 8vo, 7s. 6d.

Annals of Westminster School. By J. SARGEANT, M.A. With Numerous Illustrations. Demy 8vo, 7s. 6d.

Annals of Shrewsbury School. By G. W. FISHER, M.A. With Numerous Illustrations. Demy 8vo, 10s. 6d. [Shortly.]

A Class Book of Dictation Passages for the Use of Middle and Higher Forms. By the Rev. W. WILLIAMSON. Crown 8vo, 1s. 6d.

The passages are culled from recognized authors, and a few newspaper passages are included. The lists of appended words are drawn up mainly on the principle of comparison and contrast, and will form a *répertoire* of over 2,000 words, embracing practically all the difficulties felt by the pupil.

An Entrance Guide to the Professions and Business. By HENRY JONES. Crown 8vo, 1s. 6d. [Commercial Series.]

Volumetric Analysis. By J. B. RUSSELL, B.Sc., Science Master at Burnley Grammar School. Crown 8vo, 1s.

A small manual, containing all the necessary rules, &c., on a subject which has hitherto only been treated in expensive volumes.

A Shorter Greek Primer of Accidence and Syntax. By A. M. M. STEDMAN, M.A. Crown 8vo, 1s. 6d.

A Key to Stedman's Easy French Exercises. By G. A. SCHRUMPF. Crown 8vo, 3s. net.

SCHOOL EXAMINATION SERIES.

EDITED BY A. M. M. STEDMAN, M.A.
Crown 8vo, 2s. 6d.

French Examination Papers in Miscellaneous Grammar and Idioms. By A. M. M. STEDMAN, M.A. Ninth Edition.

A Key, issued to Tutors and Private Students only, to be had on application to the Publishers. Fourth Edition. Crown 8vo, 6s. net.

Latin Examination Papers in Miscellaneous Grammar and Idioms. By A. M. M. STEDMAN, M.A. Eighth Edition.

Key, Third Edition (issued as above), 6s. net.

Greek Examination Papers in Miscellaneous Grammar and Idioms. By A. M. M. STEDMAN, M.A. Fifth Edition, Enlarged.

Key, Second Edition (issued as above), 6s. net.

German Examination Papers in Miscellaneous Grammar and Idioms. By R. J. MORICH, Manchester Grammar School. Fifth Edition.

Key, Second Edition (issued as above), 6s. net.

History and Geography Examination Papers. By C. H. SPENCE, M.A., Clifton College. Second Edition.

Science Examination Papers. By E. E. STEEL, M.A., F.C.S., Chief Natural Science Master, Bradford Grammar School. In Three Vols. Part I., Chemistry. Part II., Physics.

General Knowledge Examination Papers. By A. M. M. STEDMAN, M.A. Third Edition.

Key, Second Edition (issued as above), 7s. net.

CLASSICAL TRANSLATIONS.

EDITED BY H. F. FOX, M.A.,
Fellow and Tutor of Brasenose College, Oxford.

Cicero.—De Natura Deorum. F. BROOKS, M.A., late Scholar of Balliol College. Crown 8vo, 3s. 6d.

Cicero.—De Oratore, I. E. N. P. MOOR, M.A., late Assistant-Master at Clifton. Crown 8vo, 3s. 6d.

Cicero.—Pro Milone, Pro Murena, Philippic II. in Catilinam. H. D. BLAKISTON, Fellow and Tutor of Trinity College, Oxford. Crown 8vo, 5s.

Horace.—Odes and Epodes. A. D. GODLEY, M.A.

Sophocles.—Electra and Ajax. E. D. A. MORSHEAD, M.A., Assistant-Master at Winchester. Crown 8vo, 2s. 6d.

Aeschylus.—Agamemnon, Choephoroe, Eumenides. LEWIS CAMPBELL, M.A., LL.D., late Professor of Greek at St. Andrews. Crown 8vo, 5s.

Lucian.—Six Dialogues (Nigrinus, Icaro-Menippus, Cock, Ship, Parasite, Lover of Falsehood). S. T. IRWIN, M.A., Assistant-Master at Clifton. Crown 8vo, 3s. 6d.

Tacitus.—Agricola and Germania. R. B. TOWNSHEND, M.A., late Scholar of Trinity College, Oxford. Crown 8vo, 2s. 6d.

METHUEN'S COMMERCIAL SERIES.

EDITED BY H. DE B. GIBBINS, D.Litt., M.A. Crown 8vo.

British Commerce and Colonies from Elizabeth to Victoria. By H. DE B. GIBBINS, D.Litt., M.A., Author of "The Industrial History of England," &c. Third Edition. 2s.

Commercial Examination Papers. By H. DE B. GIBBINS, D.Litt., M.A. 1s. 6d.

The Economics of Commerce. By H. DE B. GIBBINS, D.Litt., M.A. 1s. 6d.

A Primer of Business. By S. JACKSON, M.A. Second Edition. 1s. 6d.

German Commercial Correspondence. By S. E. BALLY. Crown 8vo, 2s. 6d.

French Commercial Correspondence. By S. E. BALLY. Second Edition. 2s.

A French Commercial Reader. By S. E. BALLY. 2s.

Commercial Geography, with special reference to the British Empire. By L. W. LADE, M.A. Second Edition. 2s.

Commercial Arithmetic. By F. G. TAYLOR, M.A. 1s. 6d.

Précis Writing and Office Correspondence. By E. E. WHITFIELD, M.A. 2s.

Guide to Professions and Business. By HENRY JONES. Crown 8vo, 1s. 6d.

Test Cards in Euclid and Algebra. By D. S. CALDERWOOD, Headmaster of the Normal School, Edinburgh. In three stages of 40, with Answers, 1s. each.

A set of cards for advanced pupils in elementary schools.

"They bear all the marks of having been prepared by a teacher of experience, who knows the value of careful grading and constant repetition. Summs are specially inserted to meet all likely difficulties. The papers set at the various public examinations have been largely drawn upon in preparing the cards."—*Glasgow Herald*.

The above may also be had in Book form (without Answers). Stages I. and II., price 2d. each; and Stage III., price 3d.

Carpentry and Joinery. By F. C. WEBBER. With Numerous Illustrations. Crown 8vo, 3s. 6d. [Text-Books of Technology.]

A manual for technical classes and self-instruction.

Practical Mechanics. By SIDNEY H. WELLS. Illustrated. Crown 8vo, 3s. 6d. [Text-Books of Technology.]

A History of Egypt, from the Earliest Times to the Present Day. Edited by W. M. FLINDERS PETRIE, D.C.L., LL.D., Professor of Egyptology at University College. Fully Illustrated. In Six Volumes. Crown 8vo, 6s. each.

Vol. IV. **The Egypt of the Ptolemies.** J. P. MAHAFFY. [Shortly.]

Vol. V. **Roman Egypt.** J. G. MILNE. [Ready.]

A Short History of Rome. By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 4 Maps. Second Edition. Crown 8vo, 3s. 6d.

"An original work, written on an original plan, and with uncommon freshness and vigour."—*Speaker*.

Taciti Agricola. With Introduction, Notes, Map, &c. By R. F. DAVIS, M.A., Assistant-Master at Weymouth College. Crown 8vo, 2s.

Taciti Germania. By the same Editor. Crown 8vo, 2s.

Passages for Unseen Translation. By E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and A. M. COOK, M.A., late Scholar of Wadham College, Oxford, Assistant-Masters at St. Paul's School. Crown 8vo, 3s. 6d.

This book contains two hundred Latin and two hundred Greek Passages, and has been very carefully compiled to meet the wants of V. and VI. Form boys at Public Schools. It is also well adapted for the use of Honourmen at the Universities.

"A capital selection, and of more variety and value than such books usually are."—*Athenaeum*.

"We know of no book of this class better fitted for use in the higher forms of schools."—*Guardian*.

Exercises in Latin Accidence. By S. E. WINBOLT, Assistant-Master in Christ's Hospital. Crown 8vo, 1s. 6d.

An elementary book adapted for Lower Forms to accompany the shorter Latin Primer.

Accurate and well arranged."—*Athenaeum*.

Notes on Greek and Latin Syntax. By C. BUCKLAND GREEN, M.A., Assistant-Master at the Edinburgh Academy, late Fellow of St. John's College, Oxon. Crown 8vo, 3s. 6d.

Notes and explanations on the chief difficulties of Greek and Latin Syntax, with numerous passages for exercise.

"Well arranged, clear, and extremely useful."—*School Guardian*.

METHUEN & CO., 36 ESSEX STREET, STRAND.

OLD TESTAMENT MANUALS

Suitable for the Examinations of the College of Preceptors, &c.

BY THE

REV. H. M. CLIFFORD, M.A.,

WADHAM COLLEGE, OXFORD; AND ELLESMERE, SALOP.

These are the only Manuals which omit from the Text the passages not usually read in public. Also the only ones that have

- (i.) The Notes opposite the Text.
- (ii.) References to every Person and Place mentioned in each Book.
- (iii.) Questions upon each Book, with References to the Answers.

Over 70,000 copies have been sold in England for educational purposes, and they have been highly commended by the Headmasters of Harrow, Rugby, Shrewsbury, Cheltenham, and 100 other Masters and Mistresses and Clergy. These Manuals are as cheap as any that are published, varying in price from 9d. to 1s. 6d. each. They will be found very suitable for Class Teaching in Day and Sunday Schools, for Family Reading, for Parents with their Children, and for Private Study,

ALSO IN PREPARATION FOR EXAMINATION.

HANDBOOK TO	PRICE.
GENESIS	1s. 6d.
EXODUS	1s. 6d.
JOSHUA and JUDGES	9d.
RUTH and I. SAMUEL	9d.
II. SAMUEL	1s.
I. KINGS	1s.
II. KINGS	1s.
EZRA and NEEHEMIAH	1s.

SOLD BY ALL BOOKSELLERS.

FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID." Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth. Now ready.

Now Ready, Second Edition, Revised and Enlarged, 564 pp., price 12s.

A TREATISE ON THE

ANALYTICAL GEOMETRY

OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS. Containing an account of its most recent Extensions, with numerous Examples. New Edition. Crown 8vo.

A TREATISE ON

ELEMENTARY TRIGONOMETRY.

With numerous Examples and Questions for Examination. Third Edition. Small 8vo, 148 pp., price 3s.

KEY TO THE EXERCISES

IN THE TREATISE ON ELEMENTARY TRIGONOMETRY. With numerous Examples and Questions. Second Edition. Price 2s.

A TREATISE ON

PLANE TRIGONOMETRY.

Containing an account of Hyperbolic Functions, with numerous Examples. Crown 8vo. Second Edition.

Crown 8vo, price 6s.

A TREATISE ON

SPHERICAL TRIGONOMETRY,

AND ITS APPLICATION TO GEODESY AND ASTRONOMY. With numerous Examples.

HODGES, FIGGIS, & CO., LIMITED, 104 GRAFTON STREET, DUBLIN. LONDON: LONGMANS & CO.

On and after JANUARY, 1899,

THE

Educational Review

WILL APPEAR

EVERY MONTH

Instead of Six Times a Year, as before.

THE PRICE of the Review will be FOURPENCE,

But the number of pages will be the same as when the Magazine cost One Shilling.

The Magazine will now be largely devoted to the

Science and Art of Teaching.

But, in addition to PEDAGOGICS, will contain

News, and discuss topics of current importance in Secondary and Higher Education.

PROFESSOR MEIKLEJOHN'S SERIES.

The Comparative Atlas. By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. Containing 64 Plates and General Index 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."—*The Teachers' Monthly*.

"This is certainly the most comprehensive work ever published at the moderate price of half-a-crown. From the attractive frontispiece, representing the flags of all nations, to the final page on geographical etymology, there is not a wasted inch."—*The Teachers' Review*.

A New Arithmetic. By G. A. CHRISTIAN, B.A. Lond. and G. COLLAR, B.A., B.Sc. Lond. Crown 8vo, 562 pp. 4s. 6d.

"We recommend teachers and students to judge for themselves what a powerful auxiliary to success has been given them by the experience and judgment of the able authors."—*The Schoolmaster*.

"We also welcome it because in several of its chapters—such, for example, as those on factors, decimal fractions, involution and evolution, surds and logarithms—it seems to us to mark a distinct advance on the majority of its predecessors."—*The School Guardian*.

"We consider it so satisfactory that we have at once placed it on our list of books."—*The Rev. G. H. S. Walpole, D.D., Principal, Bede College, Durham*.

London: a Short History. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. Crown 8vo, 268 pp. 1s. 6d.

"This book is a successful attempt to place before the school-children of London some of the important geographical and historical facts connected with the great metropolis. The facts are presented in language suitable to the children's requirements, and every thing has been done to make the volume attractive and readable."—*The Teachers' Aid*.

The English Language: its Grammar, History, and Literature. By J. M. D. MEIKLEJOHN, M.A. Seventeenth Edition. Enlarged, with Exercises and additional Analysis. Crown 8vo, 470 pp. 4s. 6d.

"For the first class College of Preceptors your work is most excellent and valuable."—*The Rev. F. Marshall, M.A., Almondbury Grammar School*.

"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—*W. Johnson, Esq., B.A., Elmfield College, York*.

A New Geography on the Comparative Method. With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. Twenty-first Edition. 115th Thousand. Crown 8vo, 630 pp. 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of Geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education*.

"For all that is best worth knowing no better book than this could be studied."—*The Educational News*.

A New History of England and Great Britain. With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Thirteenth Edition. Crown 8vo, 740 pp. 4s. 6d.

"We like the arrangement of the text, which is a distinct success for the purpose of catching the eye. We shall have much pleasure in warmly recommending it to our H.C.S. Class II. candidates."—*Messrs. Wren & Gurney, Powis Square, London*.

The Principles and Practice of Teaching and Class Management. By JOSEPH LONDON, F.G.S., Vice-Principal in the Sattleby Training College. Third Edition. Crown 8vo, 462 pp. 5s. 0d.

"We have no hesitation in saying that this is one of the best treatises on this subject which has appeared for some time, and we cannot too strongly recommend it to the attention of all interested in the practical work of education."—*The Educational News*.

A New Poetry Book for the use of Schools and Families. Fourth Edition. 156 pp. 1s. 0d.

"This neatly bound little collection, which is one of Professor Meiklejohn's series of school manuals, may be confidently recommended to teachers in search of new elections for recitation."—*The Schoolmaster*.

A School Algebra for Junior Forms. By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. 1s. 6d.

With Answers, 266 pp. 2s. 0d.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent*.

"The scientific method, from known to unknown, from Arithmetic to Algebra, has invariably been adopted, while lucid explanations and proofs precede oral exercises, followed in turn by numerous carefully graduated examples for attaining the necessary mechanical accuracy."—*The Educational News*.

The United States: their Geography, Resources, Commerce, and History. By M. J. C. MEIKLEJOHN, B.A. 92 pp. 6d.

"Useful tables of products, exports, distances, &c., are given, and many valuable hints on map practice. The book is brightened by numerous quotations from travellers, geographers, and historians. A little book of great value to the student."—*The Practical Teacher*.

Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery. By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. 6d.

"This book is up to date in every detail; there is a very good and useful map as frontispiece, and the paragraph arrangement is adopted. The student will find it a very desirable text-book on this portion of Greater Britain."—*The Pupil Teacher*.

Africa: its Geography, Resources, and Chronicle of Discovery up to 1897. By M. J. C. MEIKLEJOHN, B.A. Oxon. Second Edition. Crown 8vo, 76 pp. 4d.

"This little book is, for its size, remarkably full of information about Africa, and gives pithy explanations of such current expressions as 'sphere of influence' and 'hinter-land,' &c."—*The Teachers' Aid*.

The British Colonies and Dependencies: their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Second Edition. Crown 8vo, 96 pp. 6d.

"This manual is terse and full; intelligently paraphrased and skilfully managed typographically. It does credit to the compiler, and we hope this work may gain the recognition it really merits."—*The Educational News*.

A Short Geography, with the Commercial Highways of the World. Thirteenth Edition. Crown 8vo, 196 pp. 1s.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.

"Clearness and conciseness exemplified."—*The Private Schoolmaster*.

A Short History of England and Great Britain. B.C. 55 to A.D. 1890. Tenth Edition. Crown 8vo 1s.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises. Ninth Edition 1s.

This little book is written in the clearest and simplest style for beginners. It contains:—

- | | |
|---------------------------------|---|
| i. The Simplest Definitions. | iv. Graduated Methods of Parsing. |
| ii. Slowly graduated Exercises. | v. Bad Grammar Corrected, with Reasons. |
| iii. Clearly printed Tables. | vi. Analysis, with Plain Diagrams. |

A New Spelling Book. With Side Lights from History. Sixth Edition. Crown 8vo, 152 pp. 1s.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

The Spelling List. For Civil Service and other Examinations. With a Key to Correct Spelling. Third Edition. Crown 8vo, 146 pp. 1s.

"Your 'Spelling List' is a very decided advance in the right direction, ably conceived, and brilliantly written. We shall certainly strongly recommend it to our pupils."—*The Rev. H. P. Gurney, M.A. (Messrs. Wren & Gurney), Powis Square, London*.

A Complete List will be forwarded on application.

Growth and Greatness of our World-Wide Empire.

A READING BOOK FOR SCHOOLS.

Crown 8vo, 320 pp. Well Illustrated, containing **Coloured Maps**, specially engraved, Interesting Diagrams, and useful Appendix. Published price, **1s. 9d.**

From a Speech by the Right Hon. JOSEPH CHAMBERLAIN, Colonial Secretary:—

"Let it be our endeavour, let it be our task, to keep alight the torch of Imperial patriotism, and to keep warm the affection of our kinsmen across the seas, so that in every vicissitude of fortune the British Empire may present an unbroken front to all our foes, and to carry on to distant ages the glorious traditions of the British flag."

Mr. Chamberlain's words, quoted above, well express the aim in issuing this book, which has been written to open the eyes of British boys and girls to the splendid inheritance which is theirs in the wide-world Empire that owns the sovereignty of our Queen. Its design is to create and foster in young people a true pride in the greatness of that inheritance, and to inspire them with that spirit of love and devotion for their country which will help to make them worthy citizens of a mighty Empire.

The book differs from others dealing with the same subject in that it is of the nature of a story rather than a history.

Certificate Examination.—The "Isbister Prize" will be awarded to the Candidate who stands First, and the "Pinches Memorial Prize" to the Candidate who stands Second in General Proficiency. Prizes will also be awarded to the Third and Fourth in General Proficiency, and to the First and Second in the following subjects:—Classics, Mathematics, Modern Languages, Natural Science, English Subjects. The "Taylor Jones Memorial Prize" will be awarded to the best Candidate in Scripture History. Two Medals will be awarded to the best Candidates in Shorthand.

The Regulations of the above Examinations can be obtained on application to the Secretary at the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

PRELIMINARY EXAMINATION OF MEDICAL STUDENTS.—

The COLLEGE OF PRECEPTORS will hold an Examination for Certificates recognised by the General Medical Council as qualifying for Registration as a Medical Student, on the 7th, 8th, and 9th of March, 1899.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool.

Examination Fee, 25s.

Regulations and Entry Forms may be obtained on application to the Secretary of the College of Preceptors, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS.— EXTRACT FROM THE BY-LAWS.

Section II., clause 5.—"The Council may grant the privileges of Membership, without payment, to holders of Diplomas of the College, as long as such persons are engaged in teaching in Secondary Schools."

Holders of the College Diplomas who are not Members of the College are requested to send their Addresses to the Secretary of the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

The next Monthly Evening Meeting of the Members will take place on Wednesday, the 15th of February, when W. C. BROWN, Esq., M.A., F.C.P., will read a Paper on "The Teaching of Modern Languages in German Schools," being impressions derived from personal inspection of Kealschulen in Berlin.

The Chair will be taken at 7.30 p.m., and a discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS. (Bloomsbury Square, W.C.) LECTURES FOR TEACHERS.

The First Course of Lectures (Twenty-seventh Annual Series), by JAMES SULLY, M.A., LL.D., Grote Professor of the Philosophy of Mind and Logic in University College, London, on "Moral Education," will commence on Thursday, February 16th, at 7 p.m.

(For Syllabus, see p. 56.)

*. * A Doreck Scholarship, of the value of £20, will be awarded at the Diploma Examination at Christmas next to the Candidate who, having attended two courses of the Training Class Lectures during the preceding 12 months, and having passed the full examination for a College Diploma, stands first in the examination in the Theory and Practice of Education.

The Fee for the Course is Half-a-guinea.

The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to this Course.

C. R. HODGSON, B.A., Secretary.

Particulars of the above and of the full curriculum are given in the Prospectus, which may be obtained from the MEDICAL SECRETARY, St. Thomas's Hospital, London, S. E. H. P. HAWKINS, *Dean*.

THE LONDON HOSPITAL MEDICAL COLLEGE.

The Hospital is the largest general hospital in the kingdom and contains nearly 800 beds.
Appointments:—Sixty qualified resident appointments are made annually. Dressers, clinical and post-mortem clerks, and maternity assistants are appointed every three months. All appointments are free. Holders of resident appointments are also provided free board.
SCHOLARSHIPS AND PRIZES.—Entrance Scholarships, value £120, £60, £50, £35, £30, and £20, will be offered for competition at the end of September. Numerous Scholarships and Prizes are given annually.
FEES.—120 guineas in one payment, or 150 guineas by instalments. A reduction of 15 guineas is allowed to the sons of members of the profession.
The Students' Clubs Union, embracing all the Scientific, Social, and Athletic Clubs, is available to all Students. The Clubs Union Grounds is at Lower Edmonton.

SPECIAL CLASSES.

Special Classes are held in the subjects required for the PRELIMINARY SCIENTIFIC M.B. (London) EXAMINATION.
Botany and Zoology.—By P. Chalmers Mitchell, M.A. Oxon., F.Z.S.
Chemistry and Physics.—By Hugh Caudy, B.A., B.Sc. Lond.
Fee for the whole Course, 10 guineas.
These Classes are not confined to Students of the Hospital.
Students who have recently passed the Matriculation or other preliminary Examinations can enter at once.
For further information apply, personally or by letter, to
MUNBO SCOTT, *Warden*.
Mile End, E.

GUY'S HOSPITAL. — PRELIMINARY SCIENTIFIC (M.B. Lond.).—Classes are held throughout the year. Special instruction is given for the July Examination. Fee, 16 guineas.

GUY'S HOSPITAL. — ENTRANCE SCHOLARSHIPS in September, 1899. Six open Scholarships, three (£150, £60, and £50) in Science, and three (£100, £50, and £30) in Arts. Particulars and copies of examination papers on application to the DEAN, Guy's Hospital, London Bridge, S. E.

CHARING CROSS HOSPITAL MEDICAL SCHOOL.

The Livingstone Scholarship (100 guineas). The Huxley Scholarship (55 guineas) and six other Entrance Scholarships, total value £550, will be awarded in October.

Two Scholarships of the value of 60 guineas each are reserved for Students of Oxford, Cambridge, or London Universities.

FEES.—For the five years' curriculum of study required by the various Examining Bodies and for hospital practice, 110 guineas in one sum, or 121 guineas in five instalments.

The composition fee for sons of registered medical practitioners is 100 guineas, and the fee by instalments, 110 guineas in five payments.

The composition fee for Dental Students is 54 guineas or 60 guineas, payable in two instalments of 30 guineas each.

A proportionate reduction of the above Fees is made to Students who have completed part of the curriculum elsewhere.

THE SCHOOL PROSPECTUS, containing full information concerning the classes, prizes, and all other arrangements connected with the Medical School, will be sent on application to the Dean, Chandos Street, Strand, W. C. H. MONTAGUE MURRAY, *Dean*.

THE DENTAL HOSPITAL OF LONDON MEDICAL SCHOOL, LEICESTER SQUARE.

LECTURES.

Dental Anatomy and Physiology (Human and Comparative)—CHARLES S. TOMES, F.R.S., M.A. Oxon., F.R.C.S., L.D.S., on Tuesdays and Thursdays at 5 p.m. (Summer.)

Dental Surgery and Pathology—WILLIAM HERN, M.R.C.S., L.D.S., on Wednesdays and Fridays, at 8 a.m. (Summer.)

Mechanical Dentistry—E. LLOYD WILLIAMS, L.R.C.P., L.S.A., M.R.C.S., L.D.S., on Wednesdays, 5.30 p.m. (Winter.)

Metallurgy in its application to Dental Purposes—DR. FORSTER MORLEY, M.A., F.I.C., F.C.S., on Tuesdays at 5 p.m. (Winter.)

The Hospital is open both morning and afternoon. During the Sessions the Surgeons of the day will give demonstrations at stated hours.

The Medical Tutor holds classes before each Examination for the L.D.S.

The House Surgeons attend daily while the Hospital is open.

The Saunders Scholarship of £20 per annum and Prizes are open for competition.

Fee for two years' Hospital Practice required by the Curriculum, including Lectures, £50 in one payment, or 50 guineas in two yearly instalments. The Curriculum requires two years to be passed at a General Hospital. The fee for this is about £55. Both Hospitals can be attended simultaneously.

The Calendar may be obtained on application to the DEAN, who attends at the Hospital on Wednesday mornings from 10.30 to 12 through the year.
MORTON SMALE, *Dean*.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

THE SUMMER SESSION will begin on May 1st, 1899.

FIVE ENTRANCE SCHOLARSHIPS AND EXHIBITIONS are offered for competition on September 27th and following days, viz.: Two of the value of £75, one of the value of £150, one of the value of £50, and one £20; and students who enter in May are eligible. Other Scholarships and Prizes, including the Lawrence, Brackenbury, Kirkes, and Matthews Duncan Scholarships in Medicine, Midwifery, and Surgery, are awarded annually. The total value of Scholarships and Prizes awarded is over £2000 per annum.

A RESIDENTIAL COLLEGE is provided so as to afford students the advantage of living within the Hospital walls.

All the APPOINTMENTS are open to students without additional fees.

Special Laboratories and other arrangements have been provided to give the necessary additional instruction required by the new regulations, and the courses of study have been so arranged that students may with advantage begin in the Summer Session.

Special Classes are held for the Preliminary Scientific and all the other Examinations for the M.B. and M.D. (London).

For particulars apply to DR. CALVERT, Warden of the College, St. Bartholomew's Hospital, E.C. Handbook forwarded on application.

ADVICE AS TO CHOICE OF SCHOOLS, TUTORS, &c.

Parents or Guardians may obtain, without charge, Information and Advice as to Schools (for Boys or Girls) at home or abroad, Tutors for University, Civil Service, or Military Examinations, and Educational Establishments of every kind by sending a statement of their requirements to

R. J. BEEVOR, M.A.,

Manager, Scholastic Association, Ltd.,

8 Lancaster Place, Strand, W.C.

Telegraphic Address:

"**Triform, London.**"

Telephone:

No. 1854, Gerrard.

N.B.—Parents or students applying by letter are requested to furnish the fullest possible details of their requirements, and, if a boarding school is wanted, to mention, within certain limits, what fees for board and tuition they are prepared to pay.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant-Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Preceptors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- Oxford Appointments Committee.
- Cambridge University Scholastic Agency.

The rates of commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

OWENS COLLEGE, VICTORIA UNIVERSITY, MANCHESTER.

PROSPECTUSES for the Session 1898-9 will be forwarded on application:—

- I. DEPARTMENT OF ARTS, SCIENCE, AND LAW; and DEPARTMENT FOR WOMEN.
- II. DEPARTMENT OF MEDICINE.
- III. EVENING AND POPULAR COURSES.

Special Prospectuses can also be obtained of:—

- IV. DEPARTMENT OF ENGINEERING.
- V. DEPARTMENT OF LAW.
- VI. DEPARTMENT OF PUBLIC HEALTH.
- VII. DENTAL DEPARTMENT.
- VIII. PHARMACEUTICAL DEPARTMENT; and
- IX. A LIST OF FELLOWSHIPS, SCHOLARSHIPS, EXHIBITIONS, AND PRIZES.

Apply to Mr. CORNISH, 16 St. Anne's Square, Manchester, or at the College.

SYDNEY CHAFFERS, Registrar.

BOOKS AND PAMPHLETS ON VARIOUS SUBJECTS

BY THE

REV. J. O. BEVAN, M.A., F.G.S., F.S.A.,
Fellow of the College of Preceptors.

JOHN BULL, JUNIOR.
THE WELSH EDUCATION ACT OF 1891.
CONCERNING PRIZES AND PROXIMES.
PARTING WORDS TO A PUPIL.

THE EDUCATION OF PAUPER CHILDREN, INDUSTRIALLY AND OTHERWISE.
THE UP-BRINGING OF NECESSITOUS AND PAUPER CHILDREN.
EXTENSION OF BOARDING-OUT OF NECESSITOUS CHILDREN.

THE BETTER HOUSING OF THE WAGE-EARNING CLASSES.

THE ADVANTAGES OF A TIME SIGNAL IN LARGE TOWNS.

THE SCIENCE OF RELIGION AND THE RELIGION OF SCIENCE.
*VOICES OF EARTH AND WHISPERS OF HEAVEN.

PLEA FOR A COMPLETE ARCHEOLOGICAL SURVEY OF ENGLAND.

*ARCHEOLOGICAL MAP OF HEREFORDSHIRE. PART I. PRE-NORMAN.

*ARCHEOLOGICAL MAP OF HEREFORDSHIRE. PART II. MEDIEVAL.

WANDERING LIFE IN ENGLAND IN THE FOURTEENTH CENTURY.

DENTAL HYGIENE.

"Mr. Bevan has done well to direct public notice to the urgent necessity for a periodical inspection of the teeth of children. Professional men have been insisting on this for years past, but their warnings have not received the attention they merited. The statements in the pamphlet before us may be regarded as absolutely trustworthy. They are eminently deserving the notice of parents and teachers. My professional brethren, too, may find it expedient to distribute the pamphlet in their immediate circles, inasmuch as the author is well known as an expert both in education and hygiene, and has had, moreover, abundant opportunity of observing the facts of the case. Furthermore, his testimony is entirely unsolicited and impartial, and free, besides, from any suspicion of self-interest. It might make an impression in quarters where dental surgeons themselves have hitherto preached in vain."—J. C. O., Licentiate in Dental Surgery.

All the above (with the exception of those marked with an asterisk which are 2s. 6d.) are published at 6d. each, and can be procured from the AUTHOR, 55 Gunterstone Road, West Kensington, W.

RAMSEY GRAMMAR SCHOOL,

HUNTINGDONSHIRE.—HEADMASTER wanted immediately. Fixed Salary £100, with two-thirds of fees, House, and permission to take boarders. Particulars with copy of scheme by application to P. L. ROGERS, Esq., Ramsey, Huntingdon.

LECTURES FOR TEACHERS

On the Science, Art, and History of Education.

MORAL EDUCATION.

To be delivered by JAMES SULLY, M.A., LL.D.,

Grote Professor of the Philosophy of Mind and Logic at University College, London.

The First Course of Lectures (27th Annual Series) will commence on Thursday, February 16th, at 7 p.m.

This Course, consisting of Twelve Lectures, will deal with the Development of the Will and Character. The aim of this branch of education will be elucidated by a reference to the ethical conception of good or virtuous character, and its methods by a reference to the psychological laws of development. Attention will be paid throughout to the special circumstances and needs of the school teacher.

Directions will be given as to reading, and care will be taken, by the setting of papers and by conversation, to give students a real grasp of the subjects of the Course.

SYLLABUS.

I.—The Conception of Moral Education—The Aim of Moral Education—The Idea of the Good Man not Determined by Current Standards—The Ethical Conception of the End of Action and its Historical Development—Happiness and Moral Perfection—Relation of the Self to other Selves—The Service of Humanity—Dutiful conduct and Virtuous Character—The Connexion between Moral and other Excellences—The Intellectual Side of Virtuous Character: Reasonableness—The Emotional Element in Moral Perfection: Enthusiasm—Types of Virtuous Character.

II.—The Material on which Moral Education works—Different Conceptions of Child-Nature—View that Goodness and Badness are alike acquired (Locke)—Theory of Innate Badness—Theory of Innate Goodness (Rousseau)—Scientific View of Natural Tendencies—Evolution and Heredity as explaining Natural Tendencies—Significance of Brutal and of Human Characteristics in the Child—Passionateness, Combativeness, &c.—Germ of Respect for Order and Law—Imitation as furthering Moral Adaptation—Rudiments of the Social Affections—Early Modifications of Natural Tendency by the Influence of the Home and Companions.

III.—The Methods of Moral Education—Presuppositions of Moral Education: Personal Authority and the Power to Control Children's Actions—Negative and Positive Sides of Moral Control—The School as a Restraining System—The School as developing the Ideal Self—Indirect and Direct Action of Positive Training—The Teacher as working on Moral Growth through Ideas—The Cultivation of Social and Moral Feeling—The Development of the Good Will as entering into School Discipline—Moral Growth as depending on the Action of a Community—The Moulding of the Individual by acting upon the School Community—Moral Function of the Day and the Boarding School.

IV.—Development of the Intelligence as furthering Moral Education—The Observation of Moral Facts—Extension of Field of Observation by presentation of others' Moral Experience—The Apperception of Moral Presentations—Children's Manner of Apperception—The part of the Educator in the Selection and the Interpretation of Moral Facts—The rôle of History and of Fiction in the Development of Moral Ideas—Simplification of Facts by Stories of Child-Life, Fables, &c.—Later Stage of Moral Instruction—Inductive Building-up of more Abstract Moral Conceptions—Exercising the Child in the Analysis and Classification of Moral Facts—The Construction of Ideas of "Me and My World," the Actual and Ideal "Me," &c.

V.—The Cultivation of Feeling as furthering Moral Education—The Place of Feeling in Mental Life as a Whole and in Moral Growth—The Idea of a Cold Morality—Moral Estimate of Children's Feelings—Violence of Feeling and Enthusiasm—Affectation of Feeling and Sentimentalism—The Egoism of Early Feeling—The Duty of the Teacher to respect the Egoistic Feelings of the Child—The Injury of the Moral Nature by Indifference or Apparent Injustice—Injuries due to Failure to Understand the Individual Child—The Sensitive Child and its Varieties—The Problem of Encouraging Self-confidence—The Moral Effects of Showing Sympathy and Kindness to Children—The Hardening Effect of School Life on Feeling, and its Ethical Significance.

VI.—The Action of School Life on the Social Feelings, and its Ethical Importance—Development of Respect for the Higher Personality and for Authority—The Child's Sensitiveness to Blame and Praise—The Delight of Pleasing—The Action of the Community on the Child's Social Feelings: Rivalry and the Love of Co-operation—Example and its Effect on Feeling—Warning Examples and Moral Dislikes—The Admiration of Heroes—The School Community as developing Sympathy—The Ethical Value of School Friendships—Beginnings of a Respect for Law as such—How the Experience of the School develops the Feeling of Justice—Collective or Communal Sympathy as a Basis of Moral Sentiment.

VII.—The Higher Development of Moral Feeling—The Presentation of a Model of Good Feeling by the Teacher—The Methodical Exercise of the Better Feelings: Encouragement of Sympathy with others—Working against Childish Prejudices—The Formation of a Habit of Impartial Sympathy—The Exercise of the Feelings in the Development of Just Appreciations of Goodness—The Action of Historical and Fictitious

Character on the Growth of Moral Feeling—The Control and Guidance of Children's Pity—The Conflict and Reconciliation of Justice and Mercy—Influence of the Direction of Moral Admiration on the Growth of Ideal Conceptions of Goodness—The Privacy of the Child's Moral Feeling and its Respect by the Teacher—The Supreme Need of studying the Emotional Nature of the Individual Child.

VIII.—Moral Education as concerning itself ultimately with the Will—Nature of Volition and its relation to Thought and to Feeling—Action of the Teacher on the Child's Will—This Action rendered difficult by the Weakness of the Child's Will and the Limitations set to its Field of Activity—Whence Two Characteristics of Moral Training: (a) its Prospective Character as preparing for Later Conduct, (b) its Reliance on Authority and Systematic Discipline—Moral Education as emphasizing the Development of Moral Ideas, Feelings, and Desires (Herbart)—The System of Authoritative Control as interfering with the Child's Spontaneous Action and as enforcing New Modes of Activity by the Introduction of New Motives—The Education of the Will as surmounting these Limitations—The Moral Influence of the Educator as permeating and transforming Governmental Control—The Problem of rendering Prescribed Lines of Action Natural to the Child—Education as developing in its turn a New Spontaneity: "Moral Freedom."

IX.—Primary Education of the Will—Characteristics of Children's Actions—The Dominion of Instinct and Passion—Mischievous Directions of Early Action—The Institution of Authority and Government as a means of controlling Children's Actions—The Operation of Educational Restraint on the Growing Will—The Prohibition of Actions in the Home and the School—Natural Attitude of Children towards Prohibitions—The Attitude of Disobedience and its Variations—Different Moral Values of Obedience—The Gentle or Yielding and the Resistant Child—Some Problems respecting Punishment.

X.—The Operation of Authority as going beyond mere Arrest of Mischievous Activity—Government as Complicated from the First by the Personal Element in Authority—How this Element gives Moral Influence to Restraining Government—The Child's Wish to Avoid giving Offence—Appeals to the Child's Good Feeling and Reasonableness—The Methods of calling forth Efforts of Will—Moral Suggestion and its use in Education—The Desire to Please and to Gain Credit—The Judicious Use of Praise—The Appeal to Imitativeness and the Use of Example—The Judicious Use of the Motive of Emulation—The Fixing of Effort in Definite Directions—The Value of the Principle of Habit in Early Moral Training.

XI.—The Organizing of Control into an Intelligible System—The Generalizing of Commands into Rules of Conduct—The Rule as Permanent Command and as Valid for all alike—The Explanation of Rules—The Special Rules of School Discipline: Orderly Behaviour, Industry, &c.—How the Rules of School Life develop the Idea of a Social System and of Common Duties—The Part of the Teacher in enforcing the Rules of Virtue: Truthfulness, Honesty, &c.—How the Teacher's Personality contributes to the Acceptance of Moral Rules—Rewards of Good Conduct—Moral Discipline as developing Standard Ideas of Conduct—The Use of Striking Examples in recommending Rules of Virtuous Conduct—The Habit of Virtuous Conduct as preparing for Moral Freedom.

XII.—Later Stages of Education of Will and Character—The Connecting of Moral Instruction with Moral Discipline—Treatment of Unusual and Exceptional Cases of Conduct—Mistaken Sense of Duty and Conscientious Obstinacy—The Respecting of Moral Individuality—Action of the Teacher on the Collective Moral Tone—Problem of correcting Wrong or Defective Moral Notions and Standards—False Ideas of Honour: Reflections of Low "Conventional" Morality, &c.—Inculcation of Duty in the Face of Numbers—The Gradual Enlargement, by the Teacher, of the Field of Virtuous Conduct—The Encouragement of Public Spirit and Participation in Public Causes—The Preparation for Self-controlled Conduct—The Educational Use of Posts of Trust and the Gradual Devolution of Moral Responsibility on the Pupil.

The Fee for the Course of Twelve Lectures is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

APPROVED SCHOOL BOOKS BY DR. CORNWELL, F.R.G.S.

"We are qualified by ample trial of the books in our own classes to speak to their great efficiency and value. We have never known so much interest evinced, or so much progress made, as since we have employed these as our school-books."—*EDUCATIONAL TIMES*.

A School Geography. 87th Edition; 3s. 6d., or, with 30 Maps on Steel, 5s. 6d.

"Very superior to the common run of such books. It contains a good deal of useful matter of a more practical kind than usual, which the exercises are likely to impress on the mind more deeply than by the parrot system."—*Athenæum*.

A School Atlas. Consisting of Thirty Small Maps. A Companion Atlas to the Author's "School Geography." 2s. 6d., or 4s. coloured.

Geography for Beginners. 67th Edition; 1s., or, with 48 pp. of Questions, 1s. 4d. Questions, 6d.

"A very useful series of Educational Works, of which Dr. Cornwell is either author or editor. It ('The Geography for Beginners') is an admirable introduction. There is a vast difficulty in writing a good elementary book, and Dr. Cornwell has shown himself possessed of that rare combination of faculties which is required for the task."—*John Bull*.

Spelling for Beginners. A Method of Teaching Reading and Spelling at the same time. 4th Edition, 1s.

Allen and Cornwell's School Grammar. 64th Edition; 2s. red leather, or 1s. 9d. cloth.

"The excellence of the Grammar published by the late Dr. Allen and Dr. Cornwell makes us almost despair of witnessing any decided improvement in this department."—*Athenæum*.

Grammar for Beginners. An Introduction to Allen and Cornwell's "School Grammar." 87th Edition; 1s. cloth, 9d. sewed.

"This simple introduction is as good a book as can be used."—*Spectator*.

The Book is enlarged by a Section on Word-Building, with Exercises for Young Children.

The Young Composer: Progressive Exercises in English Composition. 48th Edition, 1s. 6d. Key, 3s.

"The plan of the work is very superior. We are persuaded this little book will be found valuable to the intelligent instructor."—*Westminster Review*.

Poetry for Beginners: A Selection of Short and Easy Poems for Reading and Recitation. 13th Edition, 1s.

London: Simpkin, Marshall, Hamilton, Kent, & Co., Limited.—Edinburgh: Oliver & Boyd.

FROM WALTER SCOTT'S LIST.

THE SCOTT LIBRARY.

Crown 8vo, cloth elegant, 1s. 6d. each.

NEW VOLUMES.

Science of Teaching.

By P. W. JOYCE, LL.D.

A Handbook on School Management and Methods of Teaching. Eighteenth Edition (85th Thousand). Fcap. 8vo, 3s. 6d.

By JAMES SULLY, M.A.

Outlines of Psychology. Crown 8vo, 9s.

The Teacher's Handbook of Psychology. Crown 8vo, 6s. 6d.

Studies of Childhood. 8vo, 10s. 6d.

Children's Ways: being Selections from the Author's "Studies of Childhood," with some Additional Matter. With 25 Figures in the Text. Crown 8vo, 4s. 6d.

Published by Blackie & Son.

NEW BOOKS.

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Assistant-Master at Harrow School. 5s.
The purpose of this book is to give an idea of the main features of our Economic History, and to show the continuity and far-reaching consequences of certain events and policies upon the development of England's Industrial Wealth and Power.

THE GREAT CAMPAIGNS OF NELSON. By WILLIAM O'CONNOR MORRIS, M.A. Illustrated from Captain Mahan's "Sea-Power," and with a portrait of Lord Nelson. Crown 8vo, cloth, 3s. 6d.
"The book should be read, and will seldom fail to command a full measure of appreciation."—*United Service Magazine*.

CHARLES KINGSLEY AND THE CHRISTIAN SOCIAL MOVEMENT. By the Very Rev. CHARLES W. STUBBS, D.D., Dean of Ely. (*Victorian Era Series*.) 2s. 6d.

THE SCIENCE OF LIFE. By J. ARTHUR THOMSON, M.A. (*Victorian Era Series*.) 2s. 6d. [On February 15.]

SKETCHES OF THE GREEK DRAMATIC POETS. By C. HAINES KEENE, M.A., Professor of Greek in Queen's College, Cork. Crown 8vo, cloth, 3s. 6d.

Five Lectures, on Aeschylus, Sophocles, Euripides, Aristophanes, and the Classical and Romantic Drama.

The *Irish Times* says:—"Such lectures as these will be perused by all scholars with sincere pleasure. They give life to the dry bones of old history and literature, and vastly illuminate a classic period from which all the art of the modern world has derived its inspiration. . . . A book which will teach every reader of it to think. Alike in point of learning and of reflection, its chapters are excellent, and we commend them to the attention of all students of letters."

HORACE.—THE ODES. Book I. Edited by STEPHEN GWYNN, B.A., late Scholar and Hulmeian Exhibitioner of Brasenose College, Oxford. Illustrated. 1s. 6d.

The first volume of *Blackie's Latin Series* edited by Prof. Tyrrell.
The *Speaker* says:—"Mr. Gwynn has aimed at freshness and literary quality, and he may claim to have achieved these to a goodly extent. The introduction on Horace and his work is very pleasantly written. . . . the translations offered are characterized by literary sense and poetical feeling combined with sound scholarship. . . . the notes are judicious and sound; they seem to reveal the practised teacher. Text, notes, and vocabulary are all clearly printed. On the whole, we have here a text-book distinctly in advance, both scholastically and pedagogically, of the majority of school-books, and withal at the very reasonable price of 1s. 6d. If Messrs. Blackie's series maintains its first promise, secondary schools will be the better off for this new up-to-date apparatus."

CICERO.—THE FIRST CATILINE ORATION. Book I. Edited by C. HAINES KEENE, M.A., Professor of Greek in Queen's College, Cork. Illustrated. 1s. 6d.

THE MEDEA OF EURIPIDES. Edited by P. B. HALCOMBE, M.A., King's College, Cambridge. Illustrated. 1s. 6d.
* * This edition is specially suited to candidates in the examinations of the College of Preceptors, the lyrical parts being omitted from the Greek text, but the omission being supplied by a rendering into English prose.

MACAULAY'S ESSAY ON MILTON. Edited by JOHN DOWNIE, M.A., Examiner in History to Edinburgh University. [In March.]

A NEW SEQUEL TO EUCLID. By Prof. W. J. DILWORTH, M.A. Crown 8vo, cloth, 2s. 6d.

PART I: Exercises on the First Three Books of Euclid. 1s.
PART II: More difficult Exercises on the First Four Books, and Exercises on Book VI. 2s.

The *Guardian* says:—"Mr. Dilworth has in it skilfully arranged and collected in a handy form some of the best-known and often-quoted extra propositions, given usually in odd corners of text-books of Euclid. . . . The notes at the end of the Second Book are worthy of study."

LAYNG'S ARITHMETIC. By A. E. LAYNG, M.A., Editor of "Layng's Euclid." With or without Answers, 4s. 6d.

"The examples are extremely numerous. . . . It would be difficult to suggest any point in which they might be extended or improved. The treatment of the theory of arithmetic is detailed, and at the same time clear and interesting."—*Journal of Education*.

"A very good and comprehensive treatise. The explanations are clear, the worked-out examples properly arranged, and the more commercial part of a really practical nature. The variety of methods employed to suit different circumstances ought to prove very instructive. The book is very pleasant to read and (a point of considerable importance) it is well printed."—*The School World*.

EXERCISES IN ARITHMETIC. By A. E. LAYNG, M.A. Being the Exercises of the above, published separately.

PART I. (5000 Exercises), without Answers, 1s.; with Answers, 1s. 6d.
PART II. (3500 Exercises), without Answers, 1s. 6d.; with Answers, 2s.

THE GROWTH OF GREATER BRITAIN. A Reading Book for Schools. By F. B. KIRKMAN, B.A., formerly Scholar of Lincoln College, Oxford. Fully Illustrated. Crown 8vo, cloth, 1s. 9d.

The *Speaker* says:—"A luminous sketch of the rise and expansion of British Colonies and Dependencies in every quarter of the Globe. The narrative abounds in facts picturesquely stated, and is freely illustrated by maps, portraits, and other pictorial aids to interpretation."

THE GEOGRAPHY OF GREATER BRITAIN. A Reading Book for Schools. Fully Illustrated. Crown 8vo, cloth, 1s. 9d.

This book contains an account of the geography of the British Colonies and Dependencies. It aims at giving, not a mass of dry facts and statistics, but a clear and picturesque general account of the physical features, productions, political and trade relations of Britain over seas.

BOOKS FOR THE CAMBRIDGE LOCAL AND COLLEGE OF PRECEPTORS EXAMS., 1899.

English.

The Oxford Manuals

OF ENGLISH HISTORY.

General Editor—C. W. C. OMAN, M.A., Fellow of All Souls College, Oxford.

In fcap. 8vo volumes, with Maps, Genealogies, and Index; cloth, 1s.

- No. I.—THE MAKING OF THE ENGLISH NATION;** B.C. 55–A.D. 1135. By C. G. ROBERTSON, B.A., Fellow of All Souls College.
No. II.—KING AND BARONAGE; 1135–1327. By W. H. HUTTON, B.D., Fellow and Tutor of St. John's College.
No. III.—ENGLAND AND THE HUNDRED YEARS' WAR; 1327–1485. By C. W. C. OMAN, M.A.
The Athenæum says:—"A decidedly good addition [No. III.] to the school text-books of English history. It is brightly and attractively written, the facts are as a rule well chosen, unnecessary names are nearly always avoided, the chief events stand out in due prominence, and there is a real thread of connexion between incident and incident."
No. IV.—ENGLAND AND THE REFORMATION; 1485–1603. By G. W. POWERS, M.A., late Scholar of New College.
No. V.—KING AND PARLIAMENT; 1603–1714. By G. H. WAKELING, M.A., Fellow of Brasenose College.
No. VI.—THE MAKING OF THE BRITISH EMPIRE; 1714–1832. By ARTHUR HASSALL, M.A., Student and Tutor of Christ Church.

- SCIENCE HANDBOOKS FOR THE LABORATORY AND THE CLASSROOM.** Edited by J. G. KERR, M.A., Headmaster, Allan Glen's School.
Elementary Physics, Practical and Theoretical. By J. G. KERR, M.A. 1s. 6d.
Elementary Chemistry, Practical and Theoretical. By T. A. CHEETHAM, F.C.S. 1s. 6d.

JUST PUBLISHED

NEW VERE FOSTER COPY-BOOKS

Medium Series

MEDIUM SLOPE, MEDIUM THICKNESS OF LETTER

A LEGIBLE, CURSIVE, BUSINESS HAND

EMBODYING THE ELEMENTS ESSENTIAL TO FLUENT PENMANSHIP IN ACCORDANCE
WITH MR. VERE FOSTER'S SYSTEM OF CIVIL SERVICE WRITING

Praising all is praising none.

*"Wherever VERE FOSTER'S method is introduced
a uniform, legible, and elegant style of penmanship is
the result, and often within a very limited period."*

The above sentence, quoted from the Blue-book (1893) of the Scotch Education Department, gives official sanction to an opinion of world-wide acceptance. VERE FOSTER'S method, which has revolutionized the teaching of penman-

ship, is known and practised in all parts of the world, and the general improvement in the current styles of writing is striking testimony to the value of Mr. Foster's lifelong work. Specimen Lines on application.

LONDON: BLACKIE & SON, Limited, 50 OLD BAILEY, E.C.

By NELLIE DALE (Headmistress of Preparatory Part of Wimbledon High School). With Numerous Coloured Plates
by WALTER CRANE.

1. **Steps to Reading.** 16 pp., crown 8vo. Containing 8 pp. of Words printed in colour, and 7 full-page Pictures (in addition to the title-page) illustrating these words. Price **Fourpence** net.
2. **The First Primer.** 32 pp., crown 8vo. With numerous Pictures illustrating the Text. Price **Fivepence** net.
3. **The First Primer.** 32 pp., crown 8vo. With numerous Pictures illustrating the Text. Price **Sixpence** net.
4. **The Infant Reader.** 64 pp. With numerous Pictures illustrating the Text. Price **Sevenpence** net.
5. **On the Teaching of English Reading:** being a study and explanation of the method that is used in the above Readers. By NELLIE DALE. Crown 8vo, price **2s. 6d.** net.

Dr. H. F. HEATH says:—"The two main principles underlying this method are, first, the careful selection from complete word-lists of the words taught to beginners, excluding at first all those which present difficulties of meaning or irregularity of form; and, next, the use of colour to indicate the broad distinctions between vowels, voiced consonants, voiceless consonants, and silent letters.

"By these two means, and notably by the employment of colour in the first stages, Miss Dale has turned the arid, tearful desert of the spelling and reading lesson into the most enchanting of fairy gardens."

Specimen pages and prospectus of the above may be had on application.

Introductory Address at the Winter Meeting of Teachers	83		

The Educational Times.

The Local Authorities.

WHILST the Duke of Devonshire bids us wait patiently for our Local Authorities, and accept the Board of Education Bill as a reasonable and cautious first step, Sir John Gorst, ever frank, trusts that we shall not pay too much attention to those who "invite us to sit down and wait, and see what Parliament will do for us." Clearly he would have us make shift with Clause 7. We have always suspected that this innocent administrative act was intended by the Government as a virtual creation of Local Authorities. We suggested it when the clause was added to the "Directory," and everything which has happened in the meanwhile tends to confirm the suspicion. The Duke of Devonshire said at Derby that Parliament would undoubtedly have to create the Authorities; but many an Act of Parliament has simply given permanence to existing institutions, and that may be so again with the Joint Education Boards called into being by the Borough and County Councils. Ought we, or ought we not, to be satisfied with this mode of generating Authorities which, in process of time, will become as strong and influential as any in the country? The *Schoolmaster*, not unnaturally, sniffs at the notion. Sir John Gorst, our contemporary says,

obviously desires that the thing should muddle itself out locally. And he now tells the Bradford people that he does not think the School Boards have anything to fear from such a plan of operation. Possibly Sir John Gorst is unaware of what has taken place in several parts of the country, notably at Burnley and at Brighton, in connexion with this altogether agreeable proposal that Parliamentary aid should not be invoked in the settlement of this critical question.

Sir John did not say exactly that; he advised us not merely to wait for the action of Parliament, but to act for ourselves with the materials ready to our hands. The School Boards do not like the Joint Boards, with their indirect representation, and they honestly believe that they would themselves make excellent secondary administrative bodies. At the least they hold that they ought to have just as effective a voice in the control of secondary education as the Councils have. But this, strictly considered, would be no representation at all, for the School Boards are elected exclusively for the control of elementary education, whereas County Councils are elected for miscellaneous purposes, one of which is the control of technical education, and, under Clause 7, of a large part of secondary education.

Sir John Gorst is of opinion that there should eventually be one Authority for elementary and secondary education.

People who conduct secondary education have an enormous interest in primary education, because it must be such as to fit the children for the secondary education; and conductors of primary schools have a great interest in secondary schools, because they have to train the children for their further progress. It would be quite impossible for a system to be reasonably carried on unless the primary and the secondary authorities were so closely allied as practically to form one body. Now, is that body to be the School Board, or the Council, or some new body drawn from both, or elected in some entirely different way?

We are not quite sure that Sir John has fully considered this essential difference between elementary and secondary education: that the former is compulsory, strictly codified, and gratuitous by Act of Parliament, whilst the latter can never as a whole assume this form. Technical and commercial instruction may be codified; education graded on to the elementary standards may be gratuitous by means of promotion scholarships—a very different thing from statutory abolition of fees; but compulsion after the elementary stage is in no way probable. And, as for the secondary education which is given in the "preparatory schools," the great public schools, most of the endowed schools, and nearly all private schools, it is simply impossible to make this compulsory, codified, or gratuitous. The argument quoted above applies to secondary education which is naturally continuous with the education of the Board school. It does not apply to the secondary education which we have just mentioned. It is not sufficiently borne in mind that there have been two distinct streams in our recent discussions relating to secondary organization. Some of us have kept our attention fixed on the literary and professional first and second grade schools, whilst others have been writing and speaking as though the whole question of organization were one of adding consecutive standards to the national elementary code. The distinction stands in the nature of things, and cannot, in practice, be obliterated or obscured. But confusion has arisen in our controversy, and, if we are not careful, mischief may arise in legislation. It seems to us essential that, in one form or another, we should have both an Elementary and a Secondary Authority, and still more essential that the Secondary Authority should have a duplex mind, if not a duplex organization, for dealing with the two main divisions of secondary education.

The principal duty of the Local Authorities will be to get as many elementary scholars as possible to continue their work in secondary schools. It is to be hoped that they will do this with all their might; that they will get as much control as they can over endowments which are not being efficiently managed, and that they will concern themselves with the efficient public and private schools almost exclusively on the invitation

of the governors or masters of these schools. In that case the Authorities will be a blessing undisguised; and, in that case, we should come nearer to the point of agreement with Sir John Gorst when he says that one Authority would suffice for elementary and secondary schools—always assuming the duplex mind of the Authority. What, then, is the ultimate Authority to be—School Board, or County Council, or a body specially selected to control the entire course of school education? Some of the larger School Boards would do very well; most of the smaller ones would not do at all. The County Council, as Sir John Gorst reminded us, and as the Science and Art Department has shown us by its “*solvitur ambulando*” clause, is already fairly equipped and organized for the work.

It had statutory power which it had exercised for ten years, and money which it had possessed for eight years; it was able to supplement local taxation money by the ratepayers' money; and it possessed the great advantage that the Acts which established its authority, being passed in great haste and without that Parliamentary consideration which people considered so important, had happily abstained from implying any particular organization. The educational organization for town and county purposes had grown up of itself.

Shall we live to see the Council absorb the whole duty of educational control, including the duty of the School Board? That is a prospect which will overwhelm with horror a great number of very estimable people. But the horror is really superfluous. We should still have the School Boards, though under another name. The work would continue, and the men would remain where they are, and the N.U.T. would flourish more abundantly. The M.L.S.B. would reappear after election as an L.C.C., and the whole body of members, headmasters, teachers, pupil-teachers, and clerks could unite in crying: “Here we are again!” We are not arguing for this transformation; but we are, in a sense, vaticinating. And the beauty of it would be that both Council and Board would be, or ought to be, satisfied; for, so far as education is concerned, each might claim that it had absorbed the other.

NOTES.

DURING January letters have appeared in the medical journals which show conclusively that the first section of the report of the Education Committee of the General Medical Council, relating to cases of “deficiency in general education,” is entirely inaccurate in its statistics, and contains a serious error in the drafting. The error in drafting has been admitted by the Registrar of the Medical Council in a letter to the medical journals, and has, in fact, been corrected in a revised edition of the report. It appears, therefore, that there is power to amend a report after it has been adopted by the Council and issued to the public. But the statistical table, which the Registrar was “instructed” to publish, still contains serious errors, which have been pointed out in a further letter written by the Dean of the College to the medical journals, and no contradiction to this letter has appeared. It is, therefore, difficult to understand why these incorrect statistics are allowed to stand, or why the conclusions drawn from them have been in no respect modified.

JANUARY has once more been a month of hard work for teachers of all kinds. There have been conferences of all sorts. Headmasters and headmistresses, assistant-masters and assistant-mistresses, elementary teachers and secondary, College and Guild,

—all of these have been busy discussing, conferring, and proposing, till one wonders how much real rest and holiday the Christmas holidays can have brought with them. Some amusement appears to have been excited by this surprising energy, and some one has been found asking, in a London paper, whether the work of teachers is to teach or to talk. “Do they,” it is asked, “contrive to find any time at all for a bit of plain, quiet work in their class-rooms?” The fact is, of course, that teachers do not talk instead of working, but in the intervals of work. They talk that they may get the conditions of their work improved and the abuses of the teaching profession remedied. And, indeed, if the teachers did not care about these things, there would be little hope for education in this country, where the majority of people are still so indifferent to its claims. But the teachers care, at any rate, and that is why they talk in January, instead of making holiday, as they might.

THE second of the Winter Meetings for Teachers, which was held at the College of Preceptors during the first fortnight in January, and on which we make some comments in our “Educational Gossip,” was as marked a success as the first, which was held at the corresponding period of last year. The number of persons who took tickets for the entire course, or for one or other of the two weeks into which it was divided, was 160, the majority of them being members of one or other of the associations of teachers to which the privilege had been accorded of purchasing tickets at half fees. In addition to these, about as many members of the College had applied for free tickets of admission, and about as many more availed themselves of the opportunity of attending single lectures on payment of the fee of one shilling. Thus the attendance throughout the Meeting generally considerably exceeded a hundred, and was on several occasions nearly double that number.

THE plan on which the programme was arranged so far differed from that of last year's Meeting that there was no attempt at a continuous series of lectures covering the whole of the field either of theory or of practice of education. Instead, there were a number of short courses of two or three lectures each, as well as single lectures dealing chiefly with two main divisions—the first, physical education, including school hygiene; defects of the organs of sight, hearing, and voice, the use and abuse of athletics, school games and the corporate life of school, and, in connexion with this subject, the leisure-hour pursuits of school-children. The second division had mainly to do with the practice of education, including discipline and conduct, the practical applications of the study of psychology, and methods of teaching history and geography. Technical education was represented by a lesson in shorthand, and literature by a lecture on “The Greek Ideals of Education.” “The Teaching of Science” was on this occasion the subject of a Conference arranged by the Technical Education Board of the London County Council, and held at the Chelsea Polytechnic, which members of the Winter Meeting were invited to attend. The whole was appropriately introduced by an inaugural address by Sir Joshua Fitch.

THE appeal of Miss Vines, in the case of Vines against the North London Collegiate School for Girls, has resulted in a judgment for the defendants. The plaintiff, it will be remembered,

as a sanitary inspector for the parish of St. Pancras, applied for admission to the school premises, not on account of knowledge or suspicion of a nuisance, but in order to see whether a nuisance existed. Her request was refused; she applied to a magistrate for an order to enter; the magistrate decided against her, and now Justices Lawrance and Channell have confirmed the decision of the magistrate. Mr. Justice Lawrance said:

It seems to me that there is absolutely no ground whatever, whether reasonable or not, stated by the plaintiff, upon which she could ask the magistrate for leave to enter. No ground is stated by her. She says again: "I wanted to enter, and I then and there applied" (this is to Mrs. Sophia Bryant, the Headmistress of the school) "for permission to enter the school premises for the purpose of examining as to the existence of any nuisance therein." Now that throws us back to the question, is that a reasonable ground? The reasonable ground must be a ground with some reason for it. "Why do you want to go in?" the magistrate has a right to ask, and the answer to that is, as far as it is given on this information: "I have no more right than that which was given to me by the statute, and it is enough for me to swear that I wish to go in, because the statute gives me power to go in." That, in my judgment, is not a reasonable ground.

The school authorities are to be congratulated on having secured a judgment which will be useful in many similar cases.

THE new Lord Rector of St. Andrews University, in place of the Marquis of Bute, who had a long and eventful tenure of the office, is Mr. James Stuart, M.P., formerly Professor of Mechanism and Applied Mechanics in the University of Cambridge. He came up to Cambridge, where he was Third Wrangler in 1866, from St. Andrews, so that it is his first University which does him honour. Mr. Stuart was installed on January 22, and, in accordance with custom, he had the privilege of nominating eight Doctors of Laws for the approval of the Senate. His list is particularly interesting. The honorary degree was conferred on Mr. Buckle, editor of the *Times*, and Mr. McKinnon Wood, Chairman of the London County Council, representing respectively the interests of the Press and of local government. Literature received recognition in Mr. George W. E. Russell, historical research in Mr. Osmund Airy, theological learning in the Chief Rabbi Adler, and medicine in Sir William Broadbent. The University being open to women as to men, Mrs. Fawcett received a new gown, and an honorary degree was also conferred on Mr. George Baxter, Chairman of the Council of University College, Dundee. The advocates of incorporation will not, we imagine, regard the last honour as a victory, but rather as a sign that the hatchet is buried, and that Mr. Stuart's will be a reign of peace and quietness.

THE Government of Bavaria recently sent a commissioner, Dr. Karl Fischer, to inquire into and report upon English methods of secondary education. Though Dr. Fischer has not yet completed his report, he is understood to have come to the conclusion that English schools take the lead of German schools in sundry important respects—amongst others, in the provision of well equipped laboratories for practical science, which have not yet been added to German secondary schools. On the other hand, he considers that German schools have the following advantages:—(1) More careful classification of boys, (2) more definite selection of a course of education, (3) a longer timetable, (4) more careful instruction in modern languages, (5) more support from the central Government. Dr. Fischer is taking specimens of school books, time-tables of schools, and elaborate data of all kinds useful for comparison. Thus, as we

have previously noted, competent German observers are sometimes willing to pay us a return compliment for our appreciation of their own enlightened methods.

THE work done by free libraries is not of a kind which lends itself readily to tabulated returns and statistical reports. But, for all that, it is a very real and important work, and one which grows yearly more efficient and far-reaching as the science of library keeping becomes better understood and more seriously studied. The Free Libraries Committee of the Corporation of Manchester have recently arranged for a course of lectures on "English History in Modern Fiction," to be delivered in the public hall of a branch library on six successive Friday evenings. The lectures, which are to be given by Mr. Ernest Phythian, will be illustrated by lantern slides taken from contemporary architecture and pictures, and by quotations from works of historical fiction. Amongst the titles of the lectures are "The Meeting of the Saxon and the Norman," "Tudor England," "Cavalier and Roundhead," "England under the House of Hanover." With such an interesting syllabus and a free admission, Mr. Phythian ought to get enthusiastic audiences, and it is to be hoped that the result will encourage the civic governors of Manchester to make further advances along this educational by-path.

THE interesting book of M. Edmond Demolins ("A quoi tient la supériorité des Anglo-Saxons"), in which he contrasted English and French education, is about to bear fruit in the establishment of a school, somewhat on the lines of Bedales College and Abbotsholme. This new venture will shortly be opened at Verneuil, in Normandy, on an estate of some fifty acres. Hundreds of communications have been received by M. Demolins, he tells us, saying that French boys are disarmed for the battle of life by excessive devotion to a purely literary education, especially Latin and Greek. The Ecole des Roches will have for its device: "Bien armés pour la vie," on a shield. As might be expected, at least by the readers of "Anglo-Saxon Superiority," espionage will be discouraged, and an attempt made to bridge the gulf between teachers and pupils, and prominence will be given to manual labour and games. Apart from the reason assigned by M. Demolins, another consideration seems to point to the necessity for reform in the French school system, and for the healthy outlet of natural energy. There is an unhappy prevalence of suicide among young people in France. Nearly five hundred of the persons who committed suicide in the course of a twelvemonth in France were under the age of twenty-one. In all probability the highly competitive system of examinations for admission to the public services is responsible for this melancholy state of affairs. The Ecole des Roches at Verneuil is intended to be a practical protest against overpressure, as well as an attempt to liberalize education.

THE report on public education in Bengal for the year 1897-8 contains a somewhat startling statement. It seems that the total number of institutions at which pupils are instructed decreased by 3,334, or nearly 5 per cent., and the falling-off in attendance was about 50,000, or nearly 3 per cent. The demand for high education was as great as ever; it was in the lower primary schools that the decrease was most marked,

the loss in pupils being about 44,800, while in private institutions the attendance was less by some 6,260. The Lieutenant-Governor naturally expressed regret at this sudden decline of education among the mass of the people, and he asked for an explanation of the Director of Public Instruction. Dr. Martin put it down to the last famine, and we can only hope that there is no more serious or insidious cause. The Baboo is not always an admirable product of Anglo-Indian education; but the simple instruction given to the children of the poorer Bengalese is unmistakably useful to them, and it would be lamentable if the native population were found to be setting their faces against it.

SUMMARY.

THE MONTH.

At Derby, on January 19, the Duke of Devonshire, after opening the new buildings of the Municipal Technical College, indicated the present attitude of the Government towards the question of secondary education. He began by pointing out the necessity of a sound secondary basis for technical, scientific, and artistic training. "You cannot graft scientific or artistic education upon the stunted stem of deficient elementary education."

He had seen, with great satisfaction, that a good deal of attention had been paid during the last few weeks to a measure which he had before Parliament last year, for the purpose of obtaining discussion and criticism, and which he hoped, either in its former or in an altered shape, to introduce again very shortly into Parliament, with a view to its passing. The object of that measure was to commence—it did not profess to do more. The reform and reorganization of our secondary education were the things of which, at present, we stood in need. The materials for that education were not deficient. We had already our public schools, our grammar schools, our endowed schools, and our private schools: in addition to that, we had technical colleges and institutions; we had polytechnics; and we had various science and art classes in connexion with the Science and Art Department. Again, in connexion with our elementary educational system, we had higher-grade schools. Therefore, the supply which we had for secondary education was certainly abundant. Whether it was sufficient and adequate could only be ascertained hereafter, when full inquiry had been made. But all these agencies were under separate and independent management; none of them knew exactly what the other was doing, and none of them knew precisely what space in the educational field was vacant and what was already filled. The result of this was want of co-operation, and, to a certain extent, waste of power. At the best, this state of things must be defective in producing unity and co-operation; at the worst, it might result in friction, in unnecessary competition, and in absolute waste of power.

HAVING thus slain the slain, the Lord President of the Council repeated his former admission that legislation was indispensable, and went on to show pretty clearly that, in the first instance, the Government relied on authorities under "Clause 7" to administer the decrees of the Board of Education.

The powers of any such authority must necessarily at present be of a limited character, but it would be possible for them to exercise some supervision over the various educational agencies within their area, and to suggest how educational effort might best be applied to prevent overlapping and friction, and to establish something like co-ordination and order. This invitation had already been accepted in a very large number of places, and he believed, in general, with very admirable results. The Government were perfectly aware that the creation of strong bodies for the control of secondary education must be the work of Parliament, and the powers of Parliament could not be anticipated by any such voluntary action as he had referred to; they knew that there were many difficult and intricate questions—questions of rating, of organization, of educational policy—which Parliament would have to consider, and to decide; and, when the time came, the Government had no thought of shrinking from making their own proposals as to the creation of a statutory secondary authority. If the provisions of the Bill which he introduced last year—and which he should probably introduce again shortly—were of a limited character, and were confined to the creation of a Central Authority, it was because the Government was of opinion that it was best and wisest to proceed by degrees and with caution. . . . The Government believed that, if they succeeded—and they hoped to succeed—in uniting the authorities at the centre into one harmonious and powerful organization, then, without attempting to impose upon the country any cast-iron system, while leaving to localities perfect freedom to adapt their own educational methods to their

own ends, they would be able to afford the inspectors that assistance and that guidance which would enable them to carry out efficiently their important duties.

A CONGRESS of the Teachers' Guild was held on January 9 and 10, the Headmaster of Haileybury in the chair, when the following resolutions on the Government Bills were passed, after much discussion:—

That a Central Education Authority should be established, either simultaneously with, or prior to, Local Authorities; but Local Authorities, if not simultaneously set up, should follow in the immediate future. That, under the Board of Education, secondary education should form a separate branch, with an inspectorate familiar with the problems of secondary education. That, with regard to the Charity Commission, this Congress hopes that legislation on the lines of the recommendation of the Royal Commission on Secondary Education may follow as soon as possible, and deprecates any interference with the Welsh Education Board, which has been so recently established. That the Consultative Committee should be permanent, and also identical with the Registration Council. That the formation of a register of schools is essential. That the inspection of schools by the Board of Education should be compulsory, either directly or through the recognized authorities. That in matters of inspection there should be no difference between private and other schools. That the Guild use its utmost endeavours to secure the establishment, for English schools of a leaving certificate. That after a period of, say, seven years, no unregistered person should be appointed as teacher except as probationer.

THE annual meeting of the Geographical Association was held on January 11, at the College of Preceptors, by permission of the Council, Mr. Douglas W. Freshfield, President of the Association, in the chair. The annual report, read by the Hon. Sec., Mr. B. B. Dickinson (Rugby), gave evidence that the Association was growing steadily in numbers and influence. The memorial to Boards of Public Examiners had been favourably received by the Central Welsh Board for Intermediate Education, and the answers from various examining bodies in Scotland expressed sympathy with the aims of the Association. In England the memorial was circulated two years ago, and has already led in several cases to a marked improvement in the character of the questions set. The question of a syllabus had been before the Committee for some years, and in December, 1897, two schemes of geographical work were drawn up and carefully considered by the Committee, who finally decided not to lend their authority to any syllabus, preferring to encourage individual teachers to explain in detail their own ideas of method, derived from practical experience. Several papers on the subject have since been published in the *American Journal of School Geography*, a monthly magazine which the Committee have done their best, during the past year, to make known to British teachers. Dr. A. J. Herbertson (Edinburgh) has been acting as associate editor for Great Britain, and various articles and notes by members of the Association have already appeared in its pages. In moving the adoption of the report, Mr. A. D. Carlisle (Haileybury) spoke of the value to teachers of the Association's collection of lantern slides, to which large additions are now being made, as well as of the *Journal of School Geography*. The motion was seconded by Mr. H. J. Mackinder (Oxford and Reading), who expressed his satisfaction at the refusal of the Committee to issue an authoritative syllabus, which, however useful at the moment, could not fail to do harm later on. It was of the utmost importance that the Association should be kept as active and efficient as possible, and its numbers increased, for after the present period of educational organization there would come a time when the public would take an interest in educational ideals and methods as distinguished from machinery, and then would come the opportunity of this Association. The motion was carried, as was also the election of officers and Committee for the present year, proposed by Mr. E. P. Ash (Haileybury), and seconded by the Rev. Dr. Field (Radley).

THE President, Mr. Douglas W. Freshfield, then delivered a short address. He referred to the efforts made by the Council of the Royal Geographical Society from 1884 to improve the teaching of geography. But the R.G.S. was mainly concerned with travel and exploration; hence the need for such an Association as this. With regard to the *Journal of School Geography*, he remarked that co-operation with the United States was both pleasant and fashionable; yet we ought to have a journal of our own. The Committee had done wisely in deciding not to adopt a syllabus, for uniformity was alien to the English

mind, and all our great schools had their own traditions. It must be the work of the Association to convert the headmasters, the high priests of the old system, and he was glad to see at least one headmaster present who needed no conversion. Physical geography had been long neglected; he hoped it would not now be made too prominent, for many diagrams covered with little arrows were discouraging to small boys. Nor must they turn their maps into Joseph's coats, the colour smothering the physical features. In the case of the continents and the great European countries it was a good plan to place the physical map in an atlas opposite the political, so that they could be readily compared. They would not slavishly copy foreign methods, but the field excursions, so much in vogue on the Continent, followed by mapping and modelling, might in some form be introduced; or, if that were not practicable, the boys might be taken on ideal journeys by means of maps and lantern slides, the physical geography being used to throw light upon the facts of history, the position of famous cities, and the movements of population. He regretted that the establishment of a geographical school in connexion with one of the great educational centres in London seemed to be for the moment postponed; but they must lose no chance of pressing it. Meantime, although no final scheme had, he understood, been definitely adopted, there was good hope that at their next meeting they might be able to congratulate themselves on geography having been put in its proper place in the University of Oxford. In moving a vote of thanks to the chairman, Dr. H. R. Mill remarked that Mr. Freshfield had been for years at the head of the movement for improving geographical education in this country. The vote was seconded by the Rev. J. Ll. Dove, and unanimously carried. An exhibition of slides specially selected to illustrate the use of the lantern in geographical teaching was given by Mr. A. W. Andrews, who indicated the special points that each slide was designed to illustrate. Some photographs of Caucasian peaks and glaciers, lent by the President, and some typical scenes in the tropics, were particularly admired.

On January 13-14, the Association of Headmasters held its ninth Annual General Meeting in the Council Chamber, Guildhall, under the presidency of Mr. Vardy. A full report of the proceedings will be found in *Education* (January 21 and 28). The following, amongst other resolutions, were adopted:—

"That this Association cordially welcomes the Board of Education Bill as a first step towards the organization of secondary education in England, and is of opinion that the Consultative Committee proposed therein ought to be permanent, and to contain representatives of the Universities and of bodies of teachers. That this Association records with satisfaction the statement made by the Lord President in introducing the Board of Education Bill, viz., that the proposed Education Office would probably be so organized as to consist of three Departments, dealing with primary, secondary, and technical education respectively. At the same time the Association re-affirms its unanimous resolution of June, 1895, in favour of the statutory constitution of Local Authorities for Secondary Education; and is further of opinion that no organization of secondary education can be either effective or complete until Local Authorities shall have been constituted, and empowered to aid and supply secondary education within their respective areas."

At the luncheon given to the Headmasters on January 14 by the Goldsmiths' Company, Prof. Jebb, M.P., proposed the toast of the Association. In the course of his speech Prof. Jebb said:

He had perfect confidence in a strong Central Authority which, without interfering with local freedom, would give guidance and assistance when required, would accelerate a good understanding between the local agencies which justly claimed representation, and influence the Local Authorities of the future. It would seem as if the very prospect of such an Authority had contributed to the removal of the friction which in 1896 constituted a grave Parliamentary obstacle to the creation of new Local Authorities. During the last few months great progress had been made between municipal and other bodies, and he thought it would not be too sanguine for him to say that, at no long interval after the date when the Bill came into operation, there would be a reasonable hope that they would obtain Local Authorities somewhat on the lines of the Report of the Royal Commission, without any serious danger of obstruction from municipal or any other rivalries. But, whatever might be the precise form which the Local Authority of the future might assume, one thing was essential—this was that the Local Authority must be capable of watching over the interests, not only of commercial and technical training, but also of a literary and liberal education.

THE Annual General Meeting of the Assistant-Masters' Association was held on January 14 at the City of London School, Thames Embankment. The chair was taken by the Rev. W. E. Massey (Bedford Grammar School), who was supported by representatives of the staffs of most of the principal grammar schools in the United Kingdom. The chairman proposed the following resolution:—"That this Association heartily welcomes the Board of Education and Teachers' Registration Bills, recognizing that they are an important step towards the organization of secondary education." Mr. P. E. Swinstead seconded the proposition, which was unanimously carried.

THE Annual General Meeting of the Private Schools' Association was held on January 12 at the College of Preceptors, the retiring President, Mr. J. Bayley, of Wellington College, Salop, occupying the chair. The Rev. J. B. Blomfield was elected President for the year 1900, and Miss Elizabeth Dawes and Mr. E. J. Morgan were elected Hon. Secretary and Hon. Treasurer. The formal business of the meeting was completed by the election of the Council and other officers, and by a cordial vote of thanks to the retiring President and to Mr. Brown, Chairman of Council. Mr. J. Vine Milne, the President for 1899, delivered his inaugural address, which was devoted to the subject of education in relation to commercial expansion. He said that the Association, when founded in 1883, was not a militant body; but it had been compelled to assume that character by the persistent attacks which had been made on private schools.

The success of our commercial rivals had diffused an uneasy feeling that our system of education must be changed, and that its deficiencies were wholly to blame for all that was unsatisfactory in our foreign trade returns. The private schoolmaster was made the scapegoat for our declining trade simply because he was the safest and readiest person to blame. If bad education were the fault, how came about that earlier expansion of our trade which Mr. Gladstone could only describe as "advancing by leaps and bounds"? The faulty methods of our merchants and traders were more to blame than our schoolmasters; and the adoption in this country of the educational system of Germany would only lead to disappointment. In any organization of our secondary education which might be attempted, the first steps should be tentative, so that those which experience condemned might be retraced. The Education Department might do a great deal by giving information and advice to private schools; and even, on security, lending money for the development of such schools instead of stamping out private enterprise. The reason why private preparatory schools were so admittedly good was that they were free from the fear of State interference and competition.

THE Association of Assistant-Mistresses in Public Secondary Schools held its sixteenth Annual Meeting on Saturday, January 14, at the Women's Institute. The morning was occupied with elections, reports, and other routine business, followed by the President's address on "Education in France." A discussion on the Board of Education and Registration Bills was opened by Mrs. Withiel, of Notting Hill High School. The following resolutions were passed:—I. "That this Association will be glad to see the Board of Education Bill of 1898 passed, but trusts—(a) that its scope will be extended to include proposals for the creation of Local Authorities for Secondary Education on the lines suggested by the Royal Commission; (b) that the Consultative Committee indicated in the Bill will be a permanent Committee, and will include both men and women representing teachers in secondary schools; (c) that schools affected by the action of the Local Authorities will have a right of appeal to the Central Authority; (d) that under the Board of Education secondary education will form a separate branch, with its own inspectorate." II. "That this Association would desire a clause added to the Registration Bill, to the effect that—(a) after the lapse of a specified time, say seven years after the establishment of the register, no unregistered person shall be appointed as teacher in any endowed school, or school in receipt of public money, exception to be made in the case of probationers; (b) some authority should be appointed to undertake legal proceedings against persons guilty of offences under Clause 16." In the afternoon papers were read on the teaching of modern languages, and on "A Sixteenth-Century Arithmetician," which were thoroughly appreciated by the members present.

THE sixth Annual Meeting of the Association of Technical Institutions was held on January 12 in the Haberdashers' Hall. Earl Spencer was elected President for 1899, and spoke at some length on the condition and prospects of technical instruction in

this country. "We are still," said Lord Spencer, behind several countries in this respect.

We were forced to the conclusion that we had great need of exertion, organization, and development of our educational institutions in order that we might get on something like a footing of equality with our clever brethren of the United States. At present we were far behind them. Then there was Germany. For three generations that country had been elaborating its system of education, and paying the most careful attention to the wants of manufacturers, and, every one would admit, with great success. We had, therefore, in America and in Germany, not to speak of other nations, competitors who had left nothing undone to improve their manufactures by producing the best designs, giving attention to foreign languages, and otherwise enabling their people to trade successfully with other nations. We could not sit still and watch this commercial progress with indifference. We could not close our eyes and ears and remain satisfied with the old methods of education in regard to commerce.

The eighth Annual Meeting of the Association of Directors and Organizing Secretaries for Technical Education was held on January 13 in the Grocers' Hall. Mr. H. Macan resigned the office of hon. secretary. The following resolutions were passed:—"That, considering—as assumed by the Royal Commission Recommendation 36—that the large majority of the members of the existing County Councils and of their Committees for Technical Education either are or have been managers of voluntary schools, or members of School Boards, it is unnecessary and undesirable that direct representation should be given to the primary school interests." "That the Association are of opinion that the present powers possessed by county boroughs are sufficient to secure the representation of all educational interests in the areas of administrative counties." "That, in accordance with the view of the Royal Commission (Recommendation 35), no direct appointment of teachers by teachers should be made upon the Local Authorities, and it is essential that no teachers of any added school in the area should have a seat on these Authorities." "That in county boroughs the Association agrees with the compromise between the municipal associations and School Board associations with the reservation that in all cases the Municipal Council have at least one-half plus one of the members of the Local Authority." The meeting also adopted a resolution stating that it was undesirable to draw a line of separation between secondary and technical education in any legislation concerning a Central or Local Authority.

A CONFERENCE of the Froebel Society was held (by permission) at the College of Preceptors on January 25, with Sir George Kekewich in the chair. There were morning and afternoon sessions, and papers were read by Mrs. Cashmore, of East Dulwich; Miss Dunlop, of the Saffron Walden Training College; and Miss Manley, of the Stockwell Training College. The object of the Conference was to decide what special course of Froebelian training is desirable for infants' mistresses in elementary schools, in addition to their general professional training, and to frame a syllabus indicating the lines of this special preparation.

At a meeting of Convocation of the University of London, held on January 16, Mr. R. W. Hinton, B.A., moved: "That, in the opinion of this House, the new regulations for the Matriculation Examination tend to discourage the study of modern languages in schools, by making them entirely optional and alternative to science." This was agreed to *non. con.* Mr. G. Armitage-Smith moved, and Mrs. Bryant seconded, the following resolution:—"That the value of the B.A. degree has been distinctly lowered by the recent changes in the final examination, which enable a candidate to obtain the degree without taking any of those subjects (*e.g.*, mathematics and mental and moral science) which involve a discipline in the more abstract kind of thought." This was carried and was referred to the Standing Committee with the following expression of opinion:—"In the opinion of this meeting it is desirable that the subjects should be regrouped in such a way as to maintain the former standard of comprehensiveness of the degree."

The annual meeting of the Governors of Mason College, Birmingham, was held on January 12, the President (Mr. Chamberlain) in the chair. The balance-sheet showed a total income of £17,503, and a deficiency of £2,411. Alderman Clayton said that the loss was practically the same as last year. Sir Josiah Mason left the College £15,000 working capital. That had gone, and

another £15,000 as well. The number of students of all kinds was 967, and that, too, was practically the same as in 1897. Mr. Chamberlain said they had gone almost as far as they could expect to go, so long as they had to deal only with a University college instead of with a University. That, he believed, had been the experience of similar colleges in Manchester and Leeds. It was not till they formed part of a full University that they had been able to make satisfactory progress, and he thought that one moral to be drawn from the report was that they should lose no time in securing for Birmingham the advantages of a University. The endowment fund for that purpose was already considerable, and he hoped that in the course of the next few months it would be largely augmented. The committee had not finally concluded their negotiations with the great limited liability firms which added so much to the prosperity of the city, but he was glad to say that the leading managers and directors of those companies were inclined to take a proper view of their responsibilities and obligations in regard to this matter.

MISS EMILY DAVIES, the Hon. Sec. of Girton College, writes with reference to last year's proposals for increasing the accommodation at the College. Nearly £10,000 has been promised for additional building, while the fund accruing from legacies and accumulated profits reaches over £8,000. Owing to the continued pressure for room, it has been decided to begin building on a somewhat reduced scale, a range of buildings to contain students' rooms, which can be added later, being postponed, and reducing the estimated cost from £50,000 to £40,000:—

The new buildings as planned will contain a dining-hall, calculated to hold nearly 300 persons, with a kitchen department on the same scale. This last is an inconspicuous, but most necessary and costly, part of the scheme. There will also be a chapel, new lecture-rooms, and additional rooms for about twenty-five students; while the present dining-hall will be annexed to the library, for which more space is much needed. Owing to the conditions of the site, &c., we are to a considerable extent building for posterity as well as for present needs, and those who come after us will be able to provide for a large increase of students at a comparatively small cost. In taking the bold step of entering upon an undertaking which will cost at least £40,000, with less than £20,000 in hand, we are encouraged by the hope of considerable accessions to our funds during the progress of the building. The College itself, being more than self-supporting, is able to contribute from time to time to the extension fund from current income, and we venture to hope that some of our friends who were prevented from subscribing last year may now be able to do so, while those who have already given may be disposed to come forward again, now that the realization of the scheme is in immediate prospect.

OUR Welsh correspondent writes: "During the first three or four months of the year in Wales there is a considerable amount of educational administrative activity. The Executive Committee of the Court of the University of Wales then meets for the preparation of business for the Annual Extra-Collegiate Meeting of the University Court, generally held in April of each year. This year the Executive Committee of the University Court has already met in London on January 13, and another meeting will be held there on February 10. The University Court will this year hold its Annual Extra-Collegiate Meeting at Swansea on April 21. It is not improbable that at no distant date a request will be made on behalf of some of the theological colleges of Wales asking the University Court to give effect to the clauses in the Charter whereby theology may be made a subject for the B.A. degree. A meeting of members of the teaching staffs of some of the Welsh theological colleges was recently held, at which the clauses in question were carefully discussed. It is probable, however, that no petition will be presented to the University Court until the Governing Bodies of the various theological colleges have discussed the matter and have formulated some definite scheme of study. Theology is a subject for the study of which the Welsh mind has a considerable aptitude; and it is not unnatural, therefore, that many persons in Wales should wish to see theology occupying a prominent place among the activities of the University. At the same time, it seems in accordance with present day tendencies in Wales to require a thorough training in Arts as a preparation for theological study.—The Executive Committee of the Central Welsh Board for Intermediate Education will probably meet in February to prepare business in view of the forthcoming Annual Spring Meeting of the Central Welsh Board at Welshpool on April 28. The movement in favour of the systematic teaching of English in Welsh schools, in districts where English is practically a foreign language, seems to be

gaining ground. At present there is a tendency in some districts where Welsh is habitually spoken by the children to assume a knowledge of English, when the English which the children know is, for the most part, only the minimum of English required for the purposes of school life.—The Guild of Graduates of the University of Wales will meet at Bangor about Easter. The Literary and Dialect Sections of the Guild are making progress. The works of Morgan Lloyd, edited by the Warden of the Guild, Mr. T. E. Ellis, M.P., chief Opposition Whip, are now in the press, and a considerable list of Welsh Dialect words has been collected by the Secretary of the Dialects Section. The boundaries of Welsh dialects, too, are being more clearly ascertained, and the phonetic and other differences between dialects more thoroughly classified. It is gratifying to find that the University of Wales aims at becoming a repository of knowledge, especially on subjects relating to Wales, as well as a teaching and examining body for degrees.

UNIVERSITIES.

Oxford. The letter put out in the Summer term by three Professors advocating changes in the Classical course has been followed by a pamphlet written by Mr. Lewis Farnell, one of the Exeter classical tutors. He supports the three years' course and the abolition of Honour Moderations, holding that it is impossible to reform the latter examination, and undesirable to place it earlier in the University course. He contends that insufficient attention is paid to the subject-matter of the books offered, and that the standard and character of the work is not above that found in a sixth form; that the examination is unnecessary, conducive to cram, and discouraging to independent work, life, and freedom in study. He would also wish to see the Literæ Humaniores school relieved of specialism, and anticipates that, if the degree examination were taken at the end of the third year, much encouragement might be given to the abler men to work for the research degree on higher and more independent lines than is possible while the test of knowledge and originality is the three hours' "Greats" paper.

Prof. Gardner has been putting in a claim for the better recognition of archæology in the Literæ Humaniores school. He has pointed out that, although a fairly large number of men take the history of Greek sculpture as a subject in Honour Moderations, few continue the study afterwards owing to the pressure of the ordinary work for the school. The result is that few Oxford men obtain any scientific training in the subject, and are at a great disadvantage as compared with the students of Continental and American Universities, and that, though great stress is laid at Oxford on classical studies, they are narrow and behind the times. He wishes to see some of the branches of classical archæology introduced as alternative subjects in the final schools. Evidently there is dissatisfaction in the ranks of the classical scholars, though it has not expressed itself so strongly as the discontent with the Classical Tripos has at Cambridge.

Strangely enough, while Moderations and the four years' course are attacked at Oxford, an attempt is being made at Cambridge to introduce something of the same kind as a substitute for the three years' course and single Honour Examination. It is not, however, likely that the system of having a large number of set books would find favour at Cambridge, and it is probable that Moderations would be a good deal improved if the course were somewhat widened and less minute knowledge required. The getting up of elaborately annotated editions of texts is discouraging both to teacher and pupil, and limits the time that can be given to reading the authors themselves. It tends to a continuance of school ideas of work, for it must be acknowledged that there is little in the Moderations course to stimulate the interest of a boy who has already had a good classical training, and that it encourages cram on the one side, and indifference to genuine study on the other. No doubt it is undesirable to make constant changes in examinations, but, if they are to keep pace with the literature of their subject, modifications are needed from time to time, and such alterations stimulate the teaching. Some years ago Euripides was scarcely lectured on, now there are in nearly every term lectures on two or three plays; and, while Sophocles has, for obvious reasons, almost disappeared from the list as far, at least, as the younger men are concerned, Æschylus still holds his ground. On the other hand, Comparative Philology is scarcely taken up at all, though some years ago it was not difficult to get teaching in it, and Aristotle's Rhetoric, which was put on a short time ago, seems to make no way.

The death of the Master of Pembroke, Dr. Price, has removed one of the oldest resident members of the University, and one who will be greatly missed, as he had to the last taken an active part in University business, and had only recently resigned his Professorship and vacated his seat on the Hebdomadal Council. He was a special authority on questions of finance, and his judgment was highly valued. The great service he had done to the development of the Clarendon Press had been continued in different ways up to the last year of his life, and he was personally very popular in public and private relations. The election of his successor in the Mastership will be held early in February. The Professorship will be filled up in the course of the term.

A scheme to bring working men to Oxford, to share in the benefits of University teaching without their being members of the University or going through the regular course, has been started by two Americans. A fine old house in the poorer part of Oxford has been taken, and will be named Ruskin Hall, and some of the residents will, in consideration of their help in the work of the house, obtain their education free.

GERMAN AND ENGLISH IDEALS. *

One hundred and seventy pages of the third volume of "Special Reports on Educational Subjects" are devoted to Mr. Sadler's elaborate, able, and helpful study of the organized secondary education of Prussia, undertaken with the special object of drawing a moral, whenever possible, for educational reformers at home. In some respects the task of the writer was defined and limited by the work of Matthew Arnold three-and-thirty years ago. In his report on German schools to the Schools Inquiry Commissioners in 1866, Arnold wrote that, "in its completeness and carefulness, the school system of Germany is such as to excite the foreigner's admiration." If that was true when it was written, it is still more true to-day, after an intermediate period of sustained zeal and deep-reaching change. Englishmen sometimes grumble, as Mr. Sadler says, at the number and intricacy of the constant suggestions for reform in secondary education, but "the criticisms in this country are casual and intermittent as compared with those which perpetually engage the attention of the educated classes in Germany." We have passed through a wholesome stage of conviction and contrition in respect of the lead which has been taken by Germans in the matter of secondary education; and of late there has been a manifest tendency to weary of a comparison which, in some particulars, tells so little in our favour, and to rehabilitate ourselves by dwelling on the more special and valuable characteristics of English public and private schools. The salient feature of Mr. Sadler's exhaustive review is that it places the candid reader at a standpoint from which he can more accurately appreciate and compare the English and Prussian systems. The result is—as, of course, it ought to be—that some of the qualities of each system are seen to be incommensurable, and that the German and the English schoolmaster have a good deal to learn from each other.

Altogether the positive and admitted benefits of State organization and in the undercurrents of contemporary criticism, secondary education for boys in Prussia stands in almost an opposite position to that which it occupies in England. There is little doubt that, so far as wide range of all-round intellectual attainment goes, a higher average is reached in the average German secondary school than is the case with us. I make this statement with misgiving; not because I doubt its truth, but because it is incapable of absolute proof so long as the great mass of English secondary schools are under no official inspection. I am very far indeed from saying that, even if all-round intellectual attainment alone be taken as the criterion of judgment, all Prussian schools will be found superior to all the corresponding English schools. That is almost certainly not the case. But the average is, so far as I have had opportunity of making exact comparison, higher there than here, if, that is, intellectual attainments alone be taken into account. Their secondary schools of high quality are more uniformly spread over the whole country than is the case in England. They are cheaper and more accessible to poorer families of the middle class. On the other hand, our schools are more free to develop as they like; they represent a greater variety of standpoints; some of their characteristics are more strongly defined. Just as in Germany a minority calls

* *Problems in Prussian Secondary Education for Boys, with special reference to Similar Questions in England.* By M. E. Sadler, Director of Special Inquiries and Reports. (Her Majesty's Stationery Office: "Special Reports on Educational Subjects," Vol. III.)

for more freedom of organization, so with us a minority calls for much stricter control. But inquiry would doubtless show that the prevailing opinion among German parents and teachers is strongly in favour of their present type of regulations, while in England there is an equally strong predisposition against anything tending to uniformity or highly centralized control. That principles so diverse should be maintained with such earnestness of conviction in each of the two countries points to the fact that there is positive and proved advantage to be derived from each system. Hence it is probable that each country has something to learn from the other, and it is expedient to attempt to measure the value of the different results of the two systems and to consider how far, without revolutionary change, each could secure some of the benefits which are the characteristic outcome of the other. From this point of view it is significant that some of the most interesting of recent experimental changes in the organization of certain Prussian secondary schools show a tendency to approximate to compromises which are also being tried in England.

The main lines of distinction are clearly traced by Mr. Sadler, amongst them being the different principles of promotion from class to class, the more careful separation of different types of schools in Germany, each with its defined curriculum and normal duration of study, and the general preponderance of secondary day schools in Germany and of boarding schools in England. With regard to the first point, the Germans have advanced much further towards a kind of secondary codification than Englishmen, as a rule, have attempted or are willing to advance. In Germany,

the unit is the year's work assigned to each class in the school. The usual practice is to keep a boy for a whole year in each class. The task assigned by the Code of Regulations to each class in the school has been carefully adjusted, in the light of experience, to the school-time available in the course of one school year. Each boy has to go through it, and the knowledge thus acquired by him at each stage is treated as the necessary foundation for the instruction which he will receive in the class above. Moreover, the whole class works in common at all the different subjects assigned to it in the curriculum. There is no separate classification for mathematics, science, or modern languages. The year's work is conceived as a whole, and it is held that boys should advance together in all the subjects of curriculum, from point to point in a unified school course. This is a difference of far-reaching importance, and will be found to affect, in a greater degree than any other single cause, the quality of the intellectual effects of the secondary schools of the two countries. On the intellectual side the tendency of the German system is to produce a much larger number of boys with a high average level of attainment in a wide range of subjects, very well grounded, highly disciplined, and quick to learn, especially when under instruction; on the other hand (and still referring only to the intellectual side of school training), the tendency of the English system, *at its best*, is to give much more scope to individual talent, and, on the whole (though, of course, there are many exceptions to this), to produce a comparatively small number of first-rate scholars, keenly interested in their favourite subjects, vigorous in mind, accustomed to rely a great deal on themselves, and keen to pursue their studies to a higher point; *at its worst*, the English system turns out a much poorer article (from the point of view of intellectual attainment) than the German; when it deals with inferior material, it makes very little of it, so far as attainment goes.

On the important and complex question as to the proper aim of secondary education, and the possibility of establishing a definite standard of attainment for boys at particular periods of their school life, Mr. Sadler has much to say, and he reminds us that "German (and especially Prussian) statesmen and educational authorities have been constantly at pains to define their ideas of what should be the common measure of general culture among the educated classes." In the answers given to this question, it seems to us, more than in anything else, we arrive at a true mode of discrimination between the German and English ideals. English codifiers in secondary education, in the sense of creating a common mould for all intellects, and defining a range of knowledge which should be possessed by every boy of fifteen, or seventeen, or nineteen, have never yet gained the ear of the nation; and we do not believe that they will ever bring us much nearer to the codification and stereotyping of instruction (except, perhaps, in technical and commercial education) than we have already been brought by the formalizing of our "certificate" and "leaving" examinations. There are manifest reasons for a more or less definite standard of technical and commercial knowledge; but, with the majority of Englishmen, nothing could compensate for the loss of the ethical ideals in secondary education, of character-building so far as it is independent of intellectual faculty, and of variety in the types of schools to correspond with the variety of individual gifts.

SHILLING ATLAS. Modern Series. New Edition, just ready. Containing 73 full-coloured Maps. 4to, bound in cloth.

MULTUM IN PARVO ATLAS. Fourth Edition, carefully revised to date. Containing 90 full-coloured Maps. Political, Physical, &c. Useful Statistics and Index. The best and Cheapest of Miniature Atlases. Crown 16mo, full-bound cloth, price 2s. 6d.

WORLD-WIDE ATLAS. Third Edition. A Wonderful Production. Containing Two Frontispieces: "The Flags of all Nations" and "The Time of all Nations." Introduction: Geographical Discovery and Political Territorial Changes in the Nineteenth Century, by J. SCOTT KELTIE, Secretary to the Royal Geographical Society, London. 112 beautifully coloured and thoroughly accurate Plates of Maps, Plans of Cities, &c. Index of 86 pages, giving 58,000 Names. Handsomely bound in cloth, royal 4to, 12½ by 10½ inches. Price 7s. 6d. *Detailed prospectus post free.*

HISTORICAL ATLAS. New Edition. Containing 35 Maps, printed in colours, with Notes and Index. Crown 8vo, full-bound cloth gilt. Price 2s. 6d.

PHYSICAL ATLAS. Containing coloured Maps and Analytical Index. 8vo, full-bound cloth gilt. Price 2s. 6d.

ATLAS OF PHYSICAL GEOGRAPHY. By Sir ARCHIBALD GEIKIE, LL.D., F.R.S., containing 24 Maps, beautifully printed in colours, with descriptive Letterpress Maps. Imperial 4to (11 by 15 inches), half-bound 8vo. Price 12s. 6d.

BOTANY SHEETS FOR BEGINNERS. By ALEXANDER JOHNSTONE, F.G.S. Sheet I. Roots. Sheet II. Stems. Sheet III. Leaves. Sheet IV. Leaves. Sheet V. Flowers. Sheet VI. Fruits and Seeds. Carefully printed in colours, with copious Explanatory Letterpress at the foot of each sheet. Size 34 by 28 inches each. Price 3s. 6d. each, on cloth, rollers, and varnished, or on cloth to fold up, with cloth sides; 18s. the complete set.

SHEET I. OF JOHNSTON'S ILLUSTRATIONS OF GEOMETRY. By THOMAS J. MENZIES, M.A., B.Sc., F.C.S., &c. Sheet I. contains Propositions I.—XV., being the work required for Stage I. as a Specific Subject. Sheet II., Propositions XVI.—XXXIV. Size 50 by 42 inches. On cloth and rollers, unvarnished, price 7s. 6d. Sheet III., Propositions XXXV.—XLVIII. in preparation. NOTE.—The three sheets, between them, embrace the whole of Euclid, Book I.

SLATE CLOTH SCHOOL WALL MAPS FOR CHALK EXERCISES. The Maps are printed in black on black slate cloth, so that the Map is practically invisible to all but the teacher, who can, by means of chalk, bring out any particular features he desires to call attention to. The back can be used as a blackboard. Each Map is mounted on roller and slip.

The size of each Map is 50 by 42 inches, and the price 14s.

THE TIMES ATLAS. (New Edition.)

At the present moment it is impossible to open a newspaper without finding an account of war, disturbance, the fear of war, diplomatic changes achieved or in prospect, in every quarter of the world.

Under these circumstances it is absolutely essential to any one who desires to follow the course of events to possess a thoroughly good Atlas. It is impossible to obtain a better or cheaper Atlas than The Times Atlas.

IN THE NEW EDITION OF THE ATLAS, WHICH IS NOW ISSUED FROM "THE TIMES" OFFICE, MANY ALTERATIONS HAVE BEEN MADE.

I.—NEW MAP.

A new full-page map of NEW ZEALAND, with an inset map of TASMANIA, has been added to the ATLAS, making a total of ONE HUNDRED AND EIGHTEEN PAGES. A SPECIAL INDEX to this map follows the last page of the General Index.

II.—GENERAL ADDITIONS AND ALTERATIONS.

The following maps have been added to, and, where necessary, corrected:—

- | | | |
|--|---|--|
| 3, 4. Western and Eastern Hemispheres. Northern and Southern Hemispheres. | 63. Italy (North.) | 92. Canada (Western). |
| 7, 8. The British Empire, showing the Commercial Routes of the World and Ocean Currents. | 65. Southern Scandinavia. | 93, 94. United States. (General Map.) |
| 9. Religions of the World. | 66. Norway and Sweden. | 95. United States (Western). |
| 11, 12. North Polar Regions. | 67, 68. European Russia | 97. Central America and West Indies. |
| 13, 14. Europe. (General Map.) | 69, 70. The Balkan Peninsula. | 101, 102. Africa. (General Map.) |
| 21, 22. Scotland. | 73, 74. Asia—The Eurasian Continent. (General Map.) | 104. South Africa. |
| 24. Ethnographic Map of Europe. | 77, 78. Central Asia and India. | 105, 106. Africa (North-East). |
| 47, 48. Austria-Hungary. (General Map.) | 79, 80. India (North). | 107, 108. Africa (North-West). |
| 49, 50. The Austrian Alps. | 82. Burma, and the Malay Peninsula. | 109, 110. Africa (South of the Equator). |
| 53, 54. Switzerland. | 83. Afghanistan and Baluchistan. | 111. West Africa. (Colonial Map.) |
| 55. General Map of the Alps. | 84. Siam, and the Malay Archipelago. | 113. Polynesian Groups. — South Polar Regions. |
| 56. Sicily and Sardinia. | 85. China and Japan. | 114. New Guinea and the Papuan Archipelago. |
| 61, 62. Italy. (General Map.) | 87, 88. North America. | 115, 116. Australia and New Zealand. Index, pp. 1-112. |
| | 89, 90. British North America. | |
| | 91. Canada (Eastern). | |

Various minor additions have been made in the remaining maps.

III.—SPECIAL ALTERATIONS AND ADDITIONS.

In the map of the North Polar Regions will be found the highest point reached by Nansen.

Large additions in matters of detail have been made in the map of the Austrian Alps, pp. 49-50, and also in Switzerland, pp. 53-54.

The map of Asia, pp. 73-74, has been carefully revised according to the latest information.

All maps of the Malay Peninsula now show the readjusted boundaries of SIAM, and the districts affected by the Treaty between England and France.

The NEW TREATY PORTS and the recent Japanese annexations are shown on the map of China.

The maps of North America and Canada have been carefully revised. KLONDIKE and DAWSON CITY have been inserted (p. 89).

For Siam and Indo-China, see THE TIMES ATLAS MAPS, p. 85.

For the Nile Campaign, see THE TIMES ATLAS MAPS, pp. 103, 105, 106.

For the progress of exploration in the Upper Congo, see THE TIMES ATLAS MAPS, pp. 109, 110.

For the possessions of Britain, France, and Germany in West Africa, see THE TIMES ATLAS MAPS, pp. 107, 108, 109, 110, 111.

For Kiaochau Town and Bay and the German Occupation, see THE TIMES ATLAS MAPS, p. 85.

Although the expense of making these corrections has been exceedingly heavy, and although the Map of New Zealand and Tasmania constitutes a permanent addition to the Atlas, the volume, delivered post free within the United Kingdom, will be obtainable at the usual prices, viz. :—

Mathematics and Science.

- Chemical Analysis, Qualitative and Quantitative.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and R. W. STEWART, D.Sc. Lond. 3s. 6d.
- Chemistry, The Tutorial.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg, Lecturer in Chemistry in the Victoria University. Edited by WILLIAM BRIGGS, M.A., F.C.S.
Part I.: Non-Metals. 3s. 6d. Part II.: Metals. 3s. 6d.
- Chemistry, Synopsis of Non-Metallic.** With an Appendix on Calculations. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. Interleaved. 1s. 6d.
- Euclid.—Books I.—IV.** By RUPERT DEAKIN, M.A. Lond. and Oxon., Headmaster of Stourbridge Grammar School. 2s. 6d. Books I. and II. 1s.
- Hydrostatics, An Elementary Text-Book of.** With Examples and Answers. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. *Second Edition.* 2s.
- Magnetism and Electricity, First Stage.** By R. H. JUDE, M.A., D.Sc. Lond. 2s.
- Magnetism and Electricity, Text-Book of.** By R. W. STEWART, D.Sc. *Third Edition.* 3s. 6d.
- MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A., B.Sc. 2s. 6d.
- Mensuration of the Simpler Figures.** By WILLIAM BRIGGS, LL.B., B.A., F.C.S., and T. W. EDMONDSON, B.A. Lond. and Camb. *Second Edition.* 2s. 6d.
- Sound, Light, and Heat, First Stage.** By JOHN DON, M.A., B.Sc. Lond. 2s.
- Trigonometry, The Tutorial.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.

French and English.

- FRENCH COURSE, THE PRECEPTORS'.** By E. WEEKLEY, M.A. Lond. 2s. 6d.
- FRENCH COURSE, BARLET'S PRECEPTORS' JUNIOR.** By STÉPHANE BARLET, B. ès Sc., Univ. Gall. Examiner in French to the College of Preceptors. 1s. 6d.
- French Prose Composition.** By ERNEST WEEKLEY, M.A. Lond. 3s. 6d.
- FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. Lond. 1s. 6d.
- French Prose Reader.** Edited by S. BARLET, B. ès Sc., and W. F. MASOM, M.A. With Vocabulary. *Third Edition.* 2s. 6d.
- ENGLISH GRAMMAR, THE PRECEPTORS'.** With numerous Exercises. By ARNOLD WALL, M.A. Lond. [*In preparation.*]
- English Language, The: Its History and Structure.** By W. H. LOW, M.A. Lond. *Fourth Edition, Revised.* 3s. 6d.
- Shakespeare.—Richard II.** Edited, with Introduction and Notes, by Prof. W. J. ROLFE, Litt.D. 2s.

COMPLETE CATALOGUE of the University Tutorial Series, and Catalogue of Books classified for College of Preceptors' Examinations, free on application.

LONDON: W. B. CLIVE, 13 BOOKSELLERS ROW, STRAND, W.C.

CASELL'S EDUCATIONAL LIST.

CASELL'S FRENCH DICTIONARY. 515th Thousand. 1,150 pp. 3s. 6d.

"Has become a standard work in this country, being used in the best schools, recommended by many of the first professors of the day, and generally found a reference book of the highest value and importance"—*Daily Chronicle*.

CASELL'S GERMAN DICTIONARY. 222nd Thousand. 1,201 pp. 3s. 6d.

"Is the best of the smaller German dictionaries in the field, and this is faint praise."—*Journal of Education*.

CASELL'S LATIN DICTIONARY. 102nd Thousand. 927 pp. 3s. 6d.

"Is the handiest, the most useful, and certainly the very cheapest to be met with."—*Rock*.

CASELL'S ENGLISH DICTIONARY. 1,100 pp. 3s. 6d.

"It is an excellent dictionary. In addition to the clear arrangement, legible type, and other advantages of the book, it is provided with a common-sense scheme of pronunciation, includes a large number of scientific words, and does not neglect Americanisms, Provincialisms, Archaic Words, Phrases and Noun Words, or words coined for a special occasion."—*Pall Mall Gazette*.

CASELL'S LESSONS IN FRENCH. By Prof. E. ROUBAUD, R.A. Cheap Edition. Parts I. and II., cloth, each 1s. 6d.; complete, 2s. 6d. Key, 1s. 6d.

THE NEW LATIN PRIMER. By Prof. J. P. POSTGATE. 2s. 6d.

THE FIRST LATIN PRIMER. By the same Author. 1s.

LATIN PROSE FOR LOWER FORMS. Being a Series of Exercises adapted to the New and First Latin Primers. By M. A. BAYFIELD, M.A. 2s. 6d.

A FIRST SKETCH OF ENGLISH LITERATURE. Comprising an Account of English Literature from the Earliest Period to the Present Date. By HENRY MORLEY, LL.D. Thirty-first Thousand. 1,099 pp. Crown 8vo, cloth, 7s. 6d.

THE STORY OF ENGLISH LITERATURE. By ANNA BUCKLAND. Fourteenth Thousand. Cheap Edition. Cloth boards, 3s. 6d.

ELEMENTARY PHYSIOLOGY FOR STUDENTS. By ALFRED T. SCHOFIELD, M.D., M.R.C.S., &c. With Two Coloured Plates and a large number of other Illustrations. Revised Edition, price 5s.

THIS WORLD OF OURS. By H. O. ARNOLD-FORSTER, M.P. A Manual of Physiography, Geology, and Commercial Geography. Fully Illustrated. Cheap Edition. Price 2s. 6d.

SONGS FOR SCHOOLS.

Edited by JOHN FARMER, Musical Director of Balliol College, Oxford, late of Harrow School.

SCARLET AND BLUE. Being Songs for Soldiers and Sailors. Extra crown 4to, cloth, 5s. Words only, royal 32mo, 6d. paper; 9d. cloth.

GAUDEAMUS. One Hundred Songs for Colleges, Schools, and the Home. Crown 4to (Old Notation and Words), 5s. The Words only of the Songs contained in "Gaudemus" are issued in paper covers, 6d.; or cloth, gilt letters, 9d.

DULCE DOMUM. 134 Rhymes and Songs for Children. Crown 4to (Old Notation and Words), 5s. Also issued in crown 8vo size, in Two Parts (Tonic Sol-fa and Old Notation and Words), 6d. each. For Infant Schools and Kindergartens.

RECENTLY PUBLISHED.

A HISTORY OF ENGLAND. Second Edition. Revised. From the Landing of Julius Cæsar to the Present Day. By H. O. ARNOLD-FORSTER, M.P. Extra crown 8vo, 852 pages, copiously illustrated, 5s.

A COMPLETE MANUAL OF SPELLING ON THE PRINCIPLES OF CONTRAST AND COMPARISON. With numerous Exercises. By J. D. MORELL, LL.D. 115th Thousand. Cheap Edition. Just published. 6d.; cloth boards, 1s.

CASELL'S POETRY FOR CHILDREN. Six Books. Fully Illustrated. With Notes and short Biographies of the Authors, 1d. each; or, complete in one Vol., cloth lump, 6d.

A PRACTICAL METHOD OF TEACHING GEOGRAPHY. (England and Wales.) By J. H. OVERTON, F.C.S. Twenty-two Maps, interleaved with tracing paper. 6d.

READY SHORTLY.

A Book of Adventures for School and Home.

**IN DANGER'S HOUR;
OR, STOUT HEARTS AND STIRRING DEEDS.**

With Introduction by H. O. ARNOLD-FORSTER, M.P.

256 pp. Crown 8vo. With Four Coloured Plates and Numerous Illustrations. Price 1s. 8d.

This attractive volume recounts some of the most noteworthy historical adventures and is intended to direct the natural love of adventure among schoolboys to subjects worthy of their admiration. It contains suitable notes.

Cassell's Educational Catalogue will be sent post free on application.

CASELL & CO., LTD., LUDGATE HILL, LONDON.

FORECASTS AND COMMENTS.

February 1, 1899.

THE twenty-seventh annual series of lectures for Fixtures. teachers on the Science, Art, and History of Education will begin at the College of Preceptors on Thursday, February 16, at 7 p.m. Dr. James Sully, Grote Professor of the Philosophy of Mind and Logic at University College, London, will then deliver the first lecture of a course on "Moral Education." Members of the College have free admission to these lectures; the fee to others being half-a-guinea for the course of twelve.

* * *

THE Right Hon. James Bryce, M.P., will deliver an address on the subject of commercial education on February 2, at the opening of the Liverpool School of Commerce.

* * *

ON February 3 the Right Hon. A. J. Balfour, M.P., will distribute prizes at the Battersea Polytechnic, and will open the new hall of that institution.

* * *

LORD RAYLEIGH is to deliver a course of seven lectures at the Royal Institution on "The Mechanical Properties of Bodies," beginning on the afternoon of February 11.

* * *

THE annual meeting of the National Education Association will be held on February 14.

* * *

ON February 18 the Lord Mayor will distribute the prizes of the National Association of French Masters in England.

* * *

Education Gossip.

THE Winter Meeting at the College of Preceptors, held between January 3 and January 14, was, if possible, a greater success than that of last year. The attendance was well sustained throughout, and there was every indication of interest in the lectures, discussions, and visits to sundry educational centres. We print elsewhere the larger part of Sir Joshua Fitch's opening address, and regret that we have not space for a fuller report of the meeting as a whole. The daily Press, we are glad to note, has done substantial justice to the lecturers and other speakers.

* * *

MR. ARTHUR SIDGWICK's paper on "Greek Ideals of Education" was remarkably happy, and his colloquial rhyming versions of Aristophanes won him rounds of merited applause. We may mention for what it is worth the fact that this subject was considerably more attractive (judging by attendance) than that of last year's corresponding lecture, on "The Minor Poems of Milton."

* * *

MR. BARNETT is always full of suggestion, and his three lectures on "The Practice of Education" abounded in salient points. "Systems and methods of education," he said, "were the standards and tests of what society regarded as most important for its own prosperous existence, but communities were not infallible judges of their own good, and results often belied expectations." Again, he commended deference to tradition, which represented the wisdom of experience, and urged that

theology kept alive the study of realities. "The conception of man as a mere citizen arose out of military organization and led to dangerous errors in practice, and, in later and more advanced days, it caused the 'practical' man and the 'scientist' to measure the value of education by its relation to material results."

* * *

In his lecture on discipline, Mr. Barnett said that in school-life rewards and punishments were both necessary, but prize-giving was undesirable in the early stages. "Punishment was much more indispensable as a part of discipline than reward. Corporal punishment in the early stages of the acquisition of knowledge was harmless and necessary. It should be real, and inflicted in warm blood." Whereat the audience laughed without committing themselves.

* * *

MR. FINDLAY had an enthusiastic reception on revisiting the scene of his former labours, and his two lectures on "The Corporate Life of School" were listened to with marked attention. In the interval of a few months since he left London for Cardiff, Mr. Findlay has organized a new school, where he is already able to carry out his ideas with something like six score pupils.

* * *

Of special interest and curiosity, though in different senses were Mr. Lee's mechanical torso of the human body, with its strange and rather uncanny revelations for such as know nothing of anatomy and physiology, and Mr. Ginder's mechanical speller, which is said to enjoy the patronage of the German Kaiser. Mr. Lee's model is so arranged as to show each part of the trunk separately, or the torso as a whole. The mechanism is simple, and not likely to get out of order.

* * *

THE appearance of Professor Rein, of Jena, was looked forward to with peculiar interest. The old Thuringian university town has come to be regarded by teachers in England and America as the Mecca of a new educational creed, and the pilgrim who had made his "Hajj" and worshipped at the shrine was exalted in the eyes of his fellow-teachers as one who had been admitted to the higher mysteries, and had received some portion of the divine *afflatus*. Expectation was on tip-toe as to what manner of man it was who had so powerfully influenced the minds and hearts of his disciples. Imagination may have pictured him with heavy brows and solemn mien, haggard with severe study of the profoundest problems of human nature, and their bearing on the evolution of the "father to the man." The reality may possibly have shocked the romantic sentiment of some. A genial, fresh-coloured gentleman, with fair hair and full beard, and bright eyes beaming benevolently through gold-rimmed spectacles, whose lively conversation showed him to be no dreamer, but a very practical and matter-of-fact citizen of the world.

* * *

THE part that Professor Rein had to play in the programme of the Winter Meeting was not a light one. He was to deliver a lecture, in English, on the "Training of Teachers," and another lecture, in German, on the "Reform of German School Education." He was also announced to take part in a conference on the "Training of Modern Language Teachers." A lecture on so large a subject as the training of teachers, conceived in German, translated into English, and delivered with a painstaking anxiety to be thoroughly understood of the vulgar, was hardly calculated to exhibit Dr. Rein to the best advantage, however profound the views enunciated, however careful and methodical their elaboration; and the cordial reception accorded to the lecturer might not perhaps convey the most accurate reflex of the impression made by the lecture. Still less directly could the Professor's admirable exposition, in his native tongue, of the present position of educational movements

in Germany be expected to appeal to the intelligence of the majority of a large audience, to whom the substance of the lecturer's discourse had to be imparted in an English summary by the Chairman. At the subsequent Conference of specialists in modern languages held on the same day, Dr. Rein's thoroughly practical speech was, as might naturally be expected, better appreciated.

* * *

In his lecture on educational reform in Germany, the Professor, though he held that we need more centralization in England, pointed out that in his own country they were decentralizing, and one result had been a very large elimination of the clerical element from the schools. The training of teachers, even for private schools, was insisted on in Germany, and this had led to the abolition of incompetent schools, which, under the present law, might exist here and there in England. The local authorities in Germany co-operated more readily than in England with regard to educational movements. In Jena they had spent £20,000 on their elementary school, and so imposing was the building that visitors often asked: "What University is this?"

* * *

BUT it was reserved for the meeting convened by the Pestalozzi Society, which assembled in the College Lecture Hall in the evening of the second day for the purpose of commemorating the centenary of the beginning of Pestalozzi's educational work at Stanz, to obtain a full and true impression of the personality of the distinguished educationist who had honoured the College of Preceptors by his presence and co-operation. Here was indeed a theme intimately concerned with the teacher's work and methods, and a more striking picture than that which the Professor gave of the character of the man and the secret of his influence could not be conveyed. But there was more than this. The human interest of the pathetic story of Pestalozzi's life, his intense earnestness, his love for the children, his exaltation of spirit, his misery and times of deepest dejection and well-nigh despair—all this was brought out with a fullness, a clearness, a vividness of presentment, and an oratorical power, which was not only most impressive, but gave at the same time the most captivating sense of the intense sympathy and earnestness that glowed in the language of the speaker. It may truly be said that those who were not fortunate enough to be present at the Pestalozzi commemoration have not had an opportunity of forming a true conception of Professor Rein and the sources of his influence.

* * *

MR. MACKINDER opened the second week of the Meeting with the first of an interesting and thoughtful trio of lectures on "The Teaching of Geography." He contended that the teacher of to-day was encumbered with too many subjects. Might they not be reduced by greater correlation? In a curriculum of five or six subjects might not geography include and combine much manual training, drawing, mathematics, natural science, history, and economics, as necessary parentheses in the more strictly geographical arguments? The essence of geography was reasoned topography. In the elementary stage the dangers of metaphor were chiefly to be feared. They should avoid all complicated machinery—maps, models, instruments—and go straight to nature." Even the form and movements of the earth might be conveyed without appliances—*vide* Rousseau's "Emile." The next stage required models—made from nature by the pupils, or at least in the pupils' presence—and the globe. The first maps should be drawn by the pupils from models and from the globe. Only then could they safely introduce modern physical maps, showing relief as emphatically as outline. Last of all should come political maps.

* * *

MR. MACKINDER's second lecture was devoted mainly to physical geography, into which the lecturer insisted that measurement and precision should be introduced. As far as

possible, names should be avoided which were not essential; above all, perspective and connexion should be aimed at; and he strongly condemned the turning of boys and girls into mere indexes. In the third lecture, Mr. Mackinder dwelt on the teaching of geography on its economic and strategic sides, the latter relating not merely to the operations of war, but being connected largely with questions of "supply," which did not permit of the same precision as did the physical side of the subject, and thus afforded opportunity for the practice of judgment, in the selection of material from among immaterial facts. The lecturer insisted on the necessity of the teacher of geography possessing an easy grasp of his subject, and giving an adequate amount of thought to its presentation.

* * *

THERE was much that was helpful in Prof. Lloyd Morgan's lecture on "Psychology." There may have been great teachers who were never formally trained to study the mind, but training will produce more competent teachers in the future. Pedantry must be avoided, and the discussions, which should take the place of mere lecturing, "a relic of the middle ages," should be kept in close touch with concrete examples. Dry facts, on the one hand, paragraphed in packets of insipid pemmican, and tenuous generalizations, on the other hand, evaporated from the warm and moving stream of life into mere intellectual vapour, would avail little. Above all, the subject should be quickened with enthusiasm, the ultimate aim being to place before the teacher high ideals of the worth of his work and calling, and to afford him aid in realizing them.

* * *

THE Teaching of History was the subject of three lectures delivered by Mr. H. L. Withers, Principal of the Borough Road Training College, Isleworth. The method of treatment should, the lecturer suggested, be adapted to the stage of instruction—primary, secondary, or tertiary—at which the pupils had arrived. In the preparatory stage, history should be taught in forms similar to those in which it first appeared among primitive peoples, in tales of heroism and personal adventure. For young children, history should be mainly biography, with as strong a romantic interest as possible. In the second stage, the order and sequence of historical events should engage the attention of the teacher, and the class should be led to map out in idea the course of time, with its gradual historical development or the sudden and revolutionary changes which from time to time have diverted the course of the stream of history. In the third stage, the nature of the evidence on which the historian relied, Mr. Withers said that the history of important periods was to be studied in detail, and always accompanied by the study of some, at least, of the sources which the historian had used. Ancient history was the most serviceable for the purpose, because the mass of material was not so overwhelming as in modern history. In the sixth form, also, the study of history was to be directly connected with the theory of government and politics, through the elements of constitutional history.

* * *

THE "demonstrations" which followed on each of Principal Withers' lectures were of special interest as illustrating the method of the lecturer and his tripartite division of the subject. For the preparatory stage the class to which the lesson was given consisted of third standard boys from a public elementary school. In illustration of the second stage a class of boys from a secondary school was utilized; while for the final stage the audience itself became for the nonce the class to which the lecturer gave his lesson. The story of King Arthur in its various phases was the main subject of each lesson, but treated in a way corresponding to the supposed stage of mental development attained by each set of pupils. In the first demonstration the leading idea was the dramatic story of King Arthur's death, the battle with "the heathen," and the weapons used. A sword was produced and drawn by the lecturer, and the sudden exhibition of the shining blade was well calculated to fire the imagination of the young and eager pupils, and lead them on to

follow the series of incidents, terminating with the return of Sir Bedivere and his account of the seizing of "Excalibur" by the arm "clothed in white samite" that rose to receive it above the surface of the mere.

* * *

THE demonstration that followed the second lecture was a well designed attempt to get a more advanced class of boys to fix more definitely in time and space the details of the story—to locate its position in the procession of the centuries, to fix the true meaning of the symbols used for the measuring of time, to establish the relation of one event to another, and thus to lead to some faint notions of historical perspective. The last of the demonstrations, where the audience became the class, was a model of clear arrangement of materials, and exhibited most effectively the nature of the problems with which the historian and the student are confronted in weighing and sifting evidence of different kinds and degrees of authority.

* * *

IT is characteristic of the physical and intellectual energy of Sir Edward Clarke, as well as of his good nature, that he should have sandwiched his admirable "Lesson on Shorthand," on Tuesday of the second week, between a long speech to his constituents at Plymouth on Monday night, and the opening of the Law Courts on Wednesday morning—travelling by early train in order to keep his promise to the College. His personal interest in his task was further displayed by the arrival of a clerk with a hundred sheets of cardboard and good lead pencils, where-with he begged his audience to transfer "the natural shorthand alphabet" from the blackboard to their tablets. This the audience did, and many of them made their first acquaintance with the venerable, but still vivid, system of Taylor, which was used for many years in the Reporters' Gallery of the House of Commons.

* * *

WHEN he was at a suburban school, Sir Edward said, his master offered to teach him shorthand, and gave him one lesson, and, though from that day he never had another, he became a perfect shorthand writer, and could report verbatim a speech or a sermon. It seemed to be thought that every one who learned shorthand should learn to report verbatim. It was not one person in a thousand who had any necessity to report verbatim. For other persons there was great value in knowledge of shorthand in preparing notes for speeches, copying extracts, making memoranda, and so on. His own private secretaries soon learnt his system, and he was at any time able to read the letters they had taken down.

* * *

AFTER reducing the alphabet, on phonetic principles, to sixteen letters, Sir Edward drew the symbols for them, according to Taylor's system, and added arbitrary signs for *sh*, *th*, and *ch*, and the terminations *ing*, *ion*, and *sion*, which he said were not absolutely necessary, but were useful in rapid writing. So, too, were contractions for long words, such as *notwithstanding*. Learners ought to avail themselves of simple lines, which did not depend upon thickness or thinness, nor upon their position in relation to the line of writing. Having shown the readiest manner of joining letters, he claimed he had done what he had promised; and that those who had copied the symbols could do the rest for themselves. A fairly lively discussion followed, but the speakers, though advocating various systems, respected Sir Edward's desire to keep clear of controversy.

* * *

TWO striking addresses were delivered by Dr. Woods Hutchinson on "Methods of Teaching the Life Sciences," which were followed by discussion—the first having special regard to the child under instruction, and the second to the subject. The lecturer treated his audience as a class of receptive children—receptive they certainly were—and gave them an object-lesson on the teeth of the dog. Dr. Woods Hutchinson is on a visit to this country from America, and we trust that

he will take away with him a pleasant impression of the methods of English teachers—especially of their holiday methods.

* * *

CANON LYTTTELTON was entertaining (as he always is) on his favourite text of school athletics. He even made something out of the Duke of Wellington's (more or less authentic) saying, that "the Battle of Waterloo was won in the playing fields of Eton." This was an astounding assumption, for, at the period to which the Duke referred, there could only have been about fifty boys out of the six hundred in the school who played cricket. Probably about ten out of the fifty were present at Waterloo, and the more one looked at the Duke's statement the greater nonsense it appeared.

* * *

THE Canon was glad to know that athleticism was being encouraged in ladies' schools, and he looked for the happiest results. No doubt the games were sources of some difficulty, but the ladies could overcome habits which at first led to trying disasters. Quite recently he visited a ladies' school, where "rounders" were being played, and, just as he turned the corner of the quadrangle, a lady hit a ball with terrific vigour. The player at mid-off let it slip through her hands; it landed on her cheek, whereupon she was led off by the umpire, crying. There were six sisters in the South who were so clever at cricket that they would play an eleven of their own sex. One day the best player of the six cut a ball "to leg." The lady "long-stop" was flirting with an officer, and it took her full in the back; so she collapsed upon the ground, and shed bitter tears.

* * *

QUESTIONS of school hygiene were amply discussed in Dr. Colman's three lectures on "Physiology applied to Education," dealing successively with the eye, the ear, and the vocal organs, and in Dr. Newsholme's "Essential Conditions of Healthy Life in Schools." Dr. Colman is familiar as a lecturer to audiences at the College, and the practical utility of his short course on January 5-7 was thoroughly recognized. Dr. Newsholme is Examiner in State and Preventive Medicine to the Universities of Oxford and London. He raised an interesting question as to the requirements which would be likely to be enforced in secondary schools under the responsibility of the State, and drew no very good augury from the conditions now existing in the elementary schools.

The main problem of school hygiene was that of ventilation. In connexion with this, cleanliness was essential. Every part of a school should be washable, and wet cleansing, instead of dry, should always be practised. Dust was the great enemy of health, and infectious dust was very apt to be spread in schools. Carnelley's results, showing how the micro-organisms in school air increased with dirtiness of schools and of scholars, were quoted. Natural ventilation by windows and other openings could only suffice in summer, in view of the dense aggregation of children in school. In winter the incoming air must be warmed—a point which he emphasized. This implied, in large schools, a mechanical system of ventilation, propulsion and aspiration of air being secured by special appliances. The Education Department still allowed the deadly system of "direct radiation" without stipulating for conjoined admission of fresh air. Such warmed air was necessarily expensive; but it amply repaid in improved health of teachers and scholars. Carnelley's researches had shown that the air in mechanically ventilated schools was greatly superior to that in schools where trust was placed in natural ventilation along with hot pipes or along with open fires, as still recommended by the Education Department.

* * *

MRS. BEHNKE's lecture on "The Training of the Voice" was much appreciated. She was quite an alarmist on "those terrible throat complaints and voice failure from which such an enormous number suffered now, entirely owing to the want of training in the physical part of their work. There were nearly 1,800 teachers in London alone suffering from throat ailments more or less serious, and of these the London School Board claimed 1,000." An experience of over a quarter of a century in voice training showed Mrs. Behnke that the primary cause of these troubles was the totally inadequate management of breath

for voice purposes; but she had devised a system of breathing exercises, the results of which had attracted the attention of many medical men. She had also devised a system of vowel training to correct impure pronunciation, which had been very successful.

* * *

Nor the least interesting feature of the Winter Meeting was the series of visits to educational institutions that had been arranged. The institutions visited presented, for the most part, certain distinctive features, in relation either to the teaching of technical or science subjects, or with regard to sanitary and hygienic arrangements. At University College the resources of that well known institution for higher education were exhibited, and the newly erected physical and engineering laboratories were among the principal objects of interest. At the Technical College of the City and Guilds of London Institute, in Leonard Street, Finsbury, a continuation school devoted mainly to instruction in the principles underlying a number of industrial occupations, the mechanical and chemical laboratories were seen in operation, and the working of the scheme was explained by the Principal, Professor Silvanus Thompson. At the Regent Street Polytechnic arrangements for systematic instruction in metal- and wood-work, as part of the curriculum of a technical day school, were seen under somewhat more straitened conditions as to space. At the newly-built Pitman Metropolitan School in Southampton Row, an institution specially concerned with preparation for business life, the special features of interest were the facilities afforded for the practice of book-keeping, shorthand, and type-writing, as far as possible under normal business conditions. At the North London Collegiate School for Girls, among other things, the arrangements for the regular medical inspection of the pupils, with registration of particulars in each individual case, were explained; while at St. Paul's School the High Master and four of his assistant-masters explained the resources of one of the most modern and completely equipped of the London public secondary schools.

* * *

IN addition to these visits to educational institutions, a party of fifty was conducted round the libraries of the British Museum; and another large party spent a couple of hours in visiting several interesting remains of Old London in the neighbourhood of the College. This last visit was most efficiently conducted by Miss M. Crombie, who had often taken parties of her elder pupils to similar places of historical interest in various parts of London.

* * *

AT the Conference on the Training of Modern Language Teachers on January 5, arranged by the Modern Language Association, Mr. H. W. Eve occupied the chair, in place of Mr. Michael Sadler, who was, unfortunately, laid up with influenza. Mr. Morant, however, was present, and this, no less than the space given to modern languages in the last volume of "Special Reports," affords gratifying evidence that the Education Department is fully alive to the importance of the objects which this active and rapidly growing Association has set itself.

* * *

THE teachers attending the Winter Meeting were invited to take part in a Conference on "Science Teaching," which was organized by the Technical Education Board of the London County Council, under the experienced direction of Dr. C. W. Kimmins, who, it will be remembered, delivered a course of lectures on "The Teaching of Science" at last year's Winter Meeting. This Conference was held on January 12 and 13, at the South-West London Polytechnic, Chelsea, and was numerously attended on both days. Papers were read on "The Teaching of Elementary Experimental Science—Physics, Mechanics, and Chemistry," and the discussions which followed showed the deep interest taken in the subject. We regret that limits of space do not allow us to give a full account of this important Conference.

PROF. REIN, of Jena, set the ball rolling, and gave a capital bird's-eye view of the conditions of modern language teaching in Germany. Unlike Miss Brebner (in "Methods of Teaching Modern Languages in Germany"), he spoke of the schools as a whole, and the picture he gave was, naturally, much less bright; even so, the results are far better than our own. He insisted on the importance of a knowledge of the life and ways of the nation whose language is learned. A sound training in the history and grammar of the language is essential, but it is not enough; the teacher must be able to speak with ease, otherwise his pupils will never have the courage to do so themselves at school, and even later on, when called upon to converse with foreigners.

* * *

WHAT is the best time for University men to go abroad to study the French and Germans of to-day? asked Dr. Heath. Mr. Findlay replied that they should go whenever they could; but Dr. Breul and Mr. Rippmann modified this by pointing to the time often wasted by students who go too early. If a student has limited means, he should go at the end of his University career. The more he knows the more he will profit by his stay abroad.

* * *

MR. EVE and Mr. Storr dwell on culture as the great aim of the modern language teacher, while Mr. Findlay preferred to regard him as the international peacemaker. Messrs. Eve and Storr are excellent types of the older generation, which paid more attention to literature than to the power of using the languages for intercourse; Mr. Findlay spoke as a "reformer," anxious—as he showed in his "Direct Method of Learning English"—to see *Realien* taught.

* * *

It is sometimes said that the "reformers" are quite content when they have made their pupils talk, and that they show little interest in opening up for them the treasures of literature. The misunderstanding has probably arisen from the fact that their efforts have been largely devoted to improving the teaching during the first two or three years, in which the imitation of the methods used for teaching Latin and Greek was particularly harmful. But to conclude from this that they are indifferent to the teaching in later years is altogether wrong.

* * *

MR. FABIAN WARE uttered a timely note of warning against the danger of debasing the teaching of modern languages by great concessions to the requirements of commerce. The boys of a modern side may justly demand instruction in the speaking and writing of modern languages. But even this should not be "commercial"; and, in addition, they should receive a taste for literature, and be taught to abandon some of their insular prejudices, and to take a broad and intelligent interest in the life of other nations. Our commerce will not derive real advantage from any number of narrow-minded clerks with the knack of writing French or German letters; what we want is men with a liberal education.

* * *

THAT the efforts of the "reformers" must extend to the early teaching of English also was rightly pointed out by Dr. Heath. The problem here is somewhat complicated. The historical spelling renders it very hard to make the living sounds of the language the starting point, and that is what the "new method" requires. The use of a phonetic alphabet would get over the difficulty; but it may confidently be asserted that no such alphabet will ever be generally accepted, even for purposes of teaching.

* * *

WE quite agree with Mr. Milner Barry when he complains that the study of German is neglected in our schools; but at present there is no prospect of its receiving the same attention as French. There can be no doubt that it should be the first foreign language learnt, if we consider that the every-day words are, in most cases, closely akin in English and German, and

that the pronunciation does not present much difficulty. French, on the other hand, should obviously go with Latin; but we have to reckon with the present, and not with an ideal state of things, and we shall consider it a great gain if Latin is not taken up before the age of twelve, as was suggested by Dr. J. S. Reid at Cambridge.

* * *

THE Chair of Physics in the University of Sydney, in the gift of the New South Wales Government, is now vacant. Graduates under the age of thirty-five may obtain particulars of Sir Daniel Cooper, G.C.M.G., 9 Victoria Street, Westminster.

* * *

THE REV. DR. WALLER has been compelled by ill-health to resign the Principalship of St. John's Hall, Highbury, in which he succeeded Dr. Boulton nearly fifteen years ago.

* * *

It is proposed to establish at the new Midland University "a chair of Brewing and Malting." Subscriptions to the foundation fund of the University are said to exceed £22,000 from Burton-on-Trent alone.

* * *

THE University Court of St. Andrews have appointed Dr. C. R. S. Marshall to the new Chair of Materia Medica, rendered vacant by the retirement of Dr. W. H. Dewytt, who was appointed last October.

* * *

THE Mastership of Pembroke College, Oxford, was vacated on December 29 by the death of Dr. Bartholomew Price. Dr. Price graduated in 1840, taking a first class in mathematics, and two years later became University Mathematical Scholar. In 1853 he was appointed Sedleian Professor of Natural Philosophy. He was the author of a treatise on the "Infinitesimal Calculus," published by the Clarendon Press in 1852, and served on the Royal Commission to inquire into the property and income of the Universities of Oxford and Cambridge and the colleges therein, in 1872.

* * *

WE regret to note the death of Mr. Alleyne Nicholson, Professor of Natural History in Aberdeen University. He studied at Göttingen and Edinburgh, and held chairs of Natural History at Toronto, Dublin, and St. Andrews. Prof. Nicholson had written largely on natural history. He was a Fellow of the Royal Society.

* * *

WE have to record the death of Dr. Joseph Coats, Professor of Pathology in Glasgow University. Dr. Coats was appointed in 1894.

* * *

MR. GEORGE HOWARD DARWIN, F.R.S., D.Sc., is to be the new President of the Royal Astronomical Society. Mr. Darwin, who is the second son of the late Charles Darwin, has been Plumian Professor of Astronomy and Experimental Philosophy at Cambridge University since 1883.

* * *

THE Council of the Victoria College, Wellington, New Zealand, have appointed the following Professors to fill the under-mentioned new Chairs:—Chemistry, Thomas Hill Easterfield, M.A. Camb., Ph.D. Wurzburg; Classics, John Brown, M.A. St. Andrews, B.A. Oxford; English, Hugh Mackenzie, M.A. St. Andrews; Mathematics, Richard Cockburn Maclaurin, M.A. (N.Z.), B.A. Camb.

* * *

MR. THOMAS REID, of Dundee University College, has been appointed Headmaster of the new Municipal Technical College, Birmingham.

* * *

DR. ANDREW THOMSON, D.Sc. Edinburgh, has been appointed Rector of the Dunfermline High School and the projected School of Science.

MISS ANNA ROWLANDS, B.A., Assistant Lecturer in Education at Aberystwyth, has been appointed Headmistress of the Girls' County School, Ruthin.

* * *

MISS EWART, B.A., senior assistant-mistress at the County School, Abertillery, Monmouthshire, has been appointed senior assistant-mistress at the County School, Aberystwyth.

* * *

MISS LILIAN WINSTANLEY, B.A. Victoria, Fellow of Victoria University, has been appointed Assistant Lecturer in English to the University College of Wales, Aberystwyth.

Literary Gossip. THE *English Historical Review* for January contains noteworthy articles on "Methods of Early Church History," by the Rev. A. C. Headlam, and "The Beginnings of Wessex," by Mr. W. H. Stevenson; with notes on "The English Boroughs in the Reign of King John," by Mr. A. Ballard, "Blake at Leghorn," by Dr. Gardiner, and other contributions of considerable and varied interest.

* * *

We have quite a procession of "first numbers" this month—monthly and quarterly magazines, whose entrance into the crowded field of educational periodicals it is fitting that we should record. The *Educational Review* is very much improved in shape and substance, and we wish it all success in its new form. Amongst its contributors we may mention Mr. P. A. Barnett, Mrs. Bryant, Miss Dorothea Beale, Mr. H. B. Garrod, and Canon Lyttelton.

* * *

Child Life (Philip & Son) also is a resuscitation, and its old friends will scarcely know it again. It is now a most attractive quarterly magazine, full of excellent reading, admirably produced, and with an assured future before it. We understand that it has the support of all the Froebelian and kindred associations.

* * *

THE *School World* (Macmillan) is described as "a monthly magazine for use in secondary schools." That sounds perilously like the sub-title of a text-book; but no doubt this new venture makes a bold attempt to combine something for the masters with something for the boys—hard work with intellectual play, educational theory with practical instruction, examination papers with "the school pulpit," school hygiene, chess, and a prize competition. If there was "a felt want" for a new educational monthly magazine, why then, of course, there will be a palpable reward for those who have supplied the want.

* * *

THE *School Board Magazine* (Bemrose) explains itself by its title. Five-eighths of the first number is devoted to a report of the special meeting of the Association of School Boards.

* * *

PROF. BIRRELL'S "Oration on the Ideal University," which helped to inaugurate the "second foundation week" of University College, London, in June of last year, is printed (somewhat late) in pamphlet form. We sample it by a paragraph.

The history of Oxford and Cambridge during the last century proves the result of national indifference. "I have known a confirmed debauchee chosen Professor of Moral Philosophy; and a fellow that never looked upon the stars soberly in his life, Professor of Astronomy. We have had History Professors who never read anything but 'Tom Thumb,' 'Jack the Giant Killer,' and such like records. We have had Professors of Greek who scarce understood their mother tongue; and not long ago a famous stock-jobber and gamester was elected Professor of Divinity." This scandalous record dates, I admit, from 1721; but readers of Porson's Life, and even of Adam Sedgwick's Life; will be able to carry down the bad tradition to our own day.

We do not quite take the allusion of the last sentence. Does Mr. Birrell mean that Porson and Sedgwick were scandalous?

COLLEGE OF PRECEPTORS.—HALF-YEARLY GENERAL MEETING.

THE Ordinary half-yearly General Meeting of the members of the Corporation was held at the College, Bloomsbury Square, on Saturday, January 21.

The Secretary having read the notice convening the meeting, Dr. Wormell was appointed Chairman.

The Report of the Council was laid before the meeting, and was taken as read, a copy having previously been sent to every member. It was as follows:—

REPORT OF THE COUNCIL.

The Council beg to lay the following Report of their proceedings for the past half-year before the Members of the College:—

1. They have to report that the number of entries for the Christmas Examination for Certificates is 7365, while the number of entries for the Junior Forms Examination is 1913. At the Midsummer Examination the total number of entries was 6391, so that the total for the present year is 15869. The Public Distribution of Prizes and Certificates to the successful candidates at the last Midsummer Examination took place at the College on the 5th of October, when the Chair was occupied by Mr. H. O. Arnold-Forster, M.P. Due notice will be given of the time and place of the forthcoming Distribution.

2. The Professional Preliminary Examination for intending medical students and others was held, as usual, in the first week in September, and was attended by 201 candidates. The Medical Council have recently decided, on and after the 1st of January, 1900, to withdraw recognition from the College Second Class Certificate; but they have not thought it advisable to proceed at once to make the standard of the First Class, or its equivalent, that of the qualifying Examination; and they have invited the College to set up a special examination for medical students, the standard of which shall be midway between those of the First and the Second Class Examinations. This special examination, it is proposed, should only be carried on for a limited period, until the Medical Council see their way to insist on a "Senior Local," or "First Class" Certificate, or its equivalent, as the minimum qualification for registration as a medical student.

3. For the Christmas Examination of Teachers for the College Diplomas 210 candidates have entered. At the Midsummer Examination the number was 270, making the total number of Diploma candidates for the year 480. The Examination will be held in London and at the following local centres:—Birmingham, Bristol, Leeds, Manchester, Plymouth, Glasgow, Jamaica, St. John's (Newfoundland), Antigua, and Hong Kong.

4. In addition to their own Examinations of pupils and teachers, and the Examination of schools by Visiting Examiners, the Council have conducted, during the past half-year, the Preliminary Examinations of the Pharmaceutical Society of Great Britain and Ireland.

5. The Twenty-sixth Annual Series of Lectures to Teachers on "The Science and Art of Education," which began in February last with a Course of Twelve Lectures on "The Characteristics and Development of the Child," by Professor James Sully, was completed with a Course of Twelve Lectures on "The Teacher and the Class," by Mr. P. A. Barnett, M.A., H.M. Inspector of Schools and Assistant Inspector of Training Colleges. The success of the Winter Meeting for Teachers, which was held at the College in January last, has encouraged the Council to make arrangements for a similar Meeting to take place in January next. The Meeting will extend over two weeks, and the Programme will comprise an Inaugural Address by Sir Joshua Fitch, series of Lectures and single Lectures on educational subjects, Visits to educational institutions, a Conference on the Training of Modern Language Teachers, a Conference on Science Teaching, and a Conversazione at the Clothworkers' Hall.

6. The usual Monthly Meetings of the Members have been held during the past half-year, at which the following papers have been read:—On the 12th October, by Mr. Francis Storr, B.A., "On Cribs"; on the 16th November, by Dr. R. Wormell, M.A., "On Edward Thring as a Teacher of Teachers"; and on the 7th December, by Mr. F. P. B. Shipham, M.A., "On Corporate Life and Games in Secondary Schools." The papers and the discussions on them have been reported, as usual, in the *Educational Times*.

7. The appointment of Dr. Findlay to the Headmastership of the Cardiff Intermediate School, which was opened in September last, has necessitated a modification of the arrangements for the training of teachers which have been carried on at the College, under his direction, for the past three years. In the circumstances, the Council have not deemed it advisable to proceed at once to the appointment of a new Principal of the Training Department, and are considering how it may be possible to provide training, by means of lectures and otherwise, for teachers who are wholly or partially engaged in school work.

8. A few days before the close of the last Session of Parliament, the Duke of Devonshire introduced in the House of Lords a Bill for the Establishment of a Board of Education and a Bill for the Registration of Teachers. The former of these Bills provides for a reorganization of the Education Department, so as to bring about a coordination of authorities having to do with secondary education as well as those concerned with primary education, including the Science and Art Depart-

ment and the Charity Commission in its relation to educational endowments. Provision is also made for the appointment, from time to time, of a "consultative committee for the purpose of advising the Board of Education on any matter referred to the committee by the Board." The limited character of this measure does not, at first sight, seem to promise much more than a simplification and coordination of departmental authorities; but the introduction of the "consultative committee," which would not consist wholly of Government officials, is a new feature with potential influence of considerable importance, especially if it should eventually become a committee of a permanent and representative character. The Registration of Teachers Bill is practically the same as that introduced two years ago, and is entirely permissive in its operation. The necessity of professional training is recognized by making evidence of attainment of such training an indispensable requirement for admission to the Register. Such recognition, even in a permissive measure, must be regarded as a distinct step in advance, and may reasonably be expected to assist the efforts that have been made by this College and by other bodies for promoting the systematic training of teachers for their profession.

9. The Council have been enabled, out of the surplus funds accruing from the regular operations of the College, to provide for the outlay on account of Scholarships for intending teachers, and to place the sum of £100 to the credit of the Benevolent Fund; but, owing to the large expenditure entailed by the necessity of reconstructing the entire drainage system of the College building, they have not been able to make any addition to the Teachers' Training Fund, on which they have had to draw during the year to the amount of about £425, which has been met by the sale of a part of the Stock in which the Fund is invested.

10. During the past half-year, the Diploma of Licentiate has been conferred on four candidates, and that of Associate on a hundred and eighteen, who had passed the required examinations. Twenty-six new members have been elected, and notice has been received of the withdrawal of five. The Council regret to have to report the death of a member of their body, Dr. F. C. Maxwell, and also of the following members of the College:—Dr. E. B. Aveling, L.C.P., the Rev. S. Lodge, and Mr. J. C. Strachan.

Mr. THORNTON, in reference to paragraph 6, asked whether some information could not be given as to the numbers who had attended the Winter Meeting, and its results.

Mr. EVE said about a hundred and fifty outsiders had taken tickets, and about the same number of members of the College had applied for the free admission to which they were entitled. The lectures had been extremely well attended, there being nearly always more than a hundred present. From a financial point of view the Council had reason to be satisfied, and he did not think that, on the whole, the outgoings would exceed the receipts by more than £20 or £30.

In reply to a question by Mr. THORNTON as to the intentions of the Council with regard to the future of the Training Department, the DEAN said it was clear that it would not be expedient to carry on the Training College under the same conditions as those on which it had been started, and therefore the Council had considered it advisable to suspend any extended operations for a time. At present little more was being undertaken in the direction of training than the courses of lectures which had been carried on for many years before the idea of the Training College was started; but he hoped the time might soon come when they would resume the work that Dr. Findlay had begun, on somewhat the same lines, and with better success than had attended his efforts.

Dr. BELL thought the Council had acted very wisely in this matter. They were bound to undertake work of this sort; but, unfortunately, it had not proved a success, and he was sure the general body of the members would agree that the leaders of the College were justified in the course they had adopted.

Mr. A. S. WILSON urged the Council to restart the scheme whenever there seemed to be a chance of its being carried to a successful issue. He gathered, from what had fallen from the Dean, that such was the intention of the Council; and, in his opinion, it was the right thing to do.

Mr. PINCHES said the operations of the Council in this direction had not been given up, but rather suspended. The Council found themselves in a difficulty when at such short notice Dr. Findlay was appointed Headmaster of the Cardiff Intermediate School, but they were fortunate enough to get Mr. Barnett to come in and undertake the autumn course of lectures. These lectures had given the greatest satisfaction to all who had attended them. Mr. Barnett had been consulted as to the course to be adopted in the future with regard to training, and he had expressed his desire to defer giving a definite opinion on the subject until he had had at least one term's experience in lecturing, and of becoming personally acquainted with the students who attended the course. No doubt the Council would take an

early opportunity of reconsidering the whole matter, with Mr. Barnett's help, by the light of the experience they had gained.

Mr. BAUMANN said he was glad to learn that there was some hope of an attempt being made to resuscitate the Training College. If it had proved a financial failure, and had failed to attract as large a number of students as might have been expected, it did not follow that it would meet with no better success in the future. Similar difficulties had been overcome before, and he believed it would require a number of years before they could expect to see the fruition of the efforts they had made for the professional training of teachers.

Mr. JAMES WILSON hoped that, before any steps were taken for the starting of a new Training College, the Council would take account of the fact that there was nothing like practical unanimity among the secondary teachers of England as to the need of formal training in the art of teaching. They were all agreed that a University training was necessary, and that, having got the University training, what the young men and women ought to do was to go down to the schools and learn their business there. To give up a year or more to hearing lectures, after they had been already listening to them for seven or eight years during their school and University education, was calculated to drive men from the profession altogether. They would not get the best men to enter the profession if they put up a barrier of that kind. Until they got unanimity among the teachers, it would be mere waste of the resources of the College to begin again what they had already attempted without success. If the Government, with its unlimited resources and powers, would make it a *sine qua non* that appointments should be given only to students who had been trained in one or other of the colleges, then they might resume the undertaking with some hope of success. Heads of schools had never come forward to back up the College by agreeing to take its students and give them appointments. Until some such guarantee was given he hoped they would remember that they had burnt their fingers already over this matter, and would not touch it again.

Mr. LONGSDON was sorry the Training College had to be given up; but, considering that it had not been supported as it should have been, he thought the Council had no alternative but to leave matters in abeyance for the present. He was firmly convinced that the work done by Dr. Findlay during the three years he had been working at the College would have a much wider influence than appeared on the surface in inducing assistant-masters to take some form of training.

The Rev. G. C. BELL said that in one of the rooms of the building they had a portrait of a man whom he was proud to have known, namely, Joseph Payne, whose memory ought to move them to repudiate some of the remarks which had been made by one, and only one, of the speakers. For some years many obstacles had prevented them from taking up the work of the training of teachers in a thorough manner, until at last the Council were enabled to start the Training College under the direction of Dr. Findlay. He agreed with a previous speaker that the work of this gentleman must not be measured by too rigid a standard of the number of pupils who attended, or the length of time over which the training was spread. The College of Preceptors had one very great advantage in that, situated as it was in the centre of this great city, it could draw teachers to its lectures who were already engaged in many of the schools of the metropolis; it could provide such facilities that they need not be taken away from their employment, or make any large pecuniary sacrifice, in the process of learning their profession. Furthermore the heads of schools needed themselves to be trained into the belief that training for the young members of the profession was a matter of the first importance. It was futile to say that practice at school was in itself sufficient for the purpose of training. It was impossible for headmasters or headmistresses, with all their responsibilities and teaching duties, adequately to supervise and attend to the work of training the younger members of their staffs. They could do something in this direction, and they ought to do a good deal, but they could not take the place of classes for professional training. He was not disposed to set great store by the theory of teaching, believing that practical work was of chief importance. He hoped that the Council would do what they could to re-establish the Training College.

Mr. PINCHES said Mr. Wilson had stated that there was nothing like unanimity on the question among teachers; but it was quite impossible to canvass—he would not say teachers—but all those who called themselves teachers. The only thing that the Council could do was what they had done, namely, to

gather the opinion of bodies representing teachers. Some ten years ago, in that room, the members of the College were unanimous in deciding that the surplus revenues of the College should be set aside for the purpose of training teachers; and since then the Headmasters' Conference had unanimously passed a resolution to the effect that it was desirable that teachers in secondary schools should be trained. The same course was followed by the Headmasters' Association, and also by the Assistant-Masters' Association, who were best qualified to express an opinion upon this subject. Therefore they were justified in saying that there was practical unanimity among acting teachers on this important matter. Then Mr. Wilson said that by encouraging the training of teachers we were raising a barrier which would prevent the more promising and gifted from entering the profession of teaching; but he (Mr. Pinches) thought that until they had such a barrier they could not call teaching a profession. If it was a barrier, it was a more important body than themselves who erected it; for, in the Bill introduced by the President of the Council last Session, it was proposed to set up this barrier, and he could not help thinking that the Council was taking a very wise course in assisting to raise it.

Miss DAY said the Headmistresses' Association had for something like twenty years taken great interest in this matter, and had sent a subscription of £25 a year to the Maria Grey Training College, thus showing the strong feeling they entertained on the subject.

The CHAIRMAN said he had no doubt that before very long the question would be again forced upon the Council, when it would become their duty to make another effort to establish the College. Recently he was present when some candidates for teachers' diplomas were being tested in practice. It appeared that the women had found facilities for training, and the examiners said that, if the women were to set the standard, not one of the male candidates could be allowed to pass. It would shortly be felt that it was to the interest of a young man desirous of entering the profession of teaching that he should obtain a diploma; and, if it was equally clear that women were to set the standard, and that diplomas would not be obtained by those who could not teach, then the need for training would be accepted all round. That would be the time for the College to make its next effort; and, when that effort was made, he believed it would be successful.

Mr. RULE said it was close upon thirty-nine years since, at a special meeting of the College, he introduced the question of scholastic registration. In those days he was, perhaps, more sanguine than he was now as to obtaining an Act of Parliament, though he was glad to find that there seemed to be at last some hope of securing a Bill. He thought one of the strongest positions they should take up was that professional training should be made an indispensable condition of registration. He regretted that the Bill was not all that could be desired; but it was better than no Bill at all, and he hoped that, as time went on, another Registration Bill of a more stringent character would be introduced.

The Report of the Council and the accompanying statement of accounts were then adopted.

The meeting then proceeded to the election of twelve members of the Council to fill the places of those retiring by rotation, and three Auditors.

The Chairman having appointed Mr. DICKINSON and Mr. RIDGWAY to act as scrutators, the voting papers were distributed, and the election was proceeded with. On the scrutators presenting their report, the Chairman announced that the following had been duly elected:—

MEMBERS OF THE COUNCIL.

Rev. R. Allott, M.A., Nonconformist Grammar School, Bishop's Stortford.
 S. Barlet, B.ès Sc., 47 Bassett Road, Notting Hill, W.
 H. Baumann, M.A., F.C.P., 42 Clifton Street, Brighton.
 J. P. Bidlake, B.A., F.C.P., 339 Essex Road, N.
 E. A. Butler, B.A., B.Sc., 39 Ashley Road, Crouch Hill, N.
 H. Chettle, M.A., Stationers' School, Hornsey, N.
 Miss E. P. Hughes, F.C.P., The Training College, Cambridge.
 E. E. Pinches, B.A., F.C.P., 2 Essex Court, Temple, E.C.
 L. Sergeant, B.A., 13 Girdler's Road, Brook Green, W.
 Rev. T. W. A. Sharpe, M.A., C.B., F.C.P., Beddington, Croydon.
 F. Storr, B.A., 40 Mecklenburgh Square, W.C.
 Rev. J. Twentymann, M.A., F.C.P., Ingoldsby Rectory, Grantham.

AUDITORS.

J. Bell, M.A., LL.D., 31 Caversham Road, N.W.
 Rev. T. Mitcheson, B.A., F.C.P., 13 Pelham Road, Wimbledon.
 James Swift, 229 New Cross Road, S.E.

The Dean then presented his report, which had been printed and distributed among the members present, and which was as follows:—

THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Christmas Examination of candidates for Certificates took place on the 6th to the 10th December at 261 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Aberystwyth, Aldershot, Alton, Amberley (Glos.), Anerley, Ashburne, Ashford (Kent), Aylesbury, Balham, Banbury, Barnsley, Barnstaple, Bath, Bedford, Belper, Bethesda, Bexhill, Bexley Heath, Biggleswade, Birkenhead, Birmingham, Blackheath, Blackpool, Blandford, Bodmin, Bognor, Bolton, Bournemouth, Braintree, Brentwood, Bridgwater, Bridlington, Brighton, Bristol, Buckingham, Burnham (Som.), Burnley, Bury St. Edmunds, Buxton, Camborne, Camelford, Cardiff, Carlisle, Castle Cary, Cheltenham, Chepstow, Chertsey, Clacton-on-Sea, Clevedon, Cowes, Crewe, Croydon, Derby, Devizes, Doncaster, Dover, Dunstable, Durham, Ealing, Earl's Colne, Eastbourne, Eccles, Epsom, Evesham, Exeter, Farnworth (Widnes), Faversham, Felixstowe, Framlingham, Gillingham (Dorset), Goole, Gravesend, Grimsby, Guildford, Halifax, Harrogate, Hartlepool, Hastings, Hatfield, Haverfordwest, Hemel Hempstead, Hereford, Herne Bay, Holyhead, Hornsea, Huddersfield, Hull, Hulme, Ilfracombe, Jersey, Kingsland R.S.O., King's Lynn, Kirkby Lonsdale, Knighton, Langland Bay, Leamington, Leeds, Leek, Lewes, Lincoln, Liskeard, Littlehampton, Liverpool, Llandudno, London, Longton (Staffs.), Loughton, Louth (Lincs.), Lowestoft, Ludlow, Luton, Maidenhead, Malmesbury, Malvern, Manchester, Margate, Market Bosworth, Mariborough, Matlock, Midhurst, Minchear, Morecambe, Neath, Needham Market, Newbury, Newcastle-on-Tyne, New Malden, Newmarket, Newport (Mon.), Northampton, Norwich, Nottingham, Ongar, Pencader, Penketh, Penzance, Plymouth, Portsea, Portsmouth, Putney, Ramsgate, Reading, Redruth, Richmond-on-Thames, Romford, Ruabon, Ryde, Saffron Walden, St. Anne's, St. Austell, St. Helen's, St. Leonards-on-Sea, St. Neots, Scarborough, Selby, Sovonaks, Sheffield, Shirley, Shrewsbury, Sidecup, Sittingbourne, Southampton, Southbourne, Southend, Southport, Southsea, Spalding, Stanford-le-Hope, Sudbury (Suffolk), Sunderland, Sutton Coldfield, Swindon, Taunton, Tetbury, Tewkesbury, Tiverton, Torquay, Trowbridge, Tunbridge Wells, Ullathorpe, Waltham Cross, Walton (Liverpool), Wanstead, Wateringbury, Watford, Wellington (Salop), Wells (Som.), Weston-super-Mare, Wigton, Winchester, Windsor, Winscombe, Wisbech, Woking, Wolverhampton, Worcester, Workop, Yalding, and York. The Examination was also held at Batticaloa (Ceylon); Nassau (Bahamas); Georgetown (British Guiana); St. George's (Grenada); Kingston and Stewart Town (Jamaica); Lagos; and Port of Spain (Trinidad).

The total number of candidates examined (not including 107 examined at Colonial Centres) was 7,332, of whom 4,084 were boys and 3,248 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined for Certificates during the year (not including those who attended the supplementary examinations in March and September) was 12,464.

The following table shows the proportion of the candidates at the recent Examination who passed in the class for which they were entered:—

	Entered.	Passed.	Percentage.
First Class	535	287	54
Second Class	2,780	1,689	61
Third Class	4,017	3,263	81

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered.

The number of candidates entered for the Junior Forms Examination (not including 46 examined at Colonial Centres) was 1,811—866 boys and 945 girls. Of these, 1,402 passed, or 77 per cent.

At the supplementary Examination for First and Second Class Certificates, which was held on the 6th to 8th of September, in London and at four Provincial Centres, viz., Birmingham, Bristol, Leeds, and Liverpool, 196 candidates presented themselves. The number of candidates examined at these supplementary examinations during the year was 405.

The Christmas Examination of Teachers for the College Diplomas took place on the 3rd of January and four following days, in London and at the following Local Centres:—Birmingham, Bristol, Cockermouth, Croydon, Glasgow, Jersey, Leeds, Manchester, Plymouth, Antigua, Chefoo, Hong-Kong, Jamaica, and St. John's, Newfoundland. It was attended by 192 candidates, of whom 131 were men and 61 women. The subjects of examination included the Theory and Practice of Education, Scripture History, English Language, English History, Geography, Arithmetic, Algebra, Euclid, Trigonometry, Analytical Geometry, Latin, Greek, French, German, Spanish, Natural Philosophy, Astronomy, Physics, Animal Physiology, Botany, Geology, Chemistry, Drawing, and Music. On the results of this Examination, 4 candidates obtained the Diploma of Licentiate, and 48 that of Associate.

The number of schools examined during the year under the Visiting Examination Schemes (A) and (B) was 17.

The Preliminary Literary Examinations of the Pharmaceutical Society

have been held, as usual, at the times appointed. The number of candidates examined during the year was 1548. The College has also conducted Scholarship Examinations for St. George's Hospital Medical School.

The Report was adopted.

A vote of thanks to the Chairman concluded the proceedings.

INTRODUCTORY ADDRESS AT THE WINTER MEETING OF TEACHERS, JANUARY, 1899.

On January 3, at the College of Preceptors, Sir Joshua Fitch opened the Winter Meeting for Teachers with an introductory address, in which he began by expressing his satisfaction at the repetition of the interesting and highly successful experiment initiated by the College last January. There was no profession, he said, whose members were in their daily work so isolated from each other as the teaching profession, and yet none in which they had more to learn from mutual intercourse. Nothing had impressed him more in his visit to America than the zest and enthusiasm which hundreds of teachers evinced at their annual summer meeting. He did not know how to convey his impression of the usefulness of the conferences both in the United States and in Canada, and their influence on public opinion. Having enlarged on this subject, Sir Joshua sketched the programme for the Winter Meeting. They would have during the fortnight many opportunities of hearing and discussing different views of professional life and duty, methods of instruction and discipline, school hygiene, psychology and its applications, the use and abuse of athletics, and the training of the speaking voice. More than this, the Council had wisely resolved to direct their attention to literary, social, and quasi-political questions, such as Greek ideals of education, and the reforms which had taken place in foreign countries, all of which had a real, though apparently remote, bearing on the life and calling of a teacher.

Having regard to the programme of subjects that would receive their attention during the Meeting, Sir Joshua observed that there was little need that he should enter upon any considerations of pure pedagogics, or discuss any of the practical conditions of school life. Nor would he yield to the temptation to comment on the intentions of the Government, the formation of new Secondary boards, or the registration of teachers; for, although these questions loomed large in their view at the present moment, yet, after all, legislation was a small and unimportant thing compared with the wisdom of the teaching body itself, the clearness and nobleness of its ideals, the personal zeal, enthusiasm, and freshness of mind brought to bear upon the fulfilment of those ideals. He proposed to use his privilege as chairman for the purpose of bringing before them some considerations respecting that part of education which seemed to have little or no connexion with educational politics, or even with school lessons; but which, considering man in his totality and the life that he had to lead, were necessary to the completeness of his education. One of the factors that went to constitute a complete equipment for an honourable and useful life was the sense of beauty and the recognition of what was comely and admirable in the outward world, in art, in literature, and in human character. It had been well said that we live by admiration, hope, and love. Our rank in the scale of intelligent human beings, and our power of deriving the utmost enjoyment in life, depended greatly upon what we admired and what we disliked, on what inspired and what disgusted us. The truly educated gentleman was impatient of ugliness in the surroundings of his home, and could not see without something akin to physical pain that which was ignoble or vulgar. They could not make aesthetics the subject of formal lessons, or use "Burke on the Sublime and Beautiful" as a text-book; but, if once the need for the cultivation of taste were recognized, other and indirect means would soon occur to them. Mr. Thring understood this, and at Uppingham took pains in the decoration of his art school with medallions of the great painters, and of his classrooms with portraits of great historians, with representations of famous historic scenes, and with pictures illustrative of the Greek and Roman classics. Who could doubt that in this unconscious way there was a real training of the aesthetic faculty? There were in London priceless treasures of art, and he did not think teachers appreciated or used them enough. Much might be done by taking from time to time small groups of elder scholars to our national collections, and still more might be accomplished if such visits were occasionally preceded by simple lectures on the symbolism of the early Christian painters, and on the distinctive characteristics of the Umbrian, the Venetian, the Dutch and the French schools of art. When they considered that a great picture gallery was a record of many of the noblest thoughts, the sweetest fancies, the ripest knowledge, and the deepest religious convictions of some of the most gifted of our race, they became aware how large a part its contents ought to play in education, and how high and imperative a duty it was to take care that its value as an instrument of moral teaching and of intellectual refinement was not neglected. He dwelt upon these extra-scholastic considerations because the love of beauty, the instinctive perception of the difference between what was noble and what was ignoble in art, in nature, and in personal habits, was a great help in maintaining and elevating the standard of life, and in

making that life sweeter, more interesting, and better worth living; and because the influence of a good teacher extended beyond the frontier of formal scholastic lessons, and would be rightly exerted in just the proportion in which he tried to forecast the future of his pupils and the conditions of their honour and success in that larger world of which school formed a part.

Sir Joshua then turned to what pupils should read, and urged the cultivation of a taste for good literature and a distaste for what was tawdry and meretricious. He was sure that for the formation of a pure taste and for the development of a true literary sympathy it was well that even in school some books should be read by and for themselves as a whole, and not in selections, and without the intrusion of the commentator and his critical apparatus. Place the scholar within reach of good books and let him, as Charles Lamb said, "browse at will on that fair and wholesome pasturage." Only let them take care that he knew who were the great masters of style and thought, and that he was encouraged from the first always to go to them and their works, and not to be content with extracts or literary essays about them, or reviews or "reviews of reviews." If this was kept in view, it could not fail to have a potent after-effect when the time came for the pupil to form his own plans of life and to decide how his hours of recreation should be spent. Again, if a book was worth reading, it was worth thinking about and questioning one's self about it. And to this end it was well to form a habit of writing something about the impression an author had left upon the mind while the memory was fresh. The practice would serve to fix the habit of attention and thoughtfulness, and, if begun by occasional exercise in school, it would remain as a permanent factor in the formation of character and in the economy of time.

As they tried to view the work of a school in the light of the future destination of the man, they were confronted with the problem how to give a fair chance of development to the special aptitudes and needs of their scholar. This was an old and ever-recurring problem, and the last word had not yet been said about it. No two human beings were exactly fitted for the same career or the same duties, and it was part of education—a very difficult part, it must be owned—to discover and develop the special gift and capacity of each scholar. It was wise to recognize once for all that there were other possible types of excellence than those included in the teacher's programme, that there were forces and impulses at work in the heart and brain of their least interesting pupils which they had never measured and could not measure, and that it was their duty to find, if they could, proper scope for the exercise of those forces. "It was wonderful," said President Eliot, "what small personal gifts may become the means of conspicuous service or achievement if only they get discovered, trained, and applied." They could not discover the special gifts and tendencies of individuals if the programme for all alike failed to represent the main varieties of intellectual activity, and so give to every faculty a chance of finding its proper exercise. Let them not overload the curriculum by multiplying the number of necessary subjects, but hold fast resolutely by the recognized and staple subjects which experience had shown to have the best formative value. Secure a definite proportion of hours to these subjects; and for the rest of the available time provide as many forms of intellectual and other activity as their appliances and their teaching staff had at command. There was no gift or fancy, however exceptional, for which the social organism could not find a use. They must not begin to specialize too early, but as the pupils drew nearer to the end of their school life opportunity should be found for making it clear that the conditions of success in after life were substantially the same as the conditions of success in the school.

Sir Joshua continued: One other necessary part of the equipment of a man for an honourable life is patriotism; and this is a sentiment which may be greatly encouraged before the youth leaves school to go out into the world. By this I do not mean that theatrical patriotism which finds expression in waving the Union Jack about or singing "Rule Britannia" in schools. Fourth of July celebrations, saluting the flag, and chanting patriotic songs may easily assume a degenerate form, and become unreal, boastful, stazy, and, to say the truth, a little vulgar. But a rational love and pride for our country, founded on some knowledge of the privileges we enjoy as Englishmen, and of the debt we owe those who won them for us, are necessary to every English citizen. In France and in Italy there is a stronger sense than in England of the value even in schools of what is called *l'instruction civique*. Paul Bert's well known book, bearing that title, has a series of striking lessons on the different branches of the public service—the Army; the civil administration; Parliament; courts of justice; the local magistracy; taxation; the conditions which determine wages; service on juries; the provision of public libraries, museums, and schools. On all these subjects it is possible to give interesting and effective lessons to elder scholars. The correlative claims and duties which citizenship involves, the obligation which the possession of great privileges in a free State imposes on all its members to do something for the community in return are matters which ought to be kept in view, in historical as well as in ethical and religious teaching. Ours is a democratic State, and is likely to become more democratic in the twentieth century than in the nineteenth. Many of the traditional objects of reverence which

were set before our fathers are losing their hold upon the popular imagination. The claims of high birth, rank, wealth, and official station to respect and deference impress the children of this generation less than heretofore. The relics of the feudal spirit which find expression in the injunction of the Church Catechism "to order myself lowly and reverently before my betters" are felt by all of us to be more difficult to enforce or even to explain satisfactorily to the boys and girls who now learn that formula by heart. It is of no use to bewail this. We must accept the facts, and try to make the best of them. Yet the faculty of reverence is not dead. There must be some object to call it into exercise, unless we are to shrink up into a poor, attenuated, and selfish life. And it will be some compensation, at least, for democratic change if it brings with it a stronger love of freedom, a higher conception of civic duty, a loyalty and devotion to the public interests, a willingness to offer personal service in such manifold forms as are prescribed in our modern civilization, by municipal life, the administration of charity, and efforts for social improvement. There is a higher kind of patriotism yet possible to us, even though it is to be nurtured under new conditions, and it is to be found in a growing sense among our people, of the responsibility of each one to contribute something to the greatness of the nation, in fidelity to duty, in helpfulness to others, in toleration, in self-cultivation, in being proud of his country and so ordering his life as to make the country proud of him. That is a true ideal of Christian democracy and of Christian manhood, which is embodied in the Divine saying: "If any one would be greatest among you, let him be your servant."

Finally, we need to be reminded that after all education is an inductive science—a science essentially dependent on observation and experience. And, as an inductive science, it is at present in a very early stage of development. In the history of science, we know that at first its votaries sought to interpret the secrets of nature, and set about the task by laying down first principles. Thales, Democritus, Heraclitus, and others, are all credited with theories which were supposed to account for some of the phenomena of nature. These philosophers treated natural science as Euclid treated geometry, with its complete deductive and logical apparatus of axioms, syllogisms, and demonstrations. And, when this method proved unsatisfying, Bacon, as you know, exhorted the student of nature to abandon hypotheses, to dismiss from his mind all *a priori* theories, and to have resort to the teaching of experience. Let us look these facts in the face, he said, and see what they have to say. Let us reserve our generalizations until we know more, and, even when we get them, let us accept them as provisional only, and be ready to find them absorbed and superseded some day by larger generalizations and by wider and more thorough research. And you know what vast and memorable results have followed from the frank acceptance of this principle by naturalists, by chemists, by geologists, and by workers in all fields of experimental science. But in education we have not yet got far beyond the first stage. We quote some sage or seer; we ask what doctrine Aristotle, or Quintilian, Socrates, Ascham, Locke, Rousseau, or Pestalozzi has laid down; and we seek to interpret the duties of our profession in the light of what some one of them has taught. So far we do well. We classify educational writers as Humanists or as Realists. We are Arnoldians, or Froebelian, or Herbartians, and we wish to walk worthy of the vocation wherein we are called. But there is yet need for a larger use of the Baconian induction. What, after all, has been the outcome of these theories? How do they fit the actual facts of experience and of life? If they will not stand this test, they may need to be revised or perhaps recalled altogether. For example, are the results of primary education on the intelligence, the conduct, and the manners of the rising generation all that we desired and hoped? If not, why not? Is any practical difference discernible in after life between boys educated on one system and on another? Have the efforts of religious bodies to attach young people to their several communions, by means of early enforcement of formularies and creeds, succeeded in their purpose? How much of the teaching enforced by authority—how much of that which we ourselves received—is found to have remained with us and has left a permanent mark for good on our character or our aims in life? What would be learned suppose we collated the autobiography of famous men, such as Gibbon, Wordsworth, and Coleridge, as to the effect of school lessons upon them, and the retrospect they indulged in afterwards? Is any difference to be detected in the pulpit or the bar between men classically and others scientifically trained? And as to teachers themselves: What is the influence of theoretic studies of the history and philosophy of education on the practical duty of the professors of that science, and how is it found to tell on the influence they exert on their pupils? We must have the courage to face these questions, and to accept the results when they are properly verified whether they confirm our preconceived theories or not.

The best and most fruitful discoveries in the science of education have yet to be made. Every schoolroom is a laboratory in which experiments are being tried. Every teacher has it in his power to contribute to the common stock of useful data on which we are to build the pedagogic philosophy of the future. And it is because I believe that a Winter Meeting like this, with all the stimulus it will give to new thought and to a wide comparison of experience, will greatly help towards the evolution of such a philosophy, that I gladly welcome the members of

the profession to London, and I look forward with high hopes to the complete success and abiding usefulness of the lectures, visits, and discussions which will occupy you during the next few days.

REVIEWS.

TEACHING AS AN ART.

- (1) *The Art of Teaching*. By David Salmon. (Longmans.)
- (2) *Psychology in the Schoolroom*. By T. F. G. Dexter, B.A., B.Sc., and A. H. Garlick. B.A. (Longmans.)
- (3) *Introduction to the Herbartian Principles of Teaching*. By Catherine I. Dodd. (Sonnenschein.)

† The appearance of three more volumes on the principles and art of teaching is significant.

The first, as its name implies, is a work chiefly on the practice of teaching. There are some valuable suggestions on the best ways to maintain order and attention, and on oral questioning, with an illustration of the Socratic method. The main part of the book deals with the various subjects usually taught in primary schools. With much of this we heartily agree. Nothing could be better, in the chapter on Literature, than "the curiosities of the journey must not make the pilgrim forget the shrine which he sets out to reach." Our classics are "not to be considered as an aggregation of lines to be parsed, analyzed, and paraphrased, allusions to be explained and words to be defined and traced to their roots"; but we do not agree with Mr. Salmon that "the trail of the examiner" is over nearly all recent school editions of our classics. On the contrary, we have noticed a great improvement in this respect lately, and, after all, there must be explanations, or the "shrine"—that is, the full appreciation of the work—will not be reached.

The second volume on our list is a more ambitious work. It is a handbook of physiology and psychology, with special application of each principle to the schoolroom. The work is elaborate and very carefully written. The authors are evidently well acquainted with recent writers on the subject, as Prof. Sully and Mr. Holman. We do not doubt that the book may be useful as a work of reference on particular points; but there are too many headlines, subdivisions, and tables to make it agreeable to read through.

Miss Dodd's interesting volume on the Herbartian Principles of Teaching is prefaced by an introduction by Prof. Rein, of Jena, who says that, though "it may appear a bold and futile undertaking to transplant Herbartian theories to English soil, . . . we welcome the present work as a valuable aid to the thoughtful teacher, who is not content with mechanical routine, but is resolved to undertake and pursue his professional task in the spirit of an artist." The one supreme aim of education, according to Herbart, is the development of moral character, and the expansion and treatment of this cardinal principle forms one of the chief aims of this book. The author, very wisely, does not encumber her work by a detailed account of Herbart's psychology; but, taking the three chief doctrines based on this psychology—(1) how to choose subject-matter for instruction, (2) how to connect it, (3) how to present it to the children—she expounds them in detail, with many interesting examples, and shows their possible application in English primary schools. With most of her conclusions and *dieta* most teachers will cordially agree, and few would rise from a perusal of her volume without feeling stimulated, and the richer for some practical suggestions (we hardly like to say "tips," but that is our meaning) on particular points in teaching. The account of work done in some Herbartian schools in Germany is a case in point; for instance, the teaching of arithmetic. The work is almost entirely oral; the children do not work out sums on paper. The boys work at the blackboard; "the master says very little. A lifting of the eyebrows, or a single word of encouragement or dissent, is sufficient. The boys state the difficulty and unravel it for themselves." The "backbone of the entire instruction" is history. We commend the chapters on the selection of historical material to all teachers, though we regret that we cannot present them with the "four hours a week" the system requires. We draw special attention to the scheme for treating Bible history side by side with secular history, and with attention to chronological development, and to the simple charts that are appended. We foresee objections to the section dealing with the correlation of kindred studies, or what the author calls "concentrated schemes." The lesson on the Spanish Armada—which, by the way, takes a whole term—is fascinating; but it

strikes us *prima facie* as a far cry to get a lesson on "the composition of flame" and "telegraph communication" out of it. We may say, in conclusion, that there is not a dull page in the book. We venture to say this because our readers know that books on Herbart are not always so interesting as they are doubtless meritorious.

"Mr. W. H."

A Life of William Shakespeare. By Sidney Lee. (Smith, Elder, & Co.).

Mr. Sidney Lee's "Life of Shakespeare" has already, by the date on which this notice appears, become a modern "classic." And has it not also been crowned by an enterprising literary kingmaker? Under the circumstances, therefore, it would be unnecessary to call particular attention to the book as a contribution to Shakespearean literature. Its interest, too, lies rather in the way in which it deals with old material than in any presentation of new.

Any surprise which might have been aroused by Mr. Lee's attitude toward certain controversial points arising out of Shakespeare's work was rather discounted—before the actual appearance of the book—by some of his later articles in the "Dictionary of National Biography"—notably by that on Thomas Thorpe the publisher. That Mr. Lee had thrown over the Pembroke theory of the sonnets was known; that he had reduced "Mr. W. H.'s" ingenious history to the tale of an obscure publisher's tout had agitated as much of the world as was liable to such agitation; and Mr. Sidney Lee, the Southamptonite, was already a recognized figure in the history of this most vexed of all literary questions. But, though it cannot be doubted that Mr. Lee feels himself to have all the reasons in the world for his dogmatism on the subject, his language is nevertheless bold beyond discretion. "The Pembroke theory," he says, "will henceforth be relegated, I trust, to the category of popular delusions." And again: "That Thorpe had no 'inspirer' in his mind when he addressed himself to 'Mr. W. H.' is finally proved by the circumstance that the only identifiable male 'inspirer' of the poems was the Earl of Southampton, to whom the initials 'W. H.' do not apply." Strong language, however, is not argument; and Mr. Lee's theory of William Hall, a scarcely known book agent, or rather, pirate, as the dedicatee, by Thorpe's agency, of the sonnets, has not convinced any one. Indeed, did the Southamptonites rest their contention on so flimsy a theory, they would be in a bad plight.

There really would not be so much importance in the fact that Mr. Lee has become an ardent Southamptonite, were it not that he—who is so anxious to redeem Shakespeare from the charge of dedicating his sonnets to Pembroke after swearing eternal devotion to Southampton—thereby makes out Shakespeare to be as insincere and bombastic a versifier as the worst of his age. In his chapters on "the borrowed conceits of the sonnets" and "the patronage of the Earl of Southampton," he leaves Shakespeare with but little to boast. He practically would show that no spark of genuine sentiment shines in the greater part of the sonnets, and that the whole is a rhetorico-poetical exercise like the works of some inferior Daniel or Drayton, or of a Barnabe Barnes—who, forsooth, is the "better spirit," the vessel "of tall building and of goodly pride." What?

Was it the full proud sail of his great verse . . .
Was it his spirit, by spirits taught to write
Above a mortal pitch, that struck me dead?

Is this then Barnabe Barnes? No! Let us leave Shakespeare some literary judgment.

Enough has been said to show that Mr. Lee's "Life of Shakespeare" is no dull dishing-up of accepted commonplaces. It will be read in many different ways, and we think that few will accept the conclusions as a whole. But undoubtedly the work is one of very conspicuous merit, and, where dangerous controversies do not lead the author into perilous situations, the learning and knowledge of the period displayed compel admiration. The account of the poet's life and the history of his dramatic works, the description of Shakespearean remains, the bibliography, and the collection of opinions from all sources on Shakespeare's genius, all these go to make up a creditable piece of work. And, as to the points on which Mr. Lee is likely to rouse most opposition, is it not true that controversial writings are generally the most interesting?

NATIONAL BIOGRAPHY.

Dictionary of National Biography. Edited by Sidney Lee. Vols. LV.-LVII.: Stow-Tytler. (Smith, Elder, & Co.)

These three volumes deal with a long roll of more or less distinguished English men and women—Stricklands and Stuarts and Swifts and Sydenhams, Talbots and Taylors and Temples, Tennysons, Thackerays, Thomsons, and some fifteen hundred more. The value and interest of the Dictionary may be said to consist as much in the brief notices of almost unknown or forgotten people, on whom recent research has thrown fresh light, as in the long biographies of famous people, with whose lives and deeds we are familiar. In many instances, no doubt, the best existing biographies of well known Englishmen, Scotchmen, and Irishmen are to be found in these volumes, and unquestionably we could scarcely wish for better lives than those of John Tyndall by his widow, of Swift and Thackeray by Mr. Leslie Stephen, and of Tennyson by Canon Ainger; but, taking these somewhat for granted, the importance of the minor notices deserves to be fully recognized. We light upon one by hazard, the five columns devoted by Mr. Seccombe to John Thelwall, who, just a hundred years ago, was in great trouble as a reformer, being unable to re-act and recant after the excesses of the French Revolution, and falling a victim, in consequence, to the anti-secession laws of Pitt. He was tried more than once, but always acquitted. In 1794 Erskine defended him at the Old Bailey. Thelwall had handed a pencilled note to his counsel, saying he wished to plead his own cause. "If you do, you will be hanged," was Erskine's reply; to which he rejoined: "Then I'll be hanged if I do." In 1798 he withdrew from active politics, not because he had changed his opinions, but because he had a wife and children to support, and set up as a lecturer on elocution. In this line he had considerable success, especially amongst barristers and clergymen.

He made the acquaintance of Southey, Hazlitt, and Coleridge (who spoke of him as an honest man, with the additional rare distinction of having nearly been hanged), and also of Talfourd, Crabb Robinson and Charles Lamb. From the ordinary groove of elocutionary teaching, Thelwall gradually concentrated his attention upon the cure of stammering, and more generally upon the correction of defects arising from malformation of the organs of speech. In 1809 he took a large house in Lincoln's Inn Fields (No. 57) so that he might take complete charge of patients, holding that the science of correcting impediments involved the correcting and regulating of the whole mental and moral habit of the pupil. His system had a remarkable success. . . . Crabb Robinson visited his institution on December 27, 1815, and was tickled by Thelwall's idea of having Milton's "Comus" recited by a troupe of stutters, but was astonished at the results attained.

Thelwall's eldest son, Algernon Sydney Thelwall (1795-1863), went to Cambridge and took orders, was minister of Bedford Chapel, and after his father's death became well known as a lecturer on public reading and elocution at King's College, London, where he was succeeded by the late Mr. D'Orsey.

Another short biography, taken from the end of the last volume, is Mr. James Tait's Wat Tyler, the record of this famous rebel furnishing a good instance of the scrupulous watchfulness displayed by the contributors to the Dictionary. Mr. Tait has based his notice on the sixteenth-century transcript of the anonymous chronicle once belonging to St. Mary's Abbey at York, which was first printed in the *English Historical Review* of July, 1898, and which was noticed six months ago in the *Educational Times* as an important historical document. Perhaps Mr. Tait might have secured another column or two for his life of the Tyler—if he was a tiler, and not merely Wat Hegheler. The known events of his career could scarcely be increased in bulk; but it is just in such cases as this that we may fairly expect to see biography expanded and supported by history, and the motive springs of the Kentishman's fatal expedition to London belong to a range of facts which still demand elucidation.

A Manual of Psychology, Vol. I. By G. F. Stout, M.A., Editor of *Mind*, &c. (University Correspondence College Press.)

Mr. Stout has been very favourably known for many years past as a diligent and acute student and teacher of psychology and the cognate sciences. From Cambridge he was drawn to Aberdeen to lecture specially on Comparative Psychology, and recently he was summoned to Oxford as a Reader in the same science. These migrations, indeed, are very natural for the man who was selected to fill the shoes of the late Prof. Croom Robertson as Editor of *Mind*—a technical periodical to which he had long been a valued contributor. Mr. Stout's work on "Ana-

lytic Psychology," which distinctly raised his reputation, is frequently quoted in the present volume. This "Manual" will be found to be adapted with the skill of a practical teacher to the needs of the student. Mr. Stout aims at imparting "a real interest in the subject." The beginner, he says, "ought to be able to do riders in psychology as he does riders in Euclid"; he ought to be "able to live himself into psychological problems." Yes, but still he must have a little time to familiarize himself with the special environment; and, probably, there is no element in Mr. Stout's book that will be more helpful to him than the careful definition and illustration of terms, which will bring his thoughts to anchor, and prevent them from wandering vaguely and unprofitably. He will always be able to know where he is, with precision. Such a quality of a scientific book might be expected, but it is not always safe to take it for granted in psychology or elsewhere.

Mr. Stout follows the order of mental development. The earlier stages are illustrated from the mental life of animals; the phases of ideal construction of self and the world, from the mental condition of the lower human races. The illustration is fairly full, considering the limits of space. After preliminary chapters on the scope, data, and methods of the science, and on the relation of body and mind, Mr. Stout presents a general analysis, and then deals with Sensation, the treatment of which occupies the final half of this first volume. On the very exacting question of the immediate connexion between conscious and nervous process, Mr. Stout rather summarily rejects the theory of materialism, and prefers psycho-physical parallelism to interaction as a working hypothesis, with frank admission of the attendant difficulties. Very well; there is no better plan than to indicate exactly the various attitudes of inquirers, and to state explicitly your own preference, and proceed to work out the problem on your own hypothesis. There is no possible settlement so long as any plausible hypothesis has not received adequate examination. Probably the Associationists will have something to say by way of modification of Mr. Stout's destructive criticism on the basis of J. S. Mill's incidental doctrine of "mental chemistry." The point needs more ample treatment, though Mr. Stout makes his own view clear enough. What is consciousness? Mr. Stout firmly puts aside divergent views and affirms definitely that "consciousness includes not only awareness of our own states, but those states themselves, whether we have cognizance of them or not." Thus: "If a man is angry, that is a state of consciousness, even though he does not know that he is angry." But is not this a question of naming? The man is conscious of his state, knowing that it is so and so; you call it angry, he may call it calm. Anyhow, beginners are apt to find difficulty in consciousness without cognizance. The physical side of sensation is ably treated, with constant reference to the best English and German investigations. There is no attempt at any charm of style beyond lucidity, but students ought to be well pleased when they get that primary virtue in their text-book.

RICHARD AND SALADIN.

"Heroes of the Nations."—Edited by Evelyn Abbott, M.A. *Saladin and the Fall of the Kingdom of Jerusalem.* By Stanley Lane-Poole, M.A. (G. P. Putnam's Sons.)

Every Englishman—at least, every English reader of Scott—knows Saladin very well. His name inevitably recalls that of Richard Cœur de Lion; and, to some of us, it will recall the picture of a ghastly feast from which the Moslem leaders went away somewhat worse than unsatisfied, with hearts full of natural bitterness against their Christian foes. But, if this is the measure of our knowledge, we have nothing to boast of except romance and fable. Prof. Lane Poole is here to give us ascertained facts as to El Melik en Nasir Sala-ed-din Yusuf ibn Ayyub, whose style and title we abbreviate into Saladin, and who bore the brunt of the Crusaders' attack in the Holy War of 1187-1191. The author has a chapter on "Saladin in Romance," in which he estimates the historical significance of the Cœur de Lion cycle in earlier and later romance; but his main object is to record history from authentic sources, and he has done this with great success and interest. Four introductory chapters tell of Saladin's world, of the first crusade in 1098, and of the series of events ending with the fall of Edessa, and the attempt of Zenghy the Atabeg to build up a Syrian Empire. We then come to the youth and early manhood of Saladin, the conquest of Egypt, Syria, and Mesopotamia, until Richard appears on the scene. From Jerusalem to Tyre, Acre, Jaffa, the narrative takes us over the ground of the memorable invasion of Pales-

tine by the "Franks," ending in the failure of the latter before the walls of Jerusalem and their disastrous retreat—compensated for the English by Richard's splendid rescue of the garrison of Jaffa.

To land in face of the Saracen army, if nothing was left to be rescued, was an adventure too foolhardy even for Cœur de Lion. In this uncertainty and dismay, his quick eye caught sight of a man who plunged boldly from the castle into the sea, and swam lustily towards the fleet. He was soon pulled on board, and proved to be a priest. "O noble King," he panted, "the remnant hunger for thy coming. They are borne down by the brandished swords of yonder butchers; their necks are stretched out as sheep for the slaughter; they will perish on the spot unless God helps them through thee." And he showed the King where the garrison still stood at bay "in front of yonder tower." That was enough for Richard: "Perish the hindmost!" he shouted, and the King's red galley pulled hard for the shore. Ere it was beached, Richard was up to his middle in the sea; his knights leaped after him, and they set upon the Saracens with might and main. Right and left the King laid men low with swingeing blows from his famous Danish axe. The Moslems scattered in all directions, the beach was cleared: "under my very eyes" says the astonished secretary, "they drove us out of the harbour." Up a stairway of the Templars' house the King rushed alone, and, in an instant, the English flag was waving on the walls, a signal of salvation to the garrison. Down they came at the charge, and, meeting their deliverer hacking with his sword, as only Richard knew how to do, they all joined together, and soon there was not a live Moslem in the streets.

Clearly the Lion-heart has not been overlauded. The story of his prowess is interwoven with the biography of his chivalrous enemy, and the whole narrative is very pleasant reading.

WINDOWS OF THE SOUL.

The Five Windows of the Soul; or, Thoughts on Perceiving. By E. H. Aitken. (John Murray.)

The first thing that strikes one in this volume is the charm of the style, and it is sustained with even mastery to the last page. Closely allied with this is a complete grasp of the materials and a clear conception of purpose. Even if the author did not tell us that fifteen years had elapsed since he caught the germ of the book, one would necessarily infer that the subject had long been turning over in his mind. The fruitful germ was a remark that beauty might be defined in terms of motion—a remark by no means original, but striking, as it so happened, at the psychological moment. "Dwelling on the idea that all 'taste' is essentially a perception of truth," says Mr. Aitken, "I came to link the highest intuitions of human genius with the dim perceptions of the worm that gropes its way through the ground under our feet, and to regard as one and the same thing that wonderful faculty by which each sentient creature, according to the measure of its capacity, feels, tastes, smells, hears, sees, or otherwise apprehends the facts of its environment. From this point of view all creation assumed an aspect which was novel to me, and very impressive." The main originality of the matter, to our mind, is the manner in which Mr. Aitken has worked out his exposition—the judicious selection of points, the deft presentation of the subject, and the fine tone of the workmanship. Mr. Aitken does not profess to give anything like an exhaustive account of the senses. "Indeed," he says, "my aim has not been to give an account of anything, but to present some familiar things in an aspect which is, perhaps, not familiar, and to impart a fuller meaning to the common use of that class of words which we borrow from our senses and apply to higher purposes." The book is in no sense a text-book; but it is a capital book for collateral reading, and, in fact, is admirably calculated to inspire and foster, not merely an interest in science, but also intelligent speculation on the immediate facts, whatever be the particular branch of study. As Mr. Aitken passes upwards in the scale of development in each of the senses, he unrolls, with strikingly suggestive commentary, a marvellous panorama of mysterious craftsmanship, familiar, yet largely unexplained. It is unnecessary to dwell on particular points; but perhaps there is nothing more engaging than his account of the variety of the effects of music on different animals at the Zoological Gardens. After all, what he is most concerned for is not any matter of description, but rather the moral or spiritual bearing of the physical facts. If the stricter scientists may quarrel with him for confounding the boundaries of pegged-out claims, yet the confusion may well be condoned for its suggestive interest. In his last chapter Mr. Aitken rises to the formal antithesis of right and wrong as discriminated by the moral sense; but he has already discerned the working of the opposing principles from the very beginnings of rudimentary sense organs of every kind.

GENERAL NOTICES.

CLASSICS.

Attic Sentence Construction, by G. Murray (Glasgow: MacLehose), is a brief pamphlet in tabular form, in which Professor Murray "attempts to give an outline of all normal forms of Attic sentence construction." The grouping of the constructions is very well managed, and as an outline of syntax the rules should be of value to students. But Prof. Murray very properly hints that for junior students a lecturer or master will be necessary, for his rules will certainly be beyond the comprehension of beginners in Greek syntax. We venture one word of criticism. It does not seem to us that the usage of Attic prose in the construction of questions in reported speech is clearly or sufficiently dealt with. Prof. Murray says only that rhetorical or unreal questions are put into the infinitive; but (1) does that form of question appear with anything like frequency in Attic prose? (2) What happens to real questions? In other words, how do you put into the indirect form the question that we are here writing?

The *Tutorial Greek Reader* (Clive & Co.) appears in a second and enlarged edition. There are a number of somewhat harder extracts and an appendix containing pieces set in the London Matriculation. The *Tutorial Latin Grammar*, issued by the same publishers, has reached its third edition, which is sufficient proof that the book possesses merit. The book is based on Neue, Dräger, Roby, and Lewis and Short. It is strange not to find the names of Riemann, Schmalz, and Gildersleeve in the list of authorities. The rules are conveniently arranged, but here and there we miss an important point. Thus, for instance, we cannot find any notice of the Ciceronian construction *antequam dico*, or any reference to the rules respecting the hypothetical pluperfect subjunctive when it becomes dependent on *ut*. In the latter case our inability may be due only to the index.

Greek Test Papers, by J. Moir (Blackwood), is a series of graduated question papers designed chiefly for candidates for the Scotch examinations. The fact that the editor writes with thirty years' experience of teaching is a sufficient guarantee for the quality of his work.

Messrs. Blackie have issued a fourpenny collection of *Latin Unseens* (Intermediate Section). The plan presumably works well; but for ourselves we do not like the classics in this form. It is, however, a very good four-penn'orth, and nobody who uses it need scruple to fling it on the fire after he has had enough.

Cornelius Nepos, Vol. I., by H. Wilkinson (Macmillan), is the beginning of a complete edition of Nepos in the "Elementary Series." The vocabulary is a good one, and the notes are simple and adequate. The book is really suitable for beginners. In the same series we have *Pliny's Letters*, I.-XII., by C. J. Phillips. The subject does not seem to us well suited to beginners. The notes are of necessity largely concerned with antiquarian matters, and we think that a perusal of this volume will leave the young pupil very little—if at all—advanced in his knowledge of Latin. We do not see the use of long notes on such words as *sponsalia* and *triclinia* in such a series as that to which the volume belongs.

FRENCH.

Practical French Course for Beginners. By S. Conrad. (Simpkin, Marshall, & Co.)

We hasten to warn our readers that there is little in this volume to bear out the statement that it is a step in the "New" (title page) or "Newer" (cover) direction, if this is meant to indicate the New Method of the Continental "reformers." The very first page (on Pronunciation) is hopelessly wrong. The lessons are very much the same as in twenty other elementary grammars: rules first, examples afterwards, translation into French at the very beginning; an unwieldy vocabulary, without sufficient repetition. The printing is good, the paper flimsy.

French Commercial Correspondence. Preliminary Course. By L. Soleil. (Kegan Paul.)

M. Soleil thinks "that, provided a very easy and strictly elementary book be used, there is no reason why a boy should not commence his study of commercial French as soon as that of the grammar of the language." We trust that teachers will see fit to put off the evil day, and try to imbue their pupils with literature while they can. They should not allow themselves to be tempted by this well arranged and handy "Preliminary Course" to spend time over commercial correspondence, which is, indeed, outside the curriculum of any school that prides itself on giving a liberal education, and does not cram for any particular profession. For commercial schools the book may be recommended.

The Junior Student's Vade Mecum to His Studies in French. (The Manchester Clerical, Medical, and Scholastic Association.)

From the preface we learn that "in both construction and form it is unique and copyright." The latter is no great distinction, and "unique" may imply blame as well as praise. It is a cram book, and we trust that there will not be many junior students who grasp at it as a last resource.

GERMAN.

Die Schwierigkeiten unserer Muttersprache. By Bennowitz and Link. (Leipzig: G. A. Gloeckner.)

The increased attention given in this country to German composition, alike for academic and commercial purposes, should give circulation here to a concise, clearly written manual, which sets forth the requirements of a pure, idiomatic modern style of writing by reference in particular to the deterioration of the language in the hands of Government officials, journalists, and traders, and discriminates from the point of view of a purist the principles applicable to doubtful and difficult points. Such a book in its German dress may well attract the attention of teachers and corresponding clerks, and should be used alongside of the school manuals of grammar, and especially of manuals of commercial German, such as the books of Bemschel, Preisinger, and Bally, which more or less faithfully reproduce most of the weaknesses here exposed.

We are told that the South German, when speaking of his salary, ignores the correct masculine gender of "Gehalt," and, to the confusion of meaning, that one must not let pass the not unusual plural forms—"Geschafter" and "Collis"; that some newspapers would lead their readers to accept the weak declension for "Wirt"; that Goethe's "Leiden des jungen Werthers" should not now pass muster; that "Generale" should not be modified, as given in Otto (South German). Under the verb, we may call attention to the remarks on "wiegen" and "wagen," the faulty newspaper treatment of participles, the Swiss and Austrian treatment of separable forms, the misuse of the dative case by commission agents, &c., who are Polish Jews; and the frequent confusion of "lehren" and "lernen." We think, however, that the objection offered to "einen Wechsel begeben," for which the writers would use "verkaufen," alone is needless—British traders will always speak of "negotiating" a bill. Under prepositions, good remarks may be found on the uses of "von," instead of the genitive. Under syntax, right use of the subjunctive mood is well stated, although difference of judgment might be evoked by the application made of the rule to newspaper reports. So too for common faulty adverbial complements as in "ein Bewerber um die Stelle." We may note also the discrimination of the pronouns "welcher," "der," in regard of conjoined relative clauses, one of which is subordinate to the other; and the absurd use made of such forms as "einliegend," "beigefaltet," &c., when really qualifying the writer or recipient of a letter. Occasional expressions are criticized, which, we think, will be persistent; such as "ueberrreichen" ("hand over"). The inversion of a verb after "und," which is seldom noticed in other books, is here helpfully discussed. The needless use of certain foreign words is taken up towards the end of the volume. We agree with the writers that commercial schools should be looked to for the correction of much that is here criticized.

German Passages for Unprepared Translation. Selected by E. Ehrke. (Clarendon Press.)

A book of this kind was badly needed; one had, indeed, been published some years ago, but it was disfigured by many misprints. This volume is carefully printed; it is, however, time the Clarendon Press discarded this old-fashioned and worn fount of type. Herr Ehrke has made a very good selection. The passages are all in prose, and are taken from the eighteenth-century classics and more recent writers. It seems a pity that no sixteenth-century German was included, and that there are no specimens of modern dialect writings; both are extremely useful in the case of advanced students. With this reservation, we have nothing but praise for the book.

Object Lessons in German. By J. J. Trotter. (Nelson.)

This volume, which "can be used along with a first German course," is based on M. Alec Cran's "Object Lessons in French," and we must express our regret that the value of this book also is greatly diminished by the presence in the text of numerous suggestions intended for the teacher only. The translation has been well done, though there are some slips. The dialogue is good, but too many words are introduced; the usual failing of such books is the attempt to make the vocabulary "exhaustive." A few remarks we have jotted down: we have never found it "advisable" to teach pupils to call each other "Sie" (page 7); are boys' coats usually lined with silk? (page 20); "Niemand" should be "niemand" (page 22); a boy is told (in the book, page 24) to put on his cap, and then explains that he did it unthinkingly; "Basen" is not poetical (page 31); the window on page 35 is said to have six panes, that on page 41 eight, but the pictures do not agree with this; "Gesammt-" should be "Gesamt-" (page 41); something is wrong with the picture on page 45 (the boy is said to have eaten his soup, but has apparently done so without disturbing his napkin, which lies carefully folded between knife and fork), &c. In the hands of a good teacher the book may prove useful.

MISCELLANEOUS.

The Romance of the House of Savoy (1003-1519). By Alethea Weil. Two vols. (G. P. Putnam's Sons.)

The title of Mrs. Weil's charming volumes is thoroughly appropriate to their subject. Few royal houses have had a more romantic history, and the records here brought together in a most attractive summary will be very welcome to English readers, who will find much that is

new to them. The text is adorned by an unusually large number of excellent portraits and other illustrations. Some of the portraits of the old Counts of Savoy are "designed by F. T. D. Lange from contemporary or early sources"—that is to say, they are not fully authentic, but only the artist's conception, from coins and other evidence, of what the originals must have looked like. Many "historical" portraits, not to mention Wardour Street "ancestors," have no better authority. But it is the text of this story which will be its best recommendation.

Trigonometry at a Glance: a Graphic Demonstration of the Various Functions. By G. W. Usill and F. J. Browne. (Philip & Son.)

A convenient folding-card to illustrate the trigonometrical ratios of an angle, by means of a travelling radius and two complementary right-angled triangles. The title implies rather too much; but the device is ingenious.

From Messrs. W. Collins & Sons, we have their *New Academic Atlas*, containing forty-eight full-page maps of modern geography, together with a concise gazetteer of the world; and a *New Advanced Atlas*, with the same maps, but without the gazetteer. Both works are well and clearly printed, and will be found very serviceable.

Prophets of the Century: Essays. Edited by Arthur Rickett, M.A. (Ward, Lock, & Co.)

The modern sages commemorated by Mr. Rickett and his friends are Wordsworth, Shelley, Carlyle, Emerson, Tennyson, Browning, George Eliot, Ruskin, Whitman, William Morris, Tolstoy, and Ibsen. We do not quarrel with the selection. The prophet, as Mr. Lilley says in his essay on Shelley, "is a moral pioneer." The world "is wise, or, at least, prudent. It does not follow the pioneer at once; it waits till he has justified himself. . . . His contemporaries will not or cannot understand him. They often distort, they always resent, his message. It is another generation that gets hold of his meaning." The words are more applicable to Shelley than to some of the men above mentioned, whose message was assuredly not resented by their contemporaries. These twelve essays are all well written, and the editor has made a very good choice of his collaborators, who have combined to produce an admirable group of biographical studies.

An Introduction to the Study of the Renaissance. By Lilian F. Field. (Smith, Elder, & Co.)

Miss Field has performed her task in excellent fashion. Her summary of reaction, revival, and renaissance in European learning, literature, and the arts, which led the world back from the dark to the dazzling ages of human thought and achievement, has been made with great care and considerable scholarship and judgment. It is a very commendable *résumé* of the main features of three or four centuries, ending with the sixteenth, and may safely be adopted as an "Introduction," if not as a student's handbook of intellectual development during the period indicated.

Handbook for Literary and Debating Societies. By Laurence M. Gibson, M.A. (Hodder and Stoughton.)

A very helpful book for debaters. Mr. Gibson gives brief directions for the conduct of a public meeting, a large number of subjects and skeleton debates, and a list of references for each subject. As the arguments are arranged *pro* and *contra*, and, as Mr. Gibson is competent for what he has undertaken, it is clear that this book is the very thing that a young debater, or a young essay-writer, mostly needs.

New Methods in Education: Art Real Manual Training Nature Study. By J. Liberty Tadd. (Sampson Low & Co.)

This large and copiously illustrated volume, printed in America, is introduced to us by the English publisher apparently in an experimental mood, by way of discovering whether it is likely to meet a want on this side of the Atlantic. We are bound to say that in the course of the past year or two we have noticed three or four practical and thoroughly artistic works of English origin going over much the same ground, and, in all impartiality, we cannot say that Mr. Tadd's somewhat costly volume has any claim to be preferred to them. Blackboard class-training in freehand line-drawing is no new method in English education. In the absence of other manuals no doubt this one has real merits, but there is no want for it to meet.

WE HAVE ALSO RECEIVED the following publications and new editions:—

Picture Logic: An Attempt to Popularize the Science of Reasoning by the Combination of Humorous Pictures with Examples of Reasoning taken from Daily Life, by A. J. Swinburne, B.A. (Longmans)—a sixth edition of an ingenious and shrewd simplification of logic.

The Theory and Practice of Handwriting: A Manual for School Boards, Teachers, and Students, with Diagrams and Illustrations, by John Jackson (Sampson Low, Marston, & Co.)—the fourth edition of a serviceable work, with a new chapter on "Ambidexterity."

"Blackwood's School Shakespeare."—*Julius Cæsar*, with Introduction, Notes, and Glossary, by R. Brimley Johnson (Blackwood & Sons). "The Pitt Press Shakespeare."—*King Richard II.*, by A. W. Verity, M.A. (Cambridge University Press).

Short Studies of Shakespeare's Plays, by Cyril Ransome, M.A. (Macmillan)—simple and popular expositions, very helpful to young students.

The Lays of Ancient Rome and other Poems by Lord Macaulay, edited,

with Introduction and Notes, by J. H. Flather, M.A. (Cambridge University Press)—a very good school edition.

A Practical Method of Teaching Geography (England and Wales), by J. H. Overton (Cassell & Co.)—a series of twenty-two outline and partially detailed maps, well calculated to impress upon an English or Welsh boy a definite picture of his native country.

Examples in An Arithmetic for Schools, by S. Loney, M.A. (Macmillan)—an excellent and comprehensive collection with-out answers.

Mathematical Tables for the Use of Students in Technical Schools and Colleges, by J. P. Wrasop, B.A., and W. W. Haldane Gee, B.Sc. (Macmillan)—a well printed thin volume of four-place logarithms, weights and measures, and trigonometrical tables.

School Arithmetic for Course B, Standards I. and II. (Blackie & Son).

Attractive Work: Floral Designs and Telling Stories (C. A. Pearson)—faintly printed designs for colouring.

Handbooks.—*The Rutlish Geography Readers, Part VI: Geography of Greater Britain* (Blackie & Son)—good reading, well illustrated.—*Introduction to English Literature, from Macmillan's Advanced Reader,* (Macmillan)—elementary and thin, but generally correct.—*Poetry for Children, Books I. to VI.* in penny parts, and the six parts in one (Cassell & Co.)—a skilful selection of light and often humorous pieces.—"Ship" Literary Readers: *Introductory Reader to Standard I.* (Longmans)—Macmillan's *New Literary Readers, Standard 0* (Macmillan)—we do not like the use of the term "literary" for such very elementary readers as the two last mentioned.—*Things of Every Day: a Popular Science Reader on some Common Things* (Blackwood & Sons)—selected portions of Prof. Johnston's "Chemistry of Common Life," thoroughly adapted as a natural science reading-book.

Stormonth's Handy School Dictionary, Pronouncing and Explanatory (Blackwood & Sons)—a new and revised edition, by William Bayne, of a very useful little dictionary for schools.

"Sullivan's School Series.—*Modern Geography* (Longmans)—a compact little volume, all short statements and lists, somewhat approximating to "cram."

Happiness, by Lucy H. M. Soulsby (Longmans)—one of the author's sensible chats for girls, very comprehensive in its illustrations and references.

Amongst Readers, we have the following: *The Newton Object-Lesson Handbook, Part I.* (Blackie & Son)—illustrated and interleaved with ruled paper; a companion to the "Newton Object-Lesson."

CORRESPONDENCE.

LIMITS OF SANITARY INSPECTION.

To the Editor of the Educational Times.

SIR,—The recent decision of the High Court in the case of the Vestry of St. Pancras and the North London Collegiate School for Girls turns upon the claim made by the Vestry as the sanitary authority for an unconditional right of entry, without assigning cause, into every building in the parish. The Court has decided, as the magistrate had previously held, that the right of entry is conditional upon the existence of reasonable cause. The decision has as much reference to private houses as to the North London School, but out of it arises a question of public policy affecting secondary schools.

The governors of the school would have made no objection to the ordinary inspection of drains and the sanitary works connected with them. They would not even have opposed a house-to-house sanitary inspection in the locality. The Health Committee of the Vestry of St. Pancras, however, were aiming not at a house-to-house inspection, but at a school-to-school inspection. Now, school inspection for sanitary purposes involves the assumption of control over methods of ventilation, the ratio of numbers to cubic space in class-rooms, and other details, all fit subjects for proper investigation, but the regulation of which by a vestry inspector (not even the medical officer of health himself), whose official experience is of factories and workshops, not of schools, has never yet been contemplated by any Act of Parliament. The Public Health Act deals with schools only as included under the term "house," but the Vestry has been engaged in an attempt to use the powers of the Act with a liberal interpretation of Section 1, so as to take upon itself the sanitary inspection of schools, as if they were in the same legal category as factories or common lodging houses. The Vestry might with equal reason claim control over the number of guests at a private party and the ventilation of the reception rooms.

Thus the question which the school authorities had to decide was whether they would—by allowing the Vestry to inspect, as a right, in this fashion, the largest and most important secondary school in the parish—aid it towards the acquisition of power in the management of secondary schools beyond its legal rights. We do not for a moment dispute the proposition that there should be some public inspection and control of schools as schools, whether public or private, as to their sanitary condition, with a right of entry more absolute than that given to the Vestry for ordinary houses, and even with a right to make "surprise

visits." What we do dispute is that the Vestry is a suitable authority for this purpose. The school sanitary inspector should have special acquaintance with schools as well as with health. The Vestry has no fitness for the selection of such experts, and the area within its jurisdiction is too small for it to employ one in addition to its other sanitary officers. Nor is it in any degree qualified to draw up school regulations.

The Royal Commission on Secondary Education, 1895, made a definite recommendation on the subject of sanitary inspection, which we hope may be carried into effect in the Government Bills of next Session. It is as follows:—

"We accordingly recommend that the Local Authority be empowered to cause all schools, whether endowed (or in any sense public), proprietary, or private, within its area, to be inspected as respects the sanitary condition of their buildings and class-rooms, and to require them to conform to such general regulations for securing health as may be issued by the Central Office."

The Local Authority and Central Office here mentioned are the Local and Central Educational Authorities respectively, the establishment of which for all purposes of educational organization was contemplated by the Commissioners. The area of this Local Authority was to be no less than that of the administrative county. Nevertheless, the Commissioners thought it expedient to entrust the making of regulations not to the Local Authority, but to the Central Office.

The compulsory sanitary inspection of schools, judiciously guarded as the Commissioners recommend, would be welcomed by governing bodies and heads of schools generally. The Education Bill that was introduced last Session by Colonel Lockwood, and understood to be approved in its general features by the associations representing heads of secondary schools, contained the following clauses:—

"(1) It shall be the duty of the Education Department to cause a sanitary inspection of every school in England, not being a public elementary school, to be made as soon as may be after the passing of this Act, and afterwards at such intervals and times as they may think fit in each case.

"(2) Any person appointed by the Education Department to make a sanitary inspection under this Act on their behalf of any school may for that purpose enter the school premises at any reasonable time, and do all things necessary for making an effective inspection."

We ourselves prefer the solution suggested by the Commissioners to that of Colonel Lockwood's Bill; but we quote the above clauses in evidence of the fact that educational opinion is clear as to the need of school sanitary inspection, and equally clear as to the qualifications requisite in the authority to which it is entrusted.

Having a very clear conscience as to the sanitation of the North London Collegiate School, every point of which was carefully considered by its enlightened founder, Miss Francis Mary Buss, with the aid of skilled advisers, and has been diligently watched down to the present day, the governors of the school do not regret that it fell to them to maintain the claim of the secondary schools in general that the control of their sanitation should not fall into the hands of an authority neither posse-sing, nor designed by the Legislature to possess, the special knowledge necessary for the due exercise of such control.—We are, Sir, yours faithfully,

WILLIAM LATHAM, *Chairman of the Governors.*
SOPHIE BRYANT, *Headmistress.*

North London Collegiate School for Girls,
Camden Road, N.W., January 23, 1899.

THE WINTER MEETING.—SIR EDWARD CLARKE ON SHORTHAND.

To the Editor of the Educational Times.

SIR,—As a practical teacher of shorthand of fourteen years' experience, I may, perhaps, be allowed to make a few remarks on Sir Edward Clarke's "Lesson in Shorthand" at the College of Preceptors. The system Sir Edward uses, and which he brought before his audience, was "Harding's Improvement of Taylor." Taylor's system was published in 1786, and Harding's "Improvement" in 1823. The Taylor system in one form or another was almost the only one in general use in this country in the early part of the century. It has been adopted, sometimes modified, in many other countries, and a vast amount of excellent work is being done with it to-day by professional reporters and shorthand writers in London and many other European capitals. It is not generally known that Pitman's first edition, 1837, was issued as this system further "improved," the indebtedness of the author to Taylor and Harding being stated on the title-page. It was suggested to young Mr. Pitman that he would do better commercially by altering it further (Taylor's copyright having expired), altering the name, and calling it his own. These suggestions he adopted. These facts are all plainly stated in his own middle-life publications.

I am one of those who, having gone into the matter very carefully, and formed a judgment upon a great mass of evidence, agree with Sir Edward and those who supported him, that Pitman's "improvements" were—taken in the aggregate, and viewed from the standpoint

of the general writer—no improvements at all, but, on the contrary, converted a very simple and easily handled machine into one of extraordinary complexity, which the vast majority of those who attempt it sooner or later give up as being beyond their powers to master. At the same time, I am bound to admit that, if, in choosing a system for schools, I were limited to a simple Taylor system and Pitman's extremely complicated "improved" Taylor, I would elect the latter, as having a fine set of text-books, good ranges of exercises, a wide literature, and many other great aids to the teacher and learner. There is no one to carry on the propaganda of copyright-expired systems like Taylor and Gurney in the way in which the Pitman firm continues the propaganda of Sir Isaac.

But then we come to the question: Is the choice thus limited? While agreeing with Sir Edward in some of his contentions, I side with his critic the *Daily News* in saying that his "Shorthand in One Lesson" was a snare. The simplicity was got by practically disregarding the vowels (without which the "skeletons" of words are dead). Taylor, both in its original form and as "improved" successively by Harding and Pitman, is mainly consonantal. Now, with consonant-skeletons, it is possible to take notes which may be "deciphered" with more or less ease by the writer himself while the subject is still fresh in his mind, but how difficult such notes are to read after any lapse of time may be instantly proved by any one who will take any passage from any source and convert it into "skeletons." I open a popular poet at random and I take half-a-dozen lines that meet my eye:—

"t v chldhd nt mnhd
n hd grn m hwth
skld n l dh krft v hntrs
lrnd n l dh lr v ldmn
n l ythfl sprts nd pstm
n l mnl rts nd lbsr."

Now this is a perfectly fair average example. I do not say it is impossible to decipher it, but I say it is quite impossible to read it with any degree of certainty and fluency. As to fluency, why, the very first letter is a poser. There are at least fourteen words of which "t" is the skeleton. There are at least twelve more of which "v" is the skeleton, so that between the first two words alone there are 14 x 12, or 168, possible readings; for any one of the first may be tried with any one of the second. Then, as to certainty, is "mnl" "manual," "menial," "mainly," "meanly," or "manilla"? The Pitmans publish a "Reporter's Assistant" to the solution of such problems, but I never yet knew the schoolboy who had any decent command of one-tenth of its eighty closely packed pages. Sir Edward Clarke is a man of exceptional intellect; he has an exceptional command of the English language. I endorse the remark made to me many years ago by a very experienced shorthand teacher—master of many systems, who was then teaching Taylor's to some local pupils—"those consonantal systems are very simple, but they are only fit for clever chaps who know the language very well." What can your average schoolboy do with notes such as above—notes, moreover, remember, not in the clear and familiar characters of ordinary print, or even of common longhand, but "pothooks and hangers"?

I am almost afraid to go any further, or it will be said I have "an axe to grind." But there seems to be a great amount of apathy among schoolmasters as to what systems are taught in their schools, and as to the results, and this has always seemed to me very blameworthy and very much to be deplored. At the risk of bringing down denunciations upon myself, I will answer the question that I know will be asked—"What systems do you recommend?" I cannot do better than quote the official verdict as to the last keen contest for the Salisbury Challenge Shield, for which nearly sixty candidates entered:—"The results are certainly strongly in favour of the more recent (joined-vowel cursive) systems of shorthand, and the advantage rests with them not at one stage only, but in all, and not in one particular only, but alike in simplicity, brevity, speed, and legibility, as judged by the transcripts." As a matter of fact, the top places went as follows:—Oxford shorthand, two years, 950; Oxford shorthand, under two years, 845; Pitman & Sons' shorthand, five years, 755, and these results were typical of those all the way down the list, as well as those at all the nine similar open examinations held previously.—I am, yours sincerely,

PERCY E. KINGSFORD, M.J.I.,
Shorthand Master at Dover College.

Excelsior, Dover, January 14, 1899.

THE WINTER MEETING AND DENTAL HYGIENE.

To the Editor of the Educational Times.

SIR,—It is a matter of congratulation that the Winter Meeting passed off so satisfactorily. Not the least successful of the lectures were those devoted to physiology applied to education. I may, however, be allowed to express regret that neither in last year's course nor in this was any reference made to the importance of a dental examination of children. This duty is becoming increasingly manifest to those in charge of schools and public institutions. The proper performance

of the functions of mastication, digestion, and assimilation is of such grave import to health that it needs but to be stated to be allowed. So long as the physical basis of life is impaired—as it frequently is in this direction—the best results will not be obtainable from the instruments of thought.

In two schools I visited last week the physical charts of individual children comprised almost every point worthy of note with the exception of that relating to the soundness, regularity, and state of renewal of the teeth. Surely, if teachers consider it worth while to bring under the parents' notice defects of vision or hearing which they conceive—

and rightly—as in danger of being overlooked, they should equally esteem it a duty to notify dental defects, which experience shows are frequently a matter of culpable indifference to the guardians at home. I put altogether out of account the acute physical suffering which is so marked a penalty of dental neglect.

I have ventured to treat the matter somewhat at large in a pamphlet to which attention is called this month in the advertisement columns of this journal.—I am, Sir, faithfully yours,
55 Gunterstone Road, West Kensington, W., J. O. BEVAN.

ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

AN adjourned meeting of the Council was held at the College on January 21. Present: Dr. Wormell, Vice-President, in the Chair; Miss Bailey, Mr. Barlet, Mr. Baumann, Rev. G. C. Bell, Rev. J. O. Bevan, Mr. Bidlake, Mr. Butler, Miss Day, Mr. Eve, Rev. Dr. Hiron, Rev. E. Lee, Mr. Leatham, Mr. Pinches, Mr. Rule, and Mr. Sergeant.

Diplomas were awarded to the successful candidates at the Christmas Examination of teachers as follows:—

<i>Licentiate'ship :</i>		
Miss E. Dodwell.	H. M. Fraser.	F. E. Rogers.
W. M. P. Wilkes.	A. S. Wilson.	

<i>Associateship :</i>		
J. F. Alder.	J. E. Green.	J. F. Morris.
D. J. Badger.	J. A. Grindrod.	Miss L. M. Morris.
C. Billingham.	A. Haden.	A. J. Mullins.
Miss A. E. B. Binley.	Miss E. M. Hancock.	Miss C. M. Nettell.
Miss A. M. Butcher.	A. Harris.	Miss E. R. Peckston.
F. E. Butcher.	B. L. K. Henderson.	Miss D. Price.
C. E. Carpenter.	C. G. Hinchliff.	F. Quickfall.
Miss W. E. Chambers.	P. N. H. Hooks.	Miss A. E. Ritchie.
J. M. Chester.	A. S. Horrex.	Miss E. J. Sinclair.
W. G. Clarke.	Miss M. Hutchinson.	H. A. Taylor.
J. P. Coningham.	F. H. Jenninks.	J. L. Thompson.
A. Drewitt.	Miss M. Jones.	A. Ward.
R. J. Fox.	L. Letchford.	Miss A. Wicks.
Miss J. G. Ford.	C. G. Molyneux.	Miss L. M. Williams.
O. Freeston.	E. H. Moreton.	Miss A. E. Wise.
W. Geen.	J. Morphen.	C. T. Woosnam.

The thanks of the Council were voted to the Master, Wardens, and Court of Assistants of the Clothworkers' Company, as well as to lecturers and others who had taken part in the Winter Meeting for Teachers, which was held on the 3rd to the 14th of January.

MATHEMATICS.

13994. (R. F. DAVIS, M.A.)—If ABC is an isosceles triangle, D the middle point of the base BC, and upon BA, CA points P, Q are taken such that BP · CQ = BD², prove that the envelope of PQ is the circle whose centre is D and which touches AB, AC.

Solution by Professor A. DROZ-FARNY, and G. W. PRESTON, B.A.

De l'égalité BP · CQ = (BD)² on déduit

$$BP : BD = CD : CQ,$$

et, comme les angles B et C sont égaux, les triangles BDP et CQD sont semblables et par conséquent

$$\angle PDQ = B = C.$$

Comme

$$DP : DQ = BD : CQ = CD : CQ,$$

les triangles PDQ et CDQ sont aussi semblables; d'où

$$\angle PQD = DQC,$$

et de même $\angle QPD = DPB$.

Les perpendiculaires abaissées de D sur les côtés CQ, PQ, BP sont donc égales; d'où le théorème.

14032. (Rev. T. MITCHELSON, B.A.)—P and Q are the ends of conjugate semi-diameters of an ellipse, whose centre is C and foci H and S. The tangents meet in R, and M and N are the mid-points of HP and SQ; while CR meets PQ in T, MN in L. Show that the loci of M and N are ellipses whose common chord is equal to half the latus rectum of the original ellipse, the chord being bisected in C. The loci of L, T, and R are ellipses.

Solution by F. H. PEACHELL, B.A.; R. KNOWLES, B.A.; and the PROPOSER.

Let P be the point ϕ ; then Q is point $\phi + \frac{1}{2}\pi$.

(1) Coordinates of R are

$$a(\cos \phi - \sin \phi), \quad b(\cos \phi + \sin \phi);$$

therefore $x^2/a^2 = 1 - 2 \sin \phi \cos \phi$,

$$y^2/b^2 = 1 + 2 \sin \phi \cos \phi.$$

and locus of R is the ellipse

$$x^2/a^2 + y^2/b^2 = 2.$$

(2) Coordinates of M are

$$\frac{1}{2}(a \cos \phi + ac), \quad \frac{1}{2}b \sin \phi;$$

therefore locus of M is ellipse

$$\left(\frac{2x-ac}{a}\right)^2 + \left(\frac{2y}{b}\right)^2 = 1 \dots\dots\dots (A).$$

(3) Similarly locus of N is

$$\left(\frac{2x+ae}{a}\right)^2 + \left(\frac{2y}{b}\right)^2 = 1 \dots\dots\dots B$$

[The rest in Vol.

8842, 8500, 8884, & 12494. (D. EDWARDS.)—(8842.) Prove that

$$\int_0^1 \int_0^{\sqrt{1-k^2}} \frac{\log(1-k \sin^2 \phi)}{(1-k \sin^2 \phi)^{3/2}} dk d\phi = 4 \log 2 - 4.$$

(8500.) Prove that

$$\int_0^1 \int_0^{\sqrt{1-k}} \frac{\log(1-k)}{(1-k \sin^2 \phi)^{3/2}} dk d\phi = 8 \log 2 - 8.$$

(8884, 12494.) Prove that

$$\int_0^1 \int_0^{\sqrt{1-k}} \frac{\{\log(1-k)\}^2}{(1-k \sin^2 \phi)^{3/2}} dk d\phi = 16 - \frac{1}{3}\pi^2 + 32(\log_e \frac{1}{2}e)^2.$$

Solutions by Professor S. SIRCOM, M.A.

(8842.) Put $k = \sin^2 \theta$; then, by the method of Quest. 8465 (Vol. XLVI., p. 75), put $\cos \theta = \cos \mu \sin \omega$, $\cot \phi = \sin \mu \tan \omega$, and, the limits being $\frac{1}{2}\pi$ and 0 throughout, the integral becomes

$$4 \iint \cos \mu \sin \omega \log \sin \omega d\omega d\mu = 4 \int \sin \omega \log \sin \omega d\omega = 4 \log 2 - 4.$$

(8500.) Similarly, this integral becomes

$$4 \iint \sin \omega \sin \mu \log(\sin \omega \cos \mu) d\omega d\mu = 8 \int \sin \omega \log \sin \omega d\omega = 8 \log 2 - 8.$$

(8884.) This becomes

$$\begin{aligned} 8 \iint \sin \omega \cos \mu \{\log(\sin \omega \cos \mu)\}^2 d\omega d\mu \\ = 16 \int \sin \omega (\log \sin \omega)^2 d\omega + 16 \left(\int \sin \omega \log \sin \omega d\omega \right)^2 \\ = 16 \left\{ 1 - \frac{1}{3}\pi^2 + (\log 2 - 1)^2 \right\} + 16 (\log 2 - 1)^2 = \text{given result.} \end{aligned}$$

14035. (H. J. WOODALL, A.R.C.S.)—Is anything known about the theory of the following?—When is

$$a^p - 1 \equiv 0 \pmod{q^2},$$

it being given that a is not a power, and neither $a-1$ nor p divisible by q ? *E.g.*, $(50,000)^5 - 1 \equiv 0 \pmod{11^2}$.

Solutions (1) by Lt.-Col. ALLAN CUNNINGHAM, R.E.; (2) by C. E. BICKMORE, M.A.

(1) Much of the theory of this congruence has been already worked out; see MATHEWS'S *Theory of Numbers*, 1892, Part I., Art. 25-29, &c. Rewriting it $a^n - 1 \equiv 0$, or $a^n \equiv 1 \pmod{q^2}$, the following is a brief résumé:—There are three quantities a , n , q involved, and a prime to q ; two of these are supposed given, to find the third. Hence three problems arise.

Problem I.—Given a , q , to find n . First find ξ the least exponent satisfying $a^\xi \equiv 1 \pmod{q}$; then $a^{q\xi} \equiv 1 \pmod{q^2}$, and $n = q\xi$ is one value of n , sometimes the least value. In particular, if q be prime, then $n = q\xi$ is usually the least value of n ; if there be a less value, it is $n = \xi$. [*Ex.* $3^2 \equiv 1 \pmod{11}$, and $3^5 \equiv 1 \pmod{11^2}$]. But, if $q =$ product of primes $= q_1 q_2 q_3 \dots$, then $n = q\xi$, or some submultiple thereof (depending on the relation of a to q).

Problem II.—Given a , n to find q . A far more difficult problem, involving, in fact, the whole question of factorization. First find any factor q of $(a^n - 1)$, and then find the least exponent ξ which gives $a^\xi \equiv 1 \pmod{q}$. If $n = q\xi$, or if $n = mq\xi$, then $a^n \equiv 1 \pmod{q^2}$, as required. But, if $n \neq q\xi$, or $n \neq mq\xi$, then the question whether $a^n \equiv 1 \pmod{q^2}$ must be tested specially. In any case, if $a^n \equiv 1 \pmod{q^2}$, then q must be one of the quantities satisfying $a^n \equiv 1 \pmod{q}$.

Problem III.—Given n , q to find a . Note first that the number of distinct (incongruous) roots a each $< q^2$, each satisfying $a^n \equiv 1 \pmod{q^2}$ is $\phi(n)$ the totient of n . Next, if a be any one of such roots ($< q^2$), then the residues of the powers of a (i.e., of a^2, a^3, \dots) to modulus q^2 gives the complete set of $\phi(n)$ incongruous roots, each $< q^2$. If these be called a_1, a_2, \dots , then all quantities of type $(m_1 q^2 + a_1), (m_2 q^2 + a_2), \dots$, are also roots of the congruence. Hence, if any one of the roots $a_1, a_2, \dots, < q^2$ can be found, all the rest can be found. To find such a root, say a_1 , first find a root, say a , of the congruence $a^n \equiv 1 \pmod{q}$: any root will do. Then a_1 must be of form $m_1 q + a$, and may be shown to be given by solution of the linear congruence in m (as the unknown)

$$na^{n-1} \cdot m + (a^n - 1) + q \equiv 0 \pmod{q^2},$$

which is always possible.

[The rest in Vol.

13878. (R. F. DAVIS, M.A.)—AD, BE, CF are the medians of a triangle ABC co-intersecting in G, the centroid; and H is the orthocentre. Upon DA a point α is taken, so that DA · α = DB² = DC²; similarly for β, γ . Prove that the triangle $\alpha\beta\gamma$ has its sides proportional to the medians of ABC, and that GH is a diameter of its circumcircle.

Solution by W. J. DOBBS, M.A.; R. TUCKER, M.A.; and many others.

Let AH meet BC in P and the circumcircle in p, so that HP = Pp: and draw Bd parallel to FC to meet AD in d.

Then $A\alpha \cdot AD = AD^2 - DA \cdot Da = AP^2 + DP^2 - DC^2 = AP^2 - BP \cdot PC = AP^2 - AP \cdot Pp = AP^2 - AP \cdot PH = AP \cdot AH$;

therefore $H\alpha$ is perpendicular to AD.* therefore circle on GH as diameter passes through α , and similarly through β and γ . Whence it is easily proved that triangle $a\beta\gamma$ is similar to triangle BdG , i.e., to a triangle whose sides are respectively two-thirds of the medians of ABC.

* COR.—AA' is a chord of a circle bisecting another chord BC at D, and AP is perpendicular to BC. The segment BA'C is turned about BC through half a revolution, and in its new position cuts AD at D' and AP at P'. Then P'D' is perpendicular to AD.

[See CASEY'S Conics, second edition, page 436, in which the above is described as the ortho-centroidal circle.]

13892. (P. W. FLOOD.)—Inscribe a triangle in a given segment of a circle, having the sum of the perpendicular and segment of base a maximum.

Solution by H. W. CURJEL, M.A.

Let AKCB be the segment. Make angle $\angle ABK = \frac{1}{2}$ a right angle. Bisect arc KCB in C. Then ABC is the required triangle. Draw CD perpendicular to BA, cutting BK and BA in H and D.

Then $AD + DH = AB$, and CH is a maximum, since the distance from KB is a maximum.

$\therefore CD + AD$ is a maximum.

If BK does not cut the segment, then the sum of the perpendicular and segment of the base is greatest when C coincides with B.

13588. (H. W. CURJEL, M.A.)—Prove, by Euclid, Book I., that any triangle described on the hypotenuse of a right-angled triangle is equal to the sum of the triangles, equiangular to it, described on the other two sides.

Solution by the PROPOSER.

Lemma I.—A rhombus described on the hypotenuse of a right-angled triangle is equal to the sum of the rhombi equiangular to it described on the other two sides.

Let ABC be a triangle, right-angled at C, and let AE, AC; CD, CB; AF, AB be pairs of adjacent sides of the rhombi, containing equal angles, as in Fig. 1. Let EC meet BD in G. Then $\triangle AEF$ is clearly equal in all respects to $\triangle ACG$. Since the angles $\angle AEF, \angle ACB$ are right angles, the angles $\angle DCG, \angle CEF$ each $= \frac{1}{2} \angle CAE = \frac{1}{2} \angle DCB$; therefore $BG = GD$, and EF is equal and parallel to CD; therefore ECDF is a parallelogram, and is equal to the triangle FDB; therefore

$$\square ECDF + \triangle ABC = \triangle AEF + \triangle FDB.$$

Fig. 1.

Taking each of these equals from the whole figure EFDDBA, $\triangle AEC + \triangle BCD = \triangle ABF$.

Hence Lemma I.

[The rest in Vol.

13751. (Professor SANJANA.)—The equation of the ellipse touching the sides of a triangle at the mid-points is $\Sigma \sqrt{(aa)} = 0$. Prove that the centre of this ellipse is at the centroid of the triangle, and that one focus of it is the symmedian point of its own pedal triangle with regard to the original triangle. [This seems the easiest way of obtaining the fundamental property of STEINER'S foci.]

Solution by the Rev. J. CULLEN.

The first result is obtained by solving for α, β, γ in

$$\frac{1}{a} \frac{df}{d\alpha} = \frac{1}{b} \frac{df}{d\beta} = \frac{1}{c} \frac{df}{d\gamma}.$$

The foci satisfy the system

$$\begin{aligned} \beta_1\gamma_2 + \beta_2\gamma_1 + 2k^2 \cos A &= 2U' \\ &= \gamma_1\alpha_2 + \gamma_2\alpha_1 + 2k^2 \cos B \\ &= \alpha_1\beta_2 + \alpha_2\beta_1 + 2k^2 \cos C &= 2W' \end{aligned}$$

(WHITWORTH'S Modern Geometry, p. 267), and, since they are isogonal points, we have $\alpha_1\alpha_2 = 1, \beta_1\beta_2 = 1, \gamma_1\gamma_2 = 1, k^2 = 1$, also $U' = 2a^2bc, V' = 2b^2ca, W' = 2c^2ab$.

Now $Pm = \alpha_1 \sin \theta = \alpha_1 MA'/A'C' = \alpha_1 LP/A'C' = \alpha_1 \gamma_1 \sin B/A'C'$;

$$\therefore \frac{A'C'}{Pm} = \frac{\alpha_1^2 + \gamma_1^2 + 2\alpha_1\gamma_1 \cos B}{\alpha_1\gamma_1 \sin B},$$

and, if P is the symmedian point of $A'B'C'$, we have

$$\frac{A'B'}{Pn} = \frac{A'C'}{Pm} = \frac{B'C'}{Pl'}$$

which is easily seen to be the same as the system for the foci.

13678. (Rev. T. MITCHESON, B.A.)—In the triangle ABC, let AB be produced to F, CA to E, and BC to D; bisect the exterior angles by lines intersecting at α, β, γ , thus forming the triangles $a\beta\gamma, \beta aC, \alpha BC$, and $A\gamma B$. These triangles are equiangular, each angle being the arithmetical mean of the corresponding pair of the angles of ABC.

Solution by W. E. JEFFARES, B.A.; L. E. REAY, B.A.; and many others.

Bisect the external angles at A, B, C and α, β, γ . Where these lines meet are the centres of the escribed circles opposite A, B, C. Join $\alpha A, \beta B$, and γC ; these lines bisect the internal angles A, B, C, and meet in I, the centre of inscribed circles. Therefore $\triangle \alpha A C, \triangle \beta B A, \triangle \gamma C A$ are cyclic quadrilaterals;

therefore $\angle \alpha A \beta = \angle \angle C \beta$, and $\angle \angle \alpha C = \angle \angle B C$, and $\angle \angle \beta A C = \frac{1}{2} (B + C)$, $\angle \angle F B C = C + A$;

therefore $\angle \angle \alpha B C = \frac{1}{2} (C + A)$, $\angle \angle A C D = \angle \angle A + \angle \angle B$;

therefore $\angle \angle B C D = \frac{1}{2} (A + B)$. Hence the angles of triangle $\beta a C$ are $\frac{1}{2} (B + C), \frac{1}{2} (C + A)$, and $\frac{1}{2} (A + B)$. Similarly, the angles of the triangle $\beta C A$ are $\frac{1}{2} (C + A), \frac{1}{2} (A + B), \frac{1}{2} (B + C)$; and those of $\gamma A B = \frac{1}{2} (A + B), \frac{1}{2} (B + C), \frac{1}{2} (C + A)$ respectively; also those of $a\beta\gamma$ are $\frac{1}{2} (B + C), \frac{1}{2} (C + A), \frac{1}{2} (A + B)$. Hence the triangles are similar, and each of their angles is the arithmetical mean of the corresponding pair of the angles of ABC.

QUESTIONS FOR SOLUTION.

14104. (Professor ELLIOTT, F.R.S.)—X, Y, Z, O₁, O₂ are five points on any cubic; O₁X, O₁Y, O₁Z meet the cubic again in A, B, C respectively, and O₂X, O₂Y, O₂Z in A', B', C'. Prove that the points P, Q, R, where BC' and B'C, CA' and C'A, AB' and A'B respectively intersect, also lie on the cubic; and that PX, QY, RZ meet in a point on the cubic. Also prove conversely that, if O be a tenth point on any cubic of the pencil which passes through six points A, B, C, A', B', C' and through P, Q, R derived from the six as above, and if PO, QO, RO meet the cubic again in X, Y, Z respectively, then AX, BY, CZ meet in a point on the cubic, as also do A'X, B'Y, C'Z.

14105. (Professor CROFTON, F.R.S.)—If $u = x^2 + ax + b$, and we put for shortness the symbol $Du D = \omega$, then

$$D^n u^n D^n \equiv \omega (\omega - 1 \cdot 2) (\omega - 2 \cdot 3) \dots \{\omega - (n-1) \cdot n\}.$$

14106. (Professor G. B. MATHEWS, M.A.)—If the integers x, y are chosen at random, the chances are 31 to 18 in favour of $(x+y)^2 - x^2 - y^2$ being divisible by 49. What is the chance of divisibility by 343?

14107. (Professor NEUBERG.)—Résoudre le système
 $\tan(y+z) = a \tan x, \tan(z+x) = b \tan y, \tan(x+y) = c \tan z.$

14108. (Professor E. J. NANSON.)—If $Q(r, s)$ denote the per-symmetric determinant

$$\begin{vmatrix} c_r & c_{r+1} & \dots & c_{r+s} \\ \vdots & \vdots & & \vdots \\ c_{r+s} & c_{r+s+1} & \dots & c_{r+2s} \end{vmatrix}$$

and $Q(r, a+x) = 0$ ($x = 0, 1, \dots, b$), then $Q(r+\lambda, a+\mu) = 0$ where λ, μ are any positive integers whose sum does not exceed b .

14109. (Professor COCHEZ.)—On donne les deux paraboles $y^2 = 2py, x^2 = 2qy$. Lieu des points M tels que les tangentes issues de ces points à chaque parabole soient rectangulaires.

14110. (Professor SANJANA, M.A.)—In a triangle ABC, K is the symmedian point and O the circumcentre; on KA, KB, KC points A', B', C' are taken such that $KA' : KA = KB' : KB = KC' : KC = e$ (which may be positive or negative and less than unity or greater); through A', B', C' are drawn Y'A'Z, Z'B'X, X'C'Y anti-parallel to BC, CA, AB meeting these sides in X and X', Y and Y', Z and Z' respectively. Prove (1) that $YZ' = Z'X = X'Y = 2(1-e)abc/(a^2 + b^2 + c^2)$; (2) that YZ' is parallel to BC and $= a \{ (2e-1)a^2 + b^2 + c^2 \} / (a^2 + b^2 + c^2)$, with similar results for ZX' and XY' ; (3) that

$$XX' = a \{ a^2 + (b^2 + c^2)(2e-1) \} / (a^2 + b^2 + c^2),$$

with similar values for YY' and ZZ' ; (4) that the triangles XYZ, X'Y'Z' are equal to each other and similar to ABC; and that XYZ and ABC have the same positive BROCARD point, and X'Y'Z' and ABC the same negative one; (5) that

$$AZ : BX : CY = b/a : c/b : a/c, \text{ and } AY' : CX' : BZ' = b/c : c/a : a/b;$$

(6) that the points X, X', Y, Y', Z, Z' are situated on a circle whose centre lies on OK and coincides with the circumcentre of A'B'C'; (7) that the radius of this circle is $R \{ e^2 + (1-e)^2 \tan^2 \omega \}^{1/2}$; (8) that for values $1, \frac{1}{2}, 0$ of e the circle $XX'YY'ZZ'$ becomes respectively the circumcircle the triplicate-ratio circle, the cosine circle; (9) that when

$$e = -\cos A \cos B \cos C,$$

the circle becomes the TAYLOR circle, and its radius

$$= R(\sin^2 A \sin^2 B \sin^2 C + \cos^2 A \cos^2 B \cos^2 C)^{1/2};$$

(10) that when $e = \sin^2 \omega$, the centre of the circle bisects the line joining the BROCARD points, and its radius = $R \sin \omega$, which is the least value that the radius can ever have; and (11) that in a right-angled triangle the TAYLOR and cosine circles coincide. [All properties of TUCKER circles can thus be obtained by elementary trigonometry; the result in (11) is inaccurately given in MILNE'S Companion at p. 146.]

14111. (Professor A. DROZ-FARNY.)—Menons par l'orthocentre H d'un triangle ABC deux transversales Δ et Δ' perpendiculaires l'une sur l'autre. Il s'agit de démontrer que ces perpendiculaires déterminent sur chaque côté du triangle un segment dont les points milieux α, β, γ sont en ligne droite.

14112. (Professor UMES CHANDRA GHOSH.)—Find the altitude of the star η Tauri when it crossed the prime vertical of a place, whose latitude is 30° , in 3000 A.C., given that the longitude of the star was $39^\circ 8'$ in 560 A.D. and its latitude is $4^\circ 44'$.

14113. (D. BIDDLE.)—From one angle of a parallelogram draw a straight line to each of the opposite sides, such that, with the join of their distal extremities, three equal triangles may be cut off; and prove that the area of the remaining (central) triangle is to one of the former as $\sqrt{5} : 1$.

14114. (Rev. Dr. FREETH.)—AB is the diameter, and AC, the half of AB, the radius, of the generating circle ADB. Assume any chord AD. Join CD, producing AD to P so that DP is equal to radius CD. Thus P is a point in a trisectrix. Join CP, producing it to P_1 so that AP is equal to PP_1 . Join AP_1 . Hence P_1 is a point in a supertrisectrix. Produce CP_1 to P_2 so that AP_1 is equal to P_1P_2 . Join AP_2 . Thus P_2 is a point in a bisupertrisectrix. Bisect AC in E, and join P_2E . Let the angle $AP_2C = \theta, AC = r, CP_2 = R, AP_2 = R'$.

$$\text{Then } R = r \frac{\sin 11\theta}{\sin \theta}, R' = r \frac{12 \sin \theta}{\sin \theta}.$$

Show that (1), in the isosceles position, AP_2C is an isosceles triangle, having each base angle the undecuple of the vertical angle AP_2C ; (2) regarding the angle P_2AC , the curve is an undecasectrix; (3) adopting the angle P_2CB , the curve is a dodecasectrix; (4) on AC, in the isosceles position, by means of the isosceles triangle AP_2C , a regular icosatrigon is describable; (5) trace the curve; (6) find its area, tangent, and rectangular coordinates.

14115. (H. FORTY, M.A.)—A cheese is a cylinder of 2 feet in diameter, and is of variable quality, the part at the axis being worth 1s. 2d. per lb., and the quality deteriorating as the distance from the axis increases, so that at the circumference it is worth only 10d. per lb. An epicure buys a concentric cylindrical piece cut out of the centre and pays 4s. 11d. for it. What is the diameter of this piece? Given that the whole cheese is worth £1. 18s. 3d.

14116. (R. TUCKER, M.A.)—AD, BE, CF are the perpendiculars of a triangle and H is the orthocentre; a, b, c are the mid-points of BC, CA, AB respectively; aH, bH, cH produced meet EF, FD, DE in P, Q, R; prove that AP, BQ, CR meet in a point which is on the join of the symmedian point (K) and the orthocentre.

14117. (G. HALB PUCKLE, M.A.)—By the methods of Quest. 13535, No. 437, show that the equation to a conic, $\phi(xy) = 0$, is equivalent to $\rho^2 \{ a(ax+hy+g) + \beta(hx+by+f) + \Delta^2 \}^2 = (Cx-G-a\Delta^2)^2 + (Cy-F-\beta\Delta^2)^2$.

14118. (R. F. DAVIS, M.A.)—PQRS, Pqrs are two equal squares in contact at P whose corners S, s slide along the sides AB, AD of a third equal immovable square ABCD. Find the position of P in CA produced when the circle circumscribing CBRQPqrD shall be the least possible.

The loci of all the angular points of the moving squares are straight lines.

This is suggested by question: From a given circular sheet of paper show how to cut out three equal squares of maximum area.

14119. (Rev. W. ALLEN WHITWORTH, M.A.)—If out of m cards numbered 1, 2, 3 ... m we draw n cards at random, the expectation of the lowest drawn is $(m+1)/(n+1)$ and the expectation of the highest is $n(m+1)/(n+1)$.

[COROLLARY.—If n numbers be named at random the expectation of the highest is n times the expectation of the lowest.]

14120. (Rev. T. ROACH, M.A.)—Prove geometrically $\cot^{-1} 7 + \cot^{-1} 8 + \cot^{-1} 18 = \cot^{-1} 3$.

14121. (B. N. CAMA, M.A.)—If two parabolas touch at P, and their axes meet at O, then S, S', P, O are cyclic, S, S' being the foci. Hence, if S, S' be fixed points on fixed lines meeting at right angles in O, and two systems of parabolas be drawn having S, S' for their foci, and axes OS, OS', such that each parabola of one system touches the corresponding parabola in the other system, all the points of contact lie on a fixed circle. Generally, four parabolas of one system can be drawn to touch a given parabola of the other system. If the axes be parallel, show that the corresponding locus is a straight line.

14122. (The late "LEWIS CARROLL.")—It is given that (1), if C is true, then, if A is true, B is not true; and (2), if A is true, B is true. Can C be true? What difference in meaning, if any, exists between the following propositions?—(1) A, B, C cannot be all true at once; (2) if C and A are true, B is not true; (3) if C is true, then, if A is true, B is not true.

14123. (H. MACCOLL, B.A.)—Show that the two syllogistic canons of Quest. 14091 (with all valid syllogisms) are deducible from the formula

$$(A : B) (B : C) : (A : C),$$

which asserts that, if A implies B, and B implies C, then A implies C. The symbols A, B, C denote propositions.

14124. (G. H. HARDY.)—Prove that

$$\int_0^{\pi/12} \log \tan \phi \, d\phi = \frac{1}{3} \int_0^{\pi/9} \log \tan \phi \, d\phi = -4 \int_0^{\pi/6} \tanh^{-1} \tan \phi \, d\phi.$$

14125. (DISCIPULUS.)—If $(1+2x)^m/(1-x)$ be expanded in ascending powers of x , prove that the coefficient of any power of x greater than $m-1$ is 3^m , m being a positive integer.

14126. (Rev. J. CULLEN, B.A.)—A triangle $D_\mu E_\mu F_\mu$ is constructed homothetic with the triangle DEF of a TUCKER circle T_μ , Ω being the homothetic centre, and μ the modulus of similarity compared with DEF. In like manner $D'_\mu E'_\mu F'_\mu$ is obtained from D'E'F' and Ω' . Show that (1) the homologous sides of these triangles intersect those of ABC on another TUCKER circle T_μ , where

$$\tan \phi = \sin^2 \theta + (\mu-1) \sin^2 \omega / \sin \theta \cos \theta - (\mu-1) \sin \omega \cos \omega;$$

(2) T_μ is the common T_μ of $D_\mu E_\mu F_\mu$ and $D'_\mu E'_\mu F'_\mu$; (3) the circle concentric with T_μ and passing through Ω and Ω' also passes through the B-points of the DEF triangles of T_μ with respect to ABC, $D_\mu E_\mu F_\mu$, and $D'_\mu E'_\mu F'_\mu$, and through the centres of T_μ and $T_{\mu-\psi}$ ($2\psi = \phi - \omega$), and is coaxial with the circumcircle and $T_{\mu-\psi}$; (4) the condition for a common B-circle is $\phi = \theta + \omega$.

[In Quest. 13850, May 1898, $\mu = 2, \theta = \frac{1}{2}\pi, \phi = \frac{1}{3}\pi$. There is also another interesting case when $\mu = 2, \theta = \omega, \phi = \frac{1}{2}\pi$.]

14127. (REV. T. MITCHESON, B.A.)—Show that
 $(p+q)!/p!q! = 1 + pq + p(p-1)q(q-1)/(2!)^2$
 $+ p(p-1)(p-2)q(q-1)(q-2)/(3!)^2 + \&c.$

14128. (G. W. PRESTON, B.A.)—Show that

$$(i.) \frac{\sum (y-z)^2}{\sum (y-z)^2} - 4\pi (y-z)^2 = \{ \sum x^2 - \sum yz \}^2;$$

$$(ii.) \frac{\sum \frac{b+c+d}{abct(b-a)(c-a)(d-a)(x-a)}}{\sum \frac{a+b+c+d-x}{(x-a)(x-b)(x-c)(x-d)}}.$$

[See CHRYSTAL'S *Algebra*.]

14129. (R. KNOWLES, B.A.)—Prove that the $(r+1)$ th terms in the expansions of $(1+x)^{m+n}$ and $(1-x)^{m-n}$ are respectively

$$\frac{(m+n-nr)(m+2n-nr)(m+3n-nr) \dots \text{to } r \text{ terms}}{n! \cdot r!};$$

$$\frac{(n-m-nr)(2n-m-nr)(3n-m-nr) \dots \text{to } r \text{ terms}}{n! \cdot r!}.$$

14130. (J. J. BARNIVILLE, B.A.)—Having $u_{n-1} + u_{n+1} = 6u_n$, prove that

$$\frac{1}{1+1} + \frac{1}{5+1} + \frac{1}{29+1} + \frac{1}{169+1} + \dots = \frac{1}{\sqrt{2}}.$$

$$\frac{1}{5+7} + \frac{1}{13+7} + \frac{1}{73+7} + \frac{1}{425+7} + \dots = \frac{1}{9\sqrt{2}-6}.$$

$$\frac{1}{3+3} + \frac{1}{17-3} + \frac{1}{99+3} + \frac{1}{577-3} + \dots = \frac{1}{4}.$$

$$\frac{1}{17+3} + \frac{1}{99-3} + \frac{1}{577+3} + \frac{1}{3563-3} + \dots = \frac{1}{18}.$$

14131. (ROBERT W. D. CHRISTIE.)—Let a and b be the successive number of terms in a *Continuant*; then $a^2 + ab - b^2 = \pm 1$ alternately.

14132. (I. ARNOLD.)—Describe a square in a given sector having two angular points on the arc and the other two on the radii.

14133. (LT.-COL. ALLAN CUNNINGHAM, R.E.)—Find a sum of successive odd cubes equal to a square.

14134. (C. E. HILLYER, M.A.)—O is the circumcentre of the triangle ABC, and P, Q, R the images of O with respect to the sides; D, E, F are the feet of the perpendiculars, and abc the triangle formed by drawing tangents to the circumcircle at A, B, and C. Prove that PD, QE, RF are concurrent in the orthocentre of abc .

14135. (PROFESSOR THOMAS SAVAGE.)—For what positive integral value or values of n is $(n+1)^n - n^n$ divisible by $2mn+1$, where m is any positive integer?

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXIX. of the "*Mathematical Reprint*" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.O. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, January 12th, 1899.—Professor Elliott, V.P., F.R.S., and subsequently Lt.-Col. Cunningham, R.E., V.P., and Dr. Hobson, F.R.S., in the Chair. Present, fourteen members and a visitor.

Professor Elliott referred, in feeling terms, to the recent death of the Rev. B. Price, F.R.S., who was elected a member, June 26th, 1866.

Dr. Morrice read a paper on "Linear Transformation by Inversions."

Mr. H. M. Macdonald, M.A., spoke on the "Zeroes of the Bessel Functions" (in continuation of a former paper on the subject).

Lt.-Col. Cunningham communicated a short paper by Mr. Biddle, M.R.C.S., entitled "A Simple Method of Factorizing large Composite Numbers of any unknown form." Messrs. Lawrence and Western made a few remarks on this paper.

Dr. Hobson communicated the following papers, in abstract:—

"On a Determinant each of whose Elements is the Product of k Factors," Professor W. H. Metzler.

"Properties of Hyperspace, in relation to Systems of Forces, the Kinematics of Rigid Bodies, and Clifford's Parallels," Mr. A. N. Whitehead, M.A.

And "On the Reduction of a Linear Substitution to its Canonical Form," Professor W. Burnside, F.R.S.

GEORGE PHILIP & SON'S LIST.

BLACKBOARD STUDIES.

BLACKBOARD DRAWING STUDIES. By HELEN PHILLIPS. With Hints and Directions by KATHARINE PHILLIPS, Lecturer for the London School Board. 24 Designs, consisting of Curved and Right Line Objects, Plant Forms, Animals, &c. Boldly printed in silver line on sheets of blackboard paper. Size 22x14 inches. In cardboard box, net, 6s.

"The best investment of the year, for it cannot be too highly praised."—*Girls' and Infants' Mistress.*

TRIGONOMETRY.

TRIGONOMETRY AT A GLANCE. By means of a novel mechanical device. By G. W. USILL and F. J. BROWNE. Price 2s. net.

"The simple contrivance designed by Messrs. Usill and Browne enables the student to give concrete expression to the various trigonometrical functions and to represent graphically the functions of an angle and its complement. It should be of service to students who have a difficulty in grasping abstract principles."—*Academy.*

NEW AND REVISED EDITION.

The Temple Reader.

300 pp.
1/6

Edited by E. E. SPEIGHT, B.A. Lond.

300 pp.
1/6

WITH AN INTRODUCTION BY

Prof. EDWARD DOWDEN, LL.D., Litt.D.

Entirely New in Form, Enlarged, and Illustrated.

THE TEMPLE READER, which now forms the first volume of MESSRS. HORACE MARSHALL & SON'S "NEW ENGLISH SERIES," has been completely changed since its first appearance last year. An arrangement has been devised by which the extracts are presented in a definite sequence of ideas, more than 50 pieces have been added, and an important feature is the introduction of portraits and reproductions of great paintings, amongst which are Pinturicchio's *Return of Ulysses*, Turner's *Ulysses Deriding Polyphemus*, Guido Reni's *St. Michael*, and Michael Angelo's *Moses*, with portraits of John Keats, Mrs. Browning, Charles Lamb, and Dr. Johnson.

CONTENTS.

Eighty great writers and famous books have been laid under contribution in the preparation of THE TEMPLE READER, among them being:—

Alderson, Bacon, Blake, Charlotte Brontë, Bunyan, Burns, Carlyle, Cervantes, Chapman, Coleridge, Dante, Defoe, Earle, Froissart, Goldsmith, Gray, Hakluyt, Herbert, Herodotus, Herrick, Homer, Keats, Lamb, Landor, Livy, Longfellow, Malory, George Meredith, Milton, Montaigne, Pliny, Prescott, De Quincey, Ruskin, Shakespeare, Shelley, Sidney, Sterne, Swift, Thoreau, Jeremy Taylor, Whitman, Wordsworth, Xenophon, and others; also various Books of the Bible, the "Norse Edda," "Beowulf," "The Song of Roland," "The Volunga Saga," and "The Arabian Nights."

N.B.—THE TEMPLE READER was requisitioned by the London School Board on appearance.

SOME OPINIONS.

Prof. JOSEPH WRIGHT, M.A., Ph.D., writes: "This New Edition far surpasses any Reader I have ever seen in any language."

Miss ETHEL R. LUSH, Organizing Mistress to the Ipswich School Board writes: "After six months' use of the 'Temple Reader,' the girls find it as fascinating as ever. I have never before met with a Reader capable of arousing and sustaining the interest of elder girls to such an extent. It has given them a love of the beautiful in literature, which cannot fail to influence them in after life."

EDUCATION.—"A book that has a distinct *raison d'être*. It is not written down to boys and girls. The Editor is too ardent a believer in the humanities for this. . . . We venture to think that this will be an excellent book in the hands of good teachers. . . . We can imagine it providing material for ideal lessons in literature."

Miss CHARLOTTE M. MASON writes: "I am greatly pleased with the 'Temple Reader,' and wish to make it known. It is the most successful effort of the kind I have seen."

Prof. J. M. D. MEIKLEJOHN: "It is an admirable book in every way. The selection is excellent—made by a man who knows the best in our literature, and who has the courage to give it. I like particularly the mottoes; and I also like the complete absence of notes."

Prof. F. YORK POWELL: "It is excellent, and the best that I have seen."

THE NEW ENGLISH SERIES.

Other Volumes ready of this Series, to include Selections from the great literature of the world, and to be issued at a price which will place them within the reach of all, are:—

I. Selections from Wordsworth's Poems. Edited by E. E. SPEIGHT, B.A. With an Introduction by Dr. EDWARD CAIRD, Master of Balliol. 96 pp. in stiff cover. Price 6d. net.

II. Lamb's Adventures of Ulysses. Edited by E. E. SPEIGHT, B.A. With an Introduction by Sir GEORGE BRIDWOOD, K.C.I.E., LL.D. With Ancient Greek Illustrations. 112 pp. in linen cover. Price 10d. net.

To be followed by:—

III. Stories from the Northern Sagas. Edited by E. E. SPEIGHT, B.A., and ALBANY F. MAJOR. With an Introduction by Prof. F. YORK POWELL. [End of February.]

IV. The New English Poetry Book. Edited by E. E. SPEIGHT, B.A. [End of March.]

THE STORY OF THE EMPIRE SERIES.

WILLIAM BLACKWOOD & SONS, EDINBURGH AND LONDON.

SMITH, ELDER, & CO.'S LIST.

"A DEFINITIVE BIOGRAPHY."—*Pall Mall Gazette*.

Third Edition. With Two Portraits of Shakespeare, a Portrait of the Earl of Southampton, and Facsimiles of Shakespeare's known Signatures. Crown 8vo, 7s. 6d.

A LIFE OF WILLIAM SHAKESPEARE.

By SIDNEY LEE,

Editor of "The Dictionary of National Biography."

Times: "A marvel of research, and, though we find it hard to agree with all the author's conclusions, it is, on the whole, remarkably temperate, judicious, and convincing. . . . Never before has learning been brought to bear upon Shakespeare's biography with anything like the same force."

Literature:—"Mr. Lee's work, both for its literary qualities and its scholarship, does credit to English letters, and it will probably be regarded for years to come as the most useful, the most judicious, and the most authoritative of all existing biographies of the poet."

Spectator:—"Unquestionably one of the most remarkable achievements of modern English scholarship."

Westminster Gazette:—"An indispensable work to the Shakespearian student; indeed, the classic of the subject."

Just published. Crown 8vo, 6s.

INTRODUCTION TO THE STUDY OF THE RENAISSANCE.

By Mrs. LILIAN F. FIELD.

Academy:—"Mrs. Field seems to us to have accomplished her difficult task very well. The book is capitally ordered and arranged; the essential is properly kept in the foreground, and the writing is clear, sympathetic, and scholarly."

Daily Chronicle:—"A thoroughly creditable piece of work, sufficiently concise for educational purposes, and likely at the same time to be acceptable to a reader of literary taste."

New Work by the Author of "Deeds that Won the Empire."

Second Edition. With 16 Portraits, 13 Plans, and a Facsimile Letter of the Duke of Marlborough. Crown 8vo, 6s.

FIGHTS FOR THE FLAG.

By W. H. FITCHETT ("Vedette").

Journal of Education:—"No one does these battle-pieces in black and white better than Mr. Fitchett. He chooses good subjects, and tells the story vividly and with spirit. His heart is evidently in his work, and he carries his reader along with him."

School Guardian:—"Quite worth the money, and, whether as a prize or an addition to our libraries, it is sure to be popular."

By the same Author.

Adopted as a Prize-Book by the School Board for London.

Chosen for Holiday Reading at Harrow and Winchester.

Eighth Edition. With 16 Portraits and 11 Plans. Crown 8vo, 6s.

DEEDS THAT WON THE EMPIRE: Historic Battle Scenes.

Spectator:—"Not since Macaulay ceased to write has English literature produced a writer capable of infusing such life and vigour into historical scenes. The wholesome and manly tone of Mr. Fitchett's book is specially satisfactory."

A SIMPLE GRAMMAR OF ENGLISH NOW IN USE.

By JOHN EARLE, M.A., Rector of Swanwick; Rawlinsonian Professor of Anglo-Saxon in the University of Oxford; Author of "English Prose; its Elements, History, and Usage," "The Philology of the English Tongue," &c.

Crown 8vo, 6s.

Athenæum:—"Professor Earle's book is extremely interesting, and contains a great deal of original and useful information."

Guardian:—"Cannot fail to help any one who reads it attentively to think and speak and write with accuracy and precision. . . . We should like to see the 'Simple Grammar' in the hands of every educated man and woman."

By the same Author.

ENGLISH PROSE: its Elements, History, and Usage. 8vo, 16s.

Works by the late Professor JOHN MARSHALL, F.R.S., F.R.C.S.

A DESCRIPTION OF THE HUMAN BODY: its Structure and Functions. Illustrated by reduced copies of the Author's "Physiological Diagrams," to which series this is a companion work. Designed for the use of Teachers in Schools and of Young Men destined for the Medical Profession, and for Popular Instruction generally. By the late JOHN MARSHALL, F.R.S., F.R.C.S.

The work contains 260 quarto pages of text, bound in cloth, and 240 Coloured Illustrations arranged in 11 folio plates, measuring 15 inches by 7½, in a limp cover. Price of the Quarto Volume and Small Folio Atlas, 12s. 6d.

Prepared for the Department of Science and Art.

PHYSIOLOGICAL DIAGRAMMS. Extended and Revised by the Author. 11 Diagrams, life-size, each on paper 7 ft. by 3 ft. 9 in., coloured in facsimile of the originals. Price 12s. 6d. each sheet; or mounted on canvas, with rollers, and varnished, £1. 1s. each. Explanatory Key, 16 pages, 8vo, price 1s.

1. The Skeleton and Ligaments. 2. The Muscles and Joints, with Animal Mechanics. 3. The Visceræ in Position; the Structure of the Lungs. 4. The Heart and Principal Blood-vessels. 5. Lymphatics or Absorbents. 6. The Digestive Organs. 7. The Brain and Nerves. 8. The Organs of the Senses—Plate I. 9. Ditto—Plate II. 10. The Microscopic Structure of the Textures and Organs—Plate I. 11. Ditto—Plate II.

Nos. 1, 3, 4, and 6 are specially adapted for use in Pupil Teachers' Centres and Certificate Classes as Aids in the Instruction of Domestic Economy.

Messrs. SMITH, ELDER, & CO. will be happy to forward an Illustrated Prospectus of the Diagrams post free on application.

SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French. Price 2s. 6d. cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly*.

"The English Idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.

"The exercises in the use of idioms are specially good."—*Bookman*.

"Will be found serviceable for rapid drill in the hands of a judicious teacher."—*Educational Times*.

"Would afford useful practice for intending candidates."—*Education*.

"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints, and one or two slips that we have noticed."—*Journal of Education*.

"We are great advocates of abundant exercises, hence our immediate approval of this book."—*School Guardian*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

THE PUBLIC SCHOOL SPELLING CARD.

By the same Author.
Twenty-fourth Thousand. Price 6d.

Containing nearly 1,000 words in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than 15 years, with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

French Essentials and French Conversation Sentences.

Second Edition. Price 2s., cloth; 1s. 6d., boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"Students preparing for examination in French Grammar and Composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

LONDON: LONGMANS & CO.

PETTY'S ELEMENTARY LESSONS IN DESIGN.

A Method of Instruction in FREEHAND DRAWING and DESIGN

by means of the

ELEMENTARY PRINCIPLES OF ORNAMENT.

BY

J. PETTY, Art Master and Drawing Instructor to the Leeds School Board.

IN SIX DRAWING BOOKS (Nos. 1 to 6, each 2d.) varying in difficulty, and commencing with No. 1 for the Lowest Division of a School.

Each book provides both the Copy and the Paper upon which to draw, with full Instructions for designing each Exercise and for making a new design on similar lines.

In all the Exercises some Simple Element is used, and, by easy rules, such as repetition and contrast, the Design is formed. The given Design is first completed, often with the aid of a ruler, after the teacher has explained its features. The same Exercise is then repeated, partly with the aid of a ruler, and partly freehand. The Example is then to be rearranged, with any new feature that the child can invent or the teacher suggest.

A SUPPLEMENTARY BOOK (Book VII. 32 pp., Price 6d.) consists of selected designs from Nos. 1 to 6 for the use of children in Upper Classes who have not had any preliminary training in the lower parts of the school.

Instead of shading the designs, colour may be introduced by means of crayons or water-colours.

Descriptive and Illustrated Circular, with sample pages, post free.

E. J. ARNOLD & SON, LIMITED, LEEDS.

EDUCATIONAL WORKS BY A. K. ISBISTER, M.A., LL.B.

BOOK I. Beautifully Illustrated. 128 pages, cloth boards, 9d.

"A capital little book for the juniors."—*Head Teacher*.

BOOK II. Beautifully Illustrated. 146 pages. Cloth boards, 10d.

"A most useful Reader."—*Board Teacher*.

BOOK III. Beautifully Illustrated. 177 pages. Cloth boards, 1s.

TEACHERS' HANDBOOK to accompany the above Readers, containing Notes on Apparatus, Summaries of Lessons, and Blackboard Outlines. Price 1s. 6d.

ROYAL SCIENCE READERS WALL SHEETS.

Illustrations printed in Tints.

FIRST SERIES, for Book I., 22 Sheets on one Roller, price 10s. 6d. the set.

SECOND SERIES, for Book II., 20 Sheets on one Roller, price 10s. 6d. the set.

THIRD SERIES, for Book III., 20 Sheets on one Roller, price 10s. 6d. the set.

The sheets are sold also separately, unmounted, price 1s. each. List on application.

FRENCH AND GERMAN TAUGHT BY A NATURAL METHOD.

NOW READY.

ELEMENTARY OBJECT LESSONS IN FRENCH. Book I.

By ALEC CRAN, M.A.,

Senior French Master, Royal High School, Edinburgh; Examiner in French and German for the University of Aberdeen.

Post 8vo, cloth. With many Illustrations. Price 1s. 6d.

In this book French is taught by a carefully-graded series of Reading and Conversation Lessons, which are fully illustrated by pictures and diagrams. The book contains Grammar, Exercises in Phonetics, a Synopsis of Grammatical Rules, and French-English and English-French Vocabularies.

ALREADY PUBLISHED.—A COMPANION TO FRENCH GRAMMARS.

OBJECT LESSONS IN FRENCH. Book II.

By ALEC CRAN, M.A.

With numerous Illustrations, Exercises, French and English Vocabulary. 122 pp. Cloth, 1s. 6d.

"We strongly recommend it to our readers."—*Head Teacher*.

NEW AIDS TO ORAL FRENCH LESSONS.

FRENCH OBJECT LESSON WALL SHEETS.

A Series of 11 Sheets, 21 inches by 31 inches, printed in Tints on strong Manilla paper, and mounted on Roller. Price 15s. per Set.

*. * A Specimen Copy post free to Teachers for Half-price.

JUST PUBLISHED.

MÉTHODE NATURELLE POUR APPRENDRE LE FRANÇAIS.

Fondée sur l'Enseignement Intuitif.

By GEORGE HOGBEN, M.A.

Containing numerous Lessons and Exercises, French Grammar, English to be translated into French, and a full French-English Vocabulary.

Post 8vo, cloth. With many Illustrations. 332 pp., price 3s. 6d.

"The main idea underlying the lessons in this book is that a foreign language should be learned as the mother tongue was, by using it as the direct vehicle of expression of the common facts of life."—*Extract from Preface*.

JUST PUBLISHED.—A COMPANION TO GERMAN GRAMMARS.

OBJECT LESSONS IN GERMAN.

Being a translation of "Object Lessons in French" by ALEC CRAN, M.A.

By J. J. TROTTER, M.A.,

German Master, Royal High School, Edinburgh.

Post 8vo, cloth. With many Illustrations. Price 2s.

The underlying principle of the book is that first lessons in a living language should be given orally, with the help of pictures, the object being to help the pupil's memory by associating the name with the thing seen.

A

Shilling Arithmetic.

BY

CHARLES PENDLEBURY, M.A., F.R.A.S.,
Senior Mathematical Master of St. Paul's School,

AND

W. S. BEARD, F.R.G.S.,

Headmaster of the Modern School, Fareham.

This book is intended for the lower and middle forms of Secondary Schools. It will be found adapted especially for the use of candidates for the Oxford and Cambridge Junior Local Examinations, the Scotch Universities' Locals, County Council Scholarships, and for Examinations conducted by the College of Preceptors, the Board of Intermediate Education for Ireland, &c., &c.

Throughout the book fully worked-out examples have been inserted to illustrate the theory explained in the text, and to serve as models for the pupil. The examples for exercise, numbering 4,500, are carefully graduated. The sets of miscellaneous examples are mostly taken from examination papers set at the Examinations referred to above. Questions involving unnecessarily long and tedious calculations have been excluded from the book, as unsuitable for the Junior Students for whom the book is intended.

By the same Authors.

Commercial Arithmetic.

SECOND EDITION. *Crown 8vo. 250 pages. 2s. 6d.*

This book is based upon Mr. Pendlebury's "Arithmetic for Schools," and upon the scheme suggested by the Education Department for Students in Evening Continuation Classes. It also meets the requirements of pupils on the modern or mercantile side of Secondary Schools who may be preparing for a business career.

It is assumed that students have already received a good grounding in the simple and compound rules, reduction of weights and measures, elementary fractions, and the unitary method of solving problems; but methods which shorten work in the simple and compound rules are dealt with. Methods of approximation are explained, and short methods for the mental calculation of prices are also given.

The sections dealing with such important branches of Commercial Arithmetic as Percentages and their applications, Bills of Exchange, Foreign Exchange, Stocks and Shares, are as complete as the necessary limits of space allow. The questions for written work are carefully graduated, and are such as are met with in actual business. Throughout the book examples have been taken from papers set at Oxford and Cambridge Local Examinations, by the Education Department, the London Chamber of Commerce, the College of Preceptors, the Society of Arts, the Institute of Chartered Accountants, and other examining bodies.

Specimen Copy of the above books sent post free on receipt of half the published price.

Just Published.

THE ART OF WRITING ENGLISH.

A Manual for Students.

With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters.

By J. M. D. MEIKLEJOHN, M.A.

Cr. 8vo, 340 pp., 2s. 6d.

"This book has been written for the purpose of guiding the young student into the right path, and of saving him from wasting his time in exercises that are not only of no use to him, but are positive hindrances in the way of his learning to write good, clear, and firm English. The use of analysis as a guide to composition—as it is sometimes called—proves to be the veriest slough of Despond, in which the student can neither swim nor walk. The writer has not worried his pupils with a large number of rules and meticulous directions, but has tried to set their feet in a plain path, has tried to show them the road to freedom and power—and perhaps even to delight in adequate and rhythmic expression."

The Comparative Atlas. By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. Containing 64 Plates and General Index 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."—*The Teachers' Monthly*.

"This is certainly the most comprehensive work ever published at the moderate price of half-a-crown. From the attractive frontispiece, representing the flags of all nations, to the final page on geographical etymology, there is not a wasted inch."—*The Teachers' Review*.

A New Arithmetic. By G. A. CHRISTIAN, B.A. Lond. and G. COLLAR, B.A., B.Sc. Lond. Crown 8vo, 562 pp. Second Edition 4s. 6d.

"We recommend teachers and students to judge for themselves what a powerful auxiliary to success has been given them by the experience and judgment of the able authors."—*The Schoolmaster*.

"We all welcome it because in several of its chapters—such, for example, as those on factors, decimal fractions, involution and evolution, surds and logarithms—it seems to us to mark a distinct advance on the majority of its predecessors."—*The School Guardian*.

"We consider it so satisfactory that we have at once placed it on our list of books."—*The Rev. G. H. S. Walpole, D.D., Principal, Bede College, Durham*.

The English Language: its Grammar, History, and Literature. By J. M. D. MEIKLEJOHN, M.A. Seventeenth Edition. Enlarged, with Exercises and additional Analysis. Crown 8vo, 470 pp. 4s. 6d.

"For the first class College of Preceptors your work is most excellent and valuable."—*The Rev. F. Marshall, M.A., Almondbury Grammar School*.

"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—*W. Johnson, Esq., B.A., Elmfield College, York*.

A New Geography on the Comparative Method. With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. Twenty-first Edition. 115th Thousand. Crown 8vo, 630 pp. 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of Geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education*.

"For all that is best worth knowing no better book than this could be studied."—*The Educational News*.

A New History of England and Great Britain. With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Thirteenth Edition. Crown 8vo, 740 pp. 4s. 6d.

"We like the arrangement of the text, which is a distinct success for the purpose of catching the eye. We shall have much pleasure in warmly recommending it to our H.C.S. Class II. candidates."—*Messrs. Wren & Gurney, Powis Square, London*.

The Principles and Practice of Teaching and Class Management. By JOSEPH LONDON, F.G.S., Vice-Principal in the Salfley Training College. Third Edition. Crown 8vo, 462 pp. 5s. 0d.

"We have no hesitation in saying that this is one of the best treatises on this subject which has appeared for some time, and we cannot too strongly recommend it to the attention of all interested in the practical work of education."—*The Educational News*.

London: a Short History. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. Crown 8vo, 268 pp. 1s. 6d.

"This book is a successful attempt to place before the school-children of London some of the important geographical and historical facts connected with the great metropolis. The facts are presented in language suitable to the children's requirements, and every thing has been done to make the volume attractive and readable."—*The Teachers' Aid*.

A School Algebra for Junior Forms. By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. 1s. 6d.
With Answers, 266 pp. 2s. 0d.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent*.

"The scientific method, from known to unknown, from Arithmetic to Algebra, has invariably been adopted, while lucid explanations and proofs precede oral exercises, followed in turn by numerous carefully graduated examples for attaining the necessary mechanical accuracy."—*The Educational News*.

The United States: their Geography, Resources, Commerce, and History. By M. J. C. MEIKLEJOHN, B.A. 92 pp. 6d.

"Useful tables of products, exports, distances, &c., are given, and many valuable hints on map practice. The book is brightened by numerous quotations from travellers, geographers, and historians. A little book of great value to the student."—*The Practical Teacher*.

Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery. By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. 6d.

"This book is up to date in every detail; there is a very good and useful map as frontispiece, and the paragraph arrangement is adopted. The student will find it a very desirable text-book on this portion of Greater Britain."—*The Pupil Teacher*.

Africa: its Geography, Resources, and Chronicle of Discovery up to 1897. By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. 4d.

"This little book is, for its size, remarkably full of information about Africa, and gives pithy explanations of such current expressions as 'sphere of influence' and 'hinter-land,' &c."—*The Teachers' Aid*.

The British Colonies and Dependencies: their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Second Edition. Crown 8vo, 96 pp. 6d.

"This manual is terse and full; intelligently paragraphed and skillfully managed typographically. It does credit to the compiler, and we hope this work may gain the recognition it really merits."—*The Educational News*.

A Short Geography, with the Commercial Highways of the World. Thirteenth Edition. Crown 8vo, 196 pp. 1s.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.

"Clearness and conciseness exemplified."—*The Private Schoolmaster*.

A Short History of England and Great Britain. B.C. 55 to A.D. 1890. Tenth Edition. Crown 8vo 1s.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises. Ninth Edition 1s.

This little book is written in the clearest and simplest style for beginners. It contains:—

- | | |
|---------------------------------|---|
| i. The Simplest Definitions. | iv. Graduated Methods of Parsing. |
| ii. Slowly graduated Exercises. | v. Bad Grammar Corrected, with Reasons. |
| iii. Clearly printed Tables. | vi. Analysis, with Plain Diagrams. |

A New Spelling Book. With Side Lights from History. Sixth Edition. Crown 8vo, 152 pp. 1s.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

The Spelling List. For Civil Service and other Examinations. With a Key to Correct Spelling. Third Edition. Crown 8vo, 146 pp. 1s.

"Your 'Spelling List' is a very decided advance in the right direction, ably conceived, and brilliantly written. We shall certainly strongly recommend it to our pupils."—*The Rev. H. P. Gurney, M.A. (Messrs. Wren & Gurney), Powis Square, London*.

A New Poetry Book for the use of Schools and Families. Fourth Edition. 156 pp. 1s. 0d.

"This neatly bound little collection, which is one of Professor Meiklejohn's series of school manuals, may be confidently recommended to teachers in search of new selections for recitation."—*The Schoolmaster*.

 Herodotus. Book VI. E. S. SHUCKBURGH. 4s.
 Xenophon. Anabasis, Books II. and IV.* G. M. EDWARDS. 1s. 6d. each.

* These volumes are in the *Cambridge Series for Schools and Training Colleges*.

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor: W. H. WOODWARD, of Christ Church, Oxford, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University.

The following works are now ready:—

GRAY.—ODE ON THE SPRING AND THE BARD. Edited, with Introduction and Notes, by D. C. TOVEY, M.A. 8d.

MACAULAY.—ESSAY ON BUNYAN'S PILGRIM'S PROGRESS. Edited, with Introduction and Notes, by A. D. INNES, M.A. 1s.

MILTON.—LYCIDAS AND COMUS. Edited, with Introduction, Notes, and Glossary, by A. W. VERITY, M.A. 2s.

Educational Times.—"We can heartily recommend the book."

Bookman.—"Much of the auxiliary matter here is recast from the Pitt Press edition. It is none the less admirable on that account, and includes all that is required by the student."

XENOPHON.—ANABASIS II., III., and IV. Edited, with Notes and Vocabulary, by G. M. EDWARDS, M.A., Fellow and Classical Lecturer of Sidney Sussex College, Cambridge. 1s. 6d. each.

CICERO.—IN CATILINAM I. Edited, with Introduction, Notes, and Vocabulary, by J. H. FLATHER, M.A. 1s. 6d.

VERGIL.—AENEID I., IX., and XII. Edited, with Introduction, Notes, and Vocabulary, by A. SIDGWICK, M.A. 1s. 6d. each.

School Guardian.—"For a small edition this is one of the most compact and complete possible. We recommend it to all students who want to read Vergil for the first time, and to read it well."

CAESAR.—DE BELLO GALlico, Books I. (1 to 29), II., III., and IV. With Introduction, Notes, and Vocabulary, by E. S. SHUCKBURGH, M.A. 1s. 6d. each.

Other Volumes in preparation. Full Prospectus on application.

ENGLISH GRAMMAR.

NEW AND ENLARGED EDITION.

The Elements of English Grammar. A. S. WEST. 2s. 6d.

Prefatory Note to the Enlarged Edition.—"Some hundreds of additional Questions and Examples are given in the present edition, and in a few places the wording of the text has been altered. The numbers of the paragraphs remain the same."

Guardian.—"We note with satisfaction that Mr. Alfred West's 'Elements of English Grammar' has now reached its second edition and twenty-six thousand, thus tending to justify the prophecy as to its future popularity which we ventured to utter on its first appearance in 1893. . . . For thoughtful students in the upper forms of secondary schools we know of no more suitable work."

An English Grammar for Beginners. A. S. WEST. 1s.

Schoolmaster.—"It is a capital little work, which we can heartily recommend."

CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES.

First Book of Kings.* Rev. Prof. LUMBY. 3s. 6d.

Books of Ezra and Nehemiah.* Rev. H. E. RYLE. 4s. 6d.

Book of Jeremiah. Rev. A. W. STREANE. 4s. 6d.

Gospel according to St. Matthew.* Rev. A. CARR. 2s. 6d.

Gospel according to St. Mark.* Rev. G. F. MACLEAR. 2s. 6d.

Acts of the Apostles.* Rev. J. R. LUMBY. 4s. 6d.

* Smaller Editions, 1s. each.

THE TEACHING OF MODERN FOREIGN LANGUAGES IN OUR SECONDARY SCHOOLS. By K. H. BREUL, Litt.D., Ph.D., University Lecturer in German. Crown 8vo, 2s.

Bookman.—"Teachers of modern languages should pay special attention to this book. It is full of wise suggestion and real help."

PITT PRESS SERIES.—New Volumes.

ARISTOPHANES.—CLOUDS. Edited by C. E. GRAVES, M.A., Fellow of St. John's College, Cambridge. 3s. 6d.

JUVENAL.—SATIRES. Edited, with Introduction, Notes, and Index, by J. D. DUFF, M.A., Fellow of Trinity College, Cambridge. 5s.

Extract from Preface.—"Perhaps it is reason enough for adding another to the many English editions of Juvenal that all our recent editors have excluded the Sixth Satire, the most brilliant in detail and by far the longest of Juvenal's poems. The present edition includes 530 lines of this celebrated piece. The Second and Ninth Satires, some paragraphs of the Sixth, and a few lines in other Satires, are not included in this edition."

Athenaeum.—"One of the best school-books which we have seen for some time. . . . The notes are capital."

Guardian.—"We welcome Mr. Duff's volume with great pleasure. It is, in our opinion, the first short edition of Juvenal, published in England and suited to schools, which can be called satisfactory and scholarly. . . . For the present it seems to us the best English school edition of Juvenal."

BOILEAU.—L'ART POETIQUE. Edited, with Introduction and Notes, by D. NICHOL SMITH, M.A. 2s. 6d.

Guardian.—"The book should be highly acceptable to adult students of French literature, the more especially as it is the first critical edition published in this country."

Subjects for Cambridge Local Examinations, 1899.

DUMAS.—LA FORTUNE DE D'ARTAGNAN. With Introduction, Notes, and Vocabulary. Edited by A. R. ROPES, M.A. 2s.

SAINTINE.—PICCIOLA. The Text, with Introduction, Notes, and Map, by A. R. ROPES, M.A. 2s.

Complete Catalogues of the publications of the Cambridge University Press may be had on application.

JUNIOR FORMS EXAMINATION.—PASS LIST, CHRISTMAS, 1898.

BOYS.

Table listing names of boys and their respective schools. Columns include names like Aberdein, J.H., Achurch, A.J., Adams, F., etc., and schools like Cliftonville C., Margate, St. John's Royal Latin S., etc.

CHARLES GRIFFIN & CO.'S PUBLICATIONS.

"Boys could not have a more alluring introduction to scientific pursuits than these charming-looking volumes."—LETTER TO THE PUBLISHERS
FROM THE HEADMASTER OF ONE OF OUR GREAT PUBLIC SCHOOLS.

FULLY ILLUSTRATED.

OPEN-AIR STUDIES IN BOTANY: Sketches of British Wild Flowers in their Homes. By R. LLOYD PRAEGER, B.A., M.R.I.A. Illustrated by Drawings from Nature by S. ROSAMOND PRAEGER, and Photographs by R. WELCH. In crown 8vo extra, handsome cloth, 7s. 6d.; gilt, for presentation, 8s. 6d.
GENERAL CONTENTS:—A Daisy-Starred Pasture—Under the Hawthorns—By the River—Along the Shingle—A Fragrant Hedgerow—A Connemara Bog—Where the Sapphire Grows—A Flowery Meadow—Among the Corn (a Study in Weeds)—In the Home of the Alpines—A City Rubbish-Heap—Glossary.

"A FRESH AND STIMULATING book . . . should take a high place. . . . The illustrations are drawn with much skill."—*The Times*.

"BEAUTIFULLY ILLUSTRATED. . . . One of the MOST CURATE as well as INTERESTING books of the kind we have seen."—*Athenaeum*.

"Redolent with the scent of woodland and meadow."—*The Standard*.

"A series of STIMULATING and DELIGHTFUL chapters on field-botany."—*The Scotsman*.

"A work as FRESH in many ways as the flowers themselves of which it treats. The RICH STORE of information which the book contains. . . ."—*The Garden*.

OPEN-AIR STUDIES IN GEOLOGY: An Introduction to Geology Out-of-Doors. By GRENVILLE A. J. COLE, M.R.I.A., F.G.S., Professor of Geology in the Royal College of Science for Ireland. With 12 full-page Illustrations from Photographs. Cloth, 8s. 6d.

GENERAL CONTENTS:—The Materials of the Earth—A Mountain Hollow—Down the Valley—Along the Shore—Across the Plains—Dead Volcanoes—A Granite Highland—The Annals of the Earth—The Surrey Hills—The Folds of the Mountains.

"The FASCINATING 'OPEN-AIR STUDIES' of Prof. COLE give the subject a GLOW OF ANIMATION . . . cannot fail to arouse keen interest in geology."—*Geological Magazine*.

"EMINENTLY READABLE . . . every small detail is a scene touched with a sympathetic, kindly pen that reminds one of the lingering brush of a Constable."—*Nature*.

"The work of Prof. Cole combines ELEGANCE OF STYLE with SCIENTIFIC THOROUGHNESS."—*Petermann's Mittheilungen*.

"The book is worthy of its title; from cover to cover it is strong with bracing freshness of the mountain and the field, while its ACCURACY and THOROUGHNESS show that it is the work of an earnest and conscientious student. . . . Full of picturesque touches which are most welcome."—*Natural Science*.

"A CHARMING book, beautifully illustrated."—*Athenaeum*.

HOW PLANTS LIVE AND WORK: A Simple Introduction to Real Life in the Plant-world, Based on Lessons originally given to Country Children. By ELEANOR HUGHES-GIBB. With Illustrations. Crown 8vo, cloth, 2s. 6d.

"The attention of all interested in the Scientific Training of the Young is requested to this DELIGHTFULLY FRESH and CHARMING LITTLE BOOK. It ought to be in the hands of every Mother and Teacher throughout the land.

"The child's attention is first secured, and then, in language SIMPLE, YET SCIENTIFICALLY ACCURATE, the first lessons in plant-life are set before it."—*Natural Science*.

"In every way well calculated to make the study of Botany ATTRACTIVE to the young."—*Scotsman*.

By the same Author. With Illustrations. Crown 8vo, cloth, 2s. 6d.

THE MAKING OF A DAISY; WHEAT OUT OF LILIES; and other Studies from the Plant World. A Popular Introduction to Botany.

"A bright little introduction to the study of flowers."—*Journal of Botany*.

"Very interesting, sympathetic, and deeply reverent."—*Parents' Review*.

Second Edition, with very numerous Illustrations, handsome cloth, 6s.; also, Presentation Volume, gilt and gilt edges, 7s. 6d.

THE THRESHOLD OF SCIENCE. Simple and Amusing Scientific Experiments. By C. R. ALDER WRIGHT, D.Sc., F.R.S., Lecturer on Chemistry and Physics in St. Mary's Hospital Medical School, London.

"A first-rate book to place in the hands of a boy."—*Educational Times*.

"An admirable collection of physical and chemical experiments."—*Journal of Education*.

LONDON: CHARLES GRIFFIN & CO., LIMITED, EXETER STREET, STRAND.

GOLD MEDAL, 1889.

THE

Oxford Shorthand,

Fifteenth Edition, is all over the world. This remarkable system combines simplicity with efficiency as they have never been combined before. To a much better alphabet of consonants than Taylor's (recommended by Sir Edward Clarke before the College of Preceptors), it unites its five simple vowels corresponding with the familiar five vowels of English and all European languages. The mental processes are easy and quick, and the manual motion has the harmony of a beautiful handwriting. To the 5,000 Headmasters and others who support us, we beg to say that the new revolving disks for teaching are now in use.

THE OXFORD SHORTHAND CO., DOVER.

FOR THE LOCAL EXAMINATIONS.

DINGLEWOOD SHAKESPEARE MANUALS.

CAN BE USED WITH ANY TEXT BOOK.

Latest Addition:—

RICHARD II. Questions and Notes. 1s.

"There are few questions an examiner would hit on which are not anticipated in these little books."—*Scottish Guardian*.

JOHN HEYWOOD, LONDON AND MANCHESTER.

CAREY'S "GRADUS AD PARNASSUM,"

WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, price 7s.

UNIVERSITY OF LONDON, 1899-1900.

MATRICULATION (JUNE, 1899).

CICERO.—FIRST CATILINE ORATION. With Notes and Vocabulary. By Rev. G. H. NALL, M.A. 1s. 6d.

CATILINE ORATIONS. Edited by A. S. WILKINS, Litt.D. 2s. 6d.

HOMER.—ILIAD XXIV. With Notes and Vocabulary. By W. LEAF, Litt.D., and Rev. M. A. BAYFIELD, M.A. 1s. 6d.

ENGLISH GRAMMAR: Past and Present. By J. NESFIELD, M.A. 4s. 6d. (*Adapted to the London Matriculation Course.*)

Schoolmaster.—"The valuable appendices on prosody, synonyms, and other outlying subjects, which the student has often had to travel far afield to collect, make it indispensable to examiners. . . . The whole production is marked by ripe experience, fullness, scholarly treatment, clever arrangement, and much freshness."

A SHORT HISTORY OF ENGLISH LITERATURE. By Prof. G. SAINTSBURY. 8s. 6d.

ELEMENTARY GENERAL SCIENCE. By A. T. SIMMONS, B.Sc., and L. M. JONES, B.Sc. 3s. 6d.

(*Adapted to the London Matriculation Course.*)

Nature.—"Contains an admirable course of practical work covering all the principles of Mechanics, Physics, and Chemistry included in the new subject for London Matriculation. . . . The experiments alone provide a valuable set of practical exercises in elementary Physics and Chemistry, and, if the descriptive text is read in connexion with them, the student will be given a sound basis of scientific knowledge. The volume contains an instructive course of work, which will be of real assistance to both teachers and pupils in schools where Elementary Science is taught."

MATRICULATION (JANUARY, 1900).

VIRGIL.—Æneid VI. With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d.

PLATO.—EUTHYPHRO, APOLOGY, CRITO, and PHÆDO. Translated by F. J. CURCH. 2s. 6d. net.

ENGLISH GRAMMAR, PAST AND PRESENT. By J. NESFIELD, M.A. 4s. 6d. (*Adapted to the London Matriculation Course.*)

A SHORT HISTORY OF ENGLISH LITERATURE. By Prof. G. SAINTSBURY. 8s. 6d.

ELEMENTARY GENERAL SCIENCE. By A. T. SIMMONS, B.Sc., and L. M. JONES, B.Sc. 3s. 6d.

(*Adapted to the London Matriculation Course.*)

MATRICULATION (JUNE, 1900).

CÆSAR.—GALLIC WAR, IV. With Notes and Vocabulary. By C. BRYANS, M.A. 1s. 6d.

GALLIC WAR, V. With Notes and Vocabulary. By C. COLBECK, M.A. 1s. 6d.

EURIPIDES.—HECUBA. With Notes and Vocabulary. By Rev. J. BOND, M.A., and Rev. A. S. WALPOLE, M.A. 1s. 6d.

(*For English Grammar, &c., see above.*)

FRANCIS HODGSON, 89 FARRINGTON STREET, E.C.

PETTY'S ELEMENTARY LESSONS IN DESIGN.

A Method of Instruction in FREEHAND DRAWING and DESIGN

by means of the

ELEMENTARY PRINCIPLES OF ORNAMENT.

BY

J. PETTY, Art Master and Drawing Instructor to the Leeds School Board.

IN SIX DRAWING BOOKS (Nos. 1 to 6, each 2d.) varying in difficulty, and commencing with No. 1 for the Lowest Division of a School.

Each book provides both the Copy and the Paper upon which to draw, with full Instructions for designing each Exercise and for making a new design on similar lines.

In all the Exercises some Simple Element is used, and, by easy rules, such as repetition and contrast, the Design is formed. The given Design is first completed, often with the aid of a ruler, after the teacher has explained its features. The same Exercise is then repeated, partly with the aid of a ruler, and partly freehand. The Example is then to be rearranged, with any new feature that the child can invent or the teacher suggest.

A SUPPLEMENTARY BOOK (Book VI. 32 pp., Price 6d.) consists of selected designs from Nos. 1 to 6 for the use of children in Upper Classes who have not had any preliminary training in the lower parts of the school.

Instead of shading the designs, colour may be introduced by means of crayons or water-colours.

Descriptive and Illustrated Circular, with sample pages, post free.

E. J. ARNOLD & SON, LIMITED, LEEDS.

CASEY'S EUCLID.

THE ELEMENTS OF EUCLID,

BOOKS I.—VI., and PROPOSITIONS I.—XXI. of BOOK XI. Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises. AGRICULTURAL CHEMISTRY. By T. S. DYMOND, of the County Technical Laboratory, Chelmsford. 2s. 6d.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

Published by Blackie & Son.

VERE FOSTER'S WRITING COPY-BOOKS.

The principle upon which Mr. Foster's system of writing is based is that children should from the very first be taught a *current hand*. Experience has abundantly proven that pupils using his copies soon become fluent penmen, and acquire a clear and distinct formed hand of writing that does not need to be unlearned when they enter business or professional life.

Original Series, in Seventeen Numbers, price 2d. each.

Palmerston Series, in Eleven Numbers, on fine paper ruled in blue and red, price 3d. each.

Bold Writing, or Civil Service Series, in Twenty-five Numbers, price 2d. each

Medium, or New Civil Service Series, in Twelve Numbers, price 2d. each.

Upright Series, in Twelve Numbers, price 2d. each.

MESSRS. LONGMANS & CO.'S LIST.

A STUDENT'S HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO 1885.

By SAMUEL RAWSON GARDINER, D.C.L., LL.D.

Complete in One Volume, with 378 Illustrations, crown 8vo, 12s. : or in Three Vols. as below.

Vol. I. (B.C. 55-A.D. 1509). With 173 Illustrations. Crown 8vo, 4s. Vol. II. (1509-1689). With 96 Illustrations. Crown 8vo, 4s. Vol. III. (1689-1885). With 109 Illustrations. Crown 8vo, 4s.

Educational Times—"We are convinced that this will soon become the school history. . . . We have never before had a school-book which gives so admirably clear, impartial, and interesting an account of England under the Stuarts; everything is in due proportion and due relation, and the characters of the leading actors are touched in with excellent judgment."

Journal of Education.—"Speaking from the point of view most proper to the 'Journal of Education,' we may say that this book appears to us to be of the highest possible merit as a Student's History of England. The reviewer has watched a class of forty boys as young as twelve and thirteen years of age, while passages from it have been read to them, listen with riveted attention; and, what is at least equally important, their answers afterwards have shown that the manner of telling the story, while charming, was so lifelike and intelligible that they fully grasped the matter."

COMPANION ATLAS TO GARDINER'S "STUDENT'S HISTORY OF ENGLAND."

A SCHOOL ATLAS OF ENGLISH HISTORY.

Edited by SAMUEL RAWSON GARDINER, D.C.L., LL.D.

With 66 Maps and 22 Plans of Battles, &c. Fcp. 4to, 5s.

OUTLINE OF ENGLISH HISTORY.

CAMBRIDGE UNIVERSITY PRESS.

CAMBRIDGE HISTORICAL SERIES. *New Volumes.*

General Editor—G. W. PROTHERO, Litt.D., Professor of History in the University of Edinburgh.

- SCOTLAND.** By P. HUME BROWN, M.A., LL.D., Author of "The Life of George Buchanan," "The Life of John Knox," &c. Two Volumes. Vol. I., to the Accession of Mary Stewart, crown 8vo, with 7 Maps, 6s. [Vol. II. in the press.]
- SPAIN, ITS GREATNESS AND DECAY, 1479-1788.** By Major M. HUME. With an Introduction by E. ARMSTRONG, M.A. Crown 8vo, with Maps, 6s.
- THE UNION OF ITALY, 1815-1895.** By W. J. STILLMAN, L.H.D. (Concordia), late Correspondent to the *Times* in Rome; Author of "The Cretan Insurrection of 1806," and of "Herzegovina and the late Uprising." Crown 8vo, with 4 Maps, 6s.

A HISTORY OF THE COLONIZATION OF AFRICA BY ALIEN RACES. By Sir H. H. JOHNSTON, K.C.B., H.B.M. Consul at Tunis, Author of "British Central Africa," &c. With 8 Maps by the Author and J. G. BARTHOLOMEW. Crown 8vo, 6s.

Publishers' Circular.—"It would be difficult to over-estimate the value of Sir Harry Johnston's admirable book. Impartially written and full of first-hand knowledge, it is altogether a masterly contribution to the literature of Africa, and a book for which the British public in general, and the student in particular, have good reason to be grateful."

PITT PRESS SERIES. *New Volumes.*

- JUVENAL.—SATIRES.** Edited, with Introduction, Notes, and Index, by J. D. DUFF, M.A. 5s.
- Extract from Præface.*—Perhaps it is reason enough for adding another to the many English editions of Juvenal that all our recent editors have excluded the Sixth Satire, the most brilliant in detail and by far the longest of Juvenal's poems. The present edition includes 530 lines of this celebrated piece. The Second and Ninth Satires, some paragraphs of the Sixth, and a few lines in other Satires, are not included in this edition.
- Athenæum.*—"One of the best school-books which we have seen for some time. . . . The notes are capital."
- Journal of Education.*—"All recent school editions of 'Juvenal' and Mayor's monumental edition, which is not for schools, omit the Sixth Satire. Mr. Duff gives it all but some hundred lines, and we see no reason why this 'Legend of Bad Women,' the most laboured and most characteristic of all Juvenal's writings, should be ignored. In many other respects Mr. Duff has improved on his predecessors, and we may say prophesying that he will long hold the field."
- Guardian.*—"We welcome Mr. Duff's volume with great pleasure. It is, in our opinion, the first short edition of Juvenal, published in England and suited to schools, which can be called satisfactory and scholarly. . . . For the present it seems to us the best English school edition of Juvenal."
- ARISTOPHANES.—CLOUDS.** Edited by C. E. GRAVES, M.A., 3s. 6d.
- Guardian.*—"A good, practical, scholarly edition by an experienced editor."

XENOPHON.—HELLENICA. Books I. and II. Edited, with Introductions and Notes, by G. M. EDWARDS, M.A. 2s. 6d.

BOILEAU.—L'ART POÉTIQUE. Edited, with Introduction and Notes, by D. NICHOL SMITH, M.A. 2s. 6d.

Guardian.—"The book should be highly acceptable to adult students of French literature, the more especially as it is the first critical edition published in this country."

Subjects for Cambridge Local Examinations, 1899.

DUMAS.—LA FORTUNE DE D'ARTAGNAN. With Introduction, Notes, and Vocabulary. Edited by A. R. ROPES, M.A. 2s.

SAINTINE.—PICCIOLA. The Text, with Introduction, Notes, and Map, by A. R. ROPES, M.A. 2s.

MACAULAY.—LAYS OF ANCIENT ROME, AND OTHER POEMS. Edited, with Introduction and Notes, by J. H. FLATHER, M.A. 1s. 6d.

School Guardian.—"The editor gives us some excellent notes, which will be very useful in explaining the text to young students, and especially considers the needs of those who have little knowledge of Latin or of Roman history."

GOETHE.—IPHIGÉNIE AUF TAURIS. Edited, with Introduction, Notes, and Appendices, by KARL H. BREUL, Litt.D. 3s. 6d.

RUSSIAN READER: LERMONTOFF'S MODERN HERO.

With English Translation and Biographical Sketch by IVAN NESTOR SCHNERMANN, Author of "The Russian Manual and Aid to Russian Composition." Ex. fcap. 8vo, 8s.

THE TEACHING OF MODERN FOREIGN LANGUAGES IN OUR SECONDARY SCHOOLS.

By K. H. BREUL, Litt.D., Pa.D., University Lecturer in German. Crown 8vo, 2s.

Bookman.—"Teachers of modern languages should pay special attention to this book. It is full of wise suggestion and real help."

THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

Guardian.—"Mr. Verity is an almost ideal editor of school texts."

University Correspondent.—"It would seem that the ideal school edition of Shakespeare has at last been developed."

NEW VOLUME.

KING RICHARD II. With Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A. 1s. 6d.

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor: W. H. WOODWARD, of Christ Church, Oxford, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University.

School Guardian.—"The object of this series is fully attained in the above four volumes ('Caesar, De Bello Gallico,' III. and IV., 'Vergil, Aeneid XII.' and 'Xenophon's Anabasis, Book IV.').—viz., the preparation of exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. We are quite sure that the students preparing for the Queen's Scholarship and Certificate Examinations will not be the only students who will find these text-books of value; they will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil. Among others, there is this immense advantage: each volume is its own note-book and dictionary; the student, however elementary his knowledge, needs only the book in hand and a simple grammar."

GEOMETRY FOR YOUNG BEGINNERS. An Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, M.A., Headmaster of Oundle School. 1s. 4d. [*Immediately.*]

GRAY.—ODE ON THE SPRING AND THE BARD. Edited, with Introduction and Notes, by D. C. TOVEY, M.A. 8d.

MACAULAY.—ESSAY ON BUNYAN'S PILGRIM'S PROGRESS. Edited, with Introduction and Notes, by A. D. INNES, M.A. 1s.

School World.—"A little book with a masterly introduction."
Schoolmaster.—"We have never seen a more concise and useful handbook for students."

MILTON.—LYCIDAS AND COMUS. Edited, with Introduction, Notes, and Glossary, by A. W. VERITY, M.A. 2s.

Guardian.—"One of the best books that could be devised for higher forms in secondary schools and for training college students."
Educational Times.—"We can heartily recommend the book."

Bookman.—"Much of the auxiliary matter here is recast from the Pitt Press edition. It is none the less admirable on that account, and includes all that is required by the student."

XENOPHON.—ANABASIS II., III., and IV. Edited, with Notes and Vocabulary, by G. M. EDWARDS, M.A., Fellow and Classical Lecturer of Sidney Sussex College, Cambridge. 1s. 6d. each.

CICERO.—IN CATILINAM I. Edited, with Introduction, Notes, and Vocabulary, by J. H. FLATHER, M.A. 1s. 6d.

School Guardian.—"The simplicity and usefulness of this little volume are wonderful. It is meant for students who have had little experience in reading Latin, and who have not access to books of reference. In itself, therefore, it should be complete, and it is."

VERGIL.—AENEID I., IX., and XII. Edited, with Introduction, Notes, and Vocabulary, by A. SIDGWICK, M.A. 1s. 6d. each.

Educational Times.—"Mr. Sidgwick's volume is a rather abridged and elementary version of his well-known edition. The notes are entirely to the purpose, and there are a vocabulary and a useful conspectus of the Latin subjunctive. Mr. Flather's book ('Cicero in Catilinam I.'). which also contains a vocabulary, is rendered noteworthy by the careful table of 'syntactical usages,' which considerably enhances the value of the book. . . . If all the volumes of the Latin series are up to the level reached in the two before us, the new series should prove a valuable addition to the stock of class-books."

School Guardian.—"For a small edition this is one of the most compact and complete possible. We recommend it to all students who want to read Vergil for the first time and to read it well."

CAESAR.—DE BELLO GALLICO, Books I. (1 to 29), II., III., and IV. With Introduction, Notes, and Vocabulary, by E. S. SHUCKBURGH, M.A. 1s. 6d. each.

Other Volumes in preparation. Full Prospectus on application.

London: C. J. CLAY & SONS, Cambridge University Press Warehouse, Ave Maria Lane.

The Educational Times.

Dismissal of Assistant-Masters. A CASE of wholesale dismissal of assistant-masters, which took place last Christmas at Grantham Grammar School, on the occasion of a change of headmasters, seems to us sufficiently important to be made a test case as to the legality of all similar dismissals in endowed secondary schools. No one will maintain the equity of the course which has been taken by the Governors of Grantham School; but legality and equity do not always run side by side. We can understand that a newly appointed headmaster may have some ground for desiring to select his own assistants; but it rarely happens that a strong headmaster insists on his right to do so. What we cannot for a moment admit is, that a body of local Governors has any justification whatever for making a clean sweep of assistant-masters without any assigned or reasonable cause.

From inquiries which we have made into this matter, it would appear that the Governors, or some of them, wished to have an entirely new staff in the school—a new headmaster, and a younger body of assistant-masters. They alleged no reason for getting rid of the old staff beyond the fact of their age; and it does not seem that the average age of the assistants was greater than that which one would expect to find in an endowed secondary school. Now the scheme of the Charity Commissioners under which Grantham Grammar School is governed makes the headmaster responsible for the appointing and dismissal of the assistant-masters, subject to an appeal to the Governors. Section 49 of this scheme runs as follows:—

Subject to the provisions herein contained relating to vested interests, the headmaster shall have the sole power of appointing, and, subject to an appeal to the Governors, of dismissing, all assistant-teachers; but he shall forthwith notify every appointment to the Governors. The headmaster shall also determine, subject to the approval of the Governors and to such provisions as aforesaid, in what proportion the sum assigned by the Governors for assistant-teachers and plant or apparatus shall be distributed among the various persons and objects for the aggregate of which it is assigned. The Governors shall pay the sum assigned, either through the hands of the headmaster or directly, as they think best.

In any case, it seems that the headmaster, under this section, would be acting virtually as the agent of the Governors; for (1) he has to notify every appointment, (2) the Governors approve the salary of each master, (3) assistants have a right of appeal to them against dismissal, (4) cheques for salary are signed by the Governors, and (5) the printed receipt-forms begin with the words, "Received from the Governors." Nevertheless, the initiation of appointment and dismissal is with the head-

ma-ter; and the Grantham Governors recognized this fact when they made it a condition with the new headmaster (or so it is stated) that he should not re-engage any member of the old staff.

That is briefly the case; and it is evidently a case for inquiry. We are glad to know that the Association of Headmasters, acting on behalf of the assistants, has invited the Charity Commissioners to investigate the matter, and this, we trust, will be done. The Grantham case, no doubt, is one of a considerable number, but the injustice which has been committed is particularly glaring. The Headmasters are rightly estimating the interests and feelings of the profession in the course which they are taking, and it is evident that their intervention may be more effectual than that of the Assistant-Masters' Association, because it is on the face of it more disinterested. The question of insecurity of tenure needs to be constantly discussed, and, on fitting occasion, to be fought out and determined. We repeat that the grievance which has arisen at Grantham seems worthy of being made a test-case. It is of wider and deeper interest to the whole teaching profession than the Governors of Grantham Grammar School appear to imagine.

NOTES.

THE London Statutory Commission makes no sign, but we suppose it is doing its best to overcome obstacles. On February 14 Mr. Chamberlain, in answer to a question in the House of Commons from Mr. Hogan, who was solicitous on behalf of Colonial subscribers to the Imperial Institute, said that a conference of representatives of the Government, the Institute, and the University would "shortly take place to consider whether a part of the Institute buildings could, with due regard to all existing interests, be made available for the accommodation of the University." Poor University, waiting for accommodation in "a part" of the Institute, with all the F.I.I.'s buzzing round in grudging indignation! We confess that we do not like this Institute scheme at all. If we cannot find a million for the metropolitan University, why have we troubled ourselves about a scheme in itself so inspiring and worthy? The present talk is too much like providing temporary lodging for a Board in a flat. As for Mr. Hogan's friends, considering all the pressure that was put upon them to subscribe to the Institute in the first instance, we do not wonder if they are now a little disconcerted.

CAMBRIDGE UNIVERSITY is commendably eager for new modes of useful educational activity; and we have no doubt that its

offer to inspect and examine secondary schools under Clause 2 of the Board of Education Bill is based on public grounds, as well as on a keen and healthy appetite for work. At the Cambridge Conference, referred to in our Summary of the Month, Mr. Jebb and Dr. Butler clearly indicated the reason for making this offer to the Government. Under the Board of Education Bill, certain functions of the Charity Commission are transferred to the new Board of Education. In regard to schools not subject to the Charitable Trusts Acts and the Endowed Schools Acts, and with which, therefore, the Charity Commission has nothing to do, the Bill refrains from making the examination or inspection obligatory; it makes it depend on the consent of the governing body of the school. Under this proviso a very large number of secondary schools will be exempt from the examination or inspection if their governing bodies refuse to consent to it. On that account it is the more desirable that the arrangements for examination and inspection under the new Education Board should be such as will command the confidence and goodwill of the schools. Nothing, as Mr. Jebb said, could give more confidence to the schools than if the agency of the Universities were accepted as an alternative for inspection and examination by the officers of the Board. "This would be a guarantee of the most satisfactory kind that the literary side of education should not be unduly neglected in comparison with the scientific and the technical. It would be a guarantee for the maintenance of the distinctly liberal studies, and of that liberal spirit in education generally which is the very breath of life to secondary schools." We quite agree; and it is a sign of the times that the old Universities should lose no opportunity of extending their usefulness beyond their own borders.

THOUGH the Drapers' Company (which is running the Clothworkers' hard) has reinforced the generosity of Sir Walter Gilbey, and Cambridge is soon to have her Professor of Agriculture, the new examination in Agricultural Science has not yet attracted a large number of candidates. Only one man was successful this year, making the twenty-first to obtain the diploma in about five years. It is stated in the report of the Syndicate that seven of the diploma holders are now engaged in teaching, and seven are acting as land agents or engaged in farming. But there is at least a good chance that a professor, an examination, a diploma, and a backing of public opinion, will do for agriculture at the Universities what these things have previously done for other lines of study.

THE conferring of the honorary degree of LL.D. on Mrs. Henry Fawcett by the new Lord Rector of St. Andrews University, to which we referred last month, has been the subject of favourable comment in the Press. Yet, whilst recollecting Mrs. Fawcett's devotion to her husband as his amanuensis and general helper, the writers have somewhat overlooked the fact that she has rendered considerable service to the cause of education, and is an author on her own account. With Mr. Henry Fawcett she is joint author of "Essays and Lectures, Social and Political," and on his suggestion she produced a lucid little book on "Political Economy for Beginners." She is also the author of "Some Eminent Women of our Time," "A Life of Queen Victoria," and a goodly number of magazine articles. Amidst the cordial demonstrations of St. Andrews on the graduation of Mr. Stuart's nominees, it was noteworthy that

Mrs. Fawcett was one of the few people with whose features they were familiar. Students were heard to suggest that some of the other recipients of degrees should have been labelled, or at least have worn scraps of coloured ribbon, by which, and with the help of the programme, they could have been identified.

WE learn with regret that the Hall of Residence for the women students of Liverpool University College, which was opened last October, has closed its doors until the beginning of the 1899-1900 session, having failed to receive an application from a single college student. It seems a little strange that a Committee of fifteen ladies, in addition to the officers, failed to gauge the need of such an institution. It now appears that in the course of nine years only four women students of University College have lived in lodgings, and of course there remains for consideration the fact that lodgings are often cheaper than a Hall of Residence. Twenty-five shillings weekly, and to share a bedroom with another student at this figure, cannot be reckoned cheap, and it is perhaps here that the Committee have made a mistake. They very wisely during the first term of the present session accepted technical and other students for brief periods, and thus minimized the loss, which, we are glad to learn, will not be great. It certainly seems a pity not to have counted the chickens before building their home.

WE find a difficulty in agreeing with the writer of "Questions for Women," in the *Queen*, when she tell us that the "chief moan of the bigger girls [in Board Schools] is that they are made to specialize too early in domestic economy." So far as our observation goes, the girls really like the lessons given in housewifery schools, cookery classes, and similar work, and the same remark is true of boys who have taken up manual work. Objections come neither from them nor from their parents, who in almost all cases would be hard put to it to define the relative and due proportions of general and technical training. The "moan" against sacrificing the former really comes from teachers and writers on education; up to the present, comparatively few moans have come from elementary teachers on the great waste of girls' time in giving too many hours to sewing—undoubtedly a technical subject. The writer of "Questions for Women" belabours examinations with hearty good-will. But, so long as examiners classify the results of examinations in such a way that their verdict, in the main, tallies with that of the teachers, just so long will examinations not die, but live. If the writer of the article in question had confined herself to the abuse of examinations by teachers and parents, there could still be spoken a useful, and perhaps a necessary, word on the subject. On examinations considered as tests of knowledge, especially when competition is natural and not exaggerated, there remains little to be said that is worth the saying or the reading. When all the advantages and all the drawbacks are summed up, and the lesser number deducted from the greater, the difference will be advantages.

SUMMARY.

THE MONTH.

A CONFERENCE was held at Cambridge on February 4, to consider the Government Education Bills. The chair was occupied by the Vice-Chancellor (Dr. Hill), and amongst those who attended were Prof. Jebb, M.P., the Right Hon. J. Bryce, M.P.,

the Masters of Trinity, St. John's, Christ's, Sidney, Clare, Emanuel, and Selwyn, the President of Queens', Professors Eason, Sir G. G. Stokes, Sir Robert Ball, Allbutt, J. A. Robinson, Forsyth, Waldstein, and Stanton; Drs. Sandys, Breul, Keynes, Chase, Campbell, Reid, Mayo, Besant, and MacAlister, with many others. The following resolutions were passed:—

(1) That this meeting welcomes the Board of Education Bill, introduced by the Duke of Devonshire in the House of Lords last August, as an important step towards the organization of secondary education in England. (2) That, in the opinion of this meeting, the Consultative Committee proposed in Clause 3 of the Bill should be made permanent, and should contain representatives of the Universities and of the teaching profession. (3) That, in the opinion of this meeting, it is desirable that a system of inspection and examination conducted by a University, and approved for the purpose by the Board of Education, should be accepted as adequate under Clause 2, Section 4, of the Bill. (4) That copies of Resolutions 1, 2, and 3 be forwarded to the Marquis of Salisbury, the Duke of Devonshire, Mr. Balfour, and Sir John Gorst.

Mr. Bryce referred to the Board of Education Bill as "a very imperfect and inadequate instalment of what we ought to have," and predicted that we should soon see another Bill to set up the Local Authorities. There ought not, he added, to be the least difficulty in passing the present Bill for a Central Authority, and it might very well be disposed of on the second reading and in Committee in two days.

On the first day of February an inquiry was held by the Science and Art Department at South Kensington with regard to the application made by the London County Council to be recognized under Clause 7 of the "Science and Art Directory" as the organization responsible for science and art instruction within the County of London. Sir John Donnelly presided. The delegates of the School Board included Mr. Lyulph Stanley, the Rev. Stewart Headlam, Mr. Graham Wallas, and Dr. Macnamara, and on the opposite side of the table sat Dr. Garnett, Mr. Bond, M.P., Chairman of the Technical Committee of the London County Council, Mr. Organ, and Sir Philip Magnus. Mr. Stanley first presented the case for the School Board. He was followed by Mr. Bond, who said the whole matter was one of "domestic legislation." Clause 7 would, if adopted, prevent overlapping. The School Board attitude was that of "a dog in the manger." Mr. Graham Wallas protested that the overlapping was not intentional. The extension of the evening classes was due to the increased number of applicants. Dr. Macnamara said Sir John Gorst was attempting to do by a departmental minute what he had failed to do in Parliament in 1896. Sir Philip Magnus, who represented the Polytechnic Council, said that that body were in favour of Clause 7 being applied. Sir John Donnelly asked Mr. Stanley what right the School Board had to spend money outside the regulations of the Code of the Education Department. Mr. Stanley complained of having to answer on the spur of the moment, but Sir John replied that the question was a fundamental one. Had the School Board the right to spend money out of the rates on higher education in day schools? The School Board has since discussed the matter, and appears to be fully resolved to maintain its position.

On February 16 Sir John Lubbock resigned the Principalship of the Working Men's College, Great Ormond Street, which he has held for fifteen years. Acknowledging a complimentary address, Sir John claimed that "the College had been the pioneer of similar institutions. It was gratifying that so many of the latter were now springing up in the metropolis. They had succeeded in combining instruction with good-fellowship, which was responsible for keeping many in touch with the College all their lives." He referred to his successor, Prof. Dicey, as a leader of thought, and considered that the College was fortunate in getting him to fill the post.

THE Annual Report of the Girls' Public Day School Company suggests that the time has come to revise the rate of interest paid to its subscribers. Resolutions will be submitted to the shareholders providing that in future the interest paid to the subscribers shall be that actually earned after deducting the cost of stamps and brokerage on investments. The bonuses contributed by the Company will continue as before, and the Company will still bear all the other expenses of the fund. In connexion with this recommendation, the contribution of the Company to the Teachers' Provident Fund includes £326 for deficiency of interest account. This sum, together with the augmentation, £519, added

to £71,265, the amount of teachers' salaries, makes a total sum of £72,110 paid during the year to teachers in the Company's service, an average of £10. 5s. 8d. per pupil. The profits of the Company are evidently going in the right direction.

ACCORDING to the new scheme of the Charity Commissioners for the government of the Haberdashers' Schools (Aske's Charity), the Governors are to consist of nineteen competent persons appointed as follows:—Nine (of whom two shall be women) by the Governors; one by the Lord Mayor and Aldermen of the City of London; one by the Common Council of the City of London; two (of whom one shall be a woman) by the London County Council; one by the County Council of Middlesex; three by the School Board for London; and one by the School Board of Acton; there shall be added to the School Governors such additional School Governors, if any, as may be appointed for the purpose of the Technical Instruction Act, 1889, by a Local Authority under that Act. The accounts shall be open yearly to public inspection. The Order also lays down that amongst other schools one shall be established at West Hampstead for about three hundred boys, to be called the Haberdashers' (Aske's) Boys' School, and that the cost of the site and buildings for the school are not to exceed £32,000.

THE trouble between St. Paul's School and the Charity Commissioners has ended in a compromise. Out of Dean Colet's rapidly increasing foundation fund, which is largely invested in town properties, St. Paul's is to receive annually not £8,000, or £9,000, or £11,000, as successively proposed by the Commissioners, but two-thirds of the total income, with the last-mentioned sum as a minimum. The *Manchester Guardian's* London correspondent says:

It seems impossible to record this settlement, which is the result of a compromise effected after friendly discussion, without saying that it is in great measure due to the energy and resource of the High Master during the past five or six years. He has fought the battle of the school with remarkable persistence and adroitness, and has always insisted on the equity of giving St. Paul's a proportional part of the endowment fund in place of a fixed annual grant. Other points in the compromise are more likely to be regarded with mixed feelings. St. Paul's is to be definitely a Church of England school, without a conscience clause. The London County Council is not to be represented on the Board of Governors, and, of course, the original desire of the Commissioners to set apart a number of the 153 free places for boys from the elementary schools has been finally disappointed.

IN the February session of Convocation for the Northern Province it was resolved to form a Council on Secondary Education, to represent Convocation and the House of Laymen, similar to that already constituted in the Province of Canterbury, and competent to act therewith. At the last meeting of the Southern Council, in January, the Archbishop of Canterbury made a statement of the proposed work of the Council, which was to include, first of all, legislation, and then general objects in connexion with secondary education. The Archbishop also expressed the opinion that the Church should forestall the proposals of the Government, because the Government would be more likely to do justice to religious education if they knew beforehand what the Church wanted in this respect.

THE Birmingham Teachers' Association met on Friday, February 17, 1899, when Dr. H. G. Fiedler, of Mason University College, read a paper on the "Training of Modern-Language Teachers." After having given a brief sketch of the training and social position of modern-language masters in France and Germany, the doctor maintained that the Government or Corporations ought to found travelling scholarships. An Englishman is to be preferred, as a teacher of modern languages, to a foreigner, but only when he has an undoubted command of the language. Even the candidates in the Cambridge Modern Language Tripos show absolutely insufficient conversational powers. They, too, would have to stay a year at least abroad to become fluent speakers of the language they profess to teach. Mason University College has a travelling scholarship, a lending library, named after the late Dr. Karl Dammann, and a German society of above two hundred members in which all discussion is carried on in German. Mr. Hart, M.A., Headmaster of the Handsworth Grammar School, regretted the absence of so many assistant-masters, who ought to have heard the capital paper, and proposed a vote of thanks. Mr. Barnes, H.M.L., said the United States did much more to promote the study of

than England. Dr. Tischbrock, Modern Language Teacher at Bourne College, Birmingham, seconded the vote of thanks proposed by Mr. Hart, and added that a modern-language teacher could not dispense with a sound knowledge of didactics and the special methods of language teaching. He found modern-language teachers hunting after the Parisian and Hanoverian accents (the latter is a bad one, too) instead of studying the experiences of great educationalists and language teachers. Prof. Sonnenschein put the vote to the meeting, and it was carried.

UNIVERSITIES.

(From our Correspondents.)

Oxford. The Universities of Oxford and Cambridge have made many successful grafts on their respective stocks by exchanging one good man against another, and a fresh instance of this transfusion of sap has just been given by the election of Mr. A. E. H. Love, Fellow of St. John's College, Cambridge, to the Sedleian Professorship of Natural Philosophy. The Chair was held by Dr. Bartholomew Price, the late Master of Pembroke, who succeeded in his Mastership by Bishop Mitchinson, and in his Professorship by Mr. Love. The two new men are exceptionally distinguished in their several lines. Mr. Love is a Fellow of the Royal Society.

A good deal of personal interest has been worked up over the election of a new Curator of the Bodleian Library. Mr. Nicholson, the Librarian, circulated a printed appeal to his friends, in which he accused Mr. Poole of having criticized his administration in an Oxford magazine of the year 1886, and asserted that Mr. Poole's nomination was "the culmination of a deliberate policy of personal persecution which may be traced in successive nominations of curators for the last ten years." The Librarian's letter was, as he himself admitted, "one of the most extraordinary documents that have been issued in the University"; and it resulted in the nomination, at the eleventh hour, of a rival candidate. Mr. C. Plummer, the candidate in question, had considerable claims, and he has been elected by a large majority. There is, no doubt, a good deal of friction between the Librarian and the Curators; but it is admitted that the ground of difference is one of policy rather than of persons.

Ruskin Hall is now established and at work; but it has a precarious foundation of a supply of cash for a two years' experiment. Many who have but little confidence in its permanence wish it well, though it has had to pass through a fire of criticism, not to say ridicule. Spontaneous and enthusiastic innovation must naturally expect to encounter this preliminary ordeal. Mr. and Mrs. Vrooman, the originators of the idea of a "Labour college" at Oxford, and their colleague Mr. Beard, are American admirers of Ruskin, and there are thus many grounds on which they appeal to our sympathies. The Hall was opened on Wednesday the 22nd, and three working-men trustees were nominated, namely, Messrs. C. W. Bowerman, of the London Society of Compositors; A. Sellicks, of the Amalgamated Society of Engineers; and Ben. Tillett, general secretary of the Dock Labourers' Union. Mr. Tillett said the task the founder had undertaken was heroic. There was in the mind of the working classes a desire to know more of the world, and he pointed out the advantage the Hall would confer in their being able to go to trained intellects for assistance. Those who were starting this institution said they were doing so devoid of creed and without any political fad, and he hoped they would bear that in mind, allowing persons to form opinions independently. At the public meeting which followed the opening ceremony, Prof. York Powell, who took the chair, said he was glad that the institution had been started in Oxford. Many ideas planted there had thriven, and they hoped and intended that this one should do so. It was their pride to think that Oxford, though she had not, of course, acted at every moment up to her ideals, had never been ungenerous to new ideas, but judged them by their outcome. The founders only wished for a fair judgment and a little sympathy, and those he was sure they would have in Oxford. Between seventy and eighty students have entered at the Hall.

The vexed question of the scholarship examinations, which is of vital importance to some of the Oxford colleges, has been under serious discussion this month, and resolutions have been passed at an influential meeting, presided over by the Vice-Chancellor, and forwarded to the Committee at Cambridge which has charge of the same question there, in the hope that the two Universities may be able to combine their efforts for a more reasonable scheme of examinations.

Cambridge. An important meeting was held at Trinity College Lodge on February 4, to consider the attitude of the University to prospective legislation during the present Session of Parliament. The resolutions passed unanimously by the meeting give a fairly good idea of the general tendency of the views expressed by the speakers, but it was felt on all sides that the vital points on which it was essential for the University to speak plainly were the maintenance of the cause of literary education and the recognition of existing examination agencies for the guidance and control of future developments.

By general consent the speech of the day was that delivered by Mr. R. D. Swallow, of Chigwell Grammar School. He ably brought to the notice of the meeting the difficulties which were met with by those concerned in the welfare of our smaller endowed schools; he pleaded earnestly for the consideration of the needs of those who of necessity were obliged to send their sons to local institutions—the professional men, the ordinary persons who are the backbone of English society and country life; he said it would be lamentable, nothing short of a national calamity, if schools meant for and attended by the children of the gentry were degraded by the introduction of the curriculum of the local apostle and dedicated to the propagation of the gospel of getting on; and he prayed that this great question of the organization of secondary education might not fall for solution into the hands of the party manager, the letter writer to the *Times*, the man in the street, and, he might have added, the conscientious objector.

The close connexion of the University with the educational section of the Government—our Chancellor as President of the Council being assisted by Sir John Gorst as Vice-President, while common rumour assigns to Professor Jebb an important position in reference to the work—renders the fact that all the resolutions were carried unanimously of some considerable importance.

The liberality of friends outside the University will soon render the formation of the new department of Agriculture an accomplished fact; the gift of £2,000 by Sir Walter Gilbey has been followed by the generous offer on the part of the Drapers' Company to give £800 a year for ten years to establish a Professorship in the Science of Agriculture; Sir Walter Gilbey withdrawing his condition that a Reader only should be appointed, and allowing his contribution to be merged in the general funds of the intended department. Of course, much will depend upon the actual choice of a Professor; statutory definition of duties is in itself an absolutely inefficient safeguard, and, if we get a man who does not do more than the statutory minimum, the munificence of our present benefactors will be thrown away. With examples such as Professors Thomson, Ewing, Humphry, Kanthack, Ward, and Hughes before him, the new Professor will, at any rate, know what is expected nowadays of the occupant of a professorial chair.

The Sedgwick Memorial Museum controversy is now happily a thing of the past. For twenty-six years this question has been before various committees and syndicates. The plain member of the Senate has been confused and bewildered by the intricacies of the question; but, once a plain issue was put before the University, an equally plain vote has settled the matter. Two plans, known as A and B respectively, were to be put before the Senate, the B plan being on a less parsimonious scale than the other. The Senate, by 96 votes to 58, decided to adopt the more generous proposal; and Prof. Hughes is to be congratulated on his success in overcoming the opposition which has presented itself at every stage of the proceedings.

The Council of the University have once more distinguished themselves by publishing an edict prohibiting bonfires in public places. On the occasion of the Sirdar's visit, it may be remembered, an enormous amount of damage was done by those who collected fuel for the bonfire in the market place; the danger to the buildings in the centre of the town was very considerable, and the police were absolutely powerless to stop or to control the mob. Fortunately, the town authorities acted with great wisdom and forbearance, so that no collision whatever arose between the crowd and the police. This edict, however, prohibits in the mildest manner what undoubtedly is a crime in the eyes of the law, and the Council may possibly give us their paraphrase of the eighth commandment with an intimation that it will be visited with the customary University censures.

A *propos* of discipline, an incident has occurred at Queens' College which has caused much comment and some indignation, both in the College and in the University. A man of unblemished reputation, for some acts of noisy horseplay rather

than rowdiness, has been sent down for a year, a proceeding which practically wrecks his career. The occasion of his departure was celebrated by a demonstration of a somewhat novel character. A funeral procession of nineteen cabs, containing a large proportion of the members of the College, escorted the victim to the station. Crape was much in evidence, and the "Dead March" in "Saul" was whistled at the station. The wisdom, courtesy, and fairness of the President of Queens' are known and recognized throughout the University; but the writer of these notes has not as yet heard anything but sympathy expressed on behalf of the promising undergraduate who has received so stern and exemplary a sentence.

The new Professorship of Ancient History has been filled up by the appointment of Dr. J. S. Reid, of Caius College, who thus sets the coping stone to an honourable and distinguished career of usefulness to his College and the University. It is to be hoped that the new Professor may live many years to enjoy the comparative ease of his new position.

That Cambridge is not behindhand in the practical work of physiological research is proved by the recent report issued by the Medical Officer of Health, Dr. Anningson, with regard to the spread of tuberculous disease by means of milk. Much valuable information is communicated, and it is hoped that Parliament will shortly do for mere humans what it long ago did for our four-footed friends, and protect us against diseases which modern science has shown to be, to a large extent, preventible. The researches of the late Prof. Kanthack on the subject of the dissemination of phthisis by milk were unfortunately brought to an end by the Professor's premature death; but Dr. St. Barbe Sladen, the Professor's colleague in his investigations, is now continuing the work, and has already been able to announce important results. Dr. Sladen has been appointed John Lucas Walker Student, so that the University has been able to stamp the work with the seal of official recognition.

THE last two or three months have not contributed much to the history of this University. The question of migrating to South Kensington stands pretty nearly as it stood three months ago. For some members of the Senate, and a good many graduates outside, regard the project as one for giving up house and going into apartments again; and a few of them are old enough to remember the inconveniences of former times, when the University had to share old Burlington House, and previously Marlborough House, with other public bodies. They apprehend interference of conflicting interests, confusion in the public mind, and derogation from academic dignity, by the entertainments in which the Imperial Institute has delighted. Such scruples are just, and should be removed. Certainly the University should be guarded against the immediate neighbourhood of a music-hall element; and it should be assured, to borrow the words of a Special Committee of Convocation, "that the exclusive and permanent control of the whole, or a distinct and sufficient portion [of the Institute's building], with an adequate entrance, and with security of tenure," is to be "vested in the University." But it seems that, as far back as the week before Christmas, the Vice-Chancellor had already addressed to the Treasury an exhaustive series of searching questions on every doubtful point that could be thought of. Sir Frank Mowatt's answer appears to remove all difficulties, and besides makes it clear that the Senate will pledge itself to nothing by appointing representatives to meet those of the Treasury and the Institute for preliminary conference. These communications were considered at a meeting on February 1, when the Senate, reserving its own freedom of ultimate action, appointed the Vice-Chancellor, Lord Kimberley, and Sir Joshua Fitch as a Special Committee to represent the Senate on the proposed Conference and to report the results thereof.

It does not seem that the counter-proposal of University College has met with approval in any quarter. It may have helped to retard the progress of the Statutory Commission; but, as the powers of the Commissioners are strictly defined, they may not be able seriously to consider it.

THE LAW AND THE SCHOOLMASTER.

III.

To the lasting profit of lawyers, most people deem themselves competent to make a will; and, similarly, the framing of a school prospectus is often undertaken with a light heart, in ignorance of the many legal pitfalls which its framer may thereby prepare

for himself. I shall endeavour to point out the most common—"A term's notice required prior to the removal of a pupil." The condition as to notice of removal is often found in this form; but is to be avoided, because, on the removal of a pupil without notice, only the actual damage which a master suffers thereby can be recovered. These were the terms in the prospectus in the case of *Denman v. Winstanley*, and, on the trial before the County Court judge, he held that the whole term's fees, amounting to £39, were recoverable. On appeal, however, to the High Court, it was held that the master was only entitled to recover his actual loss of profit, which was the above amount less the sum that it would cost the master to board and lodge the boy during a term. It will be observed that in this case there was no stipulation that a term's fees should be payable in lieu of notice. With such a condition, the case of *Lanssen v. Thornton* shows that the whole term's fees are payable without any diminution. In the last case, the judge of the Lord Mayor's Court gave judgment for only £5, the actual loss sustained; but, on appeal, the High Court reversed his decision, and gave judgment for the whole amount of a term's fees. The principle underlying these decisions is a clear one. In the ordinary case of a breach of contract, the damages recoverable are confined to the actual loss accruing from the defaulter's action; but, where the parties stipulate in the contract itself what sum shall be payable in case of non-performance, the whole of such sum is recoverable. In that case, the sum is payable, not strictly as damages, but as a liquidated amount payable under the terms of the original contract.

In the absence of a condition requiring notice before the removal of a pupil, the master seems to be without remedy when a boy is taken away without notice. Damages could only be recovered on the ground of custom, which could only be proved by actual evidence of a general practice to pay compensation to the master in such a case. One can hardly understand why such a custom, eminently reasonable as it would have been, should not have grown up within the wide embrace of the common law, which, for the most part, controls the relations of schoolmaster and parent; but there is no trace in the reports of any such custom having been established, although counsel for the plaintiff in the old case of *Collins v. Price*, decided in 1828, contended that it was "the usual course of dealing with schoolmasters" not to take a pupil away without a quarter's notice or a quarter's pay. The Court, however, did not decide the case on that ground. The facts were these: Four days after the beginning of term, the child was sent home by the schoolmistress because she was taken ill. The child was not sent back at all, and the schoolmistress sued to recover the fee for the whole term, and succeeded, judgment being given for the plaintiff on the ground that, as the charges had always been sent in and settled quarterly, there was evidence of an implied contract to pay from quarter to quarter. The fact that the pupil fell ill did not disentitle the plaintiff to the quarterly payment stipulated for, and the Court could give the plaintiff the relief sought without considering the matter from the point of view of the alleged custom. Even if at one time there had been such a custom, it is possible that it may have disappeared from the early and universal use of prospectuses, as express terms always oust the operation of a custom relating to the same subject-matter.

The word "request" should be avoided. In a recent case the condition was in these words: "A term's notice requested before the removal of a pupil." The judge, in spite of the compulsory character of the old "aids and requests," was somewhat inclined to think that the word only connotes a strong wish in these days. It was, indeed, only by showing from the correspondence which passed between the parent and schoolmaster that they, at any rate, understood the term in the sense of "require" that the difficulty was surmounted, and the master recovered judgment.

A condition in the prospectus stipulating that the fees are payable in advance entitles the master to the whole fees for the term even if the pupil is absent for the whole term. This was decided in the case of *Jones v. Turner* in the High Court, on appeal from a County Court. The school term commenced on April 24, on which day the boy's mother wrote saying that, on account of his father's illness, the boy could not be sent on that day, but would be sent on the following Monday. The boy, however, was not sent during that term, and, owing to a dispute as to fees, the headmaster refused to let him return the following term. No claim could, of course, be made here for a term's fees in lieu of notice, as the non-return of the boy at the beginning of the following term was due to the master's action. If the master had been willing to receive him and the boy were not sent, it

would appear from the judgment of Mr. Justice Wills in the case of *Price v. Williams* that the master would also have been entitled to another term's fees for the breach of the condition requiring a term's notice of removal. Even apart from authority it would be so; the conditions as to payment in advance, and as to notice of removal, being independent terms of the contract entitling the master to distinct and cumulative damages for their breach.

When, as is nearly always the case, school rules exist in addition to the provisions of the prospectus, a copy should always be sent to the parent with the prospectus. But, if, for some reason, this is inconvenient or thought inadvisable, there should be a note in the prospectus drawing attention to their existence and stating that they may be obtained if required. The prospectus should also state that pupils are expected to conform to such rules unless specially exempted. To be binding upon parents they must either impliedly or expressly have notice of their existence. In the case of *Price v. Williams*, decided in 1888, there was appended to the prospectus a list of "Rules and Regulations." One was: "No exeats allowed during Easter term." A pupil was allowed to go home for his sister's birthday, but, contrary to the master's wish, his father insisted upon keeping him for the night as well. Whereupon the master refused to have him back, and claimed the whole term's fees—being payable in advance—and succeeded. In giving judgment, Mr. Justice Wills said: "The parent certainly undertakes that the master shall, so far as he or his action is concerned, be at liberty to enforce with regard to his son the rules of the school or, to put it at the very lowest, at all events such rules as are known to him and assented to by him." The above, no doubt, suggests that there may be rules binding upon a parent although not brought to his knowledge. And it would be so as regards rules which are essential to the good government and discipline of a school, the knowledge of which would be presumed; but any rule peculiar to a particular school can only be enforced when notice of its existence has been expressly given to the parent. For the want of such notice a schoolmaster in a recent case had to pay damages for caning a boy for absenting himself from school without permission. The existence of a rule which had not been brought to the parent's notice could not be pleaded in justification when the parent himself had consented to his boy's absence.

There remains one matter which must never be overlooked, although possibly many schoolmasters will receive the suggestion with incredulity. Ought the contract which is made between master and parent, by means of the prospectus and letters, to be stamped? In certain cases, undoubtedly. The prospectus is not merely an advertisement circular, but the basis of the contractual relation between master and parent, and may be the actual contract itself. Now, an agreement between a schoolmaster and parent for the education of a boy, if contained *entirely* in writing, should, according to the provisions of the Stamp Act, be stamped with a sixpenny stamp. If not so stamped, the documents containing the agreement will not be accepted in court as evidence except on the payment of a penalty of £10. Such, to many a suitor's discomfort, is the rigid provision of the law. But the need of a stamp only arises where the agreement between the parties is *wholly* contained in writing, and not where the proposal is in writing and the acceptance oral or by conduct, or where certain terms of the agreement are arranged verbally and not reduced to writing. For want of such a stamp, the plaintiff in the old case of *Williams v. Stoughton*, in the year 1817, met with disaster. He sued for a year's board and tuition, and produced a copy of his printed prospectus stamped with an agreement stamp. It was objected, on behalf of the parent, that this could not be received in evidence, as it was not the identical prospectus which had been delivered to the defendant. Thereupon the plaintiff's counsel called upon the defendant to produce the original, which was then handed to him. If the original were not forthcoming, the copy might have been used. When the original was now tendered to the Court, objection was taken that it was unstamped, and the evidence was, consequently, rejected. The report of this case does not make it clear whether the agreement between the parties had been concluded entirely by correspondence. If so, the decision is right; but, if not, it must not be taken as overruled by the case of *Clay v. Crofts*, decided in 1851. There the plaintiff delivered a prospectus, in which it was stated that his terms were sixty guineas per annum, and that three months' notice, or payment, should be given before the removal of a pupil. The plaintiff agreed, *verbally*, that the defendant's two boys should be charged fifty guineas each as long as they remained together at the school.

The boys were taken away without the stipulated notice, and, at the trial, where the master sued for fees in lieu of notice, objection was taken that the agreement was not stamped. It was held, however, that the prospectus was a mere proposal, and that there was no concluded agreement wholly in writing to make a stamp necessary.

The common case, where a parent, having written for a prospectus, receives one by post, and then writes to say that he is going to send his boy next term, answered by the master who expresses his readiness to take the boy, is one where the agreement is wholly contained in writing; therefore the parent's last letter should be stamped within fourteen days of its date to avoid the penalty referred to above, in case the terms of the prospectus have to be relied upon in a court of law. It is sufficient if one letter is stamped, provided it is not a copy, but an actual letter or document which has passed between the parties and also directly concerned with the formation of the contract. Such is the strict letter of the law; but, in most cases, it is perhaps not difficult to discover that some slight variation in the original arrangement has been provided for verbally, or acquiesced in during the pupil's stay at the school, and so avoid the Stamp Act's operation.

ARTHUR E. HUGHES.

CORRESPONDENCE.

MODERN-LANGUAGE TEACHING.

To the Editor of the Educational Times.

DEAR SIR,—Rising late at the evening meeting on February 15 to second the vote of thanks to Mr. Campbell Brown for his excellent paper on "The Teaching of Modern Languages in German Schools," I felt I was trespassing upon the patience of the audience. I am afraid my remarks were consequently incomplete, and I should like to add thereto.

So much that is favourable has been said about teaching and the teachers of modern languages in Germany that I am afraid the English teacher may give up all hope of ever equalling what is being done in that country. As a rule, those who visit German schools visit only the best. They hear the best teachers—men and women whose energy, love of their work, and training as teachers have enabled them to add greatly to their obligatory qualifications, and brought them to a pitch of excellence very difficult of attainment. Yet I have no hesitation in saying that English teachers would be quite as successful as their German friends if only they could work under the same conditions.

In England teachers—teachers of modern languages especially so—are often hindered rather than helped by examinations. There is in the mind of English parents no fixed time at which children should commence their studies or leave school, and too often the number of years children spend at school is altogether too small. There is, moreover, a prejudice, which appears to be passing away, in favour of a foreign teacher for a foreign language. While there are many notable exceptions, the average foreign master is quite unable to manage English boys. Consequently the discipline of the school suffers, and lack of good discipline means absence of serious work.

My acquaintance with German schools and teachers began some twenty years ago. I had spent a long time in France studying the language, especially the pronunciation, and I took Gaillard's "French Orthoëpy" from England to help me, so that, on arriving in Germany, my mind was prepared to receive impressions. As member of several "circles" for the study of modern languages, I had opportunities of gauging the knowledge of the best educated teachers in the city in which I lived. More than one had English wives. Only a few had been in England or France. Some had one or two English or French boarders in the house, so that they had constant opportunity of speaking the languages they taught. Some spoke exceedingly well, but the majority of the teachers had learnt their French pronunciation from Floetz's books, which then held almost absolute sway, but have now been superseded by others; and it is, therefore, not surprising that I thought their pronunciation thoroughly bad.

What struck me most was the free way in which many used their bad pronunciation and their little vocabulary to the fullest extent, never worrying apparently about their inaccuracies; but, taking full credit for what they already knew, they seemed never to lose any opportunity of exercising their knowledge and of adding to it.

Much has recently been said about the advisability of exercising the pupil studying a modern language in free composition. English teachers of modern languages may wonder how their German *confrères* can manage to deal with the free compositions of their pupils. The fact is that there are in Germany comparatively few teachers of English and French who are able properly to correct free composition.

The head French master at one of the best *Gymnasien* in Germany is the author of a French course which has had a considerable sale. In my opinion he is an excellent teacher, and one would not think of

doubting his good knowledge of French; but that he would not be able properly to correct the free composition of his pupils is evident from a signed article in French contributed to the Yearly Report of his school. This article has many inaccuracies. Wrong prepositions are used, for example, and the sentences are German in construction.

A leader of the Reform Movement in Modern-Language Teaching has recently published a book dealing with the teaching of English. One might expect the English to be faultless; but this is by no means the case, and it would have been better if the proofs had been read by an Englishman.

From this it is evident that, even among the best teachers in Germany, the knowledge of the language they teach is far from sufficient to keep them from falling easily into error. The fact is that they claim credit for what they do know, and not for what they do not know, and they teach their pupils as much as they know, even if inaccuracies are frequent.

I do not write in favour of allowing badly qualified teachers to do our modern-language teaching. The German Government satisfies itself that German teachers have, at least, a fixed minimum knowledge of the language they teach; but I do want the English intending teacher of modern languages to understand that, if he waits until he can correct free composition, or until he speaks the language faultlessly, his teaching years will not be many, unless, indeed, he is a notable exception to the rule. In my opinion, one of the weak points of the new method is that the teacher often leads his pupils where he cannot properly control them, unless he is absolute master of the language he is teaching. At the same time, I should be sorry to say that successful work cannot be accomplished without a perfect knowledge of the language.

Teachers who visit the modern-language classes in Germany should make a point of seeing the ordinary teacher working by the new method; it is not quite the same in his hands.

If many classes are visited, it will be interesting to find how much these ordinary teachers know, and just as interesting will it be to find how confidently they teach in view of the much they do not know. This confidence seems to be a characteristic of the German teacher, and I should like it to take possession of all English modern-language teachers who are doing work fairly within their powers.

To teachers who are in doubt about the use of phonetics in teaching pronunciation, I would point out that the German Government has recently made a knowledge of phonetics obligatory upon future teachers of modern languages. That English teachers should know phonetics is not less necessary; but, if they cannot see their way to introducing the phonetic system, I should certainly recommend them to use Gaillard's "French Orthoëpy," and, perhaps, Lesaint's "Traité complet de la prononciation française," rather than follow the imitative method in teaching French. This last-named work does not seem to be known much in England.

In my opinion, too much attention cannot be given from the very first to pronunciation and division of words into syllables. The acquirement of new words becomes so much more easy.—I am, yours faithfully,
A. MILLAR INGLIS.

SIR EDWARD CLARKE ON SHORTHAND.

To the Editor of the Educational Times.

SIR,—In the interests of historical accuracy we should be glad if you would allow us to correct some mis-statements about the system of shorthand first published by Sir Isaac Pitman in 1837, which appear in a letter contributed by Mr. Percy E. Kingsford to your February number. The writer states that Pitman's shorthand was published as the Taylor system "further improved," the indebtedness of the author to Taylor and Harding being stated on the title-page. This is entirely wrong. There was no title-page to Isaac Pitman's first work, nor does any such statement appear in subsequent title-pages. Had it appeared, it would not have harmonized with the author's own statements in the body of the work of 1837, in which he shows that his system has a phonetic basis, while other methods, including Taylor's, have not. Isaac Pitman promised a more extended development of his principle of "writing by sound" subsequently, and this he gave to the world in 1840 and later years. Those who have had an opportunity of examining Sir Edward Clarke's copy of Taylor's alphabet can see for themselves how entirely dissimilar it is from Pitman's alphabet. We would further state that no such proposition as that mentioned by Mr. Kingsford in the following sentence was ever made: "It was suggested to young Mr. Pitman that he would do better commercially by altering it further (Taylor's copyright having expired), altering the name and calling it his own." The facts are that in 1837 Isaac Pitman suggested to Mr. Samuel Bagster, the Bible publisher, the advisability of issuing a popular edition of Taylor's system, which he had himself written for eight years. The publisher consulted a reporter, whose opinion was not favourable to the further issue of a system already in the market, and he added: "If he will compile a new system, I think he will be more likely to succeed in his object to popularize shorthand." This was the suggestion Isaac Pitman acted on, with results that are well known.

The most conclusive testimony to the dissimilarity of the two systems is to be found in the fact that, though a Taylor writer is able to read Isaac Pitman's shorthand MS. written in that system previously to 1837, he is quite unable to read the MS. written in the inventor's own system in 1837 and subsequent years.—Yours, &c.,
Phonetic Institute, Bath.

SIR ISAAC PITMAN & SONS, LIMITED.

A SCHOOLBOY'S VERSION.

To the Editor of the Educational Times.

DEAR SIR,—The following piece of versification seems to me so remarkable that I venture to send it to the Educational Times. It was written by a boy of fifteen, in school, in an hour, and is intended to be a translation of "Bion" l. 47 *et seq.* I have transcribed it without making any corrections. It is worth observing that the most obvious faults are in metre and rime. But, as every one knows, it is in technicalities of this sort that young writers always fail, even the most promising.

Φείρεις μακρόν, Ἄδωνι.

"Alas (qd. she) far, far away to hell
Art flown, Adonis, and dwell'st far from me,
Where Pluto grim and grisly king doth dwell;
But I a goddesso live in miserie,
And though immortal cannot follow thee.
My Paramoure keep safe, O Proserpone [!]
Of all fair things the fair epitome,
Better than I. Thou diest, thrice loved one;
My love hath flowne away and like a dream is gone.

"Widowed is Cytheris, the Loves grieve sore.
With thee my joy hath died: what fate thee led
In beauteous madness grapple with the boar?'
Thus Cypris wailed: the Loves thus answered:
'Alas for Venus, faire Adonis dead!'
As many goutts of blood as one could see
So many teares the Paphian maid did shed,
While flowres spring up in sweete varietie:
The blood doth beare the rose, the tears anemone."

—Your obedient servant, E. C. MARCHANT.

CIVIL SERVICE HANDWRITING.

To the Editor of the Educational Times.

SIR,—I am frequently asked by teachers and intending candidates for Civil Service appointments whether upright, or vertical, writing is accepted by the Commissioners. Will you allow me to state, for the benefit of your numerous readers, that, having written to the Department for information on the subject, I received a reply, in which the question was set at rest, once and for ever, by the official statement that: "The Commissioners have no preference for any particular style of writing. They lay stress chiefly on legibility."—Yours truly,
JOHN JACKSON.

The Hollies, West Norwood, S.E., February 13, 1899.

THE CENTRAL WELSH BOARD.

To the Editor of the Educational Times.

DEAR SIR,—The enclosed cutting may interest you. The County Councils have already complained about the extravagance of the Central Board and its morbid desire to examine everybody at every season. The chief examiner appointed by the Board is a man whose experience of schools was confined to Oswestry.—Yours, H.
February 4, 1899.

[We have no room for the cutting, which is from an article in the Cambrian News, complaining in somewhat heated language that "the attempt of the Central Welsh Board to establish an elaborate, costly, and quite unnecessary system of examinations to take the place of the Cambridge and Oxford Local Examinations, or, at any rate, which interfere with them, is a mistake in many ways, and betrays defects of educational insight which the members of the Central Board cannot realize too soon or too completely."—EDITOR.]

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on February 18. Present—Dr. Wormell, Vice-President, in the Chair; Rev. J. O. Bevan, Mr. Bowen, Mr. Brown, Mr. Butler, Mr. Chettle, Miss Dawes, Miss Day, Mr. Eve, Mr. Harris, Rev. Dr. Hiron, Miss Jebb, Mr. Reynolds, Mr. Rule, Rev. Dr. Scott, Mr. Sergeant, Mr. Armitage Smith, Mr. Stewart, and Mr. Storr.

The minutes of the last meeting were read and confirmed.

The Report of the Finance Committee was adopted.

The Report of the Examination Committee, dealing with questions in relation to the recognition of the College Certificates by the General Medical Council, was adopted.

The representative of the Council on the Joint Agency Committee reported the satisfactory progress that had been made by the Agency. Mr. A. Millar Inglis, Maidenhead College, was elected a member of the Council to fill the vacancy caused by the death of Dr. Maxwell. The Moderators and Examiners for the year 1899 were appointed. The Very Rev. the Dean of Wells was elected President of the Council, and Dr. Wormell, Sir Philip Magnus, and the Rev. J. Stewart, were elected Vice-Presidents. Mr. H. W. Eve was elected Dean, and Mr. E. E. Pinches Treasurer of the College.

The following persons were elected members of the College:—

- Mr. H. Baker, M.A. Camb., New College, Margate.
- Miss A. Gibson, Holly Mount, Washington Road, South Woodford.
- Miss A. L. Hales, 8 Quadrant, Coventry.
- Miss M. Mawer, A.C.P., 101 Tredegar Road, Bow, E.
- Miss M. Paquier, A.C.P., 41 King Henry's Road, N.W.
- Mr. W. G. Rushbrooke, LL.M. Camb., 13 Cathcart Hill, N.
- Miss J. Woods, A.C.P., Gypeswyk Road, Ipswich.

The following books had been presented to the Library since the last meeting of the Council:—

- By Mr. J. F. MOON.—Stewart's Philosophical Essays.
- By the BUREAU OF EDUCATION, WASHINGTON, U.S.A.—Report of the Commissioner of Education, 1896-97 (2 vols.).
- By the VOLTA BUREAU, WASHINGTON, U.S.A.—International Reports of Schools for the Deaf, and other papers relating to the education of the deaf.
- By the AGENT-GENERAL FOR NEW SOUTH WALES.—Report of the Minister of Public Instruction for the Year 1897.
- By G. BELL & SONS.—Bell's Reading Books (The Swiss Family Robinson, and Early English History); Pencilbury and Beard's Shilling Arithmetic.
- By A. & C. BLACK.—Chrystal's Introduction to Algebra.
- By BLACKIE & SON.—The Newton Object-Lesson Handbook I.; Dillworth's New Sequel to Euclid, Parts II. and III.; Vere Foster's New Copy Books, Medium Series, Nos. 1-5 and 9.
- By C. J. CLAY & SONS.—Preliminary Local Examination Papers, December, 1898; Breen's The Teaching of Modern Foreign Languages; Edwards's Xenophon's Anabasis, Book IV., and Xenophon's Hellenica, Books I. and II.; Flather's Macaulay's Lays of Ancient Rome; Ropes' Dumas' La Fortune de D'Artagnan, and Saintine's Piccola; Shuckburgh's Caesar's Gallic War, Books III. and IV.; Sidgwick's Vergil's Æneid, Book XII.; Smith's Boileau's L'Art Poétique; Verity's Shakespeare's King Richard II.
- By W. B. CLIVE.—Matriculation Directory, January, 1899; Bailey's Advanced Inorganic Chemistry; Briggs and Bryan's Tutorial Dynamics; Lawson's Text-Book of Botany; Mills's Plato's Apology; Stout's Manual of Psychology, Vol. I.
- By MACMILLAN & CO.—Nesfield's Manual of English Grammar and Composition; Page's Virgil's Æneid XI.; Phillips' Pliny's Letters I.-XII.; Weiss's Fontane's Vor dem Sturm; Wilkinson's Cornelius Nepos, Vol. I.
- By WHITTAKER & CO.—Hutton & Bood's Elementary Mathematics. Calendar of the Pharmaceutical Society of Great Britain.

COLLEGE OF PRECEPTORS.—DIPLOMA EXAMINATION, JANUARY, 1899.

SUPPLEMENTARY PASS LIST (COLONIAL CANDIDATES).

<i>Theory and Practice of Education.</i>	<i>Euclid.</i>	LICENTIATESHIP.

COLLEGE OF PRECEPTORS.—CERTIFICATE EXAMINATION.

ERRATA IN CLASS LIST (CHRISTMAS, 1898).

In Oral List (Boys) and in List of Candidates who were First and Second in each Subject.

Harari, M. A., for Private tuition read Great Ealing S.

SECOND CLASS (BOYS).

2nd Division: Macalpine, B. L., for Rusholme Gram. S., read Rusholme High S.

THIRD CLASS (BOYS).

- Insert in 1st Division: *Lake, F. W., ch., Oakes Inst., Walton, Liverpool.
- *Bremner, G., Oakes Inst., Walton, Liverpool.
- Read, V., c.a., Hart H., Burnham, Somerset.
- Stewart, J., e.a., Oakes Inst., Walton, Liverpool.
- *Tregurtha, W., Penzance Comm. S.
- Tuck, C. H., Edward VI. Middle S., Norwich.
- Turner, W. T., Sidcup Coll.
- Vickers, H., al., New Coll., Harrogate.
- Wardle, S. J. L. G., e., Finsbury Park Coll., N. Washington, J. H., Balham S.
- Watson, W. H., g.d., Stourwood Coll., Southbourne.

CASSELL'S EDUCATIONAL LIST.

- CASSELL'S FRENCH DICTIONARY.** 515th Thousand. 1,150 pp. 3s. 6d. Superior binding, 5s. "Has become a standard work in this country, being used in the best schools, recommended by many of the first professors of the day, and generally found a reference book of the highest value and importance"—*Daily Chronicle*.
- CASSELL'S GERMAN DICTIONARY.** 222nd Thousand. 1,201 pp. 3s. 6d. Superior binding, 5s. "Is the best of the smaller German dictionaries in the field, and this is faint praise."—*Journal of Education*.
- CASSELL'S LATIN DICTIONARY.** 102nd Thousand. 927 pp. 3s. 6d. Superior binding, 5s. "Is the handiest, the most useful, and certainly the very cheapest to be met with."—*Rock*.
- CASSELL'S ENGLISH DICTIONARY.** 1,100 pp. 3s. 6d. Superior binding, 5s. "It is an excellent dictionary."—*Pall Mall Gazette*.
- CASSELL'S LESSONS IN FRENCH.** By Prof. E. ROUBAUD, B.A. Cheap Edition. Parts I. and II., cloth, each 1s. 6d.; complete, 2s. 6d. Key, 1s. 6d.
- THE NEW LATIN PRIMER.** By Prof. J. P. POSTGATE. 2s. 6d.
- THE FIRST LATIN PRIMER.** By the same Author. 1s.
- LATIN PROSE FOR LOWER FORMS.** Being a Series of Exercises adapted to the New and First Latin Primers. By M. A. BAYFIELD, M.A. 2s. 6d.

A Class Book of Dictation Passages for the Use of Middle and Higher Forms. By the Rev. W. WILLIAMSON. Crown 8vo, 1s. 6d.
 The passages are selected from recognized authors, and a few newspaper passages are included. The lists of appended words are drawn up mainly on the principle of comparison and contrast, and will form a *répertoire* of over 2,000 words, embracing practically all the difficulties felt by the pupil.

Volumetric Analysis. By J. B. RUSSELL, B.Sc., Science Master at Burnley Grammar School. Crown 8vo, 1s.
 A small manual, containing all the necessary rules, &c., on a subject which has hitherto only been treated in expensive volumes.

Test Cards in Euclid and Algebra. By D. S. CALDERWOOD, Headmaster of the Normal School, Edinburgh. In three stages of 40, with Answers, 1s. each.
 A set of cards for advanced pupils in elementary schools.
 "They bear all the marks of having been prepared by a teacher of experience, who knows the value of careful grading and constant repetition. Some are specially inserted to meet all likely difficulties. The papers set at the various public examinations have been largely drawn upon in preparing the cards."—*Glasgow Herald*.
 The above may also be had in Book form (without Answers). Stages I. and II., price 2d. each; and Stage III., price 3d.

A History of Egypt, from the Earliest Times to the Present Day. Edited by W. M. FLINDERS PRYER, D.C.L., LL.D., Professor of Egyptology at University College. Fully Illustrated. In Six Volumes. Crown 8vo, 6s. each.
 Vol. IV. **Ptolemaic Egypt.** J. P. MAHAPPY. [Shortly.]
 Vol. V. **Egypt under Roman Rule.** J. G. MILNE. [Shortly.]

A Short History of Rome. By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 3 Maps. Second Edition. Crown 8vo, 3s. 6d.
 "An original work, written on an original plan, and with uncommon freshness and vigour."—*Speaker*.

Taciti Agricola. With Introduction, Notes, Map, &c. By R. F. DAVIS, M.A., Assistant-Master at Weymouth College. Crown 8vo, 2s.

Taciti Germania. By the same Editor. Crown 8vo, 2s.

Passages for Unseen Translation. By E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and A. M. COOK, M.A., late Scholar of Wadham College, Oxford; Assistant-Masters at St. Paul's School. Crown 8vo, 3s. 6d.
 "A capital selection, and of more variety and value than such books usually are."—*Athenæum*.
 "We know of no book of this class better fitted for use in the higher forms of schools."—*Guardian*.

Exercises in Latin Accidence. By S. E. WINBOLT, Assistant-Master in Christ's Hospital. Crown 8vo, 1s. 6d.
 "Accurate and well arranged."—*Athenæum*.

Notes on Greek and Latin Syntax. By C. BUCKLAND GREEN, M.A., Assistant-Master at the Edinburgh Academy, late Fellow of St. John's College, Oxon. Crown 8vo, 3s. 6d.
 Notes and explanations on the chief difficulties of Greek and Latin Syntax, with numerous passages for exercises.
 "Well arranged, clear, and extremely useful."—*School Guardian*.

FORECASTS AND COMMENTS.

March 1, 1899.

THE Public Distribution of Diplomas, Prizes, Fixtures, and Certificates awarded to candidates at the Christmas Examinations of the College of Preceptors will be held at the College this day at 3 p.m. The Rev. T. W. Sharpe, C.B., late H.M. Chief Inspector of Schools, will occupy the chair.

THE Professional Preliminary Examination of the College of Preceptors will begin on Tuesday next, March 7.

ON March 2 Sir Ernest Clarke will lecture at Cambridge on "Arthur Young and his Times," in conclusion of a short series of lectures on Agricultural History.

DR. A. S. MURRAY's course of lectures at the Royal Academy on "Greek Sculpture," the third of which was given on Monday last, will be continued on March 2, 6, and 9.

MIDDLESEX HOSPITAL opens its new Medical School buildings on March 15.

THERE will be a competition for a tenor Choral Scholarship at King's College, Cambridge, on March 16. The value is £60 per annum for three years.

THE National Society of French Masters in England have fixed March 18 for the distribution of prizes at the Mansion House.

THE Public Schools Sports Competition will take place at Aldershot on Friday, March 24—the University Boat-race on the following day.

THE following entrance scholarships will be offered for competition at an examination which will be held at Holloway College on July 4-8, 1899—viz.: Two of £75 a year, two of £60 a year, four of £50 a year, all for three years. The full value of the scholarships of £75 a year will only be awarded if candidates of high promise present themselves. A certain number of bursaries of £30 a year for three years will also be awarded to deserving candidates who fall below the scholarship standard, and who need help towards the expenses of their college course.

A COMBINED examination for scholarships and exhibitions at Lady Margaret Hall and St. Hugh's Hall will be held this month. Four scholarships, tenable for three years during residence, are offered at Lady Margaret Hall, one being given only to a candidate who can prove her need of pecuniary aid, and one at St. Hugh's Hall. Exhibitions of smaller value may also be awarded.

ENGLISH student-teachers in French training colleges pay 400 francs (£16) a year, and give a little assistance in the teaching of English in return for board and instruction in French. They must be over eighteen and under thirty years of

age. The next examination of candidates for vacancies that will occur in October will be held at Newnham College, Cambridge, during Easter week. Forms of application may be obtained of Miss Alice Gardner, Newnham College, Cambridge, or of the Secretary of the Franco-English Guild, 6 Rue de la Sorbonne, Paris.

* * *

A SCHOLARSHIP of the annual value of £40, tenable for three years at Newnham College, will be awarded to a woman candidate who obtains a place in the Honours Division of the Matriculation Examination of the University of London to be held in June, 1899, and one scholarship of £40, tenable for three years at the college, will be awarded on the results of the Oxford and Cambridge Higher Certificate Examination to be held in July, 1899.

Education Gossip. WE greatly regret that ill-health has compelled Miss E. P. Hughes, Principal of the Cambridge Training College for Secondary Teachers, and a member of the Council of the College of Preceptors, to suspend her work for a time. We trust that the interruption of Miss Hughes's many activities will not be of long duration.

* * *

THE Joint Agency Committee, we are glad to say, is able to make a very favourable report of the working of the Agency since the combination of forces effected last year.

* * *

At the last meeting of the College Council, Sir Philip Magnus was elected one of the Vice-Presidents of the College of Preceptors; and Mr. Millar Inglis, of Maidenhead College, was elected to fill a vacancy in the Council.

* * *

ST. ANDREWS confers the degree of M.A. on Mr. Edmund Gosse, and Glasgow the degree of LL.D. on Sir Henry Irving.

* * *

EDUCATION has another technically informed representative in the House of Commons since the election of Dr. C. Mackinnon Douglas, M.A., D.Sc., as member for North-West Lanark. Dr. Douglas was formerly Assistant-Professor in Moral Philosophy at Edinburgh, and was a candidate for the Professorship vacated by the death of Prof. Calderwood.

* * *

WE are glad to note that Mr. J. Nicol, the winner of the Matriculation scholarship at the University of London, was a pupil at Tollington Park College under Mr. A. E. Butler and Mr. W. C. Brown. We report this month Mr. Brown's paper on "Modern Language Teaching," read at the College of Preceptors on February 15. Mr. Nicol was second in the College examination at Midsummer, 1897.

* * *

IN connexion with the Cambridge meeting of the National Union of Teachers, the University has resolved to follow the precedent set by Oxford in the case of Mr. Ernest Gray, M.P., by conferring the honorary degree of M.A. upon Mr. Clancy, the President, and Mr. Yoxall, M.P., the General Secretary.

* * *

AN apparently gratuitous proposal is made to expand a Kentish "Association of the Managers and Governors of Schools for the Working Classes" into one for the United Kingdom as a whole. In connexion with this it is proposed to found a newspaper under the title of *The Imperialist*, with the prospective capital of £100,000.

* * *

WE are asked by Sir H. E. Roscoe to state that the National Association for the Promotion of Technical and Secondary Education has removed its offices from Dean's Yard to 10 Queen Anne's Gate, Westminster.

DURHAM men are naturally very unwilling to submit to the closing of Codrington College, which was affiliated to the University in 1875, and it is understood that they have subscribed a sum which will suffice to prolong the existence of the college for one year.

* * *

SOME months ago Sir Walter Besant proposed that, in recognition of Miss Charlotte Yonge's great services to the cause of religious and high-toned literature for young people, a University scholarship, bearing her name, should be founded at the Winchester High School, which receives girls from all parts of the kingdom. Miss Yonge has been connected with this school from its foundation in 1884 as one of the council of management, and there is no place outside her own village of Otterbourne more linked with her name than Winchester. Of the £6,000 required to found a scholarship of £50 to be given every year and held for three years, about one-third has been received from all parts of the United Kingdom, as well as the colonies and the United States, among the contributors being the Princess of Wales, the late American Ambassador, and the Archbishop of Canterbury. The hon. treasurer is the Rev. J. H. Merriott, Dormy Cottage, Winchester.

ON February 18, in the Great Hall of the University of Berlin, the degree of Doctor of Philosophy was conferred for the first time on a woman. The new doctor is a Jewess, Fräulein Elsa Neumann, who is twenty-seven years old. A correspondent says that the occasion was utilized by friends of the "Feminist" movement for a great demonstration. The hall was packed with their representatives, who greeted the young doctor with loud applause. Fräulein Neumann's speciality is electricity. She has also brought herself into note as an advocate of the teaching of logic in girls' schools.

THE success of the London School of Economics appears to be definitely assured. The number of students exceeds four hundred. Mr. Bryce recently expressed the opinion that the school was destined to become a faculty of practical Political Science in London University.

* * *

IT has been practically decided at Cambridge that advanced students may compete for the Tyson Medal and the Smith's Prizes. No wonder that Cambridge men are saying that all the principal emoluments and rewards will soon be at the mercy of minor who, after being educated elsewhere, take away prizes meant for Cambridge men. The tendency of modern developments is to revive the ancient practice of pot-hunters making the grand tour of the Universities, seeing what they can pick up in the way, not of knowledge, but of prizes.

* * *

TO CORRESPONDENTS.—*Pons Asinorum*. Congratulations. We should have hesitated to send in a verse for the "Extra Prize for January" in which "board," "lord," and "fraud" were made to "rime" together; but your boldness has succeeded, and you have deserved your guinea. You had the shrewdness to see that the vowel sound *aw* and the consonant *d* were the only essentials for that particular competitive rime: all else could be ignored (pr. "ignawd"). You have shown how easy it is to versify a guinea's-worth with these extended rime groups. For example: "board, lord, fraud, ignored, gawd, toward, forward, poured, floard."

THE Mastership of Pembroke College, Oxford, has been filled by the election of Bishop Appointments and Vacancies. Mitchinson. The new Master was born in 1833, and was Scholar and Fellow of the college; he took First Classes in Classical Moderations, *Litteræ Humaniores*, and Science, and subsequently graduated D.C.L. He was also President of the Union Society. He has been Headmaster of King's School, Canterbury, Bishop of Barbados,

and Archdeacon of Leicester. In 1884 he was made an Honorary Fellow of his college.

* * *

MR. G. S. WOODHEAD, M.D. Edin., has been elected Professor of Pathology at Cambridge. He was educated at Huddersfield College and Edinburgh University. Although the Chair of Pathology was founded as recently as 1884, Dr. Woodhead is the third Professor. The first, Mr. Roy, died in 1897, and his successor, the late Prof. Kanthack, occupied the position only one year. The Professor receives a stipend of £800 a year from the University, and is not allowed to practise his profession.

* * *

DR. JAMES SMITH REID, a Fellow and Tutor of Gonville and Caius College, has been elected to the newly created Chair of Ancient History at Cambridge University. Dr. Reid, who was born in Scotland in 1846, was educated at the City of London School, and had a brilliant career at Cambridge, where he was bracketed Senior Classic in 1869, being then a scholar of Christ's College.

* * *

MR. A. E. H. LOVE, M.A., F.R.S., University Lecturer in Mathematics at Cambridge, has been elected Sedlician Professor of Natural Philosophy at Oxford, in succession to the late Master of Pembroke.

* * *

THE Chair of Physiology in Edinburgh University is vacated by the death of Professor Rutherford.

* * *

THE Regius Professorship of Divinity at Cambridge will be vacated by the appointment of Prof. Armitage Robinson to succeed Canon Eyton at St. Margaret's, Westminster.

* * *

MR. GERRANS, Secretary to the Delegacy of Local Examinations at Oxford, has been elected by the Hebdomadal Council to be one of the Delegates.

* * *

WE regret to note the death of the Right Hon. Christopher Redington, Resident Commissioner of National Education in Ireland. He is succeeded by Mr. W. J. M. Starkie, President of Queen's College, Galway.

* * *

THE REV. F. W. TRACY, M.A., Headmaster of the South-Eastern College, Ramsgate, has been appointed Headmaster of the United Services College, Westward Ho, in succession to the Rev. Dr. Harris.

* * *

MR. M. J. RENDALL, M.A., has been appointed second master of Winchester College, in place of the Rev. G. Richardson, who retires at Midsummer.

* * *

MISS BROOKES, B.A., second mistress of the Holywell County School, has been appointed Headmistress of the same school.

* * *

Literary Gossip. WE receive from the United States Bureau of Education, in addition to their periodical and valuable Reports (to be precise, we receive in an official envelope of the Bureau) a weird little *brochure* on "Emile Zola, a Study of his Personality, with Illustrations," written by Mr. Arthur MacDonald, "Specialist in the U.S. Bureau of Education." It appears that M. Zola has been investigated, with his full consent, by a number of French specialists, and what Mr. MacDonald has done is to reproduce in his own words the substance of their conclusions.

* * *

THE tract has Mr. Zola's *imprimatur*; he says that the estimate made of him is authentic and true, and it must, therefore, be good and useful. "This study of me is about one who has given his life to work, and dedicated to this work all his

physical, mental, and moral forces." Mr. MacDonald says that "Zola does not have the religious sentiment"—which seems to imply that he could have it if he would. There are portraits of the novelist as boy and man; the anthropological measurements are minute; there are diagrams of his hands and his finger-tips; his abnormal tendencies are duly recorded. But yet, on the whole, this study is creditable, if not flattering; and we can imagine that a dozen similar studies of our own eminent writers would make a grimly attractive volume.

* * *

WE noticed some time ago a book by the Rev. Allen Whitworth, Vicar of All Saints, Margaret Street, of which the title was "DCC. Exercises on Chance." It is a subject which has always been a favourite one with Mr. Whitworth, and we are not altogether surprised that he should have preached a Lenten sermon at St. Paul's on gambling. While condemning as immoral betting founded on private information, and little better than blasphemous betting on one's luck—which, if it meant anything, was another word for Divine Providence—he said that he could not, with one bishop, condemn betting wholly as a sin when founded on scientific or technical knowledge. It stood logically in the same category as purchasing a commodity with the hope of its rising in value, entering into an athletic competition, or insuring one's house against fire. But what are the odds against Mr. Whitworth's having subsequently discussed his sermon with the Dean of St. Paul's?

* * *

IT seems that the Rector Magnificus of the University of Louvain is about to pay a brief visit to this country. Mgr. Hebbelynck hopes to spend a few days at Oxford collating some Coptic MSS. for a text he is shortly to edit. The *Tablet* is "not aware that a Rector Magnificus has ever visited England before, though Mgr. Abbelous, who lately retired from that office, was several times at both Oxford and London copying Syriac MSS. for his editions of Barhebraeus and other writers; but that was before his busy rectorship."

* * *

MR. E. B. NICHOLSON, Bodley's Librarian, has collected together three papers on "Mr. Gladstone and the Bodleian," "Oxford's Poverty," and "Bodley and the Bodleian." The little *brochure* is illustrated by photographs of Woolner's well known bust of Mr. Gladstone in the gallery, with its Homeric reliefs, and the traditional portrait of Bodley himself in 1598, from an unpublished miniature.

* * *

MESSRS. KEGAN PAUL & Co. have in hand a gazetteer of Greater Britain on a somewhat novel plan. The papers on the various sections will be written by men of special knowledge and authority on the countries which they treat. In the first volume, which will deal with India, the papers on the Madras and Bombay Presidencies will be written by Lord Wenlock and Lord Harris, who were former governors of the respective provinces. They will not be confined to physical, political, and commercial facts and statistics, but will set forth whatever is of interest in the habits and manners of the native races.

* * *

MR. F. E. HULME, F.L.S., F.S.A., has prepared forty new drawings of wild flowers for the serial issue of "Familiar Wild Flowers," which is to begin in March. This new edition will contain in all 240 plates in colours.

* * *

MESSRS. BLACKWOOD announce a series of monographs on English writers on similar lines to their Ancient, Foreign, and Philosophical Classics. The first volume will be on R. L. Stevenson, by Mr. Cope Cornford.

* * *

AMONGST forthcoming publications of the Clarendon Press we may mention the "Politics" of Aristotle, edited by W. L. Newman, M.A., Vols. III. and IV. (completing the work);

Homer, "Odyssey XIII.-XXIV.," edited by D. B. Monro, M.A.; Xenophon, "Hellenica," edited by G. E. Underhill, M.A.; "Hints for Greek Iambic Verse," by C. E. Laurence, M.A.; and in the Series of "Oxford Classical Texts," "Aeschylus," edited by A. Sidgwick, M.A., and "Thucydides," Vol. I., edited by H. Stuart Jones, M.A.; the "Complete Works of John Gower," edited by G. C. Macaulay, M.A., in 4 vols., 8vo; "The Plays and Poems of Robert Greene," edited by J. C. Collins, M.A.; "Milton's Poetical Works," edited by H. C. Beeching, M.A.; Bosworth's "Anglo-Saxon Dictionary," Supplement, by T. N. Toller, M.A.; "A New English Dictionary, founded mainly on the Materials collected by the Philological Society," edited by James A. H. Murray, M.A., LL.D., portions of G, by Henry Bradley, M.A., and of H, by Dr. Murray.

THE TEACHING OF MODERN LANGUAGES IN GERMAN SCHOOLS.

On February 15, at the Monthly Evening Meeting of the College of Preceptors, Mr. W. C. Brown, M.A., F.C.P., read a paper on the subject of "Modern Language Teaching in Germany," based upon "impressions derived from personal inspection of *Realschulen* in Berlin." The Chair was taken by Mr. Francis Storr, B.A.

The lecturer began with a short account of the organization and classification of Prussian schools. Of schools with a nine-years' course there were—the *Gymnasium* with its provision for the teaching of Greek, Latin, and French, with English as an optional subject; *Realgymnasium* with English in place of Greek; the *Oberrealschule* in which neither Latin nor Greek is taught, thus admitting of a much larger proportion of time being given to French and English. In the *Realschule* with its six-years' course the same subjects were taught as in the *Oberrealschule*. Time-tables of these different classes of schools had been printed and distributed among the audience. The lecturer proceeded as follows:—

Refinement in education can no more be got from a commercial, technical, or purely scientific training than can water be extracted from a stone. Our German contemporaries have recognized this, and have, in their modern schools, replaced the study of ancient languages and their classics by that of modern languages and their classics. While thus modernizing their education to suit the requirements of a large section of the people, German teachers have not thrown aside the splendid spirit of the older education, but have transfused it into new and fresh material. On this point I should like to quote from one of Mr. Sadler's reports: "Certainly the German *Realschulen* struck me as having more of the old educational tradition, writ anew in a different dialect and with an altered subject-matter, than have some of our modern secondary schools, established under the regulations of organized science schools."

In the time-tables of the different classes of schools we are at once struck with a marked difference, which at first sight apparently contravenes all pedagogical principles. In the *Oberrealschulen*, French is commenced in the very lowest class; thus a boy in one of these schools learns French for a period of nine years. In the *Realschulen*, however, it is not commenced till the fourth form (*Quarta*), so that a boy learns French only for four years. There is a corresponding difference, too, in the teaching of English, which is started a year later in the *Realschulen*. At first sight it appears very strange, if not absurd, that the commencement of French and English should be delayed in the schools with the shorter course. The reason for this peculiarity in the *Realschulen* is of very great importance, inasmuch as the need for it arises from the unique position these schools hold in the whole system of education. In origin higher-grade elementary schools, which have been raised to the position and dignity of secondary schools, the *Realschulen* stand at the boundary between elementary and secondary education, and serve as a connecting rung in the educational ladder from the elementary school to the University. Further, the *Realschule* has no *Vorschule*, or preparatory school, of its own, and has to draw the majority and the best of its pupils from the elementary school.

If now in the *Realschule* French were commenced in the *Sexta* (the bottom class), those boys coming from the elementary school would have to leave it early enough for them to commence at the bottom of the *Realschule*, because French is not taught in the *Volksschulen*. By thus withdrawing the boys at the age of nine or ten from the elementary schools, their upper classes would be robbed of their best pupils—their leaven, as it were—and their best work would be completely ruined. For this reason, therefore, the commencement of French is put off in the *Realschulen* to the *Quarta* to enable boys from the top classes of the elementary schools to enter this form. In an endeavour to avoid the overpressure that might result from this

delay, the commencement of English is also postponed to a year later. Thus, a *Realschüler* who does not pass on to the higher school only has two years' training in English and four years' in French.

Among German teachers much divergence of opinion is to be found on this subject. On the one side are those who consider that the French is, according to this system, started much too late, while there are to be found equally strong supporters of the opposite view who make a virtue of this necessity. The latter urge in favour of the system that those *Realschüler* who enter the *Oberrealschulen* generally come out well in their classes. A certain weight must be given to this argument; but it is only fair to point out, firstly, that only the best pupils of the *Realschulen* pass up into the higher school, where they join a class of boys, all of whom are not necessarily so capable, and, secondly, that more concentrated effort is put into the modern-language teaching in the shorter period of the *Realschule*. Several teachers who are doing this work in the *Realschulen* confessed to me that they had to push the boys hard in this direction; but they claimed at the same time that they got better results than were obtained in the corresponding classes of the higher school. To this point, however, I shall have to return when showing in what direction my own experience with these schools seemed to point.

Before passing on to an account of the actual teaching in these schools, the main object of this paper, I should like to answer a question which might be raised on this point of the relation of the secondary to the elementary schools.

Why should the higherschool have to bear all the brunt of the difficulty? That is to say, why should not French be taught in the top classes of the elementary school? Quite apart from the general question whether French ought to be taught at all in elementary schools, there are, in the special case of the Prussian system, two fundamental and insuperable obstacles. Firstly, one of the conditions under which the higher-grade schools (*höhere Bürgerschulen*) were raised to the rank of secondary schools was that it should cause no interference with the curriculum of the elementary schools; and, secondly, the introduction of French into the elementary schools would necessitate the supplying to them of a new body of teachers capable of doing the work.

I must now turn to the actual teaching of modern languages in these modern schools, and give you the result of my experience in them. A reference to the time-tables again will show that a large number of hours per week is given to each foreign language, especially during the first year in which the particular language is taught. For instance, in the *Oberrealschule* the lowest classes receive six hours' instruction per week in French, and the top classes four; and in the *Realschule*, because of the delay in starting French, eight hours per week are given to it for the first two years. This is the first factor in the success of the modern-language teaching in these schools, namely, the large share of the time-table devoted to it. Further, the experience of German teachers seems to prove that concentration of work and time in the teaching of either foreign language produces better results—i.e., that the larger number of hours a week spread over fewer years, as in the *Realschule*, is more effective than the smaller number of hours per week spread over more years, as in the *Oberrealschule*. My own experience, though it was only small, seemed to bear this out very strongly indeed. There are three reasons for this success. Firstly, in learning a modern language, where constant repetition and practice are of prime importance, the more frequent and continuous this practice is the better will be the result obtained. And to the particular methods used in these schools this applies even more strongly than usual. Secondly, the increase of time during the shorter period has the effect of giving to modern languages a more important position in the school work. This is no mean factor in obtaining a good result. Those subjects which come forward most frequently will be regarded by the pupils as most important, and treated accordingly. Thirdly, the postponement of the starting of the first foreign language gives more opportunity for thoroughly grounding the pupils in their own language first. It is true that with the newer methods of teaching, in which the older grammatical system is superseded, this cause has less effect. At the same time, I feel confident that some of the success of the shorter period is due to this factor. It is a mistake with any system of class teaching to commence a foreign language too soon. The quality of the result obtained in the modern-language training in these schools is far better than any increase of time could produce under the older method.

Before, however, any method of teaching can be fairly criticized, the aims which have determined the choice of the particular method must be clearly set forth. In this case the aim is twofold. The nearer and more immediate object is the acquirement of skill in the use of the language for reading, writing, and speaking, while the more remote is the cultivation of literary taste and style. To assist in realizing both parts of the aim, but particularly the latter, foreign languages are given a prominent position in the educational scheme, while to realize the former the methods of teaching have undergone complete change.

The less direct object is, at the same time, the less utilitarian, and consists in supplying the pupils in modern schools with that humanising part of education which in the past has been confined to a classical training; and this object is to be attained by introducing the pupil, through the medium of the languages, to the life and customs of the two foreign

nations. The first mentioned and more direct aim is, on the other hand, at the same time the more utilitarian: to enable those who have passed through the whole course to understand English and French authors, to be able to write in the languages, and to attain a certain conversational power, which, though limited in vocabulary, shall be fluent. The attainment of such excellent results is due to two main factors—efficiency of the teachers and excellence of the method.

Firstly, as regards efficiency of teachers, the following points must be noted:—No foreigners are allowed to teach in these schools; consequently all the French and English teaching is done by native teachers. This is a first and very important advance on the older method still pursued in England of having a Frenchman to teach French, and very often German too (or *vice versa*). It is only in very exceptional cases that a foreigner is able to obtain that discipline in class which is the first essential of school teaching. Moreover, a native teacher has a further great advantage over a foreigner, inasmuch as he has himself passed through the mill, and is, therefore, not only much more capable of showing others the way, but also far more appreciative of their difficulties. (2) The teachers are trained men, who have made a special study of the languages they teach. The reason for our falling back on foreigners for the work in England has been as much due to the want of such trained men as to any demand of the public for a foreign accent. It may be further noted that most of the men I met who were carrying on the modern language teaching had spent some time in either England or France.

In the *Realschulen* and *Oberrealschulen* of Prussia we find the so-called new method of teaching languages adopted to a varying extent. Pronunciation is made of great importance from the very first. This is done at the commencement by means of some preparatory (*propädeutische*) lessons, spread over several weeks. The methods that are used in these first lessons vary in the different schools, but in all the object aimed at is the same—the mastering of the pronunciation of the language, generally independently of words in so far as the words used to illustrate the pronunciation of the particular sounds are chosen without regard to their meaning. In all cases it comes to be a matter of constant repetition especially of those sounds which are peculiar to the language, such as the French nasal and the English *th*. At first sight such a course seemed to me rather opposed to what might be regarded as an inductive method of learning languages, but on closer acquaintance it turned out not to be so, for the aim of this earlier practice is not generally the formulation of a number of rules for pronunciation, but the acquirement of the power to pronounce certain sounds, and of the knowledge of how they are usually represented.

As the aim is thus mainly the acquirement of a certain skill, the quality of the visible result produced will give an accurate idea of the value of this preparatory training. Of the result, as far as my own experience of it went, I cannot but speak in terms of the greatest praise.

In one of the schools which I visited, the twelfth *Realschule*, the early training in pronunciation is given on the phonetic system; and, thanks to the kindness of the director, I was able, by personal examination of the classes, to judge fairly accurately of the result. I was struck everywhere with the correctness and ease with which the boys spoke—even those who had been learning only one term. It is difficult to estimate how much of this is due to some inherent quality of the method, and how much is really due to the mere fact of the care and attention that are bestowed on pronunciation generally. Not fully recognizing this, the supporters of early phonetic training, naturally enough, ascribe all the credit of their success to the peculiar excellence of their system. Now, I claim that the want of success in this direction in English schools is not so much due to a wrong method of teaching pronunciation as to the complete neglect of it. I do not say this with any intention of detracting from the value of such an excellent method, but rather with a desire of giving a warning to English teachers on the subject. A teacher's method must always be his servant, and not he its slave. The means to the end must not become an end in itself. This early method of training must not be pushed too far and too late into the language teaching. After a certain stage the phonetic skill acquired by the pupil must be for purposes of reference only.

I should like to have taken the various arguments both for and against phonetic training and compared them one by one with the results of experience, but I must content myself with these few general remarks and trust that their incompleteness will only the more provoke discussion. Before leaving this very important branch of the subject, I must touch on one more point in connexion with it—the value of phonetic training to the teacher. To me this seems to be one of the strongest arguments in favour of the method. It serves as a standard of accurate pronunciation to every teacher, even to one who has been educated abroad, and more especially to such a one who has not enjoyed the opportunity of foreign travel. In no other way could the latter ever hope to reach and maintain a high standard of efficiency. It is of greatest service to the less—I will not say least—efficient teacher.

I will now pass on from this preparatory training to the later and real language teaching. Though the actual carrying out of the method

may again vary very much according to the relative prominence given to one or other of the underlying principles, the following are the main characteristics:—(1) From the very first the language is attacked as a whole. The teaching is analytic and not synthetic. The reading of a connected piece instead of the learning of isolated words is commenced at once. (2) There is a great deal of conversation and oral work, partly based on the reading and partly with a view to practising special forms and idioms. (3) The mother tongue is used as little as possible, and is gradually superseded altogether. There is little or no translation into the mother tongue—only so far as is necessary occasionally for explanation. (4) There is a continually decreasing quantity of translation into the foreign tongue. It is replaced at first by questions set and answered in the foreign tongue, and finally by free compositions. The object of thus avoiding the use of the mother tongue is that the pupils may readily acquire a certain amount of *Sprachgefühl*, which is quite impossible if they always regard the foreign expressions and idioms as merely representing native ideas and idioms. (5) Grammar is taught inductively. Its rules are formulated from the reading and conversation matter. (6) Objects and pictures are extensively used. In many schools Hölzel's *Wandtafeln* are used, and the conversation is centred round them. (7) A proper environment is further created for the learning of the language by bringing into prominence, in the material for reading, the customs, institutions, history, and geography of the country concerned—in fact, all that is included under the term *Realien*.

It must be clearly understood that these are only generalizations. Every teacher does not attach the same relative importance to each. At the same time I shall be best able to show their practical value to you by describing in detail the English work in the twelfth *Realschule*, some mention of which I have already made. No better example could be taken as an exponent of the system as a whole than the teaching in this school. Prof. Hausknecht, the director, is a perfect English scholar and conversationalist, who has travelled a great deal in England, and is thoroughly acquainted with all that is typically English. This wide experience has enabled him to compile the excellent book which is used as the basis of the English teaching in the school. It is called "The English Student"—note the absence of the word grammar in the title—and on the outside is stamped in black a representation of an English schoolboy in college cap and Eton jacket—an object of interest, mingled with curiosity, to the German boy.

After the preliminary lessons in pronunciation the pupil is at once transported to England and introduced to English schoolboy life at Charterhouse. The first part of the book is divided into sketches in the form of dialogues, and many of them are accompanied by woodcuts illustrative of English life.

These sketches, fifteen in number, form the basis of the teaching; that is to say, they supply the material upon which the teacher founds all his lessons. They are wonderfully varied in subject-matter, thus widening the interest at the same time as increasing the vocabulary. For instance, on one occasion the boys come up to London for a day, and thus an opportunity is given for a description of the capital of the kingdom. The teacher at this stage shows some pictures and a map of London, and works up a small conversation on them.

Each sketch is followed by a narrative describing the subject of the dialogue in short, simple sentences, gradually increasing in difficulty. These are first used as oral exercises after the reading of the sketch itself. Then, and not till then, they may be copied out or dictated. We next find corresponding to each sketch a number of questions in English, the answers to which are to be given by the pupils, and can be mostly obtained from the narrative; e.g.: "Where are Bob and Tim?" "Who rings the bell every morning?" In the same way, as with the narrative, these questions and variations on them are repeated until they are thoroughly mastered, and then the pupils may be asked to write out answers to questions dictated to them.

And now for the first time some grammar is introduced into the lesson, beginning with the conjugation of the present tenses of verbs, and turning them into the interrogative with "do." No verb is ever conjugated alone, but always as part of a sentence, e.g.: "I do not talk while the master speaks." "You do not talk while the master speaks." "He does not talk while the master speaks." I was specially struck with the methods pursued in the teaching of the verbs, and I will, therefore, dwell on them in greater detail. The master calls to one of the class to stand up. The latter at once does so, saying at the same time, "I stand up." One or more of his companions (as may have been arranged) turn to him and say, "You stand up," or "You are standing up." A third boy, or set of boys, then turns to the master and says, "He stands up." Thus the lesson goes on. Master: "Come out of your place." Boy (doing so): "I come out of my place." Others: "You come out of your place." Others still: "He comes out of his place," &c. Then two boys will be ordered to do the same things together, so that the plural forms may be similarly practised. Finally, all the class will be told to sit down, which they do, saying at the same time, in a very solemn tone, "We sit down."

You will thus see what a large amount of time is given to a very thoroughly carried out scheme of oral work. This is supplemented by an equally carefully arranged plan of written work, beginning at the first with simple translation into the foreign language. This is almost

at once replaced by the writing of English answers to English questions, and leads eventually to English composition, at first built up on a skeleton given, and afterwards perfectly free. The learning of poetry and proverbs is considered of great importance, and the boys are taught to recite the poems, and not merely to repeat them in a parrot-like fashion. I heard one boy, who had been learning two years, give a very creditable rendering of "The Charge of the Light Brigade."

All points of grammar are carefully explained as they arise. Reference is made to a summary of grammatical rules at the end of the book, and it is not till a comparatively advanced stage is reached that these rules are expected to be known by themselves, at a time when, after such constant practice and reference to them, they hardly require much learning. I had it from several of the teachers that the grammar, the stumbling block in the teaching of foreign languages in English schools, gives them comparatively little trouble.

Up to the present I have only spoken of that part of the work which aims at the acquirement of skill in the use of the language, and in the short period of the *Realschule*, especially in the English teaching, this is the main object of the work. If, however, we compare the work of the top form of the *Oberrealschule*, the pupils of which have been learning French for nine years and English for five, we find that quite a different class of work is being carried on. The object of the work is literary in character—to give the pupils a thorough survey of English and French literature. This is done by taking the pupils through a number of chosen works, generally abridged, to give them some idea of the different writers and their styles. Shakespeare, Macaulay, Scott, Dickens, are favourite English authors; while Molière, Racine, Erckmann-Chatrian, Daudet are frequently chosen in the French classes.

In giving you my personal experience of this higher teaching, I must first state that I only had time to actually visit the classes of one *Oberrealschule*; and therefore it would not be fair to draw any general conclusions from such narrow experience. On the other hand, however, I had opportunity of discussing the points with several other teachers, and I inferred from what they said that my conclusions could be fairly generally applied.

I was, as a matter of fact, somewhat disappointed with this higher teaching, but not on the score of the literary training; that was certainly good, though in the top class preparing for examination I had rather a strong suspicion that there was a good deal of "craming of details." But, even with the most sensible form of examination in view, a certain amount of cram is inevitable. The fault that I found with these classes was that the boys did not seem to have sufficiently progressed in the mere acquirement of linguistic skill.

With the time devoted to modern languages in these top classes, it certainly seems a pity and quite unnecessary that all the earlier training should simply be made subservient to the later, and not pursued for its own sake. The lessons, it is true, are all supposed to be given in the foreign tongue, but the cause, I think, is to be found in the teachers. Some of the teachers doing this higher work have not anything like the skill in the use of the foreign languages that is possessed by their colleagues doing junior work, though they may and do excel in literary culture.

And now, having given you a bare outline of some of the distinguishing features of the work that is being done by our Continental colleagues, I should like, in conclusion, to just indicate some of the lessons that we can learn from investigation and experience of their system and methods. I fear I have already trespassed too much on your time, and therefore I shall content myself with selecting just one or two salient points out of the almost innumerable considerations that naturally arise out of our subject. While considering these, we must bear two things in mind. Firstly, it is neither advisable nor possible that the German system and methods generally should be introduced wholesale into English education. The very style and character of the German system would destroy that which is best in our own educational ideals. German educationists themselves recognize that their fault lies in the over-development of mere intellectual training, just as we must realize that ours lies in its insufficient development. Secondly, the German method of teaching languages is not necessarily the true and only one. I say this really as a warning, for teachers, as a class, are very prone to extremes.

Comparing, then, the successes and failures of modern language teaching at home and abroad, we see very clearly four directions in which we need reform in England.

1. We need to have modern schools in which the modern languages are given a prominent position in the curriculum. Physical and chemical sciences are not suited to form the basis of a liberal modern education. A place in the curriculum they certainly should have, but not the only place. Are our organized science schools a success? Certainly not from the point of view of "general education"; and even when regarded as schools for specialized instruction, there is some doubt on the matter.

2. Having arranged for more time to be given to the teaching of French and German, we need to improve our methods. A certain amount of agreement among teachers is necessary as to the general direction of these improvements; but the actual carrying out must and ought to depend very largely on the teacher himself. All

teachers of modern languages who really think over their subject will agree on the following improvements: (a) Greater care of pronunciation, (b) considerably increased oral practice, (c) learning of grammar inductively, at least at first, (d) less translation and more direct use of the language. If all are agreed on those points, why do they not at once set to work and carry them out? The answer to this question comes under the next heading.

3. We need to have a great alteration in our methods of examination. The examinations have the greatest power in England in directing the methods of teaching. From our examining bodies, therefore, should come the first step towards progress. Unfortunately, however, they stand to the teacher in a relation similar to that in which the teacher stands to them, inasmuch as the position of neither is strong enough to insist on change. Nevertheless, a great deal can be done by example. The College of Preceptors has already taken a step in this direction by instituting voluntary *viva voce* examinations in French and German; but more is wanted than this. The examination papers set for written work not only do not stimulate any movement in the new direction of teaching, but even encourage the continuation of the old. A boy in his examination paper is still expected to show a knowledge of grammar far beyond what his acquaintance with the language warrants. We must have alternative papers on new lines if the newer teaching is to be encouraged. Having done this, however, where are the teachers to carry on this newer work? This brings us to our last, but not by any means least, point, namely—

4. The need for trained native teachers. The problem of how to supply this want is indeed a difficult one to solve, and one that I cannot pretend to discuss within the narrow limits of this paper. I would, however, point out that, though this is the most important direction in which reform must be made, it is not the first in which it will have to be made. I urge two reasons for this:—(a) There are, at the present, in English schools a number of English teachers who are both willing and capable of carrying out this kind of modern-language teaching if only the opportunity is given them. Either they themselves or their headmasters are afraid of weak examination results if they change their system of teaching. For this reason I think that the change in the examination should come first. (b) In those schools where this work would then be done the modern languages would be given a better position in the curriculum. In this way the status of the modern-language teacher in the schools would be raised. Therefore the recognition of a better position for modern languages in the curriculum must be obtained before men will be found who are willing to go through the long training which is proposed for them. I have purposely left to the last the very debatable question as to whether Latin should be excluded from a modern curriculum in English schools. Because it has been successfully done away with in certain types of German schools, it does not follow that in England the same result would be obtained. On the other hand, the only essential difference on this point between the two countries is the different position that Latin holds with regard to the native tongue. The retention of Latin in the curriculum of a modern school will not depend on any claim for mental training or literary cultivation. It can serve neither of those purposes unless a great deal of time is devoted to it; and in a modern curriculum that will never be so, nor, in fact, ought it to be so. It all hangs, then, on the question, whether a knowledge of Latin is essential to a full appreciation of and power to use the native tongue.

In any case, whether all the boys of a school, or only those who are entering professions, are to take Latin, I think it should be the last language to be taught, after the initial difficulties of both French and German have been overcome. If French were started at, say, ten years of age, German at twelve, and Latin at fourteen, in each case with a concentrated effort at the first; the average boy at sixteen would know as much Latin as, and more French and German than, do the majority of boys in those schools at the present day where all three languages are taught, but in an almost reverse order.

All these are questions which I must leave open, and which I have put forward in this tentative manner in the hope that they may on that account be all the more freely discussed.

The CHAIRMAN said that in the school with which he was connected boys until recently began French with one hour per week. Now they had three hours a week; but it must be acknowledged that this was not sufficient for beginning a language, and, if they could get half an hour each day, better progress would be made. They were now in the transition stage, and modern languages were only just beginning to get their proper recognition. When University men were asked why they did not give scholarships for modern languages and require modern languages for their entrance examinations, they said that scholarships would come fast enough if candidates worthy of them presented themselves; and at present he was free to confess that there were very few from the public schools who would deserve a scholarship for modern languages. He thought that what they learned from Germany was that modern-language teachers must insist upon more hours being given to them before they could have a proper chance. If properly qualified English teachers of foreign languages could be got, they were certainly better; but when it was a choice—as it so often

was still with English schools—whether they were to have a Frenchman who knew English pretty well, or an Englishman who knew French very indifferently, it was an open question. As to the dialogue quoted by the lecturer from Dr. Hausknecht's book, he thought that it bore but slight resemblance to what actually was heard in an English public-school dormitory, and that a much more accurate impression would be derived by reading such a book as "Tom Brown's Schooldays." As to the teaching of grammar in sentences—the inductive method of teaching grammar—they would all be agreed. He thought there was something in the learning of languages which answered to the learning of the multiplication table in mathematics; and he was in favour of learning by heart the simplest forms of the declensions and verbs. He was glad to hear they learned poetry by heart in German schools, and that in the highest forms the object of language teaching was literary, though the lecturer's impression appeared to be that the results of the literary teaching compared unfavourably with the other. He (the chairman) would, however, be disposed to maintain that the ultimate goal of language teaching must be literature. He quite agreed that in the earlier stages the more they had of purely oral teaching the better; but he thought that this early stage ought to have been passed by the time a boy entered a public school. The opportunities an ordinary Englishman had of carrying on a conversation with an educated Frenchman or German must necessarily be rare; whereas French and German literature was open to all, and his idea, as a schoolmaster, was to give his pupils such linguistic power as to enable them to read with ease an ordinary French or German author, and to kindle such a love of French and German literature that they would continue to read French and German classics after they had left school.

Mr. KIRKMAN said that, with regard to attempting to familiarize schoolboys with the foreign life, it seemed to him undesirable to do this at too early a stage. He agreed with the lecturer that they must have trained teachers, but, with regard to the efficacy of agitation on the part of teachers, he believed there was little to be done until the Universities moved in the matter. With regard to phonetics, in the actual learning of the foreign sound, the phonetic symbol played no part whatever. The pupil could only learn the sound by hearing it, and the phonetic symbol could not help him to reproduce it. It was, no doubt, very important to pay attention to the proper use of the vocal organs, and in that particular the advocates of phonetics had done good service.

Mr. FABIAN WARE said there were one or two points in which his experience of German schools differed from that of the lecturer. In the first place, he stated that all the time-tables in Prussia were absolutely the same. It was important at the present time to remember that, although a certain curriculum was laid down by the State, a good deal of freedom was allowed in regard to details. For instance, the Frankfort teachers were allowed to adopt time-tables which differed fundamentally from those of Berlin. As to the system of teaching sounds independently of words, he must say he thought it absolutely bad. He agreed with the last speaker except when he made it an objection to the use of phonetics that it only postponed the difficulty. That was, he thought, the greatest argument in its favour. The pupil was older and better able to understand its use.

Prof. SPIERS considered that, in learning a foreign language, it was most important to learn a great deal by heart. In this way the pupil not only acquired vocabulary, but learned grammar in its practical forms. In the elementary stage the less grammar the pupil had to learn the better, and for mere beginners he would even advocate the use of no grammar at all, except for the verbs. There was one point about examinations and examiners on which he felt very strongly. When an examiner was setting a paper he must take care to be understood by the candidates, and unless he followed the methods and terminology of the grammars they used he would not be understood.

Miss BREBNER said they were too apt as teachers to think that everything rested with the Universities and the examiners. She agreed that it was impossible to do any good with less than four hours a week; but, apart from the small number of hours, teachers in England had just now abundant opportunity of bringing new methods to bear on their work. She was in sympathy with all that the lecturer had said, and, while she would like to support those who advocated new methods, it would, she thought, be a pity if they in any way exaggerated their case, and did not avail themselves of what was serviceable in the old. She agreed that the early teaching should largely assume a concrete form; but there should also be a good deal, at any rate, of verb drill. The last speaker referred to the importance of much learning by heart; and the reformer believed in that, especially in committing to memory songs and poems. The conversation of the reading-book, which formed a prominent feature of the teaching described, was good, but would not do alone. One part of the old method she would like to retain—viz., dictation, which was one of the most useful things a teacher could do with his pupils; and she thought that this test at least might be employed in examinations in foreign languages.

Mr. THORNTON said he had recently visited Scandinavian countries, and was much struck with the number of travelling scholarships offered there, especially for the study of languages. Mr. Kirkman had, he thought, exaggerated the difficulty of moving the Universities to reform.

It was only necessary to state distinctly what reform was needed, and the thing would eventually be done.

Mr. MILLAR INGLIS observed that the military system in Germany had much to do with the regulation of the teaching; and the passing of the necessary leaving examination was a most important matter. If one compared the French teaching with the English teaching in the *Gymnasien*, one found a great deal of difference. Some time ago he visited a *Gymnasium* in Germany for the purpose of seeing how the teaching of English was carried out. He found that in the timetable two hours a week were put down, but on inquiry he discovered that the teacher found it convenient to give the two lessons together. It was an optional subject, and half the class were playing during the time the lesson was given.

Mr. HOWARD SWAN considered that children should have more practice in intonation and in the variation of the vowel sounds. In commencing the study of a foreign language, it would be found of great service to devote some time to studying the nursery rhymes of the country.

Mr. BROWN having briefly replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

REVIEWS.

NEW HISTORIES.

- (1) "Cambridge Historical Series." Edited by G. W. Prothero, Litt.D.—*Spain: its Greatness and Decay (1479–1788)*. By Martin A. S. Hume. With an Introduction by Edward Armstrong. (Cambridge University Press.)
- (2) *The Colonization of Africa by Alien Races*. By Sir Harry H. Johnston, K.C.B. (Cambridge University Press.)
- (3) "Story of the Nations."—*Austria*. By Sidney Whitman, M.A., and J. R. McIlwraith. (Fisher Unwin and G. P. Putnam's Sons.)

Mr. Hume has fully established his right to a hearing on matters relating to the history of Spain, and this record of three hundred years of rapid development and almost unresisted decay will be welcome to all who are attracted by the story of the Iberian peninsula. There is colour in Mr. Hume's text, and, on the whole, both soundness of view and accuracy of statement. He works historically on the rational theory that nations, as aggregates of men, show the characteristic strength or weakness, virtues or vices, of individuals, and that, by a natural consequence, they enjoy or suffer the fruits of their qualities. Spain is somewhat of a *vile corpus* amongst nations; fortune has experimented with her, and we who live to-day can point the moral of her history without any difficulty. Mr. Hume is justified in enforcing the lessons—

that unsupported pride and unwarranted ambition are as disastrous to nations as to men; that riches gained without labour produce no extended or lasting prosperity; that the true basis of wealth is industrial production; that beneficent ends cannot be obtained by means which disregard human sufferings or trample on human rights, and, above all, that the hereditary transmission of unrestrained power from father to son is certain to end in disaster, because, sooner or later, it must descend to an individual too weak or too vicious to exercise it worthily.

What strikes Mr. Hume "above all" is not what we should regard as the most important lesson of Spanish history. The power of the monarchs of Spain was never absolutely unrestrained. There were always the grantees to consider; and the power of superstition, vested in the hands of the Pope and the Roman ecclesiastics, was more unrestrained than the authority of Ferdinand or Philip—more responsible, perhaps, for the downfall of Spain than her weakest and most vicious kings. Pride unsupported by moral vigour, ambition unwarranted by strength, luxury unearned by labour, expansion not founded on commerce or confirmed by good administration—these have been the fatal defects of the Spanish character and position. The latest and conclusive evidence of the fact has been afforded within the past twelve months; for the loss of her colonies is due entirely to the incompetence of Spain to govern subject races. It is unfortunate that Mr. Armstrong's introduction to this volume should speak of Cuba and the Philippines as still representing the colonial empire of Spain in the West and East Indies. Mr. Hume, on the other hand, leaves the whole question of Spanish colonies severely alone. Neither in the index nor elsewhere have we found any but the most casual reference to the possessions of Spain beyond the seas.

The European chapters of Spanish history are well and impartially told, from the union of Castile and Aragon, and the reconquest of Granada, until near the close of the last century.

As the idea of the series to which this volume belongs was stated in Mr. Prothero's general preface to be "to sketch the history of Modern Europe, with that of its chief colonies and conquests, from about the end of the fifteenth century down to the present time," it seems unfortunate that the history of Spain should be broken off before the Napoleonic period, and that we should be told so little about her colonial empire, which was at one time the greatest and richest the world has ever seen, our own Empire excepted. We must therefore limit ourselves to saying that Mr. Hume has made a very interesting book within the somewhat narrow bounds which he has seen fit to trace for himself.

(2) Sir Harry Johnston admits that we have already three or four admirable histories of Africa, and especially of South Africa, and he has specialized his aim so as to summarize and review in a single volume the general history of the attempts of Asia and Europe to colonize Africa during the historical period. He begins, accordingly, with the earlier records of Phœnician, Persian, Roman, Teutonic, Byzantine, and Mohamedan invasion in the north, the Malay settlement in Madagascar, and the Arab descents on the eastern shores. Then he takes up the Portuguese, Spanish, and Dutch invasions, devotes a chapter to the African slave trade, and so comes to the British traders and explorers, and our acquisitions by settlement, missionary civilization, and conquest. Finally, he deals in a few short chapters with Belgian, Italian, German, and French Africa. Needless to say, the story is one of constant and varied interest, and it is one which Sir Harry Johnston was exceptionally competent to write. His conclusion is that the whole of Africa "healthy," "yellow," and "black" Africa—will become subject to European government:—

As the white population increases from thousands to millions, it will tend to reserve to itself all the healthy country in the extreme south of Africa, and inland along the great central plateau which stretches up to the Zambezi, and the black man will be pushed by degrees into the low-lying, unhealthy coast regions of the south-east, or into the rich, but fever-stricken, countries in the Zambezi valley, which must, for an indefinite period, be regarded as a Black Man's Reserve.

The book is provided with eight excellent maps, which add very largely to its interest and usefulness.

(3) Mr. Whitman and his collaborator confine themselves to German Austria—a rather odd limitation, which ignores much of what is most characteristic in the story of the eastern Empire. It would, we think, have been more serviceable and more satisfactory to divide the records of this composite realm into chronological periods, and to maintain a comprehensive survey of the vicissitudes throughout. Only in that way is it possible to understand the complexities of Austrian history. Within their assigned limits, the authors have done all that could be done to make an intelligible and attractive story. Some of the pictures are taken from the Archduke Rudolf's "Austro-Hungarian Monarchy," and have much to recommend them.

ETHICS IN EDUCATION.

Kant on Education. Translated by Annette Churton.
(Kegan Paul.)

A great man, and, *a fortiori*, a philosopher, who presumably sees life as a whole more clearly than the average teacher, is in a far better position to decide the right *aims* of education than one who is in the midst of the work and its discouraging realities, "smelling of the machinery," as Thuring used to say of himself; and nothing can be more illogical than to refuse to consider the ideals of a man on the ground of his inexperience. When, too, he frankly admits that he has failed to apply his own principles in any specific case among his pupils, it is a proof that he still considers his principles worth giving to the world, and worth striving after. It is a mark of the slow progress of educational science that Kant's "Thoughts on Education," published in Germany nearly a hundred years ago, should only now be rendered into English. Like Locke's work with the same modest title, it consists of desultory notes with no imposing theories or metaphysical abstractions, but written with the simplicity that only a philosopher possesses. Quite a large portion of the short treatise is devoted to the management of babies. It seemed to the bachelor lecturer of Königsberg a good plan to keep a baby in a large wooden box, from which he was never to be taken. Many of these remarks are more curious than instructive, but, as might be expected, there are gems of thought even here. The most valuable suggestions, however, are contained in Kant's introductory chapter on the general lines of education, and in his characteristic treatment of moral training. He calls upon teachers

to draw a clear distinction between sins against discipline and sins against eternal moral laws. The latter must never be punished. "Morality is something so sacred and sublime that we must not degrade it by placing it in the same rank as discipline." But he adds: "No infringement of school discipline must be allowed to go unpunished." Here is food enough for reflection, and room for school organization of no easy kind. The formation of character is above every other aim, and definite instruction, even a catechism of ethics, is to be given to pupils who are old enough to exercise moral judgment. His remarks on the duty of benevolence are particularly suggestive.

The Introduction to the present translation, by Mrs. Rhys Davids, is just what is needed to put the reader in the right attitude for getting the most from these slight notes. She shows how Kant stands in the stream of educational theory, and especially his indebtedness to Rousseau. With regard to his relation to modern thought, she points out that many problems of to-day, such as heredity, and the fetters of our civilization and social environment, were unknown to him. Possibly such a problem as heredity might have modified Kant's ideals; but certainly the overcrowding of professions would not have affected his views of humanity. It is exactly the "quiet hazy horizon" of a thinker which is of supreme value, and Kant's crowning principle, that the good of the individual is secondary to that of the race, is for all time and every country. For this reason he approved scholastic experiments—almost fads (for Basedow's "Philanthropinum" was little more). He certainly would encourage every new departure in school management or method, and the utmost freedom for teachers, while anything like a rigid State-organized system of instruction would appear to him to endanger the progress of the science. Mrs. Davids seems also a little beside the mark in raising the Woman question. Of course, Rousseau had committed himself in his "Sophie"; but there is surely no word of Kant's that does not apply to the education of a girl as well as to that of a boy, for the vexed question of curricula is barely touched on, the book dealing almost entirely with broad principles of physical, intellectual, and moral training.

Miss Churton's work of translation leaves nothing to be desired, unless perhaps it be in the use of the word "maxim," which suggests to the ordinary reader an inelastic rule, the very antithesis to what Kant intended, namely, a principle of action to be freshly applied in every case of moral difficulty.

The book will meet a definite want, for the "Thoughts" have been set for the London University Teachers' Examination, and hitherto have been only procurable in a French rendering.

A BUILDER OF INDIA.

"Builders of Greater Britain." Edited by H. F. Wilson, M.A.—
Lord Clive; the Foundation of British Rule in India. By
Sir A. J. Arbuthnot, K.C.S.I. (Fisher Unwin.)

If Clive had not been, we should doubtless have had a great dependency in India, but we should scarcely have had an Indian Empire in its present well controlled and consolidated form. And Clive was little better than a young English wasterl when he took service under the East India Company, by whom, in less than six years, he was recognized as a born soldier and administrator. His remarkable career affords a familiar parallel with that of his successor Warren Hastings, even down to the persecution at home by which his latter days were embittered. James Mill, the historian of India, speaks of Robert Clive as "artful," "tricky," and "quarrelsome," but, when he comes to consider the Parliamentary proceedings against him, he denounces them as manifestly unfair. As our author says:

When we reflect upon his death at the early age of forty-nine, after a persecution which, whatever may have been his errors, it is difficult to read of without shame, we can hardly avoid the conclusion that, of the many sad and discreditable incidents which, in this and other countries, disfigured the latter part of the eighteenth century, one of the not least deplorable was the attack made by his countrymen upon the founder of our Indian Empire.

Clive's life was full of romance, from his childhood upwards. He began fighting hard at the age of seven; his schoolmasters alternately rated him and prophesied his future greatness. He was wild without being vicious; at one time damming a gutter in order to flood the shop of a hostile tradesman, at another climbing a church steeple and sitting astride of the finial. Quill-driving in India so disgusted him that he tried to shoot himself, when his pistol twice missed fire. His pistol missed fire again in his duel with an officer whom he had accused of cheating at

cards; and when his enemy demanded a retraction, pointing his weapon at Clive's temple, the latter said: "Fire and be d—d; I said you cheated, and I say so still." Clive had a charmed life. During the defence of Arcot,

Lieutenant Trenwith, perceiving a sepoy from a window taking aim at Captain Clive, pulled him on one side, upon which the sepoy, changing his aim, shot Trenwith through the body.

At Samiavaram, in a fight with the French, Clive was wounded.

At daybreak the commanding officer of the French, seeing the danger of his situation, made a sally at the head of his men, who received so heavy a fire that he himself and twelve others who first came out of the gateway were killed by the volley, on which the rest ran back into the pagoda. Captain Clive then advanced into the porch of the gate to parley with the enemy, and, being weak with loss of blood and fatigue, stood with his back to the wall of the porch, and leaned, stooping forward, on the shoulders of two sergeants. An Irish officer in charge of the English deserters presented himself with great insolence, and telling Clive, with abusive language, that he would shoot him, fired his musket. The ball missed Clive, but went through the bodies of both the sergeants.

This is Orme's account, and Sir Alexander Arbuthnot adds that the French officer in command was so indignant at the conduct of the Irishman that he at once surrendered with his whole force.

From the defence of Arcot to the great victory at Plassey, from the first shrewd and practical counsels which brought the young "writer" into notice to the strong and daring administration of the Governor of Bengal, the story of Clive is brightly and concisely retold. It may be thought that we had already as many lives as were necessary of Lord Clive of Plassey; but so long as publishers and editors will devise new series—and they have every encouragement to do so—the re-writing of old stories will become more and more inevitable. Clive certainly could not be omitted amongst the "Builders of Greater Britain."

A NEW LATIN GRAMMAR.

A Latin Grammar. By G. M. Lane, Professor Emeritus in Harvard University. (Harper & Bros.)

Prof. Lane died, greatly lamented in America and respected throughout the world of scholarship, in June, 1897. His Latin Grammar had long been expected; but his manifold engagements left him scant leisure for the work, which he had, nevertheless, pursued at intervals for nearly thirty years. After his death the book was completed by Prof. Morris Morgan, whose work is well known in this country.

The author, far from being a mere compiler, left no detail of Latin unexplored. He challenged everything that has been written on the subject, and, of course, collected an entirely new set of examples for all the principles that he enunciated. Thus the results of a vast amount of research may be traced in the list of irregular verbs. No "part" is given that does not actually occur. The fictions of grammarians with regard to supines disappear, and for the supine the perfect participle passive is substituted as a "principal part." The rules of syntax are admirably expressed, the definitions being wholly free from the subtlety that disfigures the grammatical work of some of the most distinguished American scholars. In all cases in which we are competent to test the work, we find the same thoroughness and the same soundness of doctrine. Thus the laws of the *Sequence of Tenses* are stated with precision and accuracy. Two rules here that we especially like, and which are almost invariably ignored in elementary English books on Latin, are the following:—"A final subjunctive subordinate to a perfect definite [*i.e.*, primary perfect indicative] sometimes has the primary sequence, but more commonly the secondary"; and, "in subordinate sentences, the perfect subjunctive has . . . the secondary sequence when it represents the indicative historical perfect or the imperfect." The second of these two rules may be proved from almost any page of Cicero, and yet young pupils in England are habitually taught sentences like "*Qua re acciderit ut id suspicatus sis quod scribis nescio*" for "How it came to pass that you suspected what you write, I can't imagine." Of course, *suspicatus sis* ought to be *suspiscarere*.

Under the rules for prohibitions—which are, of course, free from the errors to which Madvig gave currency—it might have been well to mention the relative frequency of the two constructions *noli* and infinitive and *ne* with perfect subjunctive. Prof. Lane merely says that both ways are right.

Equally as a matter of course, the rules formulated by Mad-

vig for the construction of questions in *oratio obliqua* are corrected. The author points out what is new to us: that the accusative with infinitive to express obliquely "rhetorical questions" is not found before Livy, with the exception of one or two cases in Cicero's letters and a few instances in Caesar.

These scanty remarks suffice to show that we have no hesitation in pronouncing the work one of extreme value. It marks a great advance in the scientific study of Latin, and it is to be hoped that the book will find its way into the hands of English students. We could wish that the type were rather larger. The book compares unfavourably with Gildersleeve and Lodge in this important matter.

PHONETIC READING.

On the Teaching of English Reading. By N. Dale. (Dent.)

Miss Dale, who has formed a high opinion of the reasonableness and accuracy of the childish mind, determined to devise a system which should avoid some of the inconsistencies of the usual method of teaching the art of reading. On her plan, children are not taught the names of the letters, and then made to learn the look and sound of each new word practically by heart, discouraged at every turn by the small relation which the names of the letters bear to the sounds as found in words. This method gives the child but a frail staff on which to lean, and leaves him after all, in face of a new and difficult word, with no resource but that of an appeal to the teacher. Miss Dale, therefore, aims at placing in the child's hands tools which will enable him to deal with each new word unassisted by the master. To this end she has developed, on scientific lines, the method already more or less widely used, of teaching the child the sounds, instead of the name, belonging to each symbol. Thus *p*, the children learn, is the sound produced by pressing the lips together and letting the breath suddenly escape through them. This voiceless (or "sister") stop they distinguish from its "brother" (voiced stop) *b* by a simple experiment of placing their hands over their ears and trying which letter has voice, which not. Each fresh letter is put through this test, and coloured blue or black according to the result. A "home" for each letter is found on a tabulating frame kept for the purpose, and thus children learn to distinguish between stops, dentals, continuants, &c. They are not, of course, troubled with these long words. Having mastered the stops and the short sound *a*, they proceed to the building of words, and begin to make use of the Readers so charmingly illustrated by Walter Crane. As described, this system seems but a thorny path to the goal of English reading, but it is possible that, with a bright and ingenious teacher, the child will tread it willingly; and it cannot fail to cultivate the logical faculty, which is undoubtedly a prominent feature in most young minds. It is a case of the longer way round being the shorter way home, and the gain in accuracy and resource will more than compensate for the possible loss of speed in gaining the power of reading easy words of one or two syllables. The system is incomplete, for in the present series of Readers the children are not carried beyond the short vowel sounds.

GENERAL NOTICES.

CLASSICS.

Elementary History of Greece, by C. W. C. Oman (Rivingtons), is a book for which there is, no doubt, room, in spite of the excellence of Mr. Robinson's little "Greek History." It is related of a candidate for a Bible clerkship at Mr. Oman's famous college that he remarked in one of his answers that the style of Herodotus "reminded him of Oman's style." The qualities common to these two distinguished historians render one of them at least well suited to be the guide of the young in the tortuous paths of Greek history.

Hercules Furens, from Euripides, by A. F. Hort (Rivingtons), is an addition to the series of "Middle Form Classics." It appears to us to be well done and likely to be of use. It would, however, be an advantage if the editors of these scraps of tragedy would frankly warn the unsuspecting pupil that they have intentionally murdered the play. This warning is especially called for in the case of Euripides, whose best work is in his lyrics.

Caesar, De Bello Gallico III. and IV. (two vols.), by E. S. Shuckburgh; *Virgil, Aeneid XII.*, by A. Sidgwick; *Xenophon, Anabasis IV.*, by G. M. Edwards, are the new volumes in the "Cambridge Series for Schools and Training Colleges." All of them, except the last mentioned, can be unreservedly recommended. Mr. Edwards seems to us to have been rather too ambitious, and he has vitiated his notes by including

too many parallel passages. Most of these passages are quite useless to junior students, such as will use a book with a vocabulary; and some of them are not even to the purpose. Thus on the words *εις ην αφικοντο κωμην μεγαλη ην*—a form of attraction constantly found in Greek—the editor says: “cf. Lysias, xix. 49, *την οδων ην κατέλειπε ού πλείονος αξια εστιν.* and Virg., ‘Aen.’ I. 573, ‘urbem quam statuo vestra est.’” Both of these are, of course, instances of a different and rather rare form of attraction due to mere change of purpose—examples, in fact, of an *anacoluthon*, which one finds now and again in Thucydides, in tragedy, and elsewhere in the Greek authors. Again, on *εν χωραις*, “at their posts,” the editor says: ‘Aesch. ‘Agam.’ 78, ‘*Αρης ουκ ενι χωρα.*’” But Mr. Edwards must know that the latter passage is disputed, and that critics are not agreed as to the propriety of the reading. Once again, we have what is called “an admirable illustration” from the “Agamemnon,” 1,031 (page 72); but, even if the reading is accepted there, the passage is not parallel: for the use of the participles in the two sentences compared together is different; and the participles are all important in the matter dealt with.

Virgil, Aeneid XI., by T. E. Page (Macmillan), belongs to the “Elementary Classics.” It is a first-rate book for young students, and will doubtless obtain the wide circulation that it merits. Mr. Page’s references to the Bible and to English literature are admirable.

Latin Exercises, Part III., by A. J. Church (Seeley), is a continuation of Mr. Church’s cheap Latin exercise books. There are a few miscellaneous hints, a series of upwards of a hundred short passages, and a set of vocabularies by another hand. The exercises and vocabularies can also be had separately. It is one of those school books that one learned to loathe so when a boy—and it can be flung on the fire when done with. Indeed, the compiler of the vocabularies, with amusing candour, suggests that his work should be doubled back when being used in class!

Plato, Apology of Socrates, by T. R. Mills (Clive), is a scholarly book, and seems to us to have a value independent of its immediate purpose. Every difficulty is explained in a short and business-like manner, and the introduction supplies a useful conspectus of the main facts bearing on the life and death of Socrates.

From Messrs. Harper & Brothers we have the first volume (prose) of a collection of passages from post-Augustan authors, *Latin Literature of the Empire*, by Mr. A. Gudeman, of Pennsylvania. The writers of this age here placed under contribution are Seneca Rhetor, Velleius Paterculus, Curtius Rufus, Petronius Arbiter, Annaeus Seneca, the philosopher (son of the rhetorician), Pliny the Elder, Quintilian, Tacitus, Pliny the Younger, Suetonius, Justinus, Apuleius, Minucius, Marcellinus, and Boethius. The editor adds brief biographical introductions and a slight critical appendix. The two volumes are calculated to be very serviceable for the study of post-classical Latin literature, and to stimulate the taste of many readers for Latinity of the silver age. As Tacitus says, “non omnia apud priores meliora, sed nostra quoque aetas multa laudis et artium imitanda posteris tulit.”

MATHEMATICS.

There is no evidence of a check in the notably accelerated production of mathematical text-books. Something like a score have accumulated on our table during the past two or three months, and we can do little more than draw attention to their character and quality. Mr. Glanville Taylor, of Nottingham University College, publishes, through Messrs. Longmans, *An Introduction to the Differential and Integral Calculus and Differential Equations*. He adopts the older-fashioned arrangement, keeping differentiation and integration separate, but advises the student to read the two sections of his volume alternately. Practical applications and elementary curve tracing are introduced at an early stage. The work is clear and novel, being indebted to, and yet advancing in method and scope upon, the treatises of Todhunter, Williamson, De Morgan, Boole, Greenhill, and others.—Messrs. Macmillan introduce us to three American works on the higher calculi: the first of them, an *Introduction to the Theory of Analytic Functions*, being English in the sense that its authors, Prof. Harkness, of Bryn Mawr, and Prof. Morley, of Haverford, are both old Cambridge men. This is an excellent treatment of series, limits, and various analytic functions, properly based on an elementary account of fundamental concepts and processes. The authors are well known by their previous work on the theory of functions; but the new volume stands on its own foundation, and is not a mere abbreviation. They have preferred to follow the methods of Weierstrass rather than those of Cauchy, though a chapter is devoted to Cauchy’s definitions and theorem.—Prof. W. B. Smith, of Tulane University, publishes the first volume of *Infinitesimal Analysis* (Macmillan), dealing with real variables, and, in the author’s own words, excluding “Weierstrassian rigor.” “No attempt has been made to deal with series, unless the most familiar, or to follow in the wake of the masters of ϵ -methods.”—An elementary work for technical schools and colleges on *Differential and Integral Calculus* (Macmillan), by Mr. P. A. Lambert, of Lehigh University, is a clear and practical introduction.

Mr. J. Gill, Headmaster of the Liverpool Corporation Nautical College, designs for officers of the merchant service, candidates for

Board of Trade certificates, and other students, his *Text-book on Navigation and Nautical Astronomy* (Longmans). His position and experience have qualified him for the efficient performance of his task and the book seems to be thoroughly adapted for its purpose.

Mathematical and Physical Tables for the Use of Students in Technical Schools and Colleges (Macmillan), by J. P. Wrapson and W. W. H. Gee, are exceptionally comprehensive, clearly exposed, and carefully stated. They cover practically the whole field of mathematics, physics, and engineering. An appendix contains, amongst other promiscuous information, tables of velocities, the dimensions of the coinage, the Morse code, and even the Greek alphabet!

Dr. Routh has devoted his leisure (if he will allow us to use such a term) to writing an elaborate and very interesting treatise on *Dynamics of a Particle* (Cambridge University Press)—marked for first and second reading, and supplied with numerous examples. It is an exhaustive work, and, at the same time, distinctly lucid. This is how Dr. Routh takes hold of his reader in the first words of his preface: “So many questions which necessarily excite our interest and curiosity are discussed in the dynamics of a particle that the subject has always been a favourite one with students. How, for example, is it that by observing the motion of a pendulum we can tell the time of the rotation of the earth; or, knowing this, how is it that we can deduce the latitude of the place? Why does our earth travel round the sun in an ellipse, and what would be the path if the law of gravitation were different? Would any other law give a closed orbit so that our planet might (if undisturbed) repeat the same path continually? Is there a resisting medium which is slowly, but continually, bringing our orbit nearer to the sun? What would be the path of a particle in a system of two centres of force? When a comet passes close to a planet, does it carry with it in its new orbit some token to prove its identity?”

Prof. Tarleton, of Dublin, in his *Introduction to the Mathematical Theory of Attraction* (Longmans), makes a brave effort to simplify for students the general theory of attraction, which he describes as “the portal to most of the higher departments of mathematical physics.” No doubt the theory of fluid motion carries with it much of the theory of the universe, and its dependent problems are mathematically the same as the problems of attraction. Dr. Tarleton’s method is well conceived and worked out with much precision. If attraction should be taken as a defined subject rather early in the student’s course, on which we do not here offer a decided opinion, this volume is very suitable to the need.

Spherical Trigonometry, Theoretical and Practical (Macmillan), by W. W. Lane, Naval Instructor, H.M.S. “Britannia,” is adapted for the use of students preparing for examinations, and is, on the whole, simply expressed and instructively arranged.—*Elementary Hydrostatics* (Rivingtons), by Charles Morgan, Instructor at the Royal Naval College, Greenwich, is a concise little work of pass-matriculation standard, with abundance of examples, “not specially adapted to those reading the subject without tutorial aid, whom, the author takes it, are few.”

In the “University Tutorial Series,” Mr. Briggs and Dr. Bryan produce the second part of *The Tutorial Algebra* (Clive), based on Radhakrishnan, and suited to the standard of the London Intermediate and B.A. examinations. As we have said before, and, as the authors point out, Prof. Radhakrishnan owes much to De Morgan, Clifford, and Chrystal, and it is only necessary to add that this advanced algebra is a well digested summary and development of the best writers. Admirable clearness is a marked characteristic of this book.—*A Text-Book of Algebra, with Exercises, for Secondary Schools and Colleges, Part I.*, by Dr. Fisher and Dr. Schwart, of Pennsylvania (published by the authors), is too elaborate for a first part. It extends to progressions and the binomial theorem, and occupies 683 pages.—*A New Sequel to Euclid, Parts II. and III.* (Blackie), by Prof. W. J. Dilworth, is a useful collection of riders on the first six books.

In the “Organized Science Series,” we have *Second Stage Mathematics* (Clive), edited by William Briggs, M.A., including Euclid II.—IV., algebra to quadratics, and trigonometry, with the Science and Art papers from 1893 to 1897, and complete solutions.—*Elementary Mathematics, including Arithmetic, Euclid, and Algebra* (Whittaker), by J. L. S. Hatton and George Boole, is intended for those who have some knowledge of arithmetic, but are not acquainted with Euclid or algebra, and the authors assure us, “with the object of assisting beginners, the subject has been as fully explained as the size of the book would permit.” The size is moderate. This is a first-stage mathematics, the Euclid being limited to the first book, and the algebra extending to simultaneous simple equations.

Our long list comes to an end with *A Shilling Arithmetic* (Bell & Sons), by Charles Pendlebury and W. S. Beard, with numerous worked examples and exercises; and *Warren’s Table and Formula Book* (Dublin: Hodges, Figgis, & Co.)—a handy little book, combining explanatory text with the tables.

FRENCH.

Méthode Naturelle pour apprendre le Français. By George Hugben, M.A. (Nelson & Sons.)

We are glad to see another book on the lines of the “New Method,”

as it shows that publishers are not shrinking from what would a few years ago have appeared a risky enterprise. The advocates of the "New Method" have recently worked to good purpose, and the prospect is distinctly encouraging. With most of the opinions expressed in Mr. Hogben's preface we agree. The foreign language should be used as much as possible, and translation should come later than it usually does. There is an allusion to a "Teacher's Book," which we have, however, not received. The book before us is evidently the outcome of considerable experience, and is far ahead of those books, generally used in England, which are based on the grammatical method. Still, there are some defects which, in our opinion, impair the value of the book. There is no adequate provision for teaching the pronunciation. Perhaps this is given in the "Teacher's Book." The lessons start well enough with discussion of things in the class-room; but then we pass on to knife and fork, the spider, lighting a candle, &c. There is an obvious lack of connexion. Greater care should have been taken to associate new ideas with old ones; but what seems to us the greatest mistake—indeed, almost fatal in a book based on the "New Method"—is the addition of a French-English vocabulary. What should have been given is, at most, a glossary, in which the words are explained in French, after the manner of Larousse's useful little work. If Mr Hogben will make this change in the second edition, his work will really be very valuable. No teacher can fail to appreciate the bright telling of the stories and the careful selection of poems. There are also a large number of pictures, which add materially to the attractiveness of the book.

Saintine: Picciola. Edited by Arthur R. Ropes, M.A. (Cambridge University Press.)

An edition which we can recommend. Mr. Ropes has edited a number of French texts for the "Pitt Press Series," and has come to know just what to say and what to leave unsaid. He has supplied a pleasant introduction and suitable notes, which give much interesting information, and leave little to find fault with. In the notes on page 2, line 25, read *poète* and *in Ravme*. The German substantives quoted should throughout be written with capital letters. In the note on page 13, line 25, the rule about *tout* is incomplete. Page 21, line 22, read *très bien* (the hyphen is no longer printed); also on page 117, line 28. The translations are, in almost every case, excellent; but for *on eût dit*, "he looked like," "he suggested," would be better than "you would have said he was" which smacks of translation. One point in which this volume compares favourably with other editions of texts by the same hand is in the restraint shown in the use of grammatical terms. We are particularly pleased to see *apodosis* and *protasis* obtruding themselves less frequently.

"Siepmann's French Series."—*Word- and Phrase-Books for L'Abbé Daniel, Saes et Parchemins, L'Anneau d'Argent, La Première Croisade; and Keys to the Appendices of the same Books.* (Macmillan.)

In the "Word- and Phrase-Books" we have the English and French (in parallel columns) of the words and phrases for *viva voce* drill which form the first appendix to certain texts in this French series. In the "Keys" there are, besides, renderings of the "sentences on syntax and idioms" and of the "passages for translation into French." They appear to have been prepared with care, and should prove useful to teachers who are reading these texts with their classes.

Boileau: L'Art Poétique. Edited, with Introduction and Notes, by D. Nichol Smith, M.A. (Cambridge University Press.)

We are not aware that a critical edition of "L'Art Poétique" has hitherto been published in English. Mr. Nichol Smith hopes that his little book will be useful to students of English literature as well as to students of French, and, no doubt, it will be so. The editor has had the efficient aid of Dr. Henry Jackson, and we cannot but give this work a warm welcome and commendation.

MISCELLANEOUS.

The Fifteen Decisive Battles of the World, from Marathon to Waterloo. By Sir Edward Creasy, M.A. (Macmillan.) *The Ingolishby Legends; or, Mirth and Marvels.* By R. H. Barham. (Bentley & Son.) *Typee: a Romance of the South Seas.* By Herman Melville. (Blackie & Son.) *Selections from Addison's "Spectator."* &c. With Introduction by Mrs. Barbauld. Edited by Mrs. Herbert Martin. (Blackie & Son.) *The Swiss Family Robinson.* By J. R. Wyss. (Bell & Sons.)

Here is a quintet of reprints, all worthy of reproduction, and likely to hold their own against many a modern competitor. They are not school-books, except in the sense that they provide good reading, more or less appropriate for boys and girls who have begun to discriminate good writers from bad ones, and to prefer the former. If Melville is a trifle insipid, and Barham rather boisterous, and Creasy just a little prosy, at any rate they all contain very much that is admirable.

English Prose for Junior and Senior Classes By J. Logie Robertson, M.A. Part I. (Blackwood & Sons.)

Mr. Robertson has selected well, and on literary lines, as we said when noticing the first part of his "English Prose." He has taken attractive pieces from Scott, Southey, Lamb, Landor, De Quincey, Carlyle, Macaulay, Kinglake, Thackeray, Tyndall, Stevenson, and

others, adding a few helpful notes to each piece. The two volumes make an excellent prose Reader.

Modern Business Methods: Import and Export Trade. By F. Hooper and J. Graham. (Macmillan.)

A practical reference- and text-book, with examples of the customary forms and correspondence; a companion to the "Home Trade" of the same authors, which we noticed some time ago.

A History of France from 1180 to 1314 A.D.—The Growth of the Feudal Absolute Monarchy. (2) *Synopsis of French History.* By Agnes F. Dodd. (University Examination Postal Institution.)

This is a concise and fairly accurate summary of the main facts which ought to be known on the subject. The text is illustrated by four maps, and the synopsis is carefully and systematically arranged.

Economics. By E. T. Devine, Ph.D. (Macmillan.)

We do not find these reprinted University Extension lectures sufficiently definite, and, perhaps, that is the reason why they appear to be even more dry than the subject warrants. At all events, they are not adapted for use in English schools.

Cassell's Popular Educator. Cheap Edition. Vol. I. (Cassell.)

This new edition of a well known work is unabridged, and has the same coloured plates and maps which appeared in the more high-priced editions. The "Educator" will be completed in eight volumes, published at intervals of a fortnight.

Selected Examples of Decorative Art. Edited by F. E. Witthaus. (Longmans.)

The first two numbers of this new monthly publication, each being a portfolio of twelve photographic reproductions of objects of art in the South Kensington Museum, leave really nothing to be desired—unless it be the succeeding numbers. The selection of objects is made by, or submitted to, the Directors of the Museum, and the reproductions are submitted to them before printing, so that, in a sense, this publication combines official sanction with private and personal initiative. Not only are the selected objects exquisite in point of art but the plates as produced are admirably artistic as pictures. The series will contain examples of sculpture in marble and stone; carved woodwork and furniture, gesso work, bronzes, hammered and cast iron, brass, copper, and lead work; silversmith's work, glass vessels, leather work, textile fabrics and embroidery, and lace; and it is intended to add various subjects, according to the needs of students. We welcome this work with high appreciation.

The Englishwoman's Year-Book and Directory, 1899. Edited by Emily James. (A. and C. Black.)

This is the first Year-Book of a new series. The value of the publication has greatly increased since its origination nineteen years ago, and if all its readers would utilize the blank pages, as the editor requests, for the purpose of making suggestions, it would soon approximate to something like completeness.

Messrs. Nelson & Sons send us two of their *Royal Portfolios of Pictures and Diagrams*, each a series of large sheets mounted on rollers, and printed boldly in colours on strong Manila paper. The design is to illustrate object lessons for classes, and to meet the requirements of the Code (or rather of Circular 369) in that respect. They are excellent for the purpose. The samples before us are the first and fifth series of "Plant Life," drawn from specimens by Dr. M. C. Cooke. The size is 34 by 30.5 inches. A handbook for teachers accompanies each series.

From Messrs. W. & A. K. Johnston we have a number of *Familiar Scenes for Object Lessons*, printed in colours from original oil paintings and illustrating town and country life, land and sea, the farmyard and the street. Each is separately mounted on a roller, the size being 34 by 28 inches. With them comes an *Object Lesson Handbook of Natural History*, which is intended for use with the same publishers' natural history plates, already noticed in these pages.

Amongst Messrs. Bacon's recent publications are *Bacon's New Drawing Charts, Freehand, Part IV.*, a series of twenty-four sheets, printed with soft grey outlines, and presenting in each case a reduction of the larger design. These admirable class-copies are by Frank Steeley and Bernhard H. Trotman. From Messrs. Bacon we also have a number of mounted and glazed sheets on rollers—*Poisonous Plants and Flags and Emblems of the United Kingdom*—effectively coloured and decidedly attractive.

Messrs. Philip & Son send us a box of *Studies for Blackboard Drawing*, by Helen Phillips, with accompanying *Hints* by Katharine Phillips. Both are of high value, and nothing could be better as a practical initiation for students working on the blackboard with an absolutely free hand. The studies are outlines in white printed on "blackboard paper"—the actual old greasy painted "board" being quite superseded by such paper surfaces as this.—From the same publishers we have a *Special Map of Africa*, showing the treaty and other boundaries, clearly distinguished, the British sphere, the pioneers' routes, &c., &c.

Mr. Edward Arnold publishes an excellent set of twenty *Scale Drawing Sheets*, examples to be studied and copied by the student. We should have been saved much labour and perplexity if we had had these sheets in our boyhood. The scales are all intended for construction with two set-squares, or one square and a flat rule, together with a pair of compasses in each case.

WE HAVE ALSO RECEIVED the following publications and new editions:—

Calendar, History, and General Summary of Regulations of the Department of Science and Art, 1899 (Her Majesty's Stationery Office).

Matriculation Directory, January, 1899 (University Correspondence College).

Education in the Country Districts: An Inquiry into the Condition and Needs of Rural Elementary Schools (Manchester: Taylor, Garnett, & Co.).

Catrina, by R. L. Stevenson (Cassell & Co.)—a sixpenny reprint. *Scenes from "Little Women" and "The Last of the Mohicans"* (Edward Arnold).

Work (Cassell & Co.)—the annual volume of this wonderfully practical paper.

Illustrated Universal History (Cassell & Co.)—Part I. of a new and cheaper edition.

Berry's Guide to the 1899 Queen's Scholarship (Simpkin, Marshall, & Co.).

Manual Instruction in France and Switzerland, by William Lewis, B.A. (Aberystwyth: Gibson)—a Gilchrist report to the University of Wales.

The Children's Labour Question (Daily News office)—a reprint of articles which attracted much attention in the columns of our contemporary.

The Temple Reader, edited by E. G. Speight, B.A. (Horace Marshall & Son)—a new edition of the Prose Reader, revised, enlarged, and illustrated.

Stories for Standard II. (Chambers's "Story Readers").

The Student's Queen Elizabeth, by T. W. Berry and T. P. Marshall. (Simpkin, Marshall, & Co.)

La Fortune de D'Artagnan, with vocabulary, edited by A. R. Ropes, M.A. (Cambridge: Pitt Press)—a stereotyped edition of a work which we have highly commended.

Otto's German Dialogues, revised by H. Runge (Heidelberg: Groos)—a fourth edition.

COLLEGE OF PRECEPTORS.

CERTIFICATE EXAMINATION.

CHRISTMAS, 1898.

List of the successful candidates at the Colonial Centres—Batticaloa, British Guiana, Grenada, Kingston (Jamaica), Lagos, Nassau (Bahamas), Stewart Town (Jamaica), and Trinidad.

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—

- a* = Arithmetic, *g* = Geography,
- al* = Algebra, *h* = History,
- d* = Drawing, *ph* = Physiology,
- e* = English, *s* = Scripture.
- f* = French.

The small figures ¹ and ² prefixed to names in the Second and Third Class Lists denote that the candidates were entered for the First and Second Classes respectively.

BOYS.

- FIRST CLASS.—PASS DIVISION.**

MATHEMATICS.

14100. (Professor ELLIOTT, F.R.S.)—ABC, A'B'C' are two triangles inscribed in a conic, and PQR is the PASCAL line of the hexagon AB'CA'BC'. P being the intersection of B'C and BC', Q of C'A and CA', and R of A'B and AB'. Prove that, if XYZ be an inscribed triangle which is copolar both with ABC and A'B'C', with vertices homologous in the order named, then XP, YQ, ZR intersect on the conic, and the two poles lie on the line PQR. Prove also that all inscribed triangles XYZ which are copolar both with ABC and A'B'C' can be constructed by joining P, Q, R to any the same point of the conic, and taking for vertices the second intersections of the conic with the joining lines.

Solution by Professor A. DROZ-FAENY.

Soient ω le centre d'homologie des triangles ABC et XYZ, et ω' celui des triangles A'B'C' et XYZ. Les hexagones inscrits BYB'CA', AXA'ZC', AXA'BYB' admettant respectivement les Pascals, $\omega\omega'P$, $\omega\omega'Q$, $\omega\omega'R$, il en résulte que les cinq points $\omega\omega'PQR$ sont en ligne droite. Tirons les droites XP, YQ, ZR et supposons que XP et YQ se coupent en a ; XP et ZR se coupent en a' .

Or dans l'hexagone XaY'BC'A, Xa et B'C se coupent en P, aY et CA se coupent en Q, YB' et A'X se coupent en ω' ; ces trois points étant en ligne droite a appartient à la conique XYB'CA'. De même dans l'hexagone Xa'ZC'BA', Xa' et C'B se coupent en P, a'Z et BA' se coupent en R, ZC' et A'X se coupent en ω' , et comme ces trois points sont en ligne droite a' appartient à la même conique. Or les deux points a et a' doivent coïncider comme constituant les deux la même seconde intersection du rayon XP avec la conique. La proposition réciproque se démontre d'une manière analogue. [The rest in Volume.

13829. (R. CHARTRES.)—If from the vertex A of a triangle there be drawn to the base the altitude AD, the bisector of the angle AE, and the median AF, then, if DE = 3EF, the sides of the triangle will be in arithmetical progression.

Solution by C. JOSS, M.A.; Prof. T. SAVAGE; and many others.

Draw BGH perpendicular to AE. Then GF is parallel to, and half of HC, the difference of the sides; therefore

$$EGF = \frac{1}{2}A,$$

and, because ABDG is concyclic,

$$GDE = \frac{1}{2}A;$$

therefore FG is tangent to circumcircle of GDE; therefore

$$DF \cdot FE = GF^2;$$

therefore $2EF = GF$,

$$\text{and } \frac{BE}{EC} = \frac{BA}{AC}; \therefore \frac{BE+EC}{BE-EC} = \frac{BA+AC}{BA-AC};$$

$$\therefore \frac{BC}{2EF} = \frac{BA+AC}{2GF}; \therefore 2BC = BA+AC.$$

14042. (Prof. G. B. MATHEWS, M.A.)—Prove that

$$a(b-c)^{6n+1} + b(c-a)^{6n+1} + c(a-b)^{6n+1}$$

is divisible by $(b-c)(c-a)(a-b)(a^2+b^2+c^2-bc-ca-ab)$ for all positive integral values of n . Thus, when $n = 1$, the quotient is $(a+b+c)(a^2+b^2+c^2+bc+ca+ab) - 18abc$.

Is there any convenient way of finding the quotients for higher values of n ?

Solution by J. O. WATTS; L. E. REAY, B.A.; and others.

$$a(b-c)^{6n+1} + b(c-a)^{6n+1} + c(a-b)^{6n+1}$$

is clearly divisible by $(a-b)$, $(b-c)$, $(c-a)$, for it vanishes when $a = b$, $b = c$, $c = a$.

$$\text{Put } a = -\omega b - \omega^2 c - \omega(b + \omega c)(b-c)^{6n+1} + b(c + \omega b + \omega^2 c)^{6n+1} + c(-\omega b - \omega^2 c - b)^{6n+1}$$

$$= -\omega(b + \omega c)(b-c)^{6n+1} + \omega b(b-c)^{6n+1} + \omega^2 c(b-c)^{6n+1} = 0.$$

Therefore $a + \omega b + \omega^2 c$ is a factor. Similarly $a + \omega^2 b + \omega c$ is a factor.

Therefore $a^2 + b^2 + c^2 - ab - bc - ca$ is a factor.

13950. (ERNEST P. BARRETT, B.A.)—If O be the point from which two common tangents are drawn to two orthogonal circles, whose points, A and C, of intersection are fixed, prove that, if the intersections of the polars of O with respect to the circles with the join of O to the centres are B and D, ABCD is a square.

Solution by Professor A. DROZ-FARNY; H. W. CURJEL, M.A.; the PROPOSER; and F. H. PEACHELL, B.A.

Soient M et M' les centres des deux circonférences de rayons R et R', E et E' les points de contact d'une des tangentes communes, d la distance MM' des centres et F le point milieu de AC. On a :

$$(MA)^2 = MF \cdot MM' \text{ et } (M'A)^2 = M'F \cdot MM';$$

$$\text{donc } R^2 R_1^2 = MF \cdot M'F \cdot d^2 = (AF)^2 d^2, \text{ et par conséquent } 2RR' = d \cdot AC.$$

On trouve aisément que

$$d \cdot BD = (EE')^2 = d^2 - (R-R')^2 = R^2 + R_1^2 - (R-R_1)^2 = d \cdot AC, \text{ d'où } BD = AC.$$

Mais l'axe radical des deux circonférences divise EE', donc aussi BD, en parties égales, et par conséquent BF = FD = FA = FC. ABCD est un carré.

13879. (J. BRILL, M.A.)—Verify that the six quantities $x, y, z, \xi, \eta, \zeta$ can be eliminated from the six equations

$$\begin{aligned} a + dx + e\xi &= 0, & b + dy + e\eta &= 0, & c + dz + e\zeta &= 0, \\ f_1 + g_1x - g_2y - h_2\xi + h_3\eta + k(y\xi - z\eta) &= 0, \\ f_2 + g_2x - g_1y - h_2\xi + h_1\zeta + k(z\xi - x\zeta) &= 0, \\ f_3 + g_3y - g_2x - h_1\eta + h_2\xi + k(x\eta - y\xi) &= 0, \end{aligned}$$

and obtain the result of elimination.

Solution by H. W. CURJEL, M.A.; and the PROPOSER.

Substituting in the last three equations for ξ, η, ζ from the first three, we get

$$F_1 + yG_3 - zG_2 = 0, \quad F_2 - G_2x + G_1z = 0, \quad F_3 + G_2x - G_1y = 0 \quad (1, 2, 3),$$

$$\begin{aligned} \text{where } F_1 &= -f_1 - \frac{h_2c}{e} + \frac{h_2b}{e}, & G_1 &= g_1 + \frac{h_1d + ka}{e}, \\ F_2 &= -f_2 + \frac{h_1c - h_3a}{e}, & G_2 &= g_2 + \frac{h_2d + kb}{e}, \\ F_3 &= -f_3 + \frac{h_2a - h_1b}{e}, & G_3 &= g_3 + \frac{h_3d + kc}{e}. \end{aligned}$$

Multiplying (1) by G_1 , (2) by G_2 , (3) by G_3 and adding, we get

$$\begin{aligned} F_1G_1 + F_2G_2 + F_3G_3 &= 0; \\ \text{i.e., } e(f_1g_1 + f_2g_2 + f_3g_3) + d(f_1h_1 + f_2h_2 + f_3h_3) + ka(f_1 + f_2 + f_3) & \\ &= a(g_3h_2 - g_2h_3) + b(g_1h_3 - g_3h_1) + c(g_2h_1 - g_1h_2) \\ &= \begin{vmatrix} a, & h_1, & g_1 \\ b, & h_2, & g_2 \\ c, & h_3, & g_3 \end{vmatrix} \end{aligned}$$

13939. (C. E. HILLYER, M.A.)—AOB is the diameter of a circle of radius R; circles are described on OA and OB as diameters; a circle O_1 is then described, touching the last two externally and the original circle internally; a second circle O_2 touches O_1 and the circle on OA externally, and the original circle internally; and so on. Show that the angles $AOO_2, AOO_3, AOO_4, \dots$ are successive acute angles in descending order which have all their trigonometrical ratios rational, and the radius

of the n th circle O_n is $\frac{R}{n^2 + 2}$. Also, if O be not the centre, but $OA = a$ and $OB = b$, then the diameter of the n th circle, similarly constructed, is $\frac{ab(a+b)}{n^2b^2 + a(a+b)}$. [See, regarding the second part, Quest. 7905, by R. LACHLAN, B.A., Vol. LXI., p. 94.]

Solution by the PROPOSER and Professor SANJANA, M.A.

If r_n, θ_n are the polar coordinates of the centre of O_n , and a_n the radius of the n th circle, we have $r_n + a_n = R$ (1),

$$\text{and } \sqrt{(r_n^2 + \frac{1}{2}R^2 - r_n R \cos \theta_n)} - a_n = \frac{1}{2}R; \text{ therefore } r_n + \sqrt{(r_n^2 + \frac{1}{2}R^2 - r_n R \cos \theta_n)} = \frac{3}{2}R, \text{ whence } \cos \theta_n = 3 - 2(R/r_n) \text{ (2).}$$

Since $\theta_1 = 90^\circ$, we have $R/r_1 = \frac{3}{2}$. Now, if we form the equation for r_2 from the condition that the circle O_2 touches the three circles O_1 , that on OA_1 , and that on AB , we shall obtain a quadratic of which $\frac{1}{2}R$ is one root, since the circle on OB also satisfies the condition [as a matter of fact

the equation is $12r^2 - 16Rr + 5R^2 = 0$ or $(2r - R)(6r - 5R) = 0$; therefore R/r_2 is rational. Similarly, since R/r_1 is rational, it follows that R/r_3 is so also, and so on, and therefore, from (2), $\cos \theta_n$ is always rational, and, from (1), R/a_n is always rational. Now, from the triangle $O_{n-1}O_n$, we have

$$\cos(\theta_{n-1} - \theta_n) = \frac{r_n^2 + r_{n-1}^2 - a_n + a_{n-1}}{2r_n r_{n-1}} = \frac{-2R^2 + 2Rr_n + 2Rr_{n-1}}{r_n r_{n-1}}$$

which is rational; and, therefore,

$\sin \theta_n \sin \theta_{n-1}$ is rational, but $\sin \theta_1 = 1$; therefore $\sin \theta_2$ is rational; therefore $\sin \theta_3$ is rational, and so on.

Thus $\theta_1, \theta_2, \theta_3, \&c.$, are successive angles having both sine and cosine rational. [The rest in Volume.

13979. (R. CHARTRES.)—Show that

$$\int_0^1 \frac{x^{k-1} \cdot dx}{1+x} = \frac{\pi}{\sin k\pi}$$

without DEMOIVRE'S theorem or imaginaries ($k < 1$); evaluate

$$\int_0^{\infty} \frac{\log x \cdot dx}{1+x^3}$$

and sum the series $\frac{1}{1^2 \cdot 2^2} - \frac{3}{4^2 \cdot 5^2} + \frac{5}{7^2 \cdot 8^2} - \&c., ad\ infinitum.$

Solution by Professor NANSON, G. H. HARDY, and the PROPOSER.

$$(1) \int_0^{\infty} \frac{x^k}{1+x} dx = \int_0^1 \frac{x^{k-1} + x^{-k}}{1+x} dx = \pi \operatorname{cosec} k\pi,$$

on expanding $(1-x)^{-1}$ in a G.P., integrating each term separately, and summing by the known formula

$$\pi \operatorname{cosec} k\pi = \frac{1}{k} + \sum_{r=1}^{\infty} \left(\frac{1}{k+r} + \frac{1}{k-r} \right) (-1)^r$$

which can be proved without using DEMOIVRE'S theorem, or imaginary quantities. [The rest in Volume.

14020. (SALUTATION.)—From a given point as vertex construct an equilateral triangle without describing any arc, but having a flat ruler with two of its edges at right angles and half the length of the required side set off on one of them, measured from their point of junction. [Not only is the ordinary joining of points postulated, but the apposition of either of the two specified points on the ruler to a point in the figure, as it grows, and of one of the edges to any line already drawn; also the drawing of a new line along the other edge, whilst the position of the ruler is maintained.]

Solution by G. W. PRESTON.

Let A be the given vertex. Place the corner of the ruler at A, and draw a line from A equal to the half-side. Place the corner of the ruler at B, the other extremity of this line, and in such a way that the unmarked edge coincides with the line AB in direction. Draw BC along the other edge equal to the half-side. Join AC. Place the ruler again at C, and so that the unmarked edge coincides with CA, and draw CD along the other edge equal to the half-side.

Then $AD^2 = 3a^2$, where $2a$ is the given side. Repeat the same process on each side of AD, then drawing DE, DF each equal to the half-side. Join AE, AF. Then AEF is the equilateral triangle required.

For $AF^2 = AD^2 + DF^2 = 3a^2 + a^2 = 4a^2$. Therefore $AF = 2a$. Similarly, $AE = 2a$, and EF also equals $2a$.

13927. (Professor SANJANA.)—Prove the identity

$$\frac{(x^{2n+1} - y^{2n+1})}{(x-y)} = (x^n + x^{n-1}y + \dots + y^n)^2 - xy(x^{n-1} + x^{n-2}y + \dots + y^{n-1})^2;$$

and show how it may be employed to obtain factors of large numbers of the form $x^{4n+2} - 1$.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.; and H. W. CURJEL, M.A.

Let $P = (x^n + x^{n-1}y + \dots + y^n)$, $Q = (x^{n-1} + x^{n-2}y + \dots + y^{n-1})$.

Then $P = \frac{x^{n+1} - y^{n+1}}{x-y}$, $Q = \frac{x^n - y^n}{x-y}$;

$$\begin{aligned} \therefore P^2 - xy \cdot Q^2 &= \frac{(x^{2n+2} - 2x^{n+1}y^{n+1} + y^{2n+2}) - xy(x^{2n} - 2x^n y^n + y^{2n})}{(x-y)^2} \\ &= \frac{x^{2n+2} - 2x^{n+1}y - xy^{2n+1} + y^{2n+2}}{(x-y)^2} \\ &= \frac{x^{2n+1}(x-y) - y^{2n+1}(x-y)}{(x-y)^2} = \frac{x^{2n+1} - y^{2n+1}}{x-y}. \end{aligned}$$

[This is a known theorem. It is given in Mr. BICKMORE'S paper "On the Numerical Factors of $(a^n - 1)$," in *Messenger of Mathematics*, Vol. xxviii., Art. 8.]

Next, let $x = \xi^2$, $y = 1$. Then

$$\frac{\xi^{4n+2} - 1}{\xi^2 - 1} = P^2 - \xi^2 \cdot Q^2 = (P - \xi Q)(P + \xi Q),$$

thus giving two factors of $(\xi^{4n+2} - 1)$, apparently new. But, on substituting for P, Q in terms of ξ , it will be found that

$$P - \xi Q = \frac{\xi^{2n+1} - 1}{\xi - 1}, \quad P + \xi Q = \frac{\xi^{2n+1} + 1}{\xi + 1};$$

so that the factors $(P \mp \xi Q)$ are simply the well known algebraic factors $(\xi^{2n+1} \mp 1) / (\xi \mp 1)$.

13973. (R. KNOWLES, B.A.)— $y^2 = 4ax$ is the equation to a parabola vertex A; on the tangent at A, AT is taken = $4a$; from T, TP is drawn to touch the curve in P; the chord AQ is drawn at right angles to AP; the lines joining the pole of AP to Q and that of AQ to P intersect in O. Prove (1) that the equation to the polar of O is $21x + 6y + 16a = 0$; (2) PQ meets this polar on AT.

Solutions by F. H. PEACHELL, B.A.; G. W. PRESTON, B.A.; and others.

(1) Coordinates of P are $16a, 8a$.

Equation of AP is

$$y/8a = x/16a, \text{ or } 2y - x = 0.$$

Therefore equation of AQ is

$$2x + y = 0$$

from which we get coordinates of Q, $a, 2a$.

Tangent at Q is

$$-2ay = 2a(x+a);$$

where this cuts $x = 0$, $y = -a$.

Therefore F is point $0, -a$.

Equation of TQ is

$$6x + y - 4a = 0;$$

FP is $9x - 16y - 16a = 0$.

Therefore coordinates of O are $\frac{1}{21}4a, -\frac{1}{21}7a$. Therefore polar of O is

$$(-y \cdot 12a)/21 = 2a(x + \frac{1}{3}4a), \text{ or } 21x + 6y + 16a = 0.$$

(2) Equation of PQ is $3y - 2x + 8a = 0$;

polar of O is

$$21x + 6y + 16a = 0.$$

These evidently meet on $x = 0$, that is, on AT.

QUESTIONS FOR SOLUTION.

14136. (Professor P. G. TAIT, M.A.)—We are told in *The Wars of the Jews* (cap. viii., § 7) that JOSEPHUS managed to save himself and a companion out of a total of 41 men, the majority of whom had resolved on self-extirmination (to avoid falling into the hands of VESPASIAN), provided their leader died with them. Since the man on whom the first lot fell was to be killed by him on whom fell the second, and so on, BACHER supposes that they stood in a ring, and that each third man became the victim in turn, the ring being instantly closed as the doomed withdrew. (1) Find, on this supposition, the original positions of the final survivor and of the last but one; and (2) generalize for any n men, when every m th is selected in succession. [For a Question somewhat similar, see Vol. LIX., p. 29.]

14137. (Professor CROFTON, F.R.S.)—Prove that $(3n)^{4n} - 1$ is divisible by $24n + 1$, if the latter is a prime number.

14138. (Professor G. B. MATHEWS, M.A.)—The conic $S' + kS'' = 0$

meets the fixed conic $S = 0$ in the points A, B, C, D; prove that, as varies, the six sides of the quadrangle ABCD envelope one and the same curve of the third class, which is in general of the sixth order. Discuss the exceptional cases, and, in particular, that in which the envelope degenerates into a point and a conic.

14139. (Professor NEUBERG.)—Eliminer x, y, z entre des équations
 $\cos x \sin y \sin z = a,$ $\cos y \sin z \sin x = b,$
 $\cos z \sin x \sin y = c,$ $\cos x \cos y \cos z = d.$

14140. (Professor E. J. NANSON.)—Defining a proper recurring series as a r-curring series whose generating function is a proper fraction, show that, if the first $2r$ terms are given, a proper recurring series S_r of order r is in general determined; and, denoting the persymmetric determinant or catalytic whose elements are the first $2k-1$ terms by P_k , prove that, if $P_r = 0, P_{r-1} = 0, \dots, P_{s+1} = 0, P_s \neq 0$, where $s < r$, then (1) the first $2s$ terms determine a proper recurring series S_s of order s which contains the next $r-s$ of the given terms; (2) the continuation of the given series as a proper recurring series of order r is not possible unless S_s contains the remaining $r-s$ given terms; (3) when S_s contains the whole of the given terms, the continuation of the given series as a proper recurring series of order r is uniquely possible, and the continuation coincides with S_s ; (4) the scale of the given series is indeterminate, and is the product of the scale of S_s and of the scale of an arbitrary recurring series of order $r-s$.

14141. (Professor COCHEZ.)—Etudier la courbe $x^2y^2 - x^2y^3 + 1 = 0$.

14142. (Professor SANJANA, M.A.)—Let O be the circumcentre of a triangle ABC, and let the tangents to the circumcircle at B and C meet in k_1 (an ex-symmedian point). (1) Draw antiparallels through k_1 to each side to meet the remaining sides; the six points thus obtained lie on a circle. Two of these points coincide at B and two at C. (2) Draw parallels through k_1 to the sides, and let perpendiculars from O meet these in A_1, B_1, C_1 ; the seven points O, k_1, A_1, B_1, C_1, B, C lie on a circle. Two of these points coincide at k_1 , and B_1 and C_1 lie on AB and AC. [The circles in (1) and (2) are respectively analogous to the cosine and BROCARD circles.]

14143. (Professor UMES CHANDRA GHOSH.)—Prove that

$$\int_0^\infty \frac{\cot x - 2^a \cot 2^a x}{x} dx = \frac{1}{2} \pi (2^a - 1),$$

where a is any positive integer.

14144. (D. BIDDLE.)—The sum to infinity of the reciprocals of triangular numbers being 2, find the value of a constant, x , to be added to each triangular, such that the sum of the reciprocals shall be $4\pi - 1/x$.

14145. (R. TUCKER, M.A.)—The equations to AP and EF are

$$a \cos A (c \cos B - b \cos C) + \beta b \cos B \cos C - \gamma c \cos B \cos C = 0,$$

$$-a \cos A + \beta \cos B + \gamma \cos C = 0.$$

Eliminating a , the equation to AP is

$$(\beta \cos^2 B)/b = (\gamma \cos^2 C)/c;$$

hence the point is $(a \sec^2 A, b \sec^2 B, c \sec^2 C)$, which evidently lies on $\Sigma bc \cos^2 A (b^2 - c^2) \alpha = 0$, the join of K and H.

14146. (R. F. DAVIS, M.A.)—If OP, OP' are tangents from an external point O to a given circle, and any point T is taken upon the line joining their middle points R, R' from which tangents are drawn whose chord of contact intersects RR' in U, prove that OT, OU are at right angles.

14147. (Rev. W. ALLEN WHITWORTH, M.A.)—If three square numbers (not having a common factor) be in arithmetical progression, the middle one divided by 120 will leave a remainder 1 or 25 or 49, and each of the others divided by 240 will leave a remainder 1 or 49. For example: 49, 289, 529; 289, 625, 961; 961, 1681, 2401.

14148. (Rev. T. ROACH, M.A.)—Sum to infinity the series

$$\frac{1}{3} - \frac{1}{11} + \frac{1}{15} - \frac{1}{23} + \dots$$

14149. (B. N. CAMA, M.A.)—A map consists of $p+1$ groups of land to be coloured, consisting, respectively, of 1, 2, 3, ..., $(p+1)$ countries meeting at a point, the extreme countries in each group not having a common boundary. Show that the total number of ways of painting the map by $k+1$ colours, when no two adjacent countries in any of the groups are to have the same colour, is $(k^{p+1} - 1)(k+1)/(k-1)$. Further, show that, if v_r denote the number of ways of painting a group of n countries in this manner,
 $v_{r+1}/v_r = k^r.$

14150. (R. KNOWLES, B.A.)—The expression $(1 - 10x + 5x^2) + (1 + x)^5$ when expanded becomes the series

$$1 - \frac{5 \cdot 6}{1 \cdot 2} x + \dots + (-1)^r \frac{5 \cdot 6 \dots (2r+3)(2r+4)}{1 \cdot 2 \dots (2r-1) 2r} x^r, \text{ ad infinitum.}$$

It is required to deduce the expression from the series.

14151. (J. J. BARNVILLE, B.A.)—Prove that

$$\log 2 = \left(\frac{1}{2}\right)^2 + 3 \left(\frac{1}{2}\right)^3 + 4 \left(\frac{1}{2}\right)^4 + 7 \left(\frac{1}{2}\right)^5 + 11 \left(\frac{1}{2}\right)^6 + \dots;$$

$$4 \log \frac{3}{2} = \left(\frac{1}{3}\right) + \frac{3^2}{2} \left(\frac{1}{3}\right)^2 + \frac{4^2}{3} \left(\frac{1}{3}\right)^3 + \frac{7^2}{4} \left(\frac{1}{3}\right)^4 + \dots;$$

$$\log 5 = \left(\frac{2}{5}\right) + \frac{3}{2} \left(\frac{2}{5}\right)^2 + \frac{7}{3} \left(\frac{2}{5}\right)^3 + \frac{17}{4} \left(\frac{2}{5}\right)^4 + \frac{41}{5} \left(\frac{2}{5}\right)^5 + \dots.$$

14152. (DISCIPLUS.)—An alphabet consists of m consonants and n vowels, m being greater than n . Find the number of ways in which all the letters may be arranged so that each of the vowels shall be between two consonants.

14153. (ROBERT W. D. CHRISTIE.)—Resolve $x^{2m} - x^{2n} + 1$ into factors. (This theorem fills the hiatus in the general theorem, Quest. 8098, given in Vol. XLVIII, p. 108.)

14154. (H. J. WOODALL, A.R.C.S.)—Find the value of x in the following table:—

0	·493 107 418 043 066 689
1	·502 687 750 553 717 016
2	·512 251 521 229 044 033
3	·521 798 422 844 633 606
4	·531 328 149 182 931 742
5	·540 840 395 051 310 490
6	·550 334 856 300 060 834
7	x
8	·569 269 213 661 871 302
9	·578 708 506 850 937 002

14155. (G. H. HARDY.)—Prove, by contour, integration, or otherwise,

that $\int_0^\infty e^{n \cos x} \sin(\beta x + n \sin x) (dx)/x = \frac{1}{2} \pi e^\alpha.$

What conditions, if any, must α, β, n satisfy?

14156. (J. WATSON.)—In a given circle is a fixed chord equal to the radius, and also a point (not the centre). Describe a second circle that shall touch the given circle and the chord whilst passing through the given point.

14157. (Rev. T. MITCHESON, B.A.)—A straight line is drawn from O, the intersection of the directrix and the axis of x , meeting an ellipse in P and Q, so that OP = PQ; show that the length of the chord PQ = $\frac{p^2}{4a} \left(\frac{17a^2 - 9b^2}{a^2 - b^2} \right)^{\frac{1}{2}}$, and its inclination to the major axis is $\cos^{-1} \frac{3a}{(17a^2 - 9b^2)^{\frac{1}{2}}}$.

14158. (Lt.-Col. ALLAN CUNNINGHAM, R.F.)—Express $(3 \cdot 2^{3n} + 1)$ in one or more of the forms $(c^2 \pm 2d^2), (A^2 \pm 3B^2)$; or show that it does not admit of this expression.

14159. (Rev. J. CULLEN, B.A.)—Prove (1) that the PASCAL line of the hexagon DD'EE'FF', formed by the intersections of the sides of ABC with any "T" circle, is the radical axis of "T" and the circumcircle; (2) the intersections of the homologous sides of DEF and D'E'F' are the vertices of a triangle homothetic with ABC, and the homothetic centre lies on KEPERT'S hyperbola.

14160. (G. BIRTWISTLE.)—The tangents to any umbilical geodesic on a quadric all intersect the focal hyperbola.

14161. (W. C. STANHAM, B.A.)—If the tangents to a conic from any point on one of its directrices intersect a fixed straight line at points P and Q, the other two tangents to the conic from P and Q intersect on a fixed straight line.

14162. (Professor A. DROZ-FARNY.)—On donne un triangle rectangle en A, ABC; le côté BA est fixe, le sommet C se meut sur CA. On porte sur les bissectrices de l'angle C les longueurs CG = CG' = CH = CH' de manière que CG = (CB · CA)^{\frac{1}{2}}. Lieux des points G et H ?

14163. (I. ARNOLD.)—Given the length l of an inclined plane, and its height h . A body descends from the top of the plane. Find at what distance from the top of the plane the body will begin to describe a space equal to the height in the same time that it would have fallen perpendicularly through the height.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXIX. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, February 9th, 1899.—Lt.-Col. Cunningham, R.E., V.P., in the Chair. Eighteen members present.

Mr. Umes Chandra Ghosh, M.A., Lecturer in Mathematics, Muir Central College, Allahabad, was elected a member; and Mr. E. W. Barnes, B.A., was admitted into the Society.

Mr. A. Berry, M.A., read a paper entitled "Note on a case of Divisibility of a Function of Two Variables by another Function."

Mr. Love, F.R.S., read a paper on "The Scattering of Electric Waves by an Insulating Sphere." A complete solution is given of the problem of determining the disturbance of a train of plane polarized waves of electric force by a dielectric sphere of any size and with any difference between the dielectric constants of the material of the sphere and the medium outside it. This solution verifies the approximation for a very small sphere otherwise obtained by Lord Rayleigh, according to which the direction in which the disturbance in the scattered wave vanishes is at right angles to the direction of propagation of the incident waves. It also shows that, in a second approximation, whatever the difference of dielectric constants may be, the direction in which the disturbance in the scattered wave vanishes is inclined at a slightly obtuse angle to the direction of propagation of the incident waves.

Mr. A. E. Western, M.A., communicated a paper on "Groups of Order p^2q "; and a paper by Dr. L. E. Dickson, entitled "The Group

of Linear Homogeneous Substitutions on mq Variables which is defined by a certain Invariant."

Mr. A. Young, B.A., read a paper on "The Irreducible Concomitants of any number of Binary Quatics."

The remaining papers were communicated in abstract, viz.:—

"On a Certain Minimal Surface, and on a Solution of $\nabla^2 r = 0$," by Mr. T. J. Bromwich, B.A. The paper consists of two parts. In the first the author investigates the condition that the plane $lx + my + nz = p$ should envelop a minimal surface. This is found to be

$$\frac{\partial^2 p}{\partial l^2} + \frac{\partial^2 p}{\partial m^2} + \frac{\partial^2 p}{\partial n^2} = 0, \text{ a result given by Mr. R. W. Genese in the } Quarterly$$

Journal of Mathematics (1875). The known surfaces of the helicoid and catenoid are proved to be deducible from this result. Comparing this with an expression for p in terms of l, m, n given by Darboux (*Théorie des Surfaces*), the author is led to a type of solution of $\nabla^2 r = 0$ which seems to be related to the forms given by Prof. Forsyth in the *Messenger of Mathematics* (1897). In the second part of the paper this solution and allied forms are investigated.

"On the Complete System of Differential Covariants of a Single Pfaffian Expression, and of a Set of Pfaffian Expressions," by Mr. J. Brill, M.A.

"The Figure of Jacobi with respect to a Linear System of Hyperquadrics," by Prof. Schoute.

COLLEGE OF PRECEPTORS.

Lectures for Teachers on the Science, Art, and History of Education.

MORAL EDUCATION.

To be delivered by JAMES SULLY, M.A., LL.D., Grote Professor of the Philosophy of Mind and Logic at University College, London.

The First Course of Lectures (27th Annual Series) commenced on Thursday, February 16th, at 7 p.m.

This Course, consisting of Twelve Lectures, will deal with the Development of the Will and Character. The aim of this branch of education will be elucidated by a reference to the ethical conception of good or virtuous character, and its methods by a reference to the psychological laws of development. Attention will be paid throughout to the special circumstances and needs of the school teacher.

Directions will be given as to reading, and care will be taken, by the setting of papers and by conversation, to give students a real grasp of the subjects of the Course.

SYLLABUS.

I.—The Conception of Moral Education—The Aim of Moral Education—The Idea of the Good Man not determined by Current Standards—The Ethical Conception of the End of Action and its Historical Development—Happiness and Moral Perfection—Relation of the Self to other Selves—The Service of Humanity—Dutiful conduct and Virtuous Character—The Connexion between Moral and other Excellences—The Intellectual Side of Virtuous Character: Reasonableness—The Emotional Element in Moral Perfection: Enthusiasm—Types of Virtuous Character.

II.—The Material on which Moral Education works—Different Conceptions of Child-Nature—View that Goodness and Badness are alike acquired (Locke)—Theory of Innate Badness—Theory of Innate Goodness (Rousseau)—Scientific View of Natural Tendencies—Evolution and Heredity as explaining Natural Tendencies—Significance of Brutal and of Human Characteristics in the Child—Passionateness, Combativeness, &c.—Germ of Respect for Order and Law—Imitation as furthering Moral Adaptation—Rudiments of the Social Affections—Early Modifications of Natural Tendency by the Influence of the Home and Companions.

III.—The Methods of Moral Education—Presuppositions of Moral Education: Personal Authority and the Power to Control Children's Actions—Negative and Positive Sides of Moral Control—The School as a Restraining System—The School as developing the Ideal Self—Indirect and Direct Action of Positive Training—The Teacher as working on Moral Growth through Ideas—The Cultivation of Social and Moral Feeling—The Development of the Good Will as entering into School Discipline—Moral Growth as depending on the Action of a Community—The Moulding of the Individual by acting upon the School Community—Moral Function of the Day and the Boarding School.

IV.—Development of the Intelligence as furthering Moral Education—The Observation of Moral Facts—Extension of Field of Observation by presentation of others' Moral Experience—The Apperception of Moral Presentations—Children's Manner of Apperception—The part of the Educator in the Selection and the Interpretation of Moral Facts—The role of History and of Fiction in the Development of Moral Ideas—Simplification of Facts by Stories of Child-Life, Fables, &c.—Later Stage of Moral Instruction—Inductive Building-up of more Abstract Moral Conceptions—Exercising the Child in the Analysis and Classification of Moral Facts—The Construction of Ideas of "Me and My World," the Actual and Ideal "Me," &c.

V.—The Cultivation of Feeling as furthering Moral Education—The Place of Feeling in Mental Life as a Whole and in Moral Growth—The Idea of a Cold Morality—Moral Estimates of Children's Feelings—Violence of Feeling and Enthusiasm—Affectation of Feeling and Sentimentalism—The Egotism of Early Feeling—The Duty of the Teacher to respect the Egotistic Feelings of the Child—The Injury of the Moral Nature by Indifference or Apparent Injustice—Injuries due to Failure to Understand the Individual Child—The Sensitive Child and its Varieties—The Problem of Encouraging Self-outitude—The Moral Effects of Showing Sympathy and Kindness to Children—The Hardening Effect of School Life on Feeling, and its Ethical Significance.

VI.—The Action of School Life on the Social Feelings, and its Ethical Importance—Development of Respect for the Higher Personality and for Authority—The Child's Sensitiveness to Blame and Praise—The Delight of Pleading—The Action of the Community on the Child's Social Feelings: Rivalry and the Love of Co-operation—Example and its Effect on Feeling—Warning Examples and Moral Dislikes—The Admiration of Heroes—The School Community as developing Sympathy—The Ethical Value of School Friendships—Beginnings of a Respect for Law as such—How the Experience of the School develops the Feeling of Justice—Collective or Communal Sympathy as a Basis of Moral Settlement.

VII.—The Higher Development of Moral Feeling—The Presentation of a Model of Good Feeling by the Teacher—The Methodical Exercise of the Better Feelings: Encouragement of Sympathy with others—Working against Childish Prejudices—The Formation of a Habit of Impartial Sympathy—The Exercise of the Feelings in the Development of Just Appreciations of Goodness—The Action of Historical and Fictitious

Character on the Growth of Moral Feeling—The Control and Guidance of Children's Will—The Conflict and Reconciliation of Justice and Mercy—Influence of the Direction of Moral Admiration on the Growth of Ideal Conceptions of Goodness—The Privacy of the Child's Moral Feeling and its Respect by the Teacher—The Supreme Need of studying the Emotional Nature of the Individual Child.

VIII.—Moral Education as concerning itself ultimately with the Will—Nature of Volition and its relation to Thought and to Feeling—Action of the Teacher on the Child's Will—This Action rendered difficult by the Weakness of the Child's Will and the Limitations set to its Field of Activity—Whence Two Characteristics of Moral Training: (a) its Prospective Character as preparing for Later Conduct, (b) its Reliance on Authority and Systematic Discipline—Moral Education as emphasizing the Development of Moral Ideas, Feelings, and Desires (Herbart)—The System of Authoritative Control as interfering with the Child's Spontaneous Action and as enforcing New Modes of Activity by the Introduction of New Motives—The Education of the Will as surmounting these Limitations—The Moral Influence of the Educator as permeating and transforming Governmental Control—The Problem of rendering Prescribed Lines of Action Natural to the Child—Education as developing in its turn a New Spontaneity: "Moral Freedom."

IX.—Primary Education of the Will—Characteristics of Children's Actions—The Dominion of Instinct and Passion—Mischievous Directions of Early Action—The Institution of Authority and Government as a means of controlling Children's Actions—The Operation of Educational Restraint on the Growing Will—The Prohibition of Actions in the Home and the School—Natural Attitude of Children towards Prohibitions—The Attitude of Disobedience and its Variations—Different Moral Values of Obedience—The Gentle or Yielding and the Resistant Child—Some Problems respecting Punishment.

X.—The Operation of Authority as going beyond mere Arrest of Mischievous Activity—Government as complicated from the first by the Personal Element in Authority—How this Element gives Moral Influence to Restraining Government—The Child's Wish to Avoid giving Offence—Appeals to the Child's Good Feeling and Reasonableness—The Methods of calling forth Efforts of Will—Moral Suggestion and its use in Education—The Desire to Plead and to Gain Credit—The Judicious Use of Praise—The Appeal to Imitativeness and the Use of Example—The Judicious Use of the Motive of Emulation—The Fixing of Effort in Definite Directions—The Value of the Principle of Habit in Early Moral Training.

XI.—The Organizing of Control into an Intelligible System—The Generalizing of Commands into Rules of Conduct—The Rule as Permanent Command and as Valid for all alike—The Explanation of Rules—The Special Rules of School Discipline: Orderly Behaviour, Industry, &c.—How the Rules of School Life develop the Idea of a Social System and of Common Duties—The Part of the Teacher in enforcing the Rules of Virtue: Truthfulness, Honesty, &c.—How the Teacher's Personality contributes to the Acceptance of Moral Rules—Rewards of Good Conduct—Moral Discipline as developing Standard Ideas of Conduct—The Use of Striking Examples in recommending Rules of Virtuous Conduct—The Habit of Virtuous Conduct as preparing for Moral Freedom.

XII.—Later Stages of Education of Will and Character—The Connecting of Moral Instruction with Moral Discipline—Treatment of Unusual and Exceptional Cases of Conduct—Mistaken Sense of Duty and Conscientious Obstinacy—The Respecting of Moral Individuality—Action of the Teacher on the Collective Moral Tone—Problem of correcting Wrong or Defective Moral Notions and Standards—False Ideas of Honour: Reflections of Low "Conventional" Morality, &c.—Inculcation of Duty in the Face of Numbers—The Gradual Enlargement, by the Teacher, of the Field of Virtuous Conduct—The Encouragement of Public Spirit and Participation in Public Causes—The Preparation for Self-controlled Conduct—The Educational Use of Posts of Trust and the Gradual Devolution of Moral Responsibility on the Pupil.

The Fee for the Course of Twelve Lectures is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

COLLEGE OF PRECEPTORS' EXAMINATIONS,

June and December, 1899.

SUITABLE BOOKS IN THE University Tutorial and Preceptors' Series.

French and English.

- FRENCH COURSE, THE PRECEPTORS'.** By E. WEEKLEY, M.A. Lond. 2s. 6d.
- FRENCH COURSE. BARLET'S PRECEPTORS' JUNIOR.** By STÉPHANE BARLET, B. ès Sc., Univ. Gall. Examiner in French to the College of Preceptors. 1s. 6d.
- French Prose Composition.** By ERNEST WEEKLEY, M.A. Lond. 3s. 6d.
- FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. Lond. 1s. 6d.
- French Prose Reader.** Edited by S. BARLET, B. ès Sc., and W. F. MASOM, M.A. With Vocabulary. *Third Edition.* 2s. 6d.
- ENGLISH GRAMMAR, THE PRECEPTORS'.** With numerous Exercises. By ARNOLD WALL, M.A. Lond. [*In preparation.*]
- English Language, The: Its History and Structure.** By W. H. LOW, M.A. Lond. *Fourth Edition, Revised.* 3s. 6d.
- Shakespeare.—Richard II.** Edited, with Introduction and Notes, by Prof. W. J. ROLFE, Litt.D. 2s.

Latin and Greek Grammar, &c.

- Greek Reader, The Tutorial.** By A. WAUGH YOUNG, M.A. Lond., Gold Medallist in Classics. *Second Edition.* 2s. 6d.
- LATIN COURSE, THE PRECEPTORS'.** By B. J. HAYES, M.A., and F. L. D. RICHARDSON, B.A. 2s. 6d. [*In the press.*]
- Latin Dictionary, The Tutorial.** By F. G. PLAISTOWE, M.A. Lond. and Camb., Gold Medallist in Classics, late Fellow of Queens' College, Cambridge. 6s. 6d.
- Latin Grammar, The Tutorial.** By B. J. HAYES, M.A., and W. F. MASOM, M.A. *Third Edition.* 3s. 6d. Exercises and Test Questions on. 1s. 6d.
- Latin Composition and Syntax.** With Exercises. By A. H. ALLCROFT, M.A., and J. H. HAYDON, M.A. *Fourth Edition.* 2s. 6d.
- Latin Reader, The Tutorial.** With Complete Vocabulary. 2s. 6d.
- LATIN READER, THE PRECEPTORS'.** [*In preparation.*]

Mathematics and Science.

- Chemical Analysis, Qualitative and Quantitative.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and R. W. STEWART, D.Sc. Lond. 3s. 6d.
- Chemistry, The Tutorial.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg, Lecturer in Chemistry in the Victoria University. Edited by WILLIAM BRIGGS, M.A., F.C.S.
- Part I.: Non-Metals. 3s. 6d. Part II.: Metals. 3s. 6d.
- Chemistry, Synopsis of Non-Metallic.** With an Appendix on Calculations. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. Interleaved. 1s. 6d.
- Euclid.—Books I.—IV.** By RUPERT DEAKIN, M.A. Lond. and Oxon., Headmaster of Stourbridge Grammar School. 2s. 6d. Books I. and II. 1s.
- Hydrostatics, An Elementary Text-Book of** With Examples and Answers. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. *Second Edition.* 2s.
- Magnetism and Electricity, First Stage.** By R. H. JUDE, M.A., D.Sc. Lond. 2s.
- Magnetism and Electricity, Text-Book of.** By R. W. STEWART, D.Sc. *Third Edition.* 3s. 6d.
- MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A., B.Sc. 2s. 6d.
- Mensuration of the Simpler Figures.** By WILLIAM BRIGGS, M.A., LL.B., F.C.S., and T. W. EDMONDSON, B.A. Lond. and Camb. *Second Edition.* 2s. 6d.
- Sound, Light, and Heat, First Stage.** By JOHN DON, M.A., B.Sc. Lond. 2s.
- Trigonometry, The Tutorial.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.

Book-keeping.

- BOOK-KEEPING, THE PRECEPTORS'.** [*In preparation.*]

The Organized Science Series.

BOOKS ADAPTED TO THE REQUIREMENTS OF THE SCIENCE AND ART DEPARTMENT.

For the Elementary Stage. 2s. each Volume.

- FIRST STAGE MECHANICS. (SOLIDS.)** *Second Edition.* By F. ROSENBERG, M.A., B.Sc.
- FIRST STAGE MECHANICS OF FLUIDS.** By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc.
- FIRST STAGE SOUND, HEAT, AND LIGHT.** By JOHN DON, M.A., B.Sc.
- FIRST STAGE MAGNETISM AND ELECTRICITY.** By R. H. JUDE, M.A. Cantab., D.Sc. Lond.
- FIRST STAGE INORGANIC CHEMISTRY (Theoretical).** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S.
- FIRST STAGE PHYSIOGRAPHY.** By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.

Price 1s.

- FIRST STAGE INORGANIC CHEMISTRY (Practical).** By FREDERICK BEDDOW, B.Sc., Ph.D.

For the Advanced Stage. 3s. 6d each Volume.

- SECOND STAGE MATHEMATICS.** (Being the additional Algebra and Euclid, with the Trigonometry required for the Second Stage.) Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S.
- ADVANCED MECHANICS. Vol. I.: Dynamics.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S.
- ADVANCED MECHANICS. Vol. II.: Statics.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S.
- ADVANCED HEAT.** By R. WALLACE STEWART, D.Sc. Lond.
- ADVANCED INORGANIC CHEMISTRY (Theoretical).** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S.

Price 1s. 6d.

- PRACTICAL ORGANIC CHEMISTRY.** By GEORGE GEORGE, F.C.S.

COMPLETE CATALOGUE of the University Tutorial Series, and List of Books classified for College of Preceptors, Science and Art Department, Cambridge and Oxford Local, and London University Examinations, free on application.

KING ALFRED'S OLD ENGLISH VERSION OF BOETHIUS DE CONSOLATIONE PHILOSOPHIAE.

Edited from the MSS., with Introduction, Critical Notes, and Glossary by WALTER JOHN SEDGEFIELD, M.A. Melb., B.A. Cantab.

In view of the approaching celebration of the 1000th anniversary of King Alfred's death, this edition of his most important work is opportune (the last edition was published thirty-five years ago) giving as it does, for the first time, the full text of the oldest MS. as far as its damaged state allows. The *Glossary* is exhaustive, and throws considerable light on Old English syntax and etymology; while the *Introduction* touches on details of interest such as Bibliography, Manuscripts, Dialect, Relation to Latin Original, Use made of Latin Commentaries, Chronology, &c. It is hardly necessary to point out how important the O.E. Boethius is for a right understanding of King Alfred's aspirations and his conception of the kingly ideal.

Just published, pp. 268, extra fcap. 8vo, cloth. 3s. 6d.

MARCUS TULLIUS CICERO PHILIPPIC ORATIONS, I., II., III., V., VII. With English Notes by JOHN R. KING, M.A., Fellow and Tutor of Oriel College, Oxford.

Now ready, pp. 192, crown 8vo, price 4s. 6d.

DEMONSTRATIONS IN LATIN ELEGIAC VERSE.

By W. H. D. ROUSE, M.A.

CONTENTS.

INTRODUCTION— I. Principles of Elegiac Verse.

II. Ovidian Usage.

EXERCISES I.—XXV.

INDEX.

Just published. 3s.

GERMAN PASSAGES FOR UNSEEN TRANSLATION. For the Use of Candidates for Army, Civil Service, and other Examinations. Selected and Arranged by EDUARD EHRKE.

"A book of this kind was badly needed. Herr Ehrke has made a very good selection."—*Educational Times*.

Ready immediately, extra fcap. 8vo, cloth, 3s. 6d.

DEMOSTHENES' SPEECH ON THE CROWN. With

Introduction and Notes by EVELYN ABBOTT, M.A., and P. E. MATTESON, M.A.

Post 8vo, pp. xvi. + 348, with Maps, cloth, price reduced to 6s.

HERODOTUS. BOOKS V. AND VI. TERPSICHORE AND ERATO. Edited, with Notes and Appendices,

by EVELYN ABBOTT, M.A., LL.D., Fellow and Tutor of Balliol College.

Ready immediately, cloth fcap., 1s. 6d.

THE "JUNIOR" EUCLID. BOOKS I. AND II.

By S. W. FINN, M.A., Headmaster of Sanbach School.

Now Ready.

Part IV. Magnetism and Electricity (completing the Work).

Crown 8vo, pp. 124, with numerous cuts, cloth, 2s.

PRACTICAL WORK IN PHYSICS. For use in Schools

and Colleges. By W. G. WOOLLCOMBE, M.A. Oxon., B.Sc. Lond., Fellow of the Royal Astronomical and Physical Societies of London, Senior Science Master in King Edward's High School, Birmingham.

By the same Author.

Crown 8vo, cloth, price 2s. each part.

Part I. PRACTICAL WORK IN GENERAL PHYSICS.

Part II. PRACTICAL WORK IN HEAT.

Part III. PRACTICAL WORK IN LIGHT AND SOUND.

Just published, Fourth Edition, Vol. I., B.C. 58—A.D. 1453, pp. xxii + 614, crown 8vo, cloth, with numerous Maps, Plans, and Tables, 10s. 6d.

A HISTORY OF FRANCE. By G. W. KITCHIN, D.D.

Also, 10s. 6d. each:—

Vol. II. Third Edition. 1453—1624.

Vol. III. Third Edition. 1624—1793.

Part II.—SYNTAX (completing the work). Crown 8vo, cloth, 3s. 6d.

A NEW ENGLISH GRAMMAR: Logical and Historical. By HENRY SWEET, M.A., Ph.D., LL.D., Corresponding Member of the Munich Academy of Sciences.

Now ready, cheap edition. crown 8vo, cloth, 7s. 6d.

PROLEGOMENA TO ETHICS. By the late THOMAS HILL GREEN, M.A., LL.D., Fellow of Balliol College, and ^Whyte's Professor of Moral Philosophy in the University of Oxford. Edited by A. C. BRADLEY, M.A.

Just published, Second Edition, Revised, pp. viii. + 126, extra fcap. 8vo, price 3s. 6d.

A MIDDLE HIGH-GERMAN PRIMER. With Grammar, Notes, and Glossary. By JOSEPH WRIGHT, M.A., Ph.D., D.C.L., Deputy Professor of Comparative Philology in the University of Oxford.

Now ready, crown 8vo, cloth, 6s.

COLLEGE OF PRECEPTORS.— EXAMINATIONS FOR 1899.

1. **DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the 4th of July, 1899.—At the Midsummer Examination, persons who have previously passed in Theory and Practice of Education at the Diploma Examination may be examined practically for Certificates of Ability to Teach.

2. **CERTIFICATE EXAMINATIONS.**—The Midsummer Examination for Certificates will commence on the 27th of June.

3. **JUNIOR FORMS EXAMINATIONS.**—The Midsummer Examination will commence on the 27th of June.

4. **PROFESSIONAL PRELIMINARY EXAMINATIONS.**—These Examinations are held in March and September. The next Examination will commence on the 5th of September, 1899.

5. **INSPECTION AND EXAMINATION OF SCHOOLS.**—Visiting Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

PRIZES.

Diploma Examination.—In addition to the Doreck Scholarship of £20, the following Prizes will be competed for:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5.

Certificate Examination.—The "Isbister Prize" will be awarded to the Candidate who stands First, and the "Pinches Memorial Prize" to the Candidate who stands Second in General Proficiency. Prizes will also be awarded to the Third and Fourth in General Proficiency, and to the First and Second in the following subjects:—Classics, Mathematics, Modern Languages, Natural Science, English Subjects. The "Taylor Jones Memorial Prize" will be awarded to the best Candidate in Scripture History. Two Medals will be awarded to the best Candidates in Shorthand.

The Regulations of the above Examinations can be obtained on application to the Secretary at the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

PRELIMINARY EXAMINATION OF MEDICAL STUDENTS.—The COLLEGE OF PRECEPTORS will hold an Examination for Certificates recognised by the General Medical Council as qualifying for Registration as a Medical Student, on the 5th, 6th, and 7th of September, 1899.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool.

Examination Fee, 25s.

Regulations and Entry Forms may be obtained on application to the Secretary of the College of Preceptors, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS.—

EXTRACT FROM THE BY-LAWS.

Section II., clause 5.—"The Council may grant the privileges of Membership, without payment, to holders of Diplomas of the College, as long as such persons are engaged in teaching in Secondary Schools."

Holders of the College Diplomas who are not Members of the College are requested to send their Addresses to the Secretary of the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

The next Monthly Evening Meeting of the Members will take place on Wednesday, the 19th of April, when Professor Woods HUTCHINSON, M.A., M.D. will read a Paper on "The Growth of the Child Mind: Its Practical Bearing on the Order of Education."

The Chair will be taken at 7.30 p.m., and a discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS,

BLOOMSBURY SQUARE, W.C.—The Council of the College of Preceptors will shortly proceed to the appointment of an additional EXAMINER IN FRENCH, and an additional EXAMINER IN ENGLISH LANGUAGE. Candidates must be Graduates (with a preference to those who have taken high Honours), and should have had considerable experience in teaching. Applications, stating age, experience, &c., and accompanied by testimonials, should be addressed to the DEAN of the College not later than the 30th of April.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS.

THE CALENDAR FOR 1899

is now ready, and may be obtained from Mr. F. HODGSON, 89 Farringdon Street, E.C. Price, free by post.

To Members of the College ... 1s. 6d.

To Non-Members ... 2s. 6d.

The Calendar contains, in addition to the Lists of Members, and of Schools sending in candidates to the Certificate Examinations, the Regulations respecting the Examinations to be held in 1899, &c., and the

EXAMINATION PAPERS

set at the Certificate, Junior Forms, Professional Preliminary, and Diploma Examinations held in 1898.

HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

TRAINING COLLEGE FOR SECONDARY TEACHERS, with School for Girls and Kindergarten.

HIGHBURY HILL HOUSE, LONDON, N.

Principal—The Rev. DAVID J. THOMAS, M.A.

Vice-Principal—Miss PERSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers' Diploma of the College of Preceptors. A Cambridge Higher Local Class for intending Teachers.

UNIVERSITY DIPLOMA FOR WOMEN.

THE UNIVERSITY OF ST. ANDREWS grants Diploma and Title of L.L.A. to WOMEN.

60 Examination Centres in Great Britain and abroad. For Prospectus, apply to the SECRETARY, L.L.A. Scheme, The University, St. Andrews, N.R.

L.L.A. ST. ANDREWS UNIVER-

SITY.—Oral Classes for London students in all subjects of this examination are held at the Day Training College, White Street, Finsbury Street, and Rope-maker Street, Finsbury Pavement, E.C., and are conducted by Mr. S. BLOWS, M.A. Honours Cantab., B.A. Honours, B.Sc., and Teachers' Diploma, London.

Correspondence Tuition in all subjects for country students.

All applications to be addressed to PROF. CURACK.

LONDON COLLEGE OF MUSIC.

Instituted 1887. Incorporated.

GREAT MARLBOROUGH STREET, LONDON, W.
FORMUSICAL EDUCATION, AND EXAMINATIONS
IN PRACTICAL AND THEORETICAL MUSIC.

Patron: HIS GRACE THE DUKE OF LEEDS.
Dr. F. J. KAEN, Mus. Bac. Cantab., Principal.
G. AUGUSTUS HOLMES, Esq., Director of Examinations.

EXAMINATIONS IN PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 350 Provincial Centres in July (June for Scotland and Ireland), when certificates will be granted to all successful candidates. The last day for receiving entries is June 15 and May 15, respectively.

The Higher Examinations for Diplomas of Associate (A.L.C.M.), Associate in Music (A.Mus.L.C.M.), Licentiate (L.C.M.), Licentiate in Music (L.Mus.L.C.M.), and Fellowship (F.L.C.M.), also take place in June and July.

Syllabus and Forms of Entry can be obtained of the Secretary.

Silver and Bronze Medals and Book Prizes are offered for competition in accordance with the regulations.

In the Educational Department students are received and thoroughly trained under the best professors at moderate fees. Day and Evening Classes are held.

T. WERKES HOLMES, Secretary.

THE SECRETARY,
(University Correspondence College London Office.)
32 Red Lion Square, Holborn, W.C.

ST. THOMAS'S HOSPITAL MEDICAL SCHOOL, ALBERT EMBANKMENT, S.E.

The **SUMMER SESSION** will commence on Monday, May 1st.

Students entering in the summer are eligible to compete for the Science Scholarships of £150 and £60 awarded in October.

A Scholarship of £50 open to University Students, and other Prizes and Scholarships of the value of £500 are offered for annual competition. All appointments are open to students without extra payment.

Special Classes for the Examinations of the University of London are held throughout the year.

Tutorial Classes are held prior to the Second and Final Examinations of the Conjoint Board in January, April, and July.

A Register of approved lodgings and of private families receiving boarders is kept in Secretary's Office.

Excellent Day Club accommodation is provided in the school building, and an athletic ground at Chiswick.

Prospectuses and all particulars may be obtained from the Medical Secretary, Mr. G. RENDLE.

H. P. HAWKINS, M.A., M.D. Oxon., *Dean*.

CHARING CROSS HOSPITAL MEDICAL SCHOOL.

The **SUMMER SESSION**, 1899, will commence on Monday, May 1st.

The Livingstone Scholarship (100 guineas), the Huxley Scholarship (55 guineas), and six other Entrance Scholarships, total value £550, are awarded annually.

Two Scholarships of the value of 60 guineas each are reserved for Students of Oxford, Cambridge, or London University.

Students who join in Summer have the same privileges as regards Scholarships, &c., as Students joining in October of the same year.

FEES.—For the five years' curriculum of study required by the various Examining Bodies and for hospital practice, 110 guineas in one sum, or 121 guineas in five instalments.

The composition fee for sons of registered medical practitioners is 100 guineas, and the fee by instalments 110 guineas in five payments.

The composition fee for Dental Students is 54 guineas, or 60 guineas payable in two instalments of 30 guineas each.

A proportionate reduction of the above Fees is made to Students who have completed part of the curriculum elsewhere.

CHARING CROSS HOSPITAL is within three minutes' walk of the Dental Hospital of London, and the hours of Lectures are arranged to suit the convenience of both General and Dental Students.

The Hospital and School are situated within two minutes of both Charing Cross Stations, and the Athletic Ground at Elyhan can be reached within half an hour from Charing Cross.

THE SCHOOL PROSPECTUS, containing full information concerning the classes, prizes, and all other arrangements connected with the Medical School, will be sent on application to the *Dean*, Chandos Street, Strand, W.C.

H. MONTAGUE MURRAY, *Dean*.

THE DENTAL HOSPITAL OF LONDON MEDICAL SCHOOL, LEICESTER SQUARE.

The **SUMMER SESSION**, 1899, will commence on Monday, May 1st.

Dental Anatomy and Physiology (Human and Comparative)—CHARLES S. TOMES, F.R.S., M.A. Oxon., M.R.C.S., L.D.S., on Tuesdays and Thursdays at 5 p.m. (Summer.)

Dental Surgery and Pathology—WILLIAM HERN, M.R.C.S., L.D.S., on Wednesdays and Fridays, at 8 a.m. (Summer.)

Mechanical Dentistry—E. LLOYD WILLIAMS, L.R.C.P., M.R.C.S., L.D.S., L.S.A., on Wednesdays at 5.30 p.m. (Winter.)

Metalurgy and its application to Dental Purposes—Dr. FORSTER MORLEY, M.A., F.I.C., F.C.S., on Thursdays at 5 p.m. (Winter.)

The Hospital is open both morning and afternoon. During the sessions the Surgeons of the day will give demonstrations at stated hours.

The Medical Tutor holds classes before each Examination for the L.D.S.

The House Surgeons attend daily while the Hospital is open.

The Saunders Scholarship of £20 per annum and Prizes are open for competition.

Fee for two years' Hospital Practice required by the Curriculum, including Lectures, £50 in one payment, or 50 guineas in two yearly instalments. The Curriculum requires two years to be passed at a General Hospital. The fee for this is about £55. Both Hospitals can be attended simultaneously.

The Calendar may be obtained on application to the *DEAN*, who attends at the Hospital on Wednesday mornings from 10.30 till 12 through the year.

MORTON SMALE, *Dean*.

BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

Principal—Miss ETHEL HURLBATT.

The **Easter Term** begins on Thursday, April 20th. The College prepares for the University of London Examinations in Arts and Science. Students may also enter for College Courses, the Training Department, Hygiene Department, and the Art School. A Course of Lectures on the History of Ancient Literature (Roman) and a Course (lectures and practical work) on Bacteriology will be held during the Easter term. Six Laboratories are open to students for practical work. Students can reside in the College. Two Entrance Scholarships will be offered for competition in June. Further information on application to the *PRINCIPAL*.

MABEL F. ROBINSON, *Secretary*.

BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

DEPARTMENT FOR PROFESSIONAL TRAINING
IN TEACHING.

(Recognized by the Cambridge Syndicate.)

Head of the Department—Miss HANNAH ROBERTSON, B.A.

The **Second Term** of the Session 1899 will begin on Monday, April 24th.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

THE

FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Mr. W. MATHER.

Treasurer—Mr. C. G. MONTEFIORE.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

Principal—Madame MICHAELIS.

KINDERGARTEN AND SCHOOL.

Headmistress—Miss M. BOYS SMITH.

Further particulars may be obtained on application to the *PRINCIPAL*.

THE HYGIENIC HOME

AND

COLLEGE OF PHYSICAL CULTURE

provides a thorough training for ladies (as teachers) in the principles and practice of **Hygiene, Swedish Gymnastics, and Vegetarian Cookery**.

The course extends over two years, and complete theoretical, as well as practical, training is given.

Examinations are held and certificates given to successful students.

There are good openings for qualified teachers, who after training here are assisted to obtain posts. The College is situated in Worcestershire, six miles from Birmingham, and half-a-mile from Halesowen Station; the old historic mansion, The Leasowes, having been adapted for this purpose.

The **Leasowes** stands in its own extensive grounds, and is surrounded by beautiful woods. Its bracing air, elevated position, and charming situation make it an ideal place for a College of Health. It has an excellent Gymnasium fitted with Swedish apparatus, also fine Gardens.

Elocution, Dancing, Gardening, Games, &c., are also taught as a means of Health and Physical Culture.

Students are admitted in September, age 18 to 30. Apply for particulars to Miss ANSTBY, The Leasowes, near Halesowen, Worcestershire.

ST. GEORGE'S TRAINING COLLEGE, FOR WOMEN TEACHERS.

This College provides a complete course of training for well-educated women who intend to become Teachers. The Course includes attendance at Professor Laurie's Lectures on Education at the University of Edinburgh, and practice in Class-Teaching in several schools. Several Bursaries of £30 are offered annually. The College year begins in October. Apply to the *PRINCIPAL*, 5 Melville Street, Edinburgh.

ROYAL INDIAN ENGINEERING COLLEGE, COOPER'S HILL, STAINES.

The Course of Study is arranged to fit an Engineer for employment in Europe, India, and the Colonies. About Forty Students will be admitted in September, 1899. The Secretary of State will offer them for competition Twelve Appointments as Assistant Engineers in the Public Works Department, and Three Appointments as Assistant Superintendents in the Telegraphs Department, One in the Accounts Branch, Public Works Department, and One in the Traffic Department, Indian State Railways.

For particulars apply to *SECRETARY* at College.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant-Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY
SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.

Incorporated Association of Headmasters.

College of Preceptors.

Teachers' Guild.

Welsh County Schools' Association.

Private Schools' Association.

Association of Headmasters of Preparatory Schools.

Association of Headmasters of Roman Catholic Schools.

Assistant-Masters' Association.

Association of Technical Institutions.

Oxford Appointments Committee.

Cambridge University Scholastic Agency.

The rates of commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the *REGISTRAR*.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A.

Next Session begins October 4th, 1898. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the Subjects for the Degrees of London University. Students may pursue their first year of Medical Study at the College. There are Special Departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts Student, £11. 1s.; ditto for Intermediate Science or Medical Student, £15. 15s.

The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students, in Upper Bangor (Fee, Thirty Guineas for the Session), is now open.

At the Entrance Scholarship Examination (beginning September 20th) more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus apply to

JOHN EDWARD LLOYD, M.A.,

Secretary and Registrar.

UNIVERSITY OF WALES.—THE

FIFTH MATRICULATION EXAMINATION

will commence on Monday, June 26th, 1899. Particulars from the *REGISTRAR*, University Office, Brecon, from whom Forms of Entry can be obtained. Entries must be made not later than Monday, May 29th.

GUY'S HOSPITAL.—ENTRANCE

SCHOLARSHIPS in September, 1899. Six open Scholarships, three (£150, £200, and £50) in Science, and three (£100, £50, and £30) in Arts. Particulars and copies of examination papers on application to the *DEAN*, Guy's Hospital, London Bridge, S.E.

GUY'S HOSPITAL.—PRELIMI-

NARY SCIENTIFIC (M.B. Lond.).—Classes are held throughout the year. Special instruction is given for the July Examination. Fee, 16 guineas.

LONDON UNIVERSITY EXAMINATIONS.

Prospectus and further particulars may be had from
THE VICE-PRINCIPAL,
University Tutorial College,
Red Lion Square, Holborn, W.C.

THE MIDDLESEX HOSPITAL MEDICAL SCHOOL.

The SUMMER SESSION (1899) will commence on Monday, May 1st.

Full opportunities for study are offered to students preparing for any of the examinations in Medicine and Surgery in the United Kingdom.

Classes will be held in the following subjects:—Midwifery, Pathology, Pathological Histology, Bacteriology, Forensic Medicine and Public Health, Anatomy, Practical Physiology and Histology, Chemistry and Practical Chemistry, Materia Medica, Therapeutics, Psychological Medicine with Clinical Demonstrations, Practical Pharmacy.

Students entering in May are eligible to compete for the Entrance Scholarships (value £100 and £60) awarded at the commencement of the ensuing Winter Session. The Broderip Scholarships, Governors' Prize, Hedley Prize, Lyell Medal, Leopold Hudson Prize, and Freeman Scholarship, are awarded annually, the Murray Scholarship (in connexion with the University of Aberdeen) every third year. Eighteen resident appointments are open for competition annually, without fee.

The composition fee, admitting to the whole curriculum, is 120 guineas; if paid in three instalments, first instalment 60 guineas.

For University of London Students requiring Preliminary Science instruction, 140 guineas, or by instalments. For members of Universities recognized by the General Medical Council and other Students who have completed their Anatomical and Physiological studies, the Fee for admission as General Students is 70 guineas, or by instalments, 75 guineas. Students from the Universities of Oxford and Cambridge entering in May are eligible to compete for the University Scholarship of £60 awarded at the commencement of the Winter Session. Fee for Dental Students, 54 guineas.

The new Laboratories and Class-rooms for Physiology, Chemistry, Biology, Pathology, Bacteriology, with all modern improvements, as well as a new and larger Dissecting Room and Operative Surgery Room, are now in regular use.

The Residential College contains accommodation for thirty students.

For prospectus and further particulars apply to
W. PASTEUR, M.D., Dean.

CAMPDEN HILL.—Lessons given by a Lady in Drawing and Painting, Oil and Water Colours, Figure, Landscape, Still Life, Flowers. Special instruction for Kensington Certificates.—T. N., Regent's Library, Regent Street.

PETTY'S ELEMENTARY LESSONS IN DESIGN.

A Method of Instruction in FREEHAND DRAWING and DESIGN

by means of the

ELEMENTARY PRINCIPLES OF ORNAMENT.

BY

J. PETTY, Art Master and Drawing Instructor to the Leeds School Board.

IN SIX DRAWING BOOKS (Nos. 1 to 6, each 2d.) varying in difficulty, and commencing with No. 1 for the Lowest Division of a School.

Each book provides both the Copy and the Paper upon which to draw, with full Instructions for designing each Exercise and for making a new design on similar lines.

In all the Exercises some Simple Element is used, and, by easy rules, such as repetition and contrast, the Design is formed. The given Design is first completed, often with the aid of a ruler, after the teacher has explained its features. The same Exercise is then repeated, partly with the aid of a ruler, and partly freehand. The Example is then to be rearranged, with any new feature that the child can invent or the teacher suggest.

A SUPPLEMENTARY BOOK (Book VII. 32 pp., Price 6d.) consists of selected designs from Nos. 1 to 6 for the use of children in Upper Classes who have not had any preliminary training in the lower parts of the school.

Instead of shading the designs, colour may be introduced by means of crayons or water-colours.

GILL'S

"CARTOGRAPHIC"

WALL MAPS

FOR SECONDARY SCHOOLS.

Edited by **GEORGE GILL, F.R.G.S.**

Size,
80 × 60 in.

NOT OVER-CROWDED, NOT UNDER-SIZED, BUT BOLD AND CLEAR.
MOUNTED ON STOUT LINEN, ROLLERS, AND VARNISHED.
Compiled from the latest statistics, artistically coloured, and thoroughly reliable.

Price 16s.

NOW READY.

ENGLAND AND WALES.
SCOTLAND.

IRELAND.
EUROPE.

INDIA.
AFRICA.

ASIA (nearly ready).

THE SERIES, CONSISTING OF TWELVE MAPS, WILL BE COMPLETED SHORTLY.

THE CARTOGRAPHIC WALL MAPS have already been adopted in the following Schools:—

Wellingborough Grammar School.
Central Foundation School, E C.
King Edward VI. Schools, Birmingham.
Girls' Grammar School, Maidstone.
Bury Grammar School.
Skerry's Civil Service Colleges.
Congregational School, Caterham.
Royal St. Anne's Schools, Redhill.
Kendrick School, Reading.
The S.W. Polytechnic, Chelsea.
Tiffin's School, Kingston.
Bedford County School.
Sevenoaks School.
University School, Southport.
Carnarvon County School.

Mathematical School, Rochester.
King's High School, Warwick.
Buxton College.
High School, Bury.
Queen's School, Basingstoke.
Clark's Civil Service Colleges.
Ipswich Middle School.
Handel College, Southampton.
Towcester Grammar School.
Bourne College, Birmingham.
Ashby-de-la-Zouch School.
Kent College, Canterbury.
Convent of Notre Dame, Clapham.
Festiniog County School.
Wigan High School.

St. Martin's High School, W.C.
Cardiff County School (Girls).
Birkenhead Institute.
Girls' Grammar School, Rochester.
Girls' High School, Formby.
Clark's College High School.
Church Middle Schools, Leeds.
Girls' Collegiate School, Leicester.
Bury St. Edmunds School.
Simon Langton School, Canterbury.
Tenison's School, W.C.
Marlborough College, Buxton.
Literary Institute, Edinburgh.
Trafalgar House, Winchester.
Endowed Schools, Watford.

Head Teachers' Criticisms.

Rev. W. H. HOWLETT, M.A. Oxon., Headmaster of Bury School, writes:—"I have much pleasure in bearing testimony to the excellence of your wall map of Africa. It is well printed, with sufficient, and yet not excessive, detail. The caravan routes and spheres of influence are carefully and accurately marked. It is extremely useful."

G. E. CLARK, Esq., Principal of Clark's Civil Service College, writes:—"The Cartographic Wall Maps serve our purpose admirably, and, having now arranged for their use in the central college, we shall introduce them into our branch establishments."

Miss RUNDLE, Headmistress of the Kendrick School, Reading, writes:—"Your maps are excellent."

J. C. UNDERWOOD, Esq., F.R.G.S., writes:—"Admirable maps for teaching purposes, in fact, models of what school maps should be."

S. LEIGH, Esq., B.A. Lond., writes:—"A splendid production at the price."

A. S. TETLEY, Esq., M.A. Cantab., writes:—"A really artistic production. I have never seen a map so beautifully coloured."

H. MATHWIN, Esq., M.A., writes:—"Your maps are excellent, and a marvel of cheapness."

Rev. H. E. MOCATTA, M.A. Oxon., writes:—"The maps supply a decided want, being extremely clear and well arranged, and can easily be seen by pupils sitting at a distance."

Miss ETHELWYN M. AMERY, B.A. Lond., writes:—"Yours are quite the clearest maps we have."

Rev. A. W. CALLIS, M.A. Oxon., writes:—"The map of England and Wales is an excellent one. I have never seen a coast line and the names upon it so well brought out."

COLLEGE OF PRECEPTORS' EXAMINATIONS, 1899.

SUITABLE BOOKS IN THE

University Tutorial and Preceptors' Series.

Latin and Greek Classics.

- Aeschylus.—Prometheus Vincetus.** Edited by F. G. PLAISTOWE, M.A., and W. F. MASOM, M.A. Introduction, Text, and Notes. **2s. 6d.**
- Caesar.—De Bello Gallico IV.** Edited by A. H. ALLCROFT, M.A., and T. R. MILLS, M.A. **1s. 6d.** Vocabulary, with Test Papers. Interleaved, **1s.** [In the press.]
- Cicero.—De Amicitia.** Edited by A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. Introduction, Text, and Notes. **1s. 6d.** Vocabulary, with Test Papers. Interleaved, **1s.**
- Cicero.—In Catilinam I.** Edited by T. T. JEFFERY, M.A., and T. R. MILLS, M.A. Introduction, Text, and Notes. **1s. 6d.** Vocabulary, with Test Papers. Interleaved, **1s.**
- Herodotus.—Book VI.** Edited by W. F. MASOM, M.A., and C. S. FEARENSIDE, M.A. *Second Edition.* Introduction, Text, and Notes. **2s. 6d.** Vocabulary, with Test Papers. Interleaved, **1s.**
- Horace.—Odes, Book II.** Edited by A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Lond. and Camb. Introduction, Text, and Notes. **1s. 6d.** Vocabulary, with Test Papers. Interleaved, **1s.**
- Livy.—Book XXI.** Edited by J. THOMPSON, M.A., and F. G. PLAISTOWE, M.A. Introduction, Text, and Notes. **2s. 6d.** Vocabulary, with Test Papers. Interleaved, **1s.**
- Vergil.—Aeneid, Book II.** Edited by A. H. ALLCROFT, M.A., and T. R. MILLS, M.A. Introduction, Text, and Notes. **1s. 6d.** Vocabulary, with Test Papers. Interleaved, **1s.**
- Vergil.—Aeneid, Book VI.** Edited by A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A., Lond. Introduction, Text, and Notes. **1s. 6d.** Vocabulary, with Test Papers. Interleaved, **1s.**
- Xenophon.—Anabasis, Book IV.** Edited by W. H. BALGARNIE, M.A., Introduction, Text, and Notes. **3s. 6d.**

Latin and Greek.

- Greek Reader, The Tutorial.** By A. WAUGH YOUNG, M.A. **2s. 6d.**
- LATIN COURSE, THE PRECEPTORS'.** By B. J. HAYES, M.A., and F. L. D. RICHARDSON, B.A. **2s. 6d.** [In the press.]
- Latin Dictionary, The Tutorial.** By F. G. PLAISTOWE, M.A. Lond. and Camb., late Fellow of Queens' College, Cambridge. **6s. 6d.**
- Latin Grammar, The Tutorial.** By B. J. HAYES, M.A., and W. F. MASOM, M.A. *Third Edition.* **3s. 6d.** Exercises on. **1s. 6d.**
- Latin Composition and Syntax.** With Exercises. By A. H. ALLCROFT, M.A., and J. H. HAYDON, M.A. *Fourth Edition.* **2s. 6d.**
- Latin Reader, The Tutorial.** With Complete Vocabulary. **2s. 6d.**
- LATIN READER, THE PRECEPTORS'.** [In preparation.]

Book-keeping.

- BOOK-KEEPING, THE PRECEPTORS'.** By THOMAS CHALICE JACKSON, B.A., LL.B. (Lond.), Barrister-at-Law, Lecturer in Commerce and Commercial Law at the Hull Technical School. [In preparation.]

Mathematics and Science.

- Algebra, The Tutorial.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Based on the *Algebra* of Radhakrishnan. Part II. Advanced Course. **6s. 6d.**
- Algebra, A Middle.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. **3s. 6d.**
- Chemistry, The Tutorial.** By G. H. BAILEY, D.Sc. Lond. Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S. Part I.: Non-Metals. **3s. 6d.** Part II.: Metals. **3s. 6d.**
- Chemistry, Synopsis of Non-Metallic.** With an Appendix on Calculations. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. Interleaved. **1s. 6d.**
- Euclid.—Books I.—IV.** By RUPERT DEAKIN, M.A. Lond. and Oxon., Headmaster of Stourbridge Grammar School. **2s. 6d.** Books I. and II. **1s.**
- Hydrostatics, An Elementary Text-Book of.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. *Second Edition.* **2s.**
- Magnetism and Electricity, First Stage.** By R. H. JUDE, M.A., D.Sc. Lond. **2s.**
- MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A., B.Sc. **2s. 6d.**
- Mensuration of the Simpler Figures.** By WILLIAM BRIGGS, LL.B., B.A., F.C.S., and T. W. EDMONDSON, B.A. *Second Edition.* **2s. 6d.**
- Sound, Light, and Heat, First Stage.** By J. DON, M.A., B.Sc. **2s.**
- Trigonometry, The Tutorial.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. **3s. 6d.**

French and English.

- FRENCH COURSE, THE PRECEPTORS'.** By E. WEEKLEY, M.A. Lond. **2s. 6d.**
- FRENCH COURSE, BARLET'S PRECEPTORS' JUNIOR.** By STÉPHANE BARLET, B. ès Sc., Univ. Gall. Examiner in French to the College of Preceptors. **1s. 6d.**
- French Prose Composition.** By ERNEST WEEKLEY, M.A. Lond. **3s. 6d.**
- FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A., Lond. **1s. 6d.**
- French Prose Reader.** Edited by S. BARLET, B. ès Sc., and W. F. MASOM, M.A. With Vocabulary. *Third Edition.* **2s. 6d.**
- ENGLISH GRAMMAR, THE PRECEPTORS'.** With numerous Exercises. By ARNOLD WALL, M.A. Lond. [In preparation.]
- English Language, The: Its History and Structure.** By W. H. LOW, M.A. Lond. *Fourth Edition, Revised.* **3s. 6d.**
- Shakespeare.—Richard II.** Edited, with Introduction and Notes, by Prof. W. J. ROLFE, Litt.D. **2s.**

LONDON: W. B. CLIVE, 13 BOOKSELLERS ROW, STRAND, W.C.

MESSRS. LONGMANS & CO.'S LIST.

A STUDENT'S HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO 1885.

By **SAMUEL RAWSON GARDINER, D.C.L., LL.D.**

Complete in One Volume, with 376 Illustrations, crown 8vo, 12s.; or in Three Vols. as below.

Vol. I. (B.C. 55-A.D. 1509). With 173 Illustrations. Crown 8vo, 4s. Vol. II. (1509-1689). With 96 Illustrations. Crown 8vo, 4s.
Vol. III. (1689-1885). With 109 Illustrations. Crown 8vo, 4s.

Educational Times.—“We are convinced that this will soon become the school history. . . . We have never before had a school-book which gives so admirably clear, impartial, and interesting an account of England under the Stuarts; everything is in due proportion and due relation, and the characters of the leading actors are touched in with excellent judgment.”

Journal of Education.—“Speaking from the point of view most proper to the ‘Journal of Education,’ we may say that this book appears to us to be of the highest possible merit as a Student’s History of England. The reviewer has watched a class of forty boys as young as twelve and thirteen years of age, while passages from it have been read to them, listen with riveted attention; and, what is at least equally important, their answers afterwards have shown that the manner of telling the story, while charming, was so lifelike and intelligible that they fully grasped the matter.”

COMPANION ATLAS TO GARDINER’S “STUDENT’S HISTORY OF ENGLAND.”

A SCHOOL ATLAS OF ENGLISH HISTORY.

Edited by **SAMUEL RAWSON GARDINER, D.C.L., LL.D.**

With 66 Maps and 22 Plans of Battles, &c. Fcp. 4to, 5s.

OUTLINE OF ENGLISH HISTORY.

(B.C. 55 to A.D. 1895.)

By **SAMUEL RAWSON GARDINER, D.C.L., LL.D.**

With 96 Woodcuts and Maps, Fcp. 8vo, 2s. 6d.

Crown 8vo, 3s. 6d.; or, in Two Parts, 2s. each. Part I., to the Death of Elizabeth, A.D. 1603. Part II., A.D. 1603 to 1895.

A SHORT HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO THE PRESENT DAY.

For the use of Middle Forms of Schools. With Tables, Plans, Maps, Index, &c.

By **CYRIL RANSOME, M.A.**

Late Professor of Modern History and English Literature, Yorkshire College, Victoria University.

By **ARTHUR SIDGWICK, M.A.**

A First Greek Writer.

Crown 8vo, 3s. 6d.

A KEY, for the use of Masters only. 5s. 2½d. net, post free.

Introduction to Greek Prose Composition.

With Exercises. Crown 8vo, 5s.

A KEY, for the use of Masters only. 5s. 3d. net, post free.

Scenes from Greek Plays.

Rugby Edition. Abridged and adapted for the use of Schools. Fcap. 8vo, 1s. 6d. each.

Aristophanes.—The Clouds. The Frogs. The Knights. Plutus.
Euripides.—Iphigenia in Tauris. The Cyclops. Ion. Electra. Alcesteis. Baccchae. Hecuba. Medea.

An Introduction to Greek Verse Composition.

By **ARTHUR SIDGWICK, M.A.**, and **F. D. MORICE, M.A.** With Exercises. Crown 8vo, 5s.

A KEY, for the use of Masters only. 5s. 2½d. net, post free.

By **H. G. LIDDELL, D.D.**, and **ROBERT SCOTT, D.D.**

Greek-English Lexicon.

4to, 36s.

Greek-English Lexicon.

Abridged from the above. Revised throughout. Square 12mo, 7s. 6d.

By **T. K. ARNOLD, M.A.**

Arnold’s Practical Introduction to Latin Prose Composition.

By **G. GRANVILLE BRADLEY, D.D.**, Dean of Westminster. 5s.

A KEY, for the use of Masters only. 5s. 2½d. net, post free.

Arnold’s Practical Introduction to Greek Prose Composition.

By **EVELYN ABBOTT, M.A., LL.D.** Crown 8vo, 3s. 6d.

A KEY, for the use of Masters only. 3s. 8d. net, post free.

By **P. W. JOYCE, LL.D.**

Outlines of the History of Ireland.

From the Earliest Times to 1837. Third Edition. Fcap 8vo, 9d.

A Child’s History of Ireland.

From the Earliest Times to the Death of O’Connell. With specially constructed Map and 160 Illustrations, including Facsimile in full colours of an illuminated page of the Gospel Book of Mac-Durman, A.D. 850. Fcap. 8vo, 3s. 6d.

A Handbook on School Management and Methods of Teaching.

Eighteenth Edition (85th Thousand). Fcap. 8vo, 3s. 6d.

With Maps and Plans, crown 8vo, 4s. 6d.

A HISTORY OF GREECE.

FROM THE EARLIEST TIMES TO THE MACEDONIAN CONQUEST.

By **C. W. C. OMAN, M.A., F.S.A.**

Fellow of All Souls’ College, and Lecturer at New College, Oxford.

* * * Lantern Slides to illustrate this work may be had from Messrs. G. Philip & Son, 32 Fleet Street, London, E.C. A List of the Slides will be found at the end of the book.

By **FRANCIS DAVID MORICE, M.A.**

Stories in Attic Greek.

With Notes and Vocabulary. Crown 8vo, 3s. 6d.

By **BENJAMIN HALL KENNEDY, D.D.**

The Revised Latin Primer.

Crown 8vo, 2s. 6d.

The Shorter Latin Primer.

Crown 8vo, 1s.

Exercises on the Shorter Latin Primer.

By **M. G. and J. E. KENNEDY, and H. WILKINSON, M.A.** Crown 8vo, 1s. 6d.

A KEY, for the use of Masters only. 2s. 9d. net, post free.

The Child’s Latin Primer; or, First Latin Lessons.

With Questions and Model Exercises, adapted to the Principle of the Public School Latin Primer. 12mo, 2s.

The Child’s Latin Accidence.

Extracted from the Child’s Latin Primer, and containing Declensions, Conjugations of Regular and Irregular Verbs, Particles, Numerals, Genders, Perfects and Supines, a Parsing Scheme, and a Brief Syntax—all that is necessary to lead Boys up to the Public School Latin Primer. 12mo, 1s.

The Public School Latin Grammar.

Crown 8vo, 7s. 6d.

The Public School Latin Primer.

Edited, with the sanction of the Headmasters of the Nine Public Schools included in Her Majesty’s Commission. 12mo, 2s. 6d.

Subsidia Primaria, Steps to Latin: Companion Exercise Books, adapted to the Public School Latin Primer.

By the Editor of the Primer. Part I. Accidence and Simple Construction, 2s. 6d. Part II. Syntax, &c., 3s. 6d.

A KEY, for the use of Masters only, Parts I. and II. 5s. 2d. net, post free.

Subsidia Primaria, Part III. Manual of the Rules of Construction in the Latin Compound Sentences; a SUPPLEMENT to the Public School Latin Primer.

By the **REV. B. H. KENNEDY, D.D.**, late Regius Professor of Greek in the University of Cambridge. 12mo, 1s.

By **A. A. SOMERVILLE, M.A.**

A First French Writer.

For the use of Lower and Middle Forms of Schools. Crown 8vo, 3s. 6d.

CAMBRIDGE UNIVERSITY PRESS.

Cambridge Local Examinations, 1899.

THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

Athenæum.—"The Pitt Press Shakespeare can stand in competition with any of the numerous editions of the sort now showered upon reviewers. This instance of it does credit to Mr. Verity, who is an excellent editor; he does not overdo the philology, and adds an excellent glossary of difficult words."

School World.—"Every page shows careful scholarship and a ripe literary judgment. It would be difficult to praise this work (or this series) too highly."

KING RICHARD II. With Introduction, Notes, Glossary, and Index. By A. W. VERITY, M.A., sometime Scholar of Trinity College. 1s. 6d.

PITT PRESS SERIES.

AUTHOR.	BOOK.	EDITOR.	PRICE.
Macaulay	Lays of Ancient Rome, &c.	J. H. Flather	1 6
<i>School World</i> .—"Is in thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. . . . The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."

* These are volumes of the *Cambridge Series for Schools and Training Colleges*.

CAMBRIDGE COMPOSITIONS, GREEK AND LATIN. Edited for the Syndics of the Press, by R. D. ARCHER HIND, M.A., and R. D. HICKS, M.A., Fellows and Classical Lecturers of Trinity College, Cambridge. Crown 8vo, 10s.

This volume is designed to meet the practical needs of teachers and students of classics. It contains a selection of some 250 English passages, taken for the most part from those set in college lecture-rooms, with enough variety of style and subject to form a complete advanced course of composition. The fair copies, now for the first time published, have been carefully revised. Specimens of the less familiar lyric metres and more abstruse philosophical prose have been sparingly introduced. The list of contributors—including, among others, the names of Prof. Jebb, Dr. Jackson, Dr. Reid, Mr. W. E. Heitland, Prof. Butcher, Dr. Verrall, Dr. Postgate, Mr. C. W. Moule, Mr. J. E. Nixon, Mr. A. W. Spratt, Mr. Neil, Prof. Tucker, Mr. Adam, Dr. R. S. Conway, Mr. Wedd, Mr. Walter Headlam, Mr. G. A. Davies, Mr. E. E. Sikes, and the late Prof. Goodliart—will, it is hoped, be taken as a pledge that a high standard of scholarship has been maintained.

Times.—"In spite of the claims and attractions of a score of competing subjects, the sway of the classics is still as strong as ever, and University men are found to write Latin verse and Greek prose as good as any that was written under the sway of Hawtrey and Kennedy. The volume called 'Cambridge Compositions' deserves to be called a new 'Arundines Cami.' The editors, Messrs. Archer-Hind and R. D. Hicks, both Fellows of Trinity, are two of the best known Cambridge scholars of the day, and their contributors include such a gallery of Senior Classics and the like as have probably never been brought together in one book before."

PITT PRESS SERIES. *New Volumes.*

JUVENAL.—SATIRES. Edited, with Introduction, Notes, and Index, by J. D. DUFF, M.A. 6s.

Extract from Preface.—"Perhaps it is reason enough for adding another to the many English editions of Juvenal, that all our recent editors have excluded the Sixth Satire, the most brilliant in detail and by far the longest of Juvenal's poems. The present edition includes 630 lines of this celebrated piece. The Second and Ninth Satires, some paragraphs of the Sixth, and a few lines in other Satires, are not included in this edition."

Athenæum.—"One of the best school-books which we have seen for some time. . . . The notes are capital."

Guardian.—"We welcome Mr. Duff's volume with great pleasure. It is, in our opinion, the first short edition of Juvenal published in England, and suited to schools, which can be called satisfactory and scholarly. . . . For the present it seems to us the best English school edition of Juvenal."

ENGLISH GRAMMARS.

NEW AND ENLARGED EDITION.

THE ELEMENTS OF ENGLISH GRAMMAR. By A. S. WEST, M.A., Trinity College, Cambridge. 2s. 6d.

Prefatory Note to the Enlarged Edition.—"Some hundreds of additional Questions and Examples are given in the present edition, and in a few places the wording of the text has been altered. The number of the paragraphs remain the same."

School World.—"The larger work shows a master hand. It is adapted to the higher forms, and its historical survey contains just what is wanted for examination purposes. . . . Both books deserve a large sale."

Guardian.—"We note with satisfaction that Mr. Alfred West's 'Elements of English Grammar' has now reached its second edition and twenty-sixth thousand, thus tending to justify the prophecy as to its future popularity which we ventured to utter on its first appearance in 1893. . . . For thoughtful students in the upper forms of secondary schools we know of no more suitable work."

AN ENGLISH GRAMMAR FOR BEGINNERS. By the same Author. 1s.

Schoolmaster.—"It is a capital little work, which we can heartily recommend."

School World.—"The smaller of these two works ought to be extensively used for the teaching of junior forms. Its matter is arranged with the greatest care, its explanations are full, and easily adapted to juvenile intelligences. . . . Altogether the book is worthy of high commendation."

CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES.

First Book of Samuel*	Rev. A. F. Kirkpatrick	3s. 6d.
Second Book of Samuel*	"	3s. 6d.
Books of Ezra and Nehemiah*	Rev. H. E. Ryle	4s. 6d.

CAMBRIDGE GREEK TESTAMENT FOR SCHOOLS AND COLLEGES.

Gospel according to St. Matthew . . . Rev. A. Carr . . . 4s. 6d.

CHURCH CATECHISM.

The Church Catechism Explained . . . Rev. W. A. Robinson . . . 2s. 6d.

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University.

School Guardian.—"The object of this series is fully attained in the above four volumes ('Caesar, De Bello Gallico, III. and IV.,' 'Vergil, Aeneid XII,' and 'Xenophon's Anabasis, Book IV.')

—namely, the preparation of exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. We are quite sure that the students preparing for the Queen's Scholarship and Certificate Examinations will not be the only students who will find these text-books of value; they will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil. Among others there is this immense advantage: each volume is its own note-book and dictionary; the student, however elementary his knowledge, needs only the book in hand and a simple grammar."

VERGIL.—AENEID IX. Edited, with Introduction, Notes, and Vocabulary, by A. SIDGWICK, M.A. 1s. 6d.

GEOMETRY FOR YOUNG BEGINNERS. An Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, M.A., Headmaster of Oundle School. 1s. 4d.

ARISTOPHANES.—CLOUDS. Edited by C. F. GRAVES, M.A. 3s. 6d.
Guardian.—"A good, practical, scholarly edition by an experienced editor."

XENOPHON.—HELLENICA, Books I. and II. Edited, with Introductions and Notes, by G. M. EDWARDS, M.A. 2s. 6d.

BOILEAU.—L'ART POÉTIQUE. Edited, with Introduction and Notes, by D. NICHOL SMITH, M.A. 2s. 6d.

Guardian.—"The book should be highly acceptable to adult students of French literature, the more especially as it is the first critical edition published in this country."

The Educational Times.

An Easter Review.

THE Easter Vacation finds us fairly free from excitement or anxiety in regard to impending educational changes. We have the text of the Government Bill, and a reasonable prospect of its becoming law this year; but we do not greatly concern ourselves to know at what precise date in the Session it will make its appearance in the House of Commons, or pass into the critical stage of Committee. So, with respect to the new constitution for London University, we know that the Statutory Commission is at work, and there is even reason to believe that it has already included in the list of Faculties those of Engineering, Economics, and Political Science—which would comprise the subdivisions of commerce and industry. But that is only in accordance with our expectations; and, for the rest, we are content to give the Commissioners as much time as they require for their very difficult and delicate task. We should be still more content if the Committee which is sitting on the Imperial Institute idea would report that the metropolitan University could not be adequately housed in the spare rooms of the Institute; but we much fear that the Treasury has set its mind on this unfortunate piece of mistaken economy, and when the permanent officials of the Treasury set themselves to carry out an arrangement of this kind the odds are all in favour of their success. We need hardly say that our dislike is not for South Kensington as the site of the University, but only for the notion of "a Board in a flat," which the arrangement with the Institute inevitably suggests. A London University whose home extended over the whole area between the Albert Hall and the Cromwell Road, including the Imperial Institute, the City and Guilds Institute, the South Kensington Museum, and the Natural History Museum—why not?—would be a very different sort of conception. A mere hint of that as an ultimate possibility would at once restore our inveterate respect for the good sense and independence of Treasury officials.

If the new Education Bill, which is so big with hopes and fears for every one who takes an intelligent interest in the educational outlook, allows us to disperse for our Easter holidays with little or no anxiety in our minds, it is probably because the measure contains no great surprises, and has aroused no formidable show of opposition. If it were likely that the principles or details of the Bill would be hotly contested in the House of Commons, we should have heard the brewing of the

storm. The School Boards had already shot their bolt, and the County Councils have apparently concluded that the question of the Local Authorities will keep for another Session. If there is to be no prolonged or angry fight over the Bill, then we can wait till June or July with great equanimity. We do not minimize the importance of the measure, or shut our eyes to the danger and uncertainty which attend upon any large re-organization of secondary education. We are, indeed, much inclined to agree with a writer in the *Athenæum* who says that the Duke of Devonshire's Bill is, in a sense, nothing short of revolutionary.

Its effect will be to create in this country what we have never yet possessed—a separate Department of the Government, with a President of Cabinet rank and a Parliamentary Secretary, charged with the interests of education as a whole, and responsible for the ultimate control of every school in England and Wales, whether elementary or secondary, public or private, from the lowest to the highest. This in itself is a far-reaching innovation, from which the secondary schoolmasters of twenty years ago would have shrunk with alarm, and which does, as a matter of fact, alarm many of the schoolmasters of to-day. With the creation of the new Board the entire system of the Science and Art Department which has grown up during the last two generations at South Kensington is to be "revised" by a Departmental Committee, and then merged in the Central Authority in Whitehall; whilst power is to be given to the Queen in Council to transfer to the Education Board all such functions of the Charity and Endowed Schools Commissioners as may appear to relate to education exclusively. It would be difficult to imagine any administrative change more thorough-going and more revolutionary.

All this is indisputably true; but it is counterbalanced by the fact that the Government have given us guarantees against hasty and destructive change—guarantees which we have unceasingly demanded from the very beginning of the discussion, and on which the educational bodies have virtually made their acquiescence depend. For what have we consistently demanded as guarantees of the great national interests which secondary schoolmasters are pledged to defend? Our claims were these:—

1. An immediate secondary register.
2. Representation on all public authorities, based upon this register.
3. A Minister responsible in the House of Commons for secondary education.
4. A permanent Consultative Committee or Council, with a clear majority of educational experts.
5. A pledge against uniformity of instruction and curriculum, so as to maintain variety of types and freedom of initiative.
6. The independence of private schools which do not seek to share the advantages of the national organization.

These are the main conditions on which we have said that the

interests of secondary education might be held reasonably safe; and the Bill secures them—every one.

The evidence as to these guarantees is to be found partly in the Duke of Devonshire's speech on introducing the Bill—from which we quote in our Summary—and partly in the following clauses, or parts of clauses, in the text of the Bill:—

1. (1) There shall be established a Board of Education charged with the superintendence of matters relating to education in England and Wales. (2) The Board shall consist of a President, and of the Lord President of the Council (unless he is appointed President of the Board), Her Majesty's Principal Secretaries of State, the First Commissioner of Her Majesty's Treasury, and the Chancellor of Her Majesty's Exchequer. . . . 2. (1) The Board of Education shall take the place of the Education Department (including the Department of Science and Art), and all enactments and documents shall be construed accordingly. (2) It shall be lawful for Her Majesty in Council, from time to time, by Order, to transfer to, or make exercisable by, the Board of Education any of the powers of the Charity Commissioners in matters appearing to Her Majesty to relate to education. . . . 3. (1) The Board of Education may, by their officers or by any University or organization approved in that behalf by the Board, after taking the advice of the Consultative Committee hereinafter mentioned, inspect any school supplying secondary education and desiring to be so inspected, for the purpose of ascertaining the character of the teaching in the school and the nature of the provisions made for the teaching and health of the scholars. (2) The Council of any County or County Borough may, out of any money applicable for the purposes of technical education, pay or contribute to the expenses of inspecting under this section any school within their county or borough. 4 It shall be lawful for Her Majesty in Council, by Order, to establish a Consultative Committee, consisting, as to not less than two-thirds, of persons representing Universities and bodies interested in education, for the purpose of: (a) framing, with the approval of the Board of Education, regulations for the formation of a register of teachers; and (b) advising the Board of Education on any matter referred to the Committee by the Board. . . . 8. (2) After the abolition of the office of the Vice-President of the Committee of the Privy Council on Education, one of the Secretaries of the Board of Education shall not by reason of his office be incapable of being elected to or of voting in the Commons House of Parliament, but the President of the Board and a Secretary of the Board shall not at the same time be members of that House.

The Duke of Devonshire and his Department have done well. It would be difficult for any one to discover a trace of partisanship or prejudice in the Education Bill; and we have not observed that any organ of the Opposition has attempted to prove their existence. If secondary schoolmasters and the parents of boys and girls in secondary schools are able on mature consideration to accept this measure as wise, necessary, and prudent, we may conclude that the necessary consideration of details in Committee will not be fatal to it.

NOTES.

A GRANTHAM correspondent writes to us: "You may be interested by the following minute of a meeting of the Governors of Grantham Grammar School (so far as it related to the wholesale dismissal of assistant-masters) held on February 27:—'At a quarterly meeting of the Governors of the Grantham Grammar School, the charity of Richard Curteis, in Grantham, and of certain other charities in the borough of Grantham, held in the dining hall, the School House, Grantham aforesaid, on Monday, the 27th day of February, 1899, at 3 o'clock in the afternoon. Present: The Right Hon. Earl Brownlow in the chair, &c., &c. Letters were respectively read from Mr. Brooke, Mr. Marindin, and Mr. Preston, three of the assistant-masters, complaining to the Governors to [*sic*] the manner in which they had been treated by being dismissed without notice, and for no assigned reason, and appealing to the Governors against such dismissal. On the proposition of Mr. White, seconded by Mr. Jeans, it was unani-

mously resolved: "That the Governors deeply regret the dismissal by the late Headmaster of all the late under-masters without due notice, and now desire to express their sincere sympathy with them in their undeserved trouble, and full recognition of the good services which have been rendered by those gentlemen." Some of the masters have received the offer of donations in lieu of salary or notice—not as their due, but as a sort of *solatium*."

It looks rather ridiculous to throw the responsibility of these dismissals upon the late Headmaster, who, as we understand, left of his own accord and in pursuance of his own notice. What object could he have in dismissing men whom he had himself appointed, and with whom he had worked amicably? There may have been an understanding that the assistants would have to go with him, according to the custom of the profession; but, if so, the understanding was based on a misconception. Whatever custom or legal precedent exists in the circumstances can only extend to the right or privilege of a new Headmaster to select his own assistants. The responsibility falls on the new Headmaster. To try and put it on the outgoing Headmaster, or to assume an arbitrary right of dismissal, without cause or notice, on behalf of the Governors, is bad law and bad sense. The new Headmaster of Grantham is said to have stated that the Governors suggested to him the dismissal of the old staff. We do not affirm this; but it is an allegation, and a very serious allegation. It is certainly quite incompatible with the resolution adopted by the Governors on February 27.

If the Board of Education Bill should become an Act of Parliament, one of its most interesting and important results will be a final settlement of the question of secondary registration. Perhaps no provision of the Bill is more far-reaching than that which assigns to the permanent Consultative Committee—we shall learn to call it the "Education Committee" when the Committee of Council on Education is no more—the special duty of creating secondary and elementary registers. The work will be long and arduous. There are principles to determine, an office and a staff to organize, a profession to circularize, returns to wait for, a bulky volume to print, before the registers can be practically useful, and before an electoral roll can come into existence. We trust that in Committee the Government will be urged to put the work of registration in hand as soon as the Bill receives the Royal assent. It would be easy to provide for this beforehand; and the gain of eight precious months in so long and complicated a business would be of the utmost importance. Even so, the registers will not be formed when the remaining provisions of the Bill come into operation.

THE case of Mr. Weale, formerly Keeper of the Art Library at South Kensington, and now fulfilling an engagement at the British Museum, has almost passed into the domain of ancient history; but it gave occasion to the Duke of Devonshire, on March 16, to criticize rather sharply a passage in the Report of the Select Committee of the House of Commons on the Museums of the Science and Art Department. The Duke especially objected to this statement in the Report:—

Your Committee desire to record their opinion that the termination of

the engagement of Mr. Weale, late Keeper of the Art Library, immediately after the rising of the House in 1897, and subsequent to the giving of evidence by Mr. Weale, in which errors and abuses of administration in the Museum were freely exposed, very much resembling a breach of privilege and an infringement of the immunity usually enjoyed by witnesses before Committees of the House of Commons.

There was, says the Lord President, no dismissal. Mr. Weale was superannuated in March, 1897; but, virtually on his suggestion as head of the Education Department, the Treasury granted an extension of Mr. Weale's services to such period, not exceeding one year, as might elapse before the Committee had reported. The Select Committee reported after the Session of 1897, and asked to be reappointed in the following year. In the meantime Mr. Weale had given his frank evidence before the Committee; and "his services were dispensed with" after the interim Report, instead of waiting for the final Report or for the expiry of the year. Dismissal or no dismissal, this was what the Committee complained of as an infringement of the immunity of witnesses; and it certainly seems to bear that construction.

IN these times when "the social problem" is so pressing, it is a matter for serious regret that the study of political economy is receiving less and less attention at Oxford. It is hardly more than formally recognized in "Greats," and it has now been decided to make it an optional subject for ordinary students in the School of Modern History. The London School of Economics and Political Science is doing excellent work in this direction; but that is no reason for the slackening of effort elsewhere. If any change had to be made in the teaching of political economy at Oxford, it ought surely to have been in the direction of a more extended and practical treatment of the subject rather than in its restriction within narrower limits. Meanwhile, if the study of economics is declining in importance, that of geography is claiming increased attention. The Royal Geographical Society has offered to pay £400 a year for the next five years towards the promotion of geographical study at Oxford, if the University will also contribute a similar amount during the same time. It is proposed that the supervision of the new scheme shall be placed in the hands of a committee of eight: the Vice-Chancellor to be a member of the committee *ex officio*, four to be appointed by the Delegates of the Common University Fund, and three by the Council of the Society. A scheme of teaching and study has been approved by the Council of the Society and the Delegates. This is, of course, not the first effort of the Society to improve the quality of geographical teaching in the Universities.

MANCHESTER has taken the first step towards the foundation of a hall of residence for women students, in connexion with Owens College. Something of the kind was necessary to make the benefits of a University education as real and as far reaching as they might be to the women students of Manchester and the surrounding districts. It is admitted that the social life of the older Universities is one of the most important elements in the education of its members, and of the women who are admitted to a share of their privileges; but it is impossible to have all these privileges in a local University college, which draws the majority of its students from their homes in the locality. Much

can be done, however, by the establishment of halls of residence which supply something of the communal life of the old residential Universities. In Manchester there are two such halls for men, in connexion with Owens College; but, so far, nothing of the kind has been provided for the women students, of whom there are now more than a hundred. At the present time many girls in outlying parts of Lancashire are losing the opportunity of a University education, which would be possible for them if such a hall were in existence; and it was the object of a public meeting held in Manchester on March 6 to discuss the question of founding one. The sum required is about £3,000; but it is intended to begin the work as soon as £2,000 has been guaranteed. The greater part of this has already been contributed, and a suitable house has been offered by another benefactor. Altogether the prospects of the new undertaking are bright.

A CORRESPONDENT of the *Indépendance Belge* claims to have unearthed a signboard of the early part of last century bearing the following curious inscription. As two staid French newspapers have already reproduced it without throwing any doubt upon its genuineness, we are, at least, offending in good company in printing it for the edification of the *mestre d'école* of this country:—

Isaac Macaire, barbier, perruquier, chirurgien, clerc de la paroisse, mestre d'école, maréchal et accoucheur. Raze pour un sout, coupe les cheveux pour deux sous et poudre et pommade par-dessus le marché les jeunes demoiselles joliment élevées, allume les lampes par année ou par quartier. Les jeunes gentils hommes à prêne aussi leur langue grand-mère de la manière la plus propre. On prend grand soin de leurs mœurs, on leur enseigne à épier. Il à prêne à chanter le plein-chant et à ferrer les chevaux de main de maître. Il fait et raccommode aussi les bottes et les souliers, enseigne le hautbois et la guimbarde, coupe les cors, soigne et met les vessicatoires au plus bas prix. Il donne des lavements et purge à un sous la pièce; enseigne au logis les cotillons et autres danses et vat en ville. Vend en gros et en détail la parfumerie dans toutes ses branches. Vend toutes sortes de papeteries, cire à décroter, harengs salés, pain d'épices, brosses à frotter, sourisnières de fil d'archal et autres confitures, racines cordiales et de gode frais, pommes de terre, sossisses et autres légumes. J'enseigne la joggraphy et marchandises étrangères tous les mercredi et vendredi. Dieu aidant, par moi, Isaac Macaire.

Sleep well, old colleague! We have changed all that now; but some day, when the Headmaster numbers His assistants, we will stand shoulder to shoulder.

THE chances of a new Roman Catholic University in Ireland, which Mr. Balfour, in a famous letter, encouraged the Irish majority to expect, have altogether disappeared since the Duke of Devonshire took occasion to criticize that letter in a speech to his brother Liberal Unionists. The writer of the letter, he said, expressed his own opinions; they were eminently worthy of respect, but they committed nobody, and he should be extremely surprised if, during the existence of the present Government, any practical measure dealing with the subject were brought forward. So far as we have seen, the Roman bishops in Ireland have made no sign since the Duke spoke—but they must be thinking the more. For ourselves, apart from any question of religious supremacy and exclusiveness, we have rather inclined to the foundation of a new University. Higher education in Ireland appears to have languished a little. If a stimulus is needed, it seems reasonable to give it where spontaneous energy and ambition have recently declared themselves.

SUMMARY.

THE MONTH.

ON March 14 the Secondary Education Bill was introduced in the House of Lords, and the Duke of Devonshire explained how far its provisions varied from those of the two Bills introduced in August. The Board of Education is to be constituted on the pattern of the Board of Trade, with a President and a Parliamentary Secretary. There will be no Vice-President, but Sir John Gorst will be nominated as an original member of the Board. We quote the principal points of the Lord President's explanation.

THE CHARITY COMMISSION.

The present Bill will give more elastic powers of transfer of the educational functions of the Charity Commissioners to the new Department. It will give power to the Queen in Council to order the transfer to the Education Board of such powers as may appear to relate to education. The question of whether a trust is of an educational or other character, and the apportioning of endowments for educational or other purposes, will, however, as in the Bill of last year, be reserved to the Charity Commissioners. Our intention is that this transfer shall only come gradually into operation, and the only power which at present will be transferred from the Charity Commissioners to the Board of Education will be that of the inspection of schools which are under schemes framed by the Endowed Schools Commissioners. The future transfer of these educational powers from the Charity Commissioners will be facilitated by the change which has recently taken place in the composition of the Commission. One of the Commissioners has recently been appointed to the office of Registrar to the Judicial Committee. His place will not, at all events for the present, be filled up, and the Commissioner appointed under the Endowed Schools Act, whose time has hitherto been entirely occupied by his educational duties, will now take his share in the ordinary duties of the Board; and the Commissioners have been informed that, in view of pending changes which are in contemplation, it will not be necessary or, in the opinion of the Government, desirable that they should push on the work of framing new educational schemes except in such cases as, for local reasons or special circumstances, may appear urgently necessary.

INSPECTION.

The Duke admitted that Clause (4) 2 of the August Bill was too drastic; it would have made all public and private schools liable to inspection except Eton and Winchester. It is true that most of the largest and most important schools have expressed their willingness to come under a general system of inspection, if that should be deemed necessary in the public interest. But the headmasters lay down conditions.

They indicate a great dread of any attempt to impose upon them uniformity of instruction or curriculum. They therefore attach great importance to the permanent existence of a Consultative Committee, in which they see a guarantee against any such attempt on the part of a Government Department. They also require that University inspection should be recognized as alternative to State inspection. These are conditions which may be satisfied without great difficulty, but there are others which will be less easily met. . . . All that we have at present in view is such an inspection of local schools as may assist the Local Authorities, hereafter to be constituted, to bring the endowed, municipal, and private proprietary schools within their areas into some common local scheme. It would be impossible to draw an exact line of demarcation between those schools in which it would be desirable that inspection should be compulsory and those in which it should be optional; and, therefore, we propose that inspection in all cases should be optional, except in the case of those schools which are being conducted under schemes of the Endowed School Commissioners, in whose case the new Department will inherit the powers of inspection which are already possessed by the Charity Commissioners.

AN APPEAL AND A RESPITE.

I believe that the advantages of recognition by the Local Authority will be a strong inducement to a greater number of the non-local schools to place themselves under inspection, and thus to obtain a guarantee of efficiency which will enable them to be recognized as part of the local provision for education, and I trust that the assent which has been given by the highest educational authorities to the principle of inspection will tend to remove any apprehensions which, up to the present time, may have been felt by the smaller local schools. We recognize that the conditions which will be required for the higher and more important schools ought, in their due degree, to be applied to the case of the smaller local public schools, and that, in the first place, no attempt should be made to impose upon them anything like uniformity in their course of instruction; that the inspection should be conducted on the advice of, and in consultation with, the Consultative Committee formed under the Bill; that due care should be taken in the selection of the inspectors; that University or other competent organizations shall be admitted as equivalent to give inspection; and, though we are unable to ask Parliament

to devote funds to provide for the inspection of schools which are mainly for the benefit of the upper or middle classes, we recognize that in the case of the poorer schools the cost of inspection may properly form a charge upon funds placed at the disposal of the counties for educational purposes.

PERMANENT COMMITTEE AND REGISTRATION.

The Government, it will be seen, have conceded the principle of a permanent Council of experts, partly elective, and charged with the responsibility of inspection and registration. The Bills of last year provided for a "fixed and permanent" Registration Council. The new Bill identifies this Council with the Consultative Committee.

The registration of teachers was provided for last year in a separate measure. We now consider that this is unnecessary. We consider that the registers of both elementary and secondary teachers may be most properly kept by the Department itself, and we provide that the regulations under which these registers are formed shall be framed in consultation with and on the advice of the Consultative Committee. The composition of that Committee will not be stereotyped by the terms of the Bill further than that it will be provided that it shall be as to two-thirds representative of the Universities or other teaching bodies and endowed, as it will be, with the permanent functions to which I have referred. I hope that any doubt which has been felt as to the intention of the Government to make the Consultative Committee a permanent institution under the Board will be removed.

THE SCIENCE AND ART DEPARTMENT.

The anomalous institution at South Kensington is to be submitted to "a very searching and complete examination," after which we shall know it as a whole no more.

Through its colleges of science and schools of art it is itself a teaching institution. It distributes a large sum in aid of instruction in certain subjects, and, therefore, it exercises a considerable control over the course of study throughout the country. It is also an examining body whose certificates possess a value of the same character as that of a University degree. It also directs great museums at South Kensington, Bethnal Green, Edinburgh, and Dublin. Its internal arrangements are also of a peculiar character, having, as it has, directors of science and art who possess no executive authority, and whose functions and responsibilities I have always found it rather difficult to understand. The intention expressed in the Bill of making this Department a branch of a larger Education Department, and also the pending vacancy in the secretaryship of the Science and Art Department, will obviously make a thorough revision of this Department necessary. That revision will be undertaken by a departmental committee, and, as soon as the principle of amalgamation of the two Departments has been approved by Parliament, that committee will be appointed and the revision commenced. It will extend to both the science and art sides of the Department and also to the administration of the museums. It is an inquiry which will necessarily occupy a certain amount of time and entail a great deal of labour, and we therefore propose that the Bill shall not come into force until the 1st of April of next year, which will certainly not allow more than the necessary time for conducting this very difficult inquiry.

At a special meeting of the Senate of London University, held on March 8, Sir Henry Roscoe, Vice-Chancellor, moved a resolution of condolence on the death of Lord Herschell, the substance of which was as follows:—

The Senate hereby desires to record its deep sense of the great and irreparable loss which the University has sustained in the untimely death of its Chancellor, Lord Herschell. The loss of such a man as the late Chancellor would at any time have been a grievous one; doubly grievous is it at this moment, when the constitution of the University is about to undergo a radical change, and when the wise counsel and enlightened views of Lord Herschell would have been of the utmost value. The Senate desires to call to mind that Lord Herschell has been not only the Chancellor, not only the most distinguished amongst the graduates of the University, but that as a Fellow and a member of Senate he for many years, and in the midst of professional and political duties of no ordinary kind, ungrudgingly placed his time and energies at the disposal of the University, the interests of which he had so much at heart.

A DIVISIONAL meeting of the Association of Headmasters was held at Southport on March 11, under the presidency of the chairman, Mr. J. E. King, M.A., High Master of the Manchester Grammar School. There was a good attendance, the Headmasters of the following schools being present:—Bury, St. Helens, Warrington, Bolton Church Institute, Wallasey, Wigan, Rivington, Ormskirk, Farnworth, Widnes, Harris Institute, Preston, Blackburn, Burnley, Liverpool Institute, Merchant Taylors' School (Crosby), Chorley, Newchurch, Southport, Keswick, Birkenhead Institute, Bolton Grammar School, and, by invitation, the Registrar of Victoria University. It was announced

that the Association intended to hold its annual summer meeting at Manchester on June 30 and July 1, and the arrangements were discussed. The meeting also considered the possibility of Victoria University instituting an examination of schools, but the subject was adjourned for further consideration.

At Belfast an "Association of Royal University graduates is being formed of those who are opposed to the establishment of provincial or sectarian Universities in Ireland as being detrimental to higher education, and involving the depreciation of Irish academic degrees and distinctions." The Association is to be called "The Northern Graduates' Association." Its objects will be: (1) to further the interests of the graduates of the Royal University; (2) to watch the initiation and progress of any legislation bearing upon the interests of higher education; and (3) to influence, if need be, such legislation, and to take concerted action thereon.

The annual report of the Headmaster of Christ's Hospital to the Council of Almoners states that the number of boys in the school in Newgate Street at the beginning of last year was 463. In the course of the year 212 were admitted and 133 left. The year closed with a roll of 542 names, which would soon be increased to nearly 600, a larger number than had been in the school for some years past. Of the 212 boys admitted during the year, 29 came from public elementary schools, 43 from endowed schools, 34 on Governor's nomination to compete, six on West's Trust, and 100 from the Preparatory School at Hertford. After the examination of the school in July, exhibitions of the usual value and allowances were awarded to six Grecians, and that was the last "parting" of exhibitioners composed exclusively of boys on the old foundation.

The Education Estimates for the coming year amount to £8,753,986, which is an increase of £186,240 on the expenditure of last year. Of this amount it is reckoned that voluntary schools will require in aid grant an additional £1,813, making in all £622,813. The Board schools are to receive an extra £17,900, bringing their total up to £210,900. The additional sum (£8,963) is estimated as necessary for training colleges.

DR. ARTHUR VINTER, Headmaster of Woodhouse Grove School, writes to the *Methodist Recorder* to complain that the £12,000 set apart for education from the Thanksgiving Fund was divided amongst the various limited companies supporting middle-class schools "either in the form of share capital on which dividend is payable, or in the form of a loan without interest." Dr. Vinter maintains that

no educational establishment belonging to a church ought ever to pay any dividend. The fundamental objects of these foundations is religious. They should, therefore, like all other religious institutions, be conducted without becoming a source of profit to any individual. This remark is not intended to refer to paying a reasonable rate of interest on borrowed money. The surplus profits, when there are any, ought to be used (a) in making the equipment of the schools equal to that of those with which they compete; (b) in improving the position of the assistant staff. Any young person who enters the teaching profession as a member of our Church ought to have a prospect that, in a reasonable time, a position may be secured that will make his vocation a life-work instead of a stepping-stone to something else.

The eleventh annual meeting of the National Association for the Promotion of Technical and Secondary Education was held on March 8. The Duke of Devonshire, who took the chair, made an interesting statement on the application of the Parliamentary grants for technical education.

In England the total amount which is now available under the Local Taxation (Customs and Excise) Act, 1890, amounts to £827,000, an increase of £20,000 over last year, and the latest figures show that, of this amount, £770,000 is now being spent on technical and secondary education, while the total sum which is devoted to other purposes, such as the relief of the rates, has been reduced during the year by £10,000. The share of London in this grant is £192,000, of which £170,000 is appropriated for educational purposes, and, I believe I may say, most usefully appropriated. That amount is an increase of £20,000 as compared with last year. The sums accumulated from the grant in England by County and County Borough Councils represent a total of £332,000, the whole of which has been ear-marked for educational purposes. Turning to the sums which have been locally raised under the Technical Instruction Acts of 1889 and 1891, the number of Local Authorities who have adopted

these Acts in England now stands at 206, while the total sum raised by rate amounts to as much as £57,000. This shows an increase of 69 Authorities exercising their rating powers and of £24,000 over the year 1895-96.

LAST month the Science and Art Department forwarded to the London School Board a protest from the North London School of Art against the action of the Board in setting up in the immediate neighbourhood of their school art classes in which not only instruction was gratuitous, but all drawing materials and apparatus were provided free. The Department called the Board's attention to Section VI. of the "Science and Art Directory," and inquired whether any of the expenses of the Board's art classes were defrayed out of the school fund, and, if so, on what authority. Further memorials have been sent by the Department to the Board from the governors of the Addey and Stanhope Schools, Deptford, and from the managers of the Camden School of Art and Science Corporation making similar complaints. The latter body pointed out that this "wanton system of overlapping" of art instruction on the part of the School Board was caused by the Board exceeding its statutory powers, and appealed to the Lord President of the Council to take steps to put an end to "this gross misapplication of public funds." The School Board, in their reply to the Department, state that the words of Section VI., to which they understood the Department to refer, were:—"Recognition may be refused to any class which the Department considers to be unnecessary, or to compete unduly with a neighbouring school." On that point the Board say that the schools complained of by the North London School of Art were taken over by them in 1897 and recognized then and before by the Department. As to the question on what authority the expenses of these classes, if any, are defrayed out of the school fund, the Board state that this point has been raised before the Local Government Board auditor engaged in auditing the accounts of the Board, and is now receiving his consideration.

THE Clothworkers' Company have established a free studentship in connexion with the Datchelor Training College, to be awarded under the following regulations:—(1) That a free studentship be offered annually, to include training in the College and board at Datchelor House for one year. (2) That such free studentship be open only to intending teachers, who are either graduates of a British University (London by preference) or have passed a degree examination of the University of Oxford or Cambridge. (3) That the selection of the free student from amongst those who become candidates be wholly with the Company, and that the pecuniary circumstances be taken into consideration in making the selection. The first award will be made for the September term.

ON St. David's Eve a meeting of Welsh students was held at the Women Teachers' College, Cambridge. There was a good attendance of both men and women, most, though not all, of whom were past students of Aberystwyth College; and the evening was marked by a presentation to Miss E. P. Hughes, the well-known Principal of the College, who has resigned on account of ill-health. Mr. S. C. Williams, Trinity College, referred to the debt of the Welsh Students' Society to Miss Hughes. It was she who made a society of the kind possible—one composed of both men and women. No one who knew her had failed to be impressed by her devotion to the cause of education and culture in Wales. They much regretted her departure, and hoped she would soon be able to resume her work. Mr. W. Jenkyn Jones, B.A., Caius College, said that, as one of the oldest members, he could keenly realize how great and varied Miss Hughes' services had been. The society had found a congenial home in the College, and had thriven there. He wished Miss Hughes a thorough and speedy restoration to health. Miss Mary Holt, Girton College, made the presentation, which took the form of a pair of silver candlesticks. Miss Hughes thanked the society for its expression of good will. She had always found the greatest pleasure in being of some use to Welsh students. She hoped the society would continue to flourish, and that the men would not drive out the women.

THE death is recorded of Dr. Leitner, of Woking, who, it is said, could speak, read, and write twenty-five languages. He was remarkable for his erudition and research. He acquired the Royal Dramatic College building at Woking in 1884, and adapted

it to the foundation of an Oriental Institute in England for the training of Orientals in any of the learned professions, and for the linguistic preparation of Europeans proceeding to various parts of the East. In the grounds of this institution he erected a mosque, for the benefit of Mohammedan residents or visitors in this country.

Our Welsh correspondent writes:—A meeting of the Executive Committee of the Court of the University of Wales was held at the Westminster Palace Hotel, London, on March 10, to make arrangements for the next meeting of the University Court, to be held at Swansea on April 21. At this meeting the report of the Judicial Committee on the question of the representation on the Senate of the Department of Education at Cardiff will be presented. The Judicial Committee of the Court consists of Lord Justice Vaughan Williams and the standing counsel of the University. Mr. D. Brynmor Jones, Q.C., M.P., and Mr. Cadwaladr Davies.—The meeting of the Court of Governors of the University College, Aberystwyth, was held at Llandrindod Wells on Friday, March 24. The chief business consisted of the receiving of reports of the various Committees connected with the College. A meeting of the Welsh Library Committee of the College was also held on the same date. This Committee has been formed in order to develop as far as possible the Welsh section of the College Library. Already several valuable gifts have been presented to the Library.—The Annual Collegiate Meeting of the Guild of Graduates of the University of Wales will be held this year at the University College, Bangor, on April 4 and 5. The general meeting for the discussion of educational questions will be held on April 5 at 10 a.m., and the business meeting for the election of officers of the Guild at 2 p.m.—A meeting of the Executive Committee of the Welsh Central Board for Intermediate Education will be held at the Raven Hotel, Shrewsbury, on April 13, in order to make arrangements for the spring meeting of the Board at Welshpool on April 28. One of the chief subjects of discussion at the meeting at Welshpool will probably be the teaching of Welsh in intermediate schools, in which Mr. T. E. Ellis, M.P., has taken considerable interest. The teaching of Welsh in the intermediate schools bears a very close relation to the teaching of English, and much could be done to practise children in Welsh districts in translation from Welsh into English, and *vice versa*.—The Central Welsh Board for intermediate education will, at its next meeting, on April 13, appoint oral examiners for the annual examinations in July.—Mr. Marchant Williams, B.A., has been appointed one of the Crown representatives on the Court of the University of Wales for a period of five years. Mr. Marchant Williams is a former student at Aberystwyth.—At a meeting held in London under the presidency of Lord Justice Sir Roland Vaughan Williams, resolutions were passed in favour of opening a subscription list towards founding a School of Law in connexion with the University College at Aberystwyth. Similar steps have already been taken to establish a School of Music in connexion with the College.—A preliminary collection of Welsh educational exhibits for the Paris Exhibition of 1900 will probably be on view during the National Eisteddfod, to be held this year at Cardiff.

UNIVERSITIES.

(From our Correspondents.)

Cambridge. THE proposed changes in the Classical Tripos have during the last part of the term produced an unusual number of the inevitable flysheets. Arguments of all kinds and descriptions have been trotted out, and, as every one's mind was made up at a comparatively early period, considerable amusement was caused by the waste of printer's ink. The new scheme was avowedly framed upon the lines of the Oxford Classical Examinations: the first part of the Tripos was to be sunk to the level of Moderations, to be taken in the second year; the new second part was to be an *olla podrida* of antiquarian subjects, and it was hoped that this would be a rival to Oxford "Greats." This fallacy was, however, quickly disproved, and the prestige of Cambridge pure scholarship was felt to be in danger. Large majorities threw out all the proposals of the Syndicate, and the Classical Tripos will now rest in peace. The appointment of Dr. Handley Moule to the Norrisian Professorship of Divinity will be received with satisfaction by all

Cambridge men. A recognized leader of the Evangelical school of thought, he has by his courtesy, as much as by his ability, made for himself a strong position in the academic world as well as in ecclesiastical circles, while those who do not agree with his views are the readiest to admit that he is a fighting man who fights fair. There is little doubt but that the needs of the Episcopal Bench will before long cause a vacancy once more in the Norrisian Professorship.

The Senate House is to be fitted with the electric light, one of the main reasons why this is to be done being that discussions which now take place in the Art Schools have to be adjourned at dusk. The Senate House will also under the new arrangement be available for sundry functions, such as the reception of distinguished guests, which at present have to take place in college halls or in the Fitzwilliam Museum.

The Botany Professors and Lecturers are joining in the general cry for better accommodation. They quote statistics with deadly effect, and dwell with harrowing precision upon the fact that twenty-nine students have to sit upon fifty-seven feet of form. There is no doubt that all science teaching in Cambridge is rapidly becoming disassociated from the college, and being vested in the University; so that, while college lecture-rooms are devoted to the uses of those who have to be taught their Greek verbs, the one department which is saving us from being a reproach to the outer world has its habitation in sheds and out-houses; a zinc roof and a tottering wall is generally found to be the only protection which *savants* of European reputation can procure from a penny-wise and pound-foolish University.

The Report of the Additional Subjects Syndicate reveals a curious state of affairs. At an early state of their deliberations, the members of this body, being at variance among themselves, referred to the Senate the question of abolishing the additional subjects altogether. By a decisive vote it was settled that the examination should continue to exist. Fresh discussions arose as to what improvements could be made. A bare majority, having originally been in favour of abolition, steadily voted against any scheme which would improve the examination, and would have preferred to reduce it to an absurdly low level with a view to ultimate abolition.

Under these circumstances a report has been issued by the majority that no alteration is desirable, while the minority issue a flyleaf setting out the facts of the case. So the matter rests for the present. It is clear that the "abolitionists" should in common fairness have resigned when they were not in favour of any change for the better.

The revised edict against bonfires in public places is even more absurd than the unamended edition. Bonfires are prohibited except on special occasions when the prohibition is withdrawn by the Vice-Chancellor; in other words, the undergraduates will not be visited with University censures, though they may be liable to six months' imprisonment or more at the discretion of the Quarter Sessions Chairman.

The recent doings at Queens' College have had a happy termination. Rumours are afloat that the recent severe sentence on Mr. Fletcher has been reconsidered by the authorities of the College, and the University football fifteen will, after all, next year have the services of one of its most brilliant members.

Among the personal items of the month may be noted the following:—Mr. Duff takes the place of Dr. Verrall after next Long Vacation as Tutor of Trinity. Chancellor's Medal for English Verse: A. C. Pigou, King's College. Porson Prize (Greek Iambics): J. E. C. Jukes, Pembroke. Isaac Newton Studentship: G. G. Walker, B.A. Trinity College. Browne's Medals: Greek Ode, T. G. Johnson, Jesus College; Greek Epigram, R. K. Gaye, Trinity College; Latin Epigram, E. Harrison, Trinity College.

London. THE principal event of the month, and a sad one, has been the death of the Chancellor, Lord Herschell, creating the third vacancy in the Chancellorship within eight years. Lord Herschell's career and distinctions have been so fully recorded and widely published in the daily and other journals that we will here do no more than mention that he received his early education in, and matriculated from, a private school—the then well known Denmark Hill Grammar School, of which the Headmaster was the equally well known educator, Mr. C. P. Mason, B.A., who, I believe, is still living; and that he was the first graduate of the University to be made its head. The Senate, at a meeting on March 8, passed a series of resolutions expressive of their sorrow at the great loss suffered

by the University, and of condolence with Lady Herschell and the family, and then adjourned without transacting any other business. Under the Cowper Scheme, Convocation is, by-and-by, to have the power of electing the Chancellor; at present he is appointed by the Queen, and the appointment is notified to the Vice-Chancellor by the Prime Minister. As it is inconvenient for the University to be without a head, it is to be presumed that an appointment will be made before long, notwithstanding the impending reconstitution of the University. A good selection may be made without going outside the Senate; the senior Crown Fellow, the Earl of Kimberley, if he would accept, would be an excellent appointment; or, if a London graduate is to be appointed, there is the choice of Lord Lister or Viscount Llandaff.

After an interval of six months, and probably because the work of the Statutory Commission has not advanced so rapidly as was expected, the Crown has appointed a Fellow, Dr. Tilden, in place of Dr. John Hopkinson. The new Fellow is a D.Sc. of London and Professor of Chemistry at the Royal College of Science: he recently examined for the University for five years.

A regrettable vacancy on the Commission was recently caused by the serious illness, which still continues, and consequent resignation, of Sir William Roberts, whose ability is only equalled by his modesty and his power of reconciling diverse views and interests. Dr. Thomas Barlow, M.D. Lond., a distinguished physician, who, like the late Chancellor, matriculated from a private school, has been appointed to fill the vacancy.

At the end of April the Senate will elect a Board of Examiners for the year beginning on July 1. Of the existing Board the following members are retiring:—Prof. Wilkins (Latin); Mr. Gollancz (English); Prof. Spiers (French); Prof. Knight (Mental and Moral Science); Mr. Storr (Teaching); Prof. Dunstan (Chemistry); Prof. Hunter (Roman Law), deceased; Judge Bompas (Common Law); and Mr. G. E. Herman (Obstetrics).

The Lords of the Treasury have appointed Sir F. Mowatt (Permanent Secretary to the Treasury), Mr. Spring Rice (a Principal Clerk), and Mr. A. Fitzroy (Clerk of the Council) to represent them upon the consultative Conference respecting the housing of the University at South Kensington.

COLLEGE OF PRECEPTORS.

PROFESSIONAL PRELIMINARY EXAMINATION—PASS LIST.

MARCH, 1899.

THE Supplementary Examination by the College of Preceptors for Certificates recognized by the General Medical Council, the Incorporated Law Society, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, was held on the 7th, 8th, and 9th of March, in London, and at four other local centres, viz., Birmingham, Bristol, Leeds, and Liverpool. The following candidates obtained Certificates:—

FIRST CLASS.

Pass Division.

Higson, W. D. | Rowntree, S. J.

SECOND CLASS.

First Division.

Ashton, C.	Kaye, W. H.	Papanicoly, J.
Barnes, J. H.	Lee, S. J.	Squires, H. C.
Bransom, J. J. B.	Leese, A. S.	Steward, F. V.
Brookes, C. J.	Levy, A. G.	Theobalds, V. W.
Collins, S. W.	McRae, A.	Thomason, H. P.
Cooke, O. C. P.	Moser, F. E.	Wallin, O. H.
Edmond, W. S.	Mottram, M. J.	Wernicke, F. P.
Holder, S. E.	Palmer, C. L.	

Second Division.

Ambrose, R.	Gent, P. W.	O'Neill, T.
Barlow, S. H.	Gibbard, S. D.	Otley, E. T. S.
Blaxley, T. T.	Glendining, R.	Peers, E. C.
Booley, J. A.	Grove, E. D.	Phippen, H. G.
Bryant, P. H.	Harris, T. E.	Ramsden, H. C. H.
Burridge, J. H.	Heathcote, G.	Ripley, J. H.
Clegg, F. W.	Holman, H. J.	Robinson, W. P.
Devas, H. C.	Houchin, V. S.	Shaw, J. A.
Dickins, C. F.	James, H. H.	Thorne, W. H. G.
Duke, H. D.	Kemp, F. W.	Walker, N. H.
Dumayne, H. G.	Lomas, G.	Wyatt, H. D.
Fearn, I. R.	McLellan, S. W.	Young, E. C.
Fletcher, W. J.	Nash, E. G.	

Third Division.

Barragry, R.	Hobbs, F. W.	Roberts, H. K.
Bridges, E. B.	Hodgkins, J. R.	Russell, H. J.
Bruce, G. A. A.	Jackson, R.	Selge, J.
d'Abadie, St. L. J.	Lister, G.	Smith, G. H.
de Greayer, H. G.	Moody, M.	South, F. M. W.
Dingle, P. A.	Moyle, H. H.	Taylor, F.
Galloway, N.	Nelson, F. G. T.	Weston, W. J.
Gayton, W. J. G.	Plumley, C. G.	White, E. R. B.
Grammer, F.	Pounds, G. C.	Wolfe, J. H.
Harborow, G. J.	Read, C.	Wolfenden, A. B.
Hicks, T.		

The following qualified for Registration as Medical Students, but did not pass in all the subjects required for a Second Class Certificate:—

Bateman, E. W.	Elliott, C.	Mann, D.
Carlyll, H. B.	Heron, G. W.	Scott, H. B.
Coles, C.	Maddison, T. W.	Tyabjee, S.
Crozier, P. B.		

COLLEGE OF PRECEPTORS.

DISTRIBUTION OF DIPLOMAS, PRIZES, AND CERTIFICATES.

THE Public Distribution of Diplomas, Prizes, and Certificates awarded to the successful candidates at the last Christmas Examinations took place at the College, Bloomsbury Square, on Wednesday, March 1. The Chair was occupied by the Rev. T. W. SHARPE, C.B., who was supported on the platform by Mr. H. W. EVE, Dean of the College, and Dr. R. Wormell, Vice-President. There were also present Mr. Atkinson, Mr. Barlet, Mr. Brown, Dr. Gladstone, Mr. Hagreen, Rev. G. Henslow, Rev. Dr. Hiron, Mr. Langler, Mr. Longsdon, Mr. Musson, Mr. Reynolds, Prof. Seeley, Rev. R. O. T. Thorpe, Dr. Turpin, Mr. Wilson, and others. The CHAIRMAN, in opening the proceedings, said:—

Ladies and Gentlemen,—I find that it is the ordinary practice for the Chairman of the day to open the proceedings with a few remarks. The first remark which I have to make is that it seems I have to deal not only with living persons, but also with ghosts, for I am told that a great number of those who ought to receive prizes live in distant parts of the country, and, consequently, they will be ghosts to most of us, as they are not here to receive their prizes.

I am not going to make a long address this afternoon, for I bear in mind what Lord Rosebery said the other day with reference to a man who was making a long speech and boring everybody. Lord Granville was present, and the speaker constantly referred to his notes, and Lord Granville, looking at them, saw in the middle: "Here enlarge on the cotton trade." Seizing a favourable moment, Lord Granville took the notes away, tore them up, and threw them on the floor. When the gentleman turned round for his notes, he found they were not forthcoming, and his speech came abruptly to an end.

In the first place, I wish to congratulate all the candidates upon the success which has attended them at the recent examination. Prizes and examinations have two sides to them. I believe that the examinations which are held here have really a good side to them: first of all, because the prizes are justly awarded; and, secondly, because they are not awarded for cram of any kind. By "cram" I mean things that are packed into the heads of the scholars which cannot be got out at the right moment, and, therefore, are useless to the possessor. I take it for granted, therefore, that, as the College of Preceptors has held these examinations, the prizes have been justly awarded, and that they are not awarded for cram. But, at the same time, I hope they do not encourage pride amongst pupils, or, as the boys say, they are not too "cocky" because they have obtained a prize. I hope will give them confidence, and make them feel that they have made a step forward in life, and got on to a little firmer ground. I do not know whether you have heard the story of the two frogs, one of a pessimistic nature, and the other of an optimistic nature. Both were tilted into a bowl of cream: the pessimistic one went quietly to the bottom and refused to stir; but the other, who had more pluck in him, tried his best to get out. In so doing he swam round and round the bowl, but did not succeed; after a short interval, he found himself sitting on a pat of butter, as the result of his unconscious labours. His labours had turned the cream into a pat of butter, and it would be well if boys would learn from the frog. I do not say that they will always sit on a pat of butter; but their exertions will be rewarded, and in a way they perhaps do not themselves expect. You have all tasted the pleasure of knowledge; but I would like to ask you one question—whether you think labour is natural to man? I myself do not think it is. I think we should all be very lazy people indeed, if we had the chance. If you go to the West End of London, you will see many lazy people, who do nothing for their livelihood; all they have to do is to enjoy themselves. Now,

you have had the enjoyment of acquiring knowledge for yourselves. One great mistake of former times used to be that the accumulation of knowledge was one of the chief ends of going to school, though one of the lessons we have all learned in recent times is that it is not the mere accumulation of knowledge, but the power of using it at once, at the right time, and for the right purpose. This accumulative age followed the days of the great renaissance of learning, when people like Bacon and Milton (the latter, by-the-by, was an unsuccessful schoolmaster, and is not a good guide for us) were all praising up the accumulation of knowledge. In fact, they thought it possible that any one could exhaust the whole round of useful knowledge. But if you go to the British Museum, and look at the books there, you will soon be cured of that fancy; you will see that it is possible to acquire but a very small part of any one branch of knowledge. I often congratulate boys and girls on living in a better age in regard to education than that in which I was brought up. Good books in those days were very few. Both teachers and books were poor on the whole, though there were some good teachers and good books. Then there came another stage when there were good books and fair teachers. Now we have nothing but good teachers. At the same time, I should like to say that all teachers have one great fault—they all talk too much to their scholars; they do not allow the scholars to think for themselves. I wish they would consider the willing boys and girls—not the unwilling ones, for, of course, they have to be pushed along the road of knowledge, and a painful road it is for the teachers—but the willing scholars should be left more to themselves, and they should apply to their teachers when they are in difficulty, rather than go through the ordinary routine such as other boys and girls are compelled to follow. If I wanted to test the education of boys and girls, I should set them to read a book to me. I could soon tell by their reading what the character of the teaching was which was given in the school. Dean Dawes had a very good school, in which all the scholars read well. The reading was so good, not because the scholars had been drilled mechanically in the art of reading, but because the teaching had been made so interesting that when they came to read a book they took an interest in all that they read. Now you live in a very happy age for yourselves; for, as I have said, there are good schools and good teachers in abundance. But, in the time to come, when you are old and grey-headed, you will be astonished at the great improvement in schools. We have not reached the excellence which I hope will be attained when the generation to which I belong has passed away. You will find that things will alter for the better, that schools will all have a definite purpose, which is wanting just now. We are rather in a state of chaos as regards the purpose for which our schools should exist. There is a great controversy going on between primary and secondary schools. I have learned to dislike the words "primary" and "secondary." They were useful at first to drive into a stubborn nation the idea that there was such a thing as primary, as totally distinct from secondary; that, though the subjects might be the same, yet the methods of teaching must differ. The French, with their love of scientific clearness, have divided all schools into primary and secondary—they are useful names, and we must bear with them for the present. When we get a thoroughly organized system of education, instead of schools being divided by a hard-and-fast line, they will be divided into types of schools. What we want is a bold declaration on the part of our middle schools that they will divide themselves into higher or lower commercial schools. We want a purpose in the schools rather than a hard and a fast division. Some people would like to separate the whole population into two parts, and say: This part requires primary education, and this secondary. Of course there might be a few in the primary who would need to be removed into the other division; and this, they say, could be done by ladling them out by means of County Council scholarships, and the like; but such an idea will not be accepted in the North of England, and I hope not in London. I have now only to congratulate you upon your success, and to hope that you will not be satisfied with your success, but that you will carry forward the same spirit you have shown in winning prizes and in acquiring knowledge, and apply it in your future life to any purpose to which it may have to be applied.

The Diplomas, Prizes, and Certificates were then distributed, after which the Dean of the College,

Mr. H. W. EVE, in proposing a vote of thanks to the Chairman, said that, when Mr. Sharpe spoke of the contrast between education now and forty or fifty years ago, he spoke from a very large experience, and from the happy experience of one who could say *quorum pars magna fui*. He had been among the foremost in raising the general standard of education throughout the country, and, in particular, in guiding elementary schools, and estimating the results of their efforts, not so much on a mechanical system as by a much larger and more intelligent method. The system of paying by results obtained on a somewhat narrow examination had been largely superseded by a general estimate of the work of the school—an estimate that it was much harder for an inspector to form, but an estimate that bore a fairer testimony to the real work done in the school. He was not surprised to hear Mr. Sharpe laying great stress upon the importance of teaching being directed to make boys and girls think a little. He (Mr. Eve) had had a number of communications from examiners, and one of the points

most often reiterated was that the questions requiring a little thought were much worse done than those requiring straightforward methods. That was to be expected. You must get your straightforward method first; but it was a very great thing if you could get a little beyond it. Take one of the most ordinary subjects of school-work—geography. There was hardly any subject that lent itself better to little bits of thinking. In history it was much more difficult, as the problems required maturer intellect. He was sure that, with a real interest on the part of boys and girls, a good deal might be done in working out small geographical problems. Mr. Sharpe also spoke about idleness being the natural condition of man, and, for people who had just given up their work, there was a certain consolation in that. But he thought he could give another illustration which had just appeared in most of the newspapers, of the unhappy condition of the Pitcairn Islanders, which was put down partly to their extremely lazy habits. They have not much inducement to work, and they do not work. He expected they would all find that, if men had not had to work pretty hard, they would lose nine-tenths of the fun of life. There was one other point on which Mr. Sharpe dwelt which raised a very difficult question—it, perhaps, concerned teachers more than pupils—the advice to do less teaching at some point in a school career, and to make pupils teach themselves a little more. He remembered being told by the late Archbishop of Canterbury that when he was a boy at Birmingham, where he was one of a very remarkable group of men, he practically read through the whole of Thucydides. That meant a condition of things more difficult to bring about, and a condition of things that, perhaps, oftener came about when schools were worse managed than they were now. Schoolmasters and mistresses felt that their duty was to get the best out of every boy and girl, and he believed that they did their utmost in that way. There were far fewer waifs and strays in the schools than there used to be. But there was the possible danger connected with it of not allowing some of the best to develop themselves a little more freely. The perfection of school teaching would have been attained when they had succeeded in guiding the best pupils to work for themselves, and yet in keeping everybody up to the mark. They all knew what good work the Chairman had done in the past, and, though he had retired with all his honours from the Government's service, it was a pleasure to them to think that he was still engaged in influencing education in many ways, and that, among his other duties, he had undertaken to guide the education of the more important and the more industrious half of the community at Queen's College.

Dr. WORMELL, in seconding the motion, said he would venture to follow the Dean in one respect, and to underscore a few of the remarks which the Chairman gave in his too short, but very suggestive, address. There used to be an old saying that there was "nothing like leather." When that was translated into the language of English manufacturers, it was "nothing like cotton." But in that room it was "There is nothing like education"; and the address of Mr. Sharpe had very direct bearing on the great work with which they were all concerned. He was amused and interested at the reference made to the difference between a pessimist and an optimist. He was sure that the Chairman was not a pessimist, and he was glad to know it, for pessimists in education cut out the sunshine. From what had been said, it might be supposed that an optimist was one who floated about on a pat of butter, whereas a pessimist was one who floundered in skimmed milk; but, perhaps, he might be allowed to give his definition. He considered a pessimist was one who perpetually endured life with the chill on, and an optimist was one who occasionally enjoyed life with the chill off. From the warmth of the address to which they had all listened, he was sure that the Chairman was, according to that definition, not a pessimist. With regard to preserving time for thinking, they were too apt in schools to work out an elaborate time-table which would account for every minute of the time of the pupil, and give no time for individual thought. This was a mistake. The poet Southey was a methodical man who cut out his time in that way. He recollected hearing a story of the Quaker who interviewed Southey, and was informed that every hour of the day had its particular task assigned to it in a kind of time-table. "But, friend," replied the visitor, "when dost thou think?" It was very necessary that they should take to heart that suggestion, and preserve time for thinking. The next point to which the Chairman had referred was the need for differentiation of schools. They were talking of the need of organization in regard to education; but what did that mean? He took it that it meant that schools should be so arranged that none were driven to cover the whole ground. With regard to this College and its examinations, there was a certain liberty of choice offered, by which it was assumed that nobody could cover the whole range of knowledge, but that those who took up certain portions, and studied them systematically, were as worthy of the best honours the College could give as those who took up another portion. What was wanted was that schools should adapt themselves to that; that no school should attempt to cover the whole ground, but that each school, by the adaptation of its curriculum, should offer a training in a certain set of subjects, and parents should be allowed to select schools for their children according to the knowledge which was possessed in individual cases and the kind of occupation that was to be followed. He almost wished the Chairman,

from his inner consciousness and from his intimate knowledge of the intentions of those working in the higher atmosphere of legislation, had told them what was coming. But, as he had not informed them, they were left to hope that when legislation did come it would be in the direction that the Chairman had suggested as being desirable—that of allowing a selection of subjects, and permitting a differentiation of schools. Comparing England with Germany, he felt confident that the English methods of teaching were better than the German; but, with regard to organization, Germany was far in advance. He remembered reading a long time ago an address which Baron Liebig delivered in Germany. He said: "There are building materials in abundance about us, so as almost to cover the ground on which the edifice of education should stand; but the master builders have not made up their minds as to the plans. One would have the structure of wood, another of stone, another of iron. All three, if properly combined, would yield an excellent building were it not for the labourers, who will have it made of straw and build it in the air. It is because of that that even the foundation is not yet finished". Germany had since then entirely removed that uncertainty, and the structure of varied materials was complete. In England they had only just gone beyond that point, for the labourers—the teachers—were more agreed than they ever were before that the structure was not to be one of straw and built in the air, but that it might be wood in one place, stone in another, and iron in another, and for the whole community a combination.

The vote of thanks having been carried by acclamation,

The CHAIRMAN, in replying, said: I thank you all for the very kind way in which you have unanimously passed this vote of thanks for the few things I have said. I should like to make one suggestion as regards this meeting. Looking at the wide range that the College of Preceptors takes in covering the whole country, I think you should hold your meeting when the excursion trains are running. If you did, I think you would have much more chance of filling the room with the candidates who have so well earned the prizes and certificates than you have at the present time when ordinary fares are being charged. I see also by the list that a great number of the candidates come from private schools. I hope very much there is a good time coming for deserving private schools—that they will not only be recognized as part of the great supply of schools of the country, but that they will receive from public funds such money as will enable them to carry on their work with greater success than before. I hope that all private schools will form part of the general system, and that they will be subsidized either by scholarships or in other ways. They have one natural dread, and that is of inspectors. Having been an inspector for forty years, I do not think that one need be afraid of that particular race. I remember on one occasion being present at the Freemasons' Tavern, and sitting behind a perfervid gentleman, who denounced inspectors root and branch; but, still, I do think the dread is an unnecessary dread. Two sorts of inspectors are needed—one for primary schools and another for secondary schools, for the reason that the methods throughout are different in the subjects taught. I have had the pleasure of inspecting a good many secondary schools since I left the public service, and I must say I do not find the difference so great as I expected. Still, I think it would be better to have one inspector for secondary schools and another inspector for primary schools.

CORRESPONDENCE.

SIR EDWARD CLARKE'S ADDRESS ON SHORTHAND.

To the Editor of the Educational Times.

SIR,—The historical accuracy of my contentions is easily proved. Without entering upon a verbal quibble as to what constitutes a title-page, I beg to make certain extracts from documents which lie before me. You and your readers will perceive that what is involved is no mere quarrel between rival shorthandmongers, but a matter of public interest and importance—especially to schoolmasters and those entrusted to their care.

My first extract shall be from a speech. The year was 1868; the place, Manchester Town Hall; the speaker, Mr. Isaac Pitman; and the most accessible form in which the speech is to be found, publications issued at the time, and for many years afterwards, from the Pitman headquarters at Bath. My own copy is dated so late as 1890:—

"At the age of about sixteen or seventeen, I read through 'Walker's Pronouncing Dictionary' for the sole purpose of ascertaining what the dumb symbols that I knew so well in books were to be called. It was this study of 'Walker's Dictionary'—particularly in the introductory matter of his work ('Walker's Key to Pronunciation')—that gave me the first idea of the science of phonetics. Walker lays down the relations of letters to each other as you have them in 'Phonography' (now better known as 'Pitman's Shorthand')—that is, the pairing of the consonants: *p* with *b*, &c.; and the vowels are classed as 'long' and 'short.' The whole of the science of phonetics that you have in 'Phonography' you have in the Introduction to 'Walker's

Dictionary.' . . . At that time I did not write shorthand. . . . About a year after, with that love of knowledge common to boys, I began to study it. I borrowed a book ('Taylor's System,' Harding's 'Improved' Edition), copied the alphabet and 'arbitrary words,' and have written shorthand ever since. I wrote it (unaltered), for about seven years. This brings me to about the age of twenty-four. I was at this time teacher of a British school. I wished that every boy in the kingdom should have an opportunity of learning shorthand. I knew that a little manual could be got up for two or three pence, and I drew up one, to be published at 3d. It was Taylor's system. You will perceive that I had no intention of becoming a shorthand author. The ambition of appearing before the public in that capacity never entered my mind until it was suggested to me as a means of accomplishing my end. . . . Mr. Bagster submitted my manual to a friend. . . . The friend said: 'The system Mr. Pitman has sent you is already in the market. . . . If he will compile a new system, there will be novelty about it.' Mr. Bagster communicated this opinion to me, and I began by making improvements in Taylor's. The first thing I did was, to distinguish the long from the short sounds of the vowels. I then began to pair the consonants (as in 'Walker's Dictionary'). In November, [1837]—[quick work for a new shorthand system!]—I sent it to Mr. Bagster. It came out in two or three weeks, a little fourpenny edition of 'Stenographic Sound-Hand.'"

Now, any one reading the above would at once conclude—and justly—that this was simply a Walkerized edition of Harding's Taylor. But let us look at the book itself.

At the foot of "Plate 1" are the words "Drawn by Isaac Pitman, Stenographer"—that is to say, a practitioner of Taylor. On Plate 2 the name of the lithographer is similarly inscribed: the one "drew," the characters and the other lithographed them.

The observer beholds the familiar Taylorian circle, such as Sir Edward Clarke drew so skilfully upon the blackboard, and an A B C arrangement of the letters; the consonants coming, as in all the other Taylorian editions, in the order B, D, F, G, &c., five of the consonant strokes being retained from Taylor, unchanged in direction, length, or value; and the examples of joinings, &c., which are given being Taylorian out and out. The spokesman for Sir Isaac Pitman & Sons, Limited, offers, in support of his case, the assertion that a Taylorian writer might have read what Sir Isaac wrote in shorthand prior to 1837, but could not read what Sir Isaac wrote afterwards. I fear the fact goes a bit further. The influence of Walker is seen in the further "pairing" of the consonants—the principle is applied to *f*, *v*, &c., in the original Taylor—but ten of the consonant strokes differ from their present allotment, only ten being the same; and the vowel scheme differs widely from the present one, but was then, as it still is, Taylorian in principle: the use of characters, dashes, hooks, &c., similar to, but on a smaller scale than, the consonants, written detached, for internal vowels, after the consonants have been dealt with, as in *t*, *k*, *a*, for "take." Taylor was "phonetic," just as this professed to be, in the use of *f* for *ph*, the omission of silent letters, and so on; and I frankly confess that I fail to discover much of the "novelty" which Bagster's adviser recommended. There are "arbitraries" of the good old pattern: a cross for *x*, prefixes and suffixes, and many curious contrivances, such as were looked for in the other editions of Taylor's Shorthand of that day; while the "draughtsman"—afterwards to be known as the "inventor," "the father of phonography," and what not?—after giving a few of the common abbreviating devices, added: "Should other methods of abbreviation be required, they may be found in shorthand treatises." Schoolboys may be interested in knowing that the fearful lists of "grammalogues" and "logograms" did not then exist, pupils being advised to represent such phrases as "Kingdom of Heaven" by joining the initial letters; while long words might be shortened to one or two letters with a comma underneath! Mr. Thomas Allen Reed remarks of the Isaac Pitman of this period, as an excuse for such things, that "he had had very little experience in actual reporting." This remained true of him through life. But he knew Taylor's Shorthand—such as he first sent to Bagster in a handy manual—to be a simple and practical system; and there is no concealing the fact that it was Taylor's he desired to further popularize. Present-day schoolboys might not be disposed to regard with much affection the memory of the commercial-minded man who advised something novel, not already "in the market"; and they will be interested in hearing the deliberate judgment of Isaac Pitman of 1837, after the publication of "Stenographic Sound-Hand," upon "refinements" such as he afterwards adopted with such bewildering fickleness. I will quote his exact words:—

"Systems that depend upon staves like music, or even on a single line on which the letters have a three-fold power of expressing different words, above, on, or below the line, are not practical. Systems containing letters of different sizes, or the same size more or less curved, are equally objectionable."

This is precisely the view of Sir Edward Clarke. From a Pitmanite report of the meeting, it appears that a Pitman teacher declared that the Pitman system in its present form could not be difficult to learn, for they found schoolboys able, after six months' tuition, to write it at the rate of 120 words a minute, and to fluently read back what they had written. In my own fourteen years' constant experience I must have

been singularly unfortunate, for, with my eyes wide open, I have never found *one* such boy.

It is worth observing that G. A. L. Sladen, the winner of the Pitman medal at the last Certificate Examination of the College of Preceptors, is not a Pitmanite; also, that the Taylor system is, in spite of the expiry of the copyright and the absence of people commercially interested in carrying on the propaganda, still in extensive use in Great Britain and the colonies, and has been adapted to local requirements in France, Italy, Spain, Holland, Belgium, Portugal, Sweden, Germany, Roumania, Hungary, India, and the Far East. Why, like other progressive shorthand-masters, I prefer to teach some modern joined-vowel cursive system, you permitted me to explain in your columns two months ago.—Yours sincerely,

PERCY E. KINGSFORD, M.J.I.,
Shorthand Master at Dover College.

Excelsior, Dover, March 7, 1899.

CODRINGTON COLLEGE, BARBADOS.

To the Editor of the Educational Times.

DEAR SIR,—Codrington, the University of the major part of the West Indies, will be closed on June 29 of this year, unless, by May 1 next, funds are available to provide for its continuance. We estimate that a minimum sum of £5,000, as an emergency fund, is required. This College—established in 1710 by General Codrington, soldier, administrator, man of letters, and a native of the West Indies—provides “an adequate education for such of the West Indian youths as should be disposed to devote themselves to the Christian ministry in their native islands, without the expense and trouble of seeking the necessary qualifications in Europe, at a distance from their friends and relations”; and has, with one interval, continued to fulfil the intentions of the founder.

General Codrington left two estates, which in those prosperous days seemed sufficient to provide for ever for the maintenance of the College. Now, alas! these estates—owing to the depression in the sugar industry—are no longer able to provide the necessary funds, and our only hope is in an appeal to the public. The wide-spread interest taken by the British people to avert the proposed closing of Codrington College leads us to hope that this appeal will be successful, and that they will surely not allow the suspension of an institution which, from its good work in sending out clergy and teachers, not only to the West Indies, but also to West Africa, has become a centre of Christianizing and civilizing influence.

Would you, therefore, allow us to state that, with the sanction of the Trustees of the College, subscriptions, with full name and address, can be sent immediately to Messrs. Drummond's Bank, 49 Charing Cross, S.W.? Cheques should be made payable to “The Trustees of Codrington College or Bearer,” and crossed “Messrs. Drummond.”—Yours faithfully,

F. CANTUAR; STAMFORD; BESSBOROUGH; B. F. DUNELM.; J. E. COMMERELE, Admiral of the Fleet; JOHN MITCHINSON, Bishop; G. W. KITCHIN, Dean of Durham; H. BARBADOS; H. B. TRISTRAM, Canon of Durham; GERALD W. H. CODRINGTON; A. E. CODRINGTON, Lt.-Col., Coldstream Guards.

THE CENTRAL WELSH BOARD.

To the Editor of the Educational Times.

DEAR SIR,—I think the letter and cutting printed therewith from “H.” should not be accepted as accurate without further investigation. One County Council has complained of certain items of the Board's expenditure. I doubt if more than one has done so. The Board only examines once a year—not “at every season.” The communications sent to my school from the Board clearly indicate a desire to diminish, not to increase, the number of examiners.

The certificate scheme established by the Board is, undoubtedly, costly to the Board; it is, however, not costly to the parents, and some such plan is absolutely necessary to the efficiency of teaching in the higher forms. It is true that the plan will make it unnecessary for intermediate schools to prepare for Oxford or Cambridge Locals.

But Oxford and Cambridge may surely afford to dispense with the scanty fees which they have collected since 1870 from Welsh schools and parents?

I write without any prejudice, for I knew nothing of these matters until it became my business to investigate them last year. I am sure that, whatever be the particular financial difficulties encountered by the Central Welsh Board at this moment, their work and their officers ought not to be slandered in the style adopted by your correspondent.

And, in view of the fact that England will soon have a Board of much greater magnitude, it may be worth while for English teachers to study carefully the operations of the Welsh Board as described, for example, in the report recently published by Mr. Sadler for the Education Department.—Yours, &c.,

J. J. FINDLAY.

St. David's Day, 1899.

PENDLEBURY'S NEW ARITHMETIC.

Small crown 8vo, 192 pp., 1s. Or with Answers, 1s. 4d.

A

SHILLING ARITHMETIC.

BY

CHARLES PENDLEBURY, M.A., F.R.A.S.,
Senior Mathematical Master of St. Paul's School,

AND

W. S. BEARD, F.R.G.S.,

Headmaster of the Modern School, Fareham.

THIS book is intended for the Lower and Middle Forms of Secondary Schools. It will be found adapted especially for the use of candidates for the Oxford and Cambridge Junior Local Examinations, the Scotch Universities' Locals, County Council Scholarships, and for Examinations conducted by the College of Preceptors, the Board of Intermediate Education for Ireland, &c., &c.

Throughout the book fully worked-out examples have been inserted to illustrate the theory explained in the text, and to serve as models for the pupil. The examples for exercises are numerous and are carefully graduated. The sets of miscellaneous examples are mostly taken from examination papers set at the Examinations referred to above. Questions involving unnecessarily long and tedious calculations have been excluded from the book, as unsuitable for the Junior Students for whom the book is intended.

ABRIDGED CONTENTS.

THE FOUR RULES—Simple and Compound.

REDUCTION—WEIGHTS AND MEASURES.

G.C.M. and L.C.M.

VULGAR FRACTIONS—DECIMALS.

PRACTICE—Simple and Compound.

INVOICES—Tradesmen's Bills.

PROPORTION (Simple and Compound) by the Unitary Method.

Bankruptcies—Rates and Taxes—Percentages.

Commission—Brokerage—Insurance—Cash Discount.

INTEREST—Simple and Compound—Calculation of Compound Interest on a given Principal—Present Worth and True Discount—Banker's Discount—Discounting Bills.

PROFIT AND LOSS—STOCKS AND SHARES.

SQUARE ROOT.

MEASUREMENT OF RECTANGLES AND RECTANGULAR SOLIDS.

THE COINAGE OF CERTAIN COUNTRIES—Exchange—Foreign Bills of Exchange.

THE METRIC SYSTEM of Weights and Measures.

CALCULATION OF PRICES.

EXAMINATION PAPERS—Oxford Junior Local, Oxford Preliminary, Cambridge Junior Local, Cambridge Preliminary, College of Preceptors, London Technical Education Board, &c.

Specimen Copy sent on receipt of half the published price to Head Teachers.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

Published by Blackie & Son.

NEW SERIES OF JUNIOR LATIN CLASSICS.

Under the editorship of Professor R. Y. TYRBELL. With Introductions, Notes, and Appendices, and Illustrations of Classical Subjects.

THE ODES OF HORACE. Book I. Edited by STEPHEN GWYNN, B.A. 1s. 6d. [Ready.]

THE FIRST CATILINE ORATION OF CICERO. Edited by Professor C. H. KEENE. 1s. 6d. [Ready.]

THE ODES OF HORACE. Book II. Edited by STEPHEN GWYNN, B.A. [Immediately.]

THE CATILINE ORATIONS COMPLETE. Edited by Professor C. H. KEENE. [Immediately.]

Others to follow.

THE MEDEA OF EURIPIDES. Edited by P. B. HALCOMBE, M.A., King's College, Cambridge. Illustrated. 1s. 6d.

*. This edition is specially suited to candidates in the examinations of the College of Preceptors, the lyrical parts being omitted from the Greek text, but the omission being supplied by a rendering into English prose.

LATIN UNSEENS: INTERMEDIATE SECTION.

Selected by ANDREW ANDERSON, M.A., Classical Master in the High School, Glasgow. Fcap. 8vo, paper cover, 4d.

LATIN GRAMMAR PAPERS.

For Middle Forms. Selected from Oxford and Cambridge Local and London Matriculation Examinations. By A. C. LIDDELL, M.A. Fcap. 8vo, cloth, 1s.

FIRST STEPS IN CONTINUOUS LATIN PROSE.

By W. C. FLAMSTEAD WALTERS, M.A., sometime Scholar of Pembroke College, Oxford. Crown 8vo, cloth, 2s.

HINTS AND HELPS IN CONTINUOUS LATIN PROSE.

By W. C. F. WALTERS, M.A. Crown 8vo, cloth, 2s. Key, 2s. 6d.

HINTS AND HELPS IN CONTINUOUS GREEK PROSE.

By W. C. FLAMSTEAD WALTERS, M.A. Crown 8vo, cloth, 2s. 6d.

MACAULAY'S ESSAY ON MILTON.

Edited by JOHN DOWNIE, M.A., Examiner in History to Edinburgh University. Crown 8vo, cloth, 2s.

A NEW SEQUEL TO EUCLID.

By Professor W. J. DILWORTH, M.A. Crown 8vo, cloth, 2s. 6d.

PART I.: Exercises on the First Three Books of Euclid. 1s.

PART II.: More difficult Exercises on the First Four Books, and Exercises on Book VI. 2s.

LAYNG'S ARITHMETIC.

By A. E. LAYNG, M.A., Editor of "Layng's Euclid." With or without Answers, 4s. 6d. Or in Two Parts, 2s. 6d. each.

"The examples are extremely numerous. . . . It would be difficult to suggest any point in which they might be extended or improved. The treatment of the theory of arithmetic is detailed, and at the same time clear and interesting."—*Journal of Education*.

EXERCISES IN ARITHMETIC.

By A. E. LAYNG, M.A. Being the Exercises of the above, published separately.

PART I. (5,000 Exercises), without Answers, 1s.; with Answers, 1s. 6d.

PART II. (3,500 Exercises), without Answers, 1s. 6d.; with Answers, 2s.

ELEMENTARY PERSPECTIVE.

By LEWES CROSSKEY, Director of Industrial Arts, Glasgow Technical College. Super royal 8vo, cloth, 3s. 6d.

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Assistant-Master at Harrow School. 5s.

"An excellent outline of the leading facts of English industrial history."—*Academy*.

TENNYSON: A CRITICAL STUDY.

By STEPHEN GWYNN. Crown 8vo, 2s. 6d. (New Volume in the "Victorian Era Series.")

BOOKS FOR THE CAMBRIDGE LOCAL AND COLLEGE OF PRECEPTORS EXAMS., 1899.

English.

SHAKESPEARE.—RICHARD THE SECOND. Edited by C. H. HERFORD, Litt.D. Fcap. 8vo, cloth, 1s. 6d. (*The Warwick Shakespeare*.)

SHAKESPEARE.—RICHARD THE SECOND. Edited by W. BARRY, B.A. 8d. (*The Junior School Shakespeare*.)

SHAKESPEARE.—TWELFTH NIGHT. Edited by A. D. INNES, M.A. Fcap. 8vo, cloth, 1s. 6d. (*The Warwick Shakespeare*.)

MILTON.—PARADISE LOST. Books I. and II. Edited, with Introduction and Notes, by F. GORSE, M.A. Fcap. 8vo, 1s. each.

MACAULAY.—ARMADA, IVRY, BATTLE OF MASEBY. Edited with Introduction and Notes. Fcap. 8vo, cloth, 3d.

MACAULAY.—LAY OF HORATIUS, LAKE REGILLUS, AND PROPHECY OF CAPYS. Edited with Introduction and Notes. Fcap. 8vo, cloth, 3d.

HIGHER ENGLISH. An Outline of English Language and Literature. By DAVID CAMPBELL. Fcap. 8vo, cloth, 1s. 6d.

LOWER ENGLISH. An Outline of English Language and Literature for Intermediate Classes. By DAVID CAMPBELL. Fcap. 8vo, cloth, 1s.

THE OXFORD MANUALS OF ENGLISH HISTORY. Fcap. 8vo, cloth, 1s. each.

THE GEOGRAPHY OF THE BRITISH EMPIRE. By W. G. BAKER, M.A. Crown 8vo, cloth, 3s. 6d.

Classics.

CAESAR.—THE GALLIC WAR. Edited, with Introduction, Notes, &c., by JOHN BROWN, B.A. Fully Illustrated. Fcap. 8vo, cloth. BOOKS IV. and V., 1s. 6d. each.

HORACE.—THE ODES. Book II. Edited by STEPHEN GWYNN, B.A. Illustrated. Crown 8vo, cloth, 1s. 6d. [*Nearly ready.*]

PHAEDRUS.—SELECTIONS FROM BOOKS I. and II. Edited by S. E. WINBOLT, B.A. Fcap. 8vo, cloth, 1s.

Mathematics.

EUCLID'S ELEMENTS OF GEOMETRY. With Notes, Examples, Exercises, and Appendices. Edited by A. E. LAYNG, M.A., formerly Scholar of Sidney Sussex College, Cambridge. BOOKS I. to VI., and XI. Crown 8vo, cloth, 3s. 6d.; also in Sections.

PRELIMINARY ALGEBRA. By R. WYKE BAYLISS, B.A. Fcap. 8vo, cloth, 1s.

ALGEBRA. Up to and Including Progressions and Scales of Notation. By J. G. KERR, M.A. Fcap. 8vo, cloth, 2s. With Answers, 2s. 6d.

ELEMENTARY TEXT-BOOK OF TRIGONOMETRY. By R. H. PINKERTON, B.A. Oxon. *New Edition, Revised and Extended.* Fcap. 8vo, cloth, 2s.

Science.

THEORETICAL MECHANICS. By R. H. PINKERTON, B.A. Oxon. *Sixth Edition.* Fcap. 8vo, cloth, 2s.

Vol. V. **Egypt under Roman Rule.** J. G. MILNE.

A Short History of Rome. By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 3 Maps. Second Edition. Crown 8vo, 3s. 6d.

"An original work, written on an original plan, and with uncommon freshness and vigour."—*Speaker*.

Taciti Agricola. With Introduction, Notes, Map, &c. By R. F. DAVIS, M.A., Assistant-Master at Weymouth College. Crown 8vo, 2s.

Taciti Germania. By the same Editor. Crown 8vo, 2s.

Passages for Unseen Translation. By E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and A. M. COOK, M.A., late Scholar of Wadham College, Oxford; Assistant-Masters at St. Paul's School. Crown 8vo, 3s. 6d.

"A capital selection, and of more variety and value than such books usually are."—*Athenaeum*.

"We know of no book of this class better fitted for use in the higher forms of schools."—*Guardian*.

Exercises in Latin Accidence. By S. E. WINBOLT, Assistant-Master in Christ's Hospital. Crown 8vo, 1s. 6d.

"Accurate and well arranged."—*Athenaeum*.

Notes on Greek and Latin Syntax. By C. BUCKLAND GREEN, M.A., Assistant-Master at the Edinburgh Academy, late Fellow of St. John's College, Oxon. Crown 8vo, 3s. 6d.

Notes and explanations on the chief difficulties of Greek and Latin Syntax, with numerous passages for exercises.

"Well arranged, clear, and extremely useful."—*School Guardian*.

METHUEN & CO., 36 ESSEX STREET, STRAND.

The Organized Science Series.

BOOKS ADAPTED TO THE REQUIREMENTS OF THE
Science and Art Department.

FOR THE ELEMENTARY STAGE.

2s. each Volume.

FIRST STAGE MECHANICS (SOLIDS.) By F. ROSENBERG, M.A., B.Sc.

"The book in every way meets most creditably the requirements of the syllabus of the Science and Art Department."—*Schoolmaster*.

FIRST STAGE MECHANICS OF FLUIDS. By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc.

"This book is well written, and contains useful summaries and collections of examples at the ends of the chapters."—*Cambridge Review*.

FIRST STAGE SOUND, HEAT, AND LIGHT. By JOHN DON, M.A., B.Sc.

"The facts and phenomena belonging to the branches of physical science named in the title of the book are clearly described and with due attention to experiment."—*Nature*.

FIRST STAGE MAGNETISM AND ELECTRICITY. By R. H. JUDE, M.A. (Cantab.), D.Sc. (Lond.).

"No book, as far as we are aware, is so well suited to serve the purpose of introducing beginners to the study of this subject, and is largely due to the admirably clear expository style of the author, and his happy way of explaining experiments."—*Educational News*.

FIRST STAGE INORGANIC CHEMISTRY (Theoretical). By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S.

"It is an admirable book, lucidly written, well arranged, and illustrated. All through, instructions for practical work are given."—*Educational Times*.

FIRST STAGE PHYSIOGRAPHY. By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.

"The book forms one of an excellent series, and candidates for the Elementary Stage in Physiography should find this little treatise of considerable use, as it has been written with a view to following closely the lines of the published syllabus."—*Invention*.

FOR THE ADVANCED STAGE.

3s. 6d. each Volume.

SECOND STAGE MATHEMATICS. Being the additional Algebra and Euclid with the Trigonometry required for Second Stage. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S.

"Thoroughly suited to the requirements of the examination."—*Guardian*.

ADVANCED MECHANICS. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Vol. I., Dynamics. Vol. II., Statics.

"The book thoroughly meets the requirements for the advanced stage."—*Education*.

ADVANCED HEAT. By R. WALLACE STEWART, D.Sc. Lond.

"Clear, concise, well arranged and well illustrated, and, as far as we have tested, accurate."—*Journal of Education*.

ADVANCED INORGANIC CHEMISTRY. By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S.

"Dr. Bailey has selected and submitted the chemical facts themselves in the clear way to be expected from his long experience as a lecturer in the Victoria University."—*Guardian*.

Price 1s.

FIRST STAGE INORGANIC CHEMISTRY (Practical). By F. BRDOW, Ph.D., D.Sc.

"An excellent guide for the beginner in practical laboratory work. The instructions are very clear."—*Educational Times*.

Price 1s. 6d.

PRACTICAL ORGANIC CHEMISTRY. By GEORGE GEORGE, F.C.S.

"The arrangement of the matter prescribed in the syllabus is carried out with very considerable skill. We strongly recommend the book to teachers and students."—*Educational News*.

FORECASTS AND COMMENTS.

April 1, 1899.

PROFESSOR SULLY will resume his Lectures to Fixtures. Teachers on "Moral Education" on Thursday, April 27. Professor Woods Hutchinson will lecture on "The Growth of the Child's Mind" at the Evening Meeting of Members on April 19.

* * *

THE National Union of Teachers holds its Easter Conference this year at Cambridge. Mr. Clancy and Mr. Yoxall are to receive the degree of M.A. There will be four public and four private sessions. The subjects to be discussed at the open meetings are compulsory school attendance, salaries, grants, fixity of tenure, and the training and qualifications of teachers. Mrs. S. Bryant, D.Sc., and Prof. Jebb, M.P., will deliver addresses during the morning session of April 4.

* * *

A MEETING in promotion of a Colston Educational Society, intended to provide further funds for the Bristol University College, has been convened by the Mayor of Bristol, the Headmaster of Clifton College, the Bishop of Hereford, and others. It will be held at the Bristol College on April 13.

* * *

THE next examinations of the London College of Music will begin at the various local centres on April 4 (for practical music) and on April 12 (for theoretical music). The summer term of the College opens on April 24.

* * *

ON April 26 the London Senate will elect its Board of Examiners. Fifty-two of the present examiners are eligible for re-election, and it may be assumed that they will be again chosen; but eight have served their full term, and can only be re-elected after an interval. The eight vacancies are in Latin, English, French, Mental and Moral Science, Teaching, Chemistry, Roman Law, and Obstetric Medicine.

* * *

AT University College, London, there will shortly be an examination for three Andrews Scholarships, of the value of £30 each: one for classics; one for any two of the following three subjects—mathematics, physics, chemistry; and the other subject for two modern languages and a science chosen out of a group. Notice of intention to compete must be sent before May 1. A West Scholarship, of similar value, is also given annually for proficiency in English history and English language, entries for which must be received by July 14. The above are open to either sex. In the Faculty of Medicine three scholarships are annually awarded; one of the value of 131 guineas, and two of the value of 55 guineas each. The conditions attaching to each scholarship may be obtained of the acting secretary (Mr. T. Gregory Foster) at the College.

* * *

AT St. John's College, Cambridge, an examination for three Choral Studentships of £40 for three years, beginning October, 1899, will be held on May 3. Two will be awarded to tenor singers and one to a bass singer. The duties of choral students are to take part in the musical services in the College Chapel. They are required to pass the University Examinations for the B.A. degree under the same conditions as other members

of the College. Further information may be obtained from the Organist.

* * *

AN International Congress on Commercial Instruction will be held in Venice from May 4 to May 8 next. Great Britain will be represented by Mr. Gilbert Redgrave, chief senior inspector of the Science and Art Department. Among the subjects to be discussed are the organization of secondary commercial instruction, tuition in foreign languages, and scholarships for the purpose of acquiring business training in foreign countries. Merchants and others interested in commercial instruction are invited to take part in the congress. Particulars may be obtained of the Secretary of the Italian Chamber of Commerce, 4 St. Mary Axe.

* * *

THE Annual Conference of Roman Catholic Colleges will this year hold its fourth meeting in the newly opened St. George's Hall, adjoining the Cathedral, Southwark. The days of meeting will be Tuesday and Wednesday, May 16 and 17. The President of the Conference this year is the Rev. John Norris, Headmaster of the Oratory School.

* * *

At the next examination (in June) of candidates for the Army, thirty commissions will be offered for competition by University candidates. London University men are eligible for these commissions on equal terms with members of the older Universities. Particulars are to be obtained from the Secretary of the Civil Service Commission.

* * *

It is proposed that a Conference of those interested in extending the National Home-Reading Union should be held at Cambridge at the end of June, and that a meeting of the nature of a Summer Assembly, but on a smaller scale, should be held in connexion with the "Co-operative Holidays" at Whitby at the end of July or early in August.

* * *

THE Modern Languages Holiday Courses, managed by a Committee of the Teachers' Guild, are to be held this year at Lisieux (from August 2) and Tours (from August 3). A handbook of information will be printed in May.

Education
Gossip.

DR. WORMELL'S retirement from the Headmastership of the Central Foundation School is amply justified by his devotion of over thirty years to the interests of the school, which he entered (under the Rev. W. Jowitt) in the same year in which he won the Gold Medal for Mathematics and Natural Philosophy at London University. The dates should argue Dr. Wormell still a young man; and members of the College of Preceptors will trust that both their senior Vice-President and their Dean, retiring from their headmasterships within a year of each other, may be able to take, if possible, an increased interest in its control and government.

* * *

THE annual meeting of members of University College, London, was held too late in February for notice last month. The Report of the Council showed a decrease of twenty-five pupils and £386 in fees; while the excess of expenditure over income during the session amounted to £2,629. The College now owes its bankers £30,000; and a Committee is being formed to issue a special appeal for subscriptions to pay off this debt. This appeal is not, however, to be made until the Council have received a reply from the Statutory Commission to their offer to transfer to that body the whole of the endowments of the College.

* * *

THE good schoolmaster will avail himself of any pretext for promoting the welfare of his school. Oliver Cromwell's three-hundredth birthday is to be celebrated by the raising of

a fund for the enlargement and general development of the Huntingdon Grammar School, where he was educated. A Committee, appointed by the Governors, have issued an appeal for subscriptions, being "persuaded that the idea of honouring one who fills so conspicuous a place in history, by promoting the cause of education, will commend itself far and wide."

* * *

AN appeal for funds has been issued on behalf of Westminster College, the Presbyterian theological institution which was removed three years ago from London to Cambridge. The new building just completed has cost £38,000 with furniture, and the subscriptions so far received fall £16,000 short of this amount.

* * *

A MOVEMENT is on foot to establish a Department of Law at University College, Aberystwyth. Lord Justice Williams recently presided at a meeting held to further this object, when an influential Committee was formed to carry it out.

* * *

It is understood that arrangements are in progress for organizing an educational exhibition in London in connexion with the forthcoming Paris Exhibition of 1900. Owing to the limited space which will be available in the Paris building for the educational section, it will not be possible to give as adequate an exhibition of English educational work as had at first been hoped; and it is, therefore, proposed to hold an exhibition early in the year, in London, which will give a comprehensive survey of the various branches of educational activity.

* * *

PURSUANT to Section 2 of the University of London Act, 1898, a notification of the appointment on March 10 of Dr. Thomas Barlow, to fill a vacancy in the London University Commission, caused by the resignation of Sir William Roberts, has been laid before Parliament.

* * *

A QUARTER of a million was mentioned as necessary for the equipment of the proposed new University of Birmingham. Of this £160,000 has been promised—£25,000 coming from an anonymous donor on condition that the total amount is raised within twelve months. There is an uncomfortable rumour that the anonymous one is of American nationality.

◆◆◆

THE REV. H. C. G. MOULE, D.D. Trinity, Appointments and Vacancies. Principal of Ridley Hall, has been elected Norrisian Professor of Divinity, in succession to Dr. Armitage Robinson. Dr. Moule was educated at Trinity, taking the second place in the Classical Tripos, 1864, bracketed equal with Mr. F. W. H. Myers, now one of Her Majesty's inspectors of schools. While an undergraduate Dr. Moule was awarded Sir William Browne's medals for a Latin ode and for Greek and Latin epigrams. He was elected to a Fellowship at Trinity in 1865, and was assistant-master at Marlborough 1865-7. He obtained a First Class in the Theological Examination in 1865, with distinction in Hebrew. He has frequently filled the office of Select Preacher at Cambridge, and once at Oxford. On the institution of Ridley Hall, he was appointed, in 1881, its first Principal.

* * *

THE QUEEN has approved the appointment of Mr. Alexander Anderson, late Fellow of Sidney Sussex, Cambridge, to be President of Queen's College, Galway, in the room of Mr. W. G. M. Starkie, now Resident Commissioner of National Education. Mr. Anderson, who is a Presbyterian and an old Galway student, has been for some time past Professor of Natural Philosophy at Galway.

* * *

THE REV. HERBERT RICKARD, M.A. Jesus College, Oxford, has been appointed Principal of Chichester Theological College.

* * *

THE REV. R. S. DE COURCY LAFFAN has resigned the Principal-

ship of Cheltenham College, from the end of the forthcoming summer term.—There is, as we announced last month, a vacancy in the Headmastership of the Central Foundation Schools, owing to the resignation of Dr. Wormell.—The Headmastership of the Mathematical Department of the Belfast Academical Institution is also vacant.

* * *

SIGNOR RUDOLFO LANCIANI, D.C.L., LL.D., Professor of Ancient Topography in the University of Rome, and director of the Italian School of Archæology, has been appointed Clifford Lecturer in the University of St. Andrews for the next two academical years. Professor Lanciani is one of the leading archæologists of the day, and is the author of the following among other works:—"Ancient Rome in the light of Recent Discoveries," "Pagan and Christian Rome," "Ruins and Excavations of Ancient Rome," and "Forma Urbis Romæ." The subject of his lectures will be the Religion of Rome, and the first course will commence shortly after the opening of the winter session.

* * *

AMONGST the efforts now being made in this country to promote commercial education, it is said that the establishment of Chairs of Commerce is contemplated both in Victoria University and in the new Midlands University.

* * *

PROF. SAYCE, of Oxford, has been appointed Gifford Lecturer in the University of Aberdeen for 1900-2.

* * *

MISS MARGARET PUNNETT has been appointed by the Council of the Cambridge Training College to succeed Miss Hughes as Principal of the College. Miss Punnett is a B.A. of London, and a former student of the Training College, and has the Cambridge Teachers' Certificate, with distinction in both the theoretical and practical parts of the examination. She has also obtained the London Teachers' Diploma, with special distinction.

* * *

THERE are vacancies for one French and eight Oral Examiners under the Central Welsh Board; for Lectureships in Classics and Germanic Philology at Holloway College; and for a Lady Tutor at Bristol University College.

* * *

MR. EDGAR JONES, M.A., Headmaster of the County School, Llandilo, Carmarthenshire, has been appointed Headmaster of the County School, Barry, Glamorganshire.

* * *

MR. G. GWYN JONES, B.A., Headmaster of the County School, Aberavon, Cardiganshire, has been appointed Headmaster of Llandilo.

* * *

MR. J. TRAVIS JENKINS, B.Sc. London and Wales, has been appointed an assistant-master at the Swansea Grammar School.

* * *

MISS SUSAN COLLIE, of Bedford, has been appointed Headmistress of the High School for Girls at Bedford, in succession to Miss Belcher.

* * *

MISS YOUNG has succeeded Miss Japp as Headmistress of the Edgbaston High School for Girls.

* * *

A HEADMISTRESS is required for the Bury St. Edmunds High School for Girls, under the Church Schools Company.

* * *

Literary Gossip. THE Public Orator at Cambridge was exceptionally happy in presenting Lord Tennyson for an honorary degree previous to his departure to take up the Governorship of South Australia:—

"Idem fortasse nonnumquam etiam amicos suos Cantabrigiensi recordabitur, qui eum ipsum, quom hodie, auspiciis optimis proficia-

centum, non sine desiderio prosequuntur, aliquando non sine laurea nova ab Austro sibi redditum animo laeto excipient.

Quale iubar primum velo e candente renidet navis devexo nostros referentis ab Austro; quale iubar summum rosea face carbasæ tingit quæ desiderium nostrum sub marmora mergunt; tam laetum actorum tempus, tam triste dierum.

The reference is to a familiar poem in "The Princess":—

Fresh as the first beam glittering on a sail
That brings our friends up from the underworld,
Sad as the last which reddens over one
That sinks with all we love below the verge;
So sad, so fresh, the days that are no more.

* * *

"I HAVE no confidence," Matthew Arnold once said, "in those who at the Universities regulate studies, degrees, and honours." If he had lived till to-day, he would scarcely have withdrawn his remark. Oxford has attempted in vain, and in a vain fashion, to create a School of English Literature. The set subject in the next examination for the degree of Bachelor of Letters is "a dissertation on the dialects of Scottish Gaelic," and there is to be a supplementary examination in that subject.

* * *

THE REV. DR. CUNNINGHAM has assigned the profits arising from the sale of his work on "The Growth of English Industry and Commerce" for the purpose of providing a fund for publishing a series of dissertations by former students of Girton College. Only such essays are to be judged worthy of publication as show evidence of original work, although translations will not be excluded. Already £330 has been received and invested.

* * *

THE Senate of Edinburgh University have resolved to confer the honorary degree of LL.D. upon the Marquis of Dufferin and Ava, Sir William Anson (Warden of All Souls, Oxford), and Prof. G. W. Prothero, the new editor of the *Quarterly Review*. The same degree is to be conferred by the University of Aberdeen upon Mr. James Frederick Goodhart, M.D., Lord Strathcona and Mount Royal, and Miss Anna Swanwick, who has done much for the promotion of higher education among women. She has also made many translations from the German and Greek.

* * *

WE extract the following version (without permission) from the *Eagle*, No. 103, March, 1894:—

"Mrs. Harris,' I says to her, 'don't name the charge, for, if I could afford to lay all my feller creeturs out for nothink, I would gladly do it; sich is the love I bear 'em. But what I always says to them as has the management of matters, Mrs. Harris'"—here she kept her eye on Mr. Pecksniff—" 'be they gents or be they ladies—is, Don't ask me whether I won't take none, or whether I will, but leave the bottle on the chimley-piece, and let me put my lips to it when I am so disposed.' " ("Martin Chuzzlewit," chapter xix.)

"ὡς ἔφατ'· αὐτὰρ ἐγὼ μιν ἀμειβομένη προσέειπον,
'δαιμονίη, Ἀρρισιαδῶ ἄλοχ' ἀντιόειο,
μὴ θῆν δὴ περὶ μίσθον ἀνείρεο, μὴδ' ὀνόμαζε
τοίη γὰρ τοι ἐγὼν ἀγαθὴ καὶ ἠπίη εἰμί,
ἥ κεν λαὸν ἅπαντ' εἴ μοι δύναμις γε παρήη,
σίτου ἐπητανοῦ βιότου θ' ἄλις ἔνδον ἔοντος,
ἀσπασίως καὶ ἄμισθος εὐδοῖα περιστέλλαιμι
[ἐν λέκτρῳ λέξασα ταμηλεγὸς θανάτιο
αὐτῆ, ὅς κε θάγησι βροτῶν καὶ πότμον ἐπίσση]
ἄλλ' ἔκ τοι ἔρέω σὺ δ' ἐνὶ φρεσὶ βάλλεο σῆσιν"
— ὅσσε δέ οἱ Πεζυγείφον ἐσέδρακον ἀσκελὲς αἰεὶ—
" 'κείνοισιν γὰρ πᾶσι πιφασκομένη ἀγορεύω
εἴτ' ἔνδρ' εἶπε γυναίχ' ὅτεω τάδε ἔργα μείμηλεν,
ὦ φίλε, τίπτε σὺ ταῦτα μ' ἀνείρειαι; οὐδέ τί σε χρῆ
ιδμεναὶ ἢ ἐθέλω πίνειν μέθυ, ἦε καὶ οὐχί·
εἰ δ' ἄγ' ἐπ' ἐσχάρωφιν κάταθε δέπας ἠέδοιο οἴνου,
ὄσρ' ἐν χερσὶν ἔλω πίνουσά τε τερπομένη τε,
χείλεά τε προσθεῖσ' ὀπότεα φίλον ἦτορ ἀνώγη.'"
SAMUEL BUTLER.

* * *

THE new Norrisian Professor of Divinity, Dr. Moule, has published commentaries on the Epistles to the Romans,

Ephesians, Philippians, and Colossians, "Outlines of Christian Doctrine," and "Thoughts on Christian Sanctity," and numerous devotional and expository works.

* * *

FATHER EDMUND NOLAN, who is the Chaplain to the Roman Catholic undergraduates at Cambridge, has submitted to the Degree Committee of the Special Board for Divinity, as an advanced student of Trinity College, a dissertation dealing with a manuscript in the University library of an unedited English martyrology. Along with this he presented the proofs of an edition of two medieval Greek grammars prepared by him for the University Press. The Degree Committee has judged these to be "of distinction as records of original research."

* * *

AN address on "Remedies for the Needless Injury to Children involved in the Present System of School Education," which Dr. Clement Dukes delivered before the Incorporated Association of Headmasters last January, is printed by request (Rivingtons). The writer prescribes much shorter hours of work and longer hours of sleep than at present obtain.

* * *

AMONGST other reprinted addresses we have that of Mr. James Stuart, M.P., on his installation as Lord Rector of St. Andrews (Macmillan); a speech by Lord Balfour of Burleigh at the opening of an industrial school in Edinburgh (Blackwood); and two papers read before the Library Association by Mr. John Ballinger, on "The Public Libraries and the Schools" (Henry Sotheran).

* * *

THE recurrence of "Richard II." as a "set subject" this year brings us sundry helps to the study of the play and its period. Amongst them is Mr. Cyril Ransome's "Short Study," extracted from a volume which was noticed in our columns on its publication by Messrs. Macmillan. Miss Beale, of Cheltenham, has reprinted a translation of a "French Metrical History of the Deposition of Richard the Second," made by the Rev. John Webb some seventy years ago (Bell & Sons). Mr. Webb was a minor canon of Gloucester, but it is not correct to speak of him as Canon Webb.

LITERARY INVENTIVENESS IN SCHOOL-CHILDREN.

AT the Members' Evening Meeting of the College of Preceptors, on March 17, the chair having been taken by Mr. George Brown, Mr. H. HOLMAN, M.A., delivered a lecture on "Literary Inventiveness in School-Children."

MR. HOLMAN said that there was very grave danger with regard to the education of children that, in many cases, the mental development might be arrested, if not perverted. Unless they had a satisfactory knowledge of the child's mind, and the general development of the mind, they might feed it with the wrong material, or stimulate it in the wrong direction, or even train it on the wrong lines. Again, they might attempt too early to develop a certain kind of mental power, a certain kind of mental taste, or a certain kind of emotion. On the other hand, they might leave it till too late before beginning to endeavour to stimulate, to strengthen, and to make skilful, certain mental powers. The result of either of those methods would be that they would practically arrest the mental development, if not do worse, and pervert it, or even cause it to be diseased. It was necessary that they should have such a general notion of child mind and child development that, at least, there should be a minimum danger with regard to this matter. He was inclined to think that it was because of a want of knowledge of this in the educational system that in England they had too few adults; by which he meant that grown-up people were too much children in many respects, and with regard to many of the practical duties and problems of life. A typical instance of this was the dread which many parents had of their children. They looked at them as if they were strange and even dangerous little animals. He remembered an instance of a lady stopping an express train because she had dropped her handbag out of the window. This was an instance of a want of a well balanced mental development. From what he had seen, heard, and read, he believed that in America they had too few children; the boys and girls were all too much like men and women before they had time to be infants.

Dealing with what he called the "constructive power of mind," or aggressiveness of mind, with regard to special conditions and special

material, Mr. Holman said there were one or two postulates which it was well to remember. They would all be agreed that the truest and best progress in education was based on material personal experience. Actual positive personal life gave actual positive personal knowledge, more or less accurate, more or less full, more or less complete; but, at the same time, more or less erroneous. Still, it was that which had come to the individual, and it was, in a true sense, a real part of the individual, and that it was which was the basis of anything like true and sound education. Given that kind of actual personal experience and personal possession of something, then the second step was that one should make a rational use of it; that one should, so to speak, rationalize the empirical and train the mind on what happened through the body to the mind; that one should search into that which the mind had by its reflective power, and get the best mental value out of it. To make clear what he meant, he would take the case of teaching grammar. The actual personal material experience in that case was the child's own language, which it had used for many years for all purposes, and to a very considerable extent. All the thought activities which language expressed were real and actual to the child. That was the empirical basis. What one had to do was to lead the child to see for itself what it had been doing, through language, with regard to thoughts. To give an example. Suppose they had a class which was going to deal with the definition of a sentence. He would say to the children: "Do you know what sentences are?"—"Yes." "Where have you seen them?"—"In reading books." "Have you ever heard of them?"—"Yes." "Where have you heard of them?"—"When we talk." "Can you define a sentence?"—"No"; they cannot, and they immediately stop there. Then he would say: "Can you make a sentence for me?"—"Yes"; and he would have a dozen or so sentences made. Upon asking where they made the sentences, the reply would be: "In our heads—in our brains—in our minds." Accepting the last answer, his next question was: "What was it when it was in your minds?" To which the reply would be: "It was thought." The next question would be: "Could I know it when it was a thought?" Answer: "No." "What did you have to do? How could you tell me?" They would say: "In a sentence." "What sort of a thing did you use to make up a sentence?"—"Words." "What did you do with your thought, so that I might know it?"—"We told it out to you in words." That was an answer which he actually got from a child; and it seemed an admirable way of expressing the actual fact. Upon asking what a sentence was, he was told that a sentence was a thought told out in words. There one had the actual knowledge and personal experience to express thought.

Personal life was the bed-rock of true education. No doubt many had read certain articles which appeared in *Hand and Eye* with regard to the imitativeness of school-children, where it was shown by experiment that where you asked children to reproduce imitatively there was an overwhelming tendency to change in the process of reproduction. Unusual ideas are replaced by usual ones; the unknown by the known; the indefinite by the definite; the complex by the simple; and book-language changed to colloquial language. For instance, "a pony and cart" were, by an East-end child, changed into "a donkey and barrow."

The lecturer then gave several interesting examples of essays and descriptions written by school-children, both boys and girls, in illustration of what he had been saying, and also of another stage of the development of inventiveness, which he called inventiveness through elaboration, or working from incomplete suggestions; and the third stage, which was inventiveness proper, or spontaneity. In the three stages which he had roughly sketched, there was evidence of the powers of observation and of construction which was really striking, and which might be said to be overwhelming evidence of the native activity of the mind. There were also in the essays to which he had called attention many traits of personal character and many evidences of personal experience and influence in the individual life. The original powers and tastes of children were also shown, and, with such a knowledge of children, teachers would be in a better position to deal with them wisely, not to say more completely and satisfactorily.

The facts to which he had referred pointed out certain definite conclusions with regard to school work, namely, that the inventive capacities of children were not sufficiently employed; that they were being treated on imitative lines when they should be treated on inventive lines. Schoolmasters did too much for children, and allowed them to do far too little for themselves. This resulted in a great waste of time and opportunity, and also in a great waste of mental power in the individual, and great waste of self-development and self-realization. Surely the moral of the whole was, "Study the child." That way education lay. They ought not to study methods too much. Method should not be studied except in direct relation to the study of the child. We should study children first through types, then as a class, and afterwards a child in particular: first through the type and then through the individual. The overstudy of method is the worst form of cram, even though the method be intelligible and based upon scientific principle. The person who studied method and not the scientific principles and the material to which the scientific principles applied was likely to go along the road of the crammer. Taking teaching as a profession, they had it in their hands to make it a mere mechanical trade or a noble profession.

So far as his experience went, it was in most cases a mechanical trade, more or less intelligent, more or less earnestly conducted, more or less successful; but, if they wanted to make it what it should be, namely, a profession than which there was no higher or nobler one, none more practical, important, or valuable, they would have to study the child, and not only to study the child, but to study themselves. A person who knew not himself in a reasonable sense was not the individual to know a child in a reasonable sense. In conclusion, he might repeat the maxim which he had given before in that room: "Man, know thyself; teacher, know thy pupil."

The CHAIRMAN said he had for a long time felt that in the educational systems of the day there was such a rush for knowledge that inventiveness in children was largely killed by thrusting upon the pupils information and knowledge which they were expected to reproduce in a mechanical way to the detriment of true inventiveness. If he might put it in the words of the lecturer, there was not the study of the child in the present day, but there was too much study of the subject. This was not so much the teacher's fault as that the circumstances which surrounded him and led him to be impatient; that he felt he had to thrust into the child's mind a certain amount of knowledge in a limited space of time. In the hurry to do it, he poured instruction into the child's ears at too rapid a rate; and the tendency was to displace that thoughtfulness and leisure in the brain, which were requisite for true inventiveness. He considered the most valuable part in the training of children was the practice of essay-writing. The inspectors of the present day were following lines very different from those formerly followed. The idea was now to give greater freedom to the teacher, to educate rather than to instruct; and greater freedom was given to the inspectors to test education. This was a return to a sensible method, and the country was at last returning to methods which must commend themselves to those who had studied child life, and seen the mistakes made in the past. There was a danger with regard to secondary education lest the State should foist upon the nation a cramped system. The Education Department, in recognizing their mistakes in the past, were now disposed to adopt a more sensible method.

A vote of thanks to the lecturer concluded the proceedings.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on March 15. Present: Sir Philip Magnus, Vice-President, in the Chair; Mr. Brown, Miss Dawes, Mr. Eve, Rev. Dr. Hiron, Mr. Leatham, Mr. Millar Inglis, Mr. Milne, Mr. Pinches, Rev. Dr. Poole, Mr. Reynolds, and Mr. Storr.

The minutes of the last meeting were read and confirmed.

The Secretary reported the death of Mr. J. F. P. Massé, one of the examiners in French.

The Report of the Examination Committee was adopted.

The following persons were elected members of the College:—

Miss M. E. Courtice, Fairholme, Belle Vue, Portishead, Somerset.

Miss L. Forge, Bute House, Victoria Road, Deal, Kent.

Mr. W. H. Hill, M.A. Lond., Woodview, Archway Road, Highgate, N.

Miss L. M. Larcombe, A.C.P., 23 Marlborough Road, Dalston, N.E.

Miss E. Lovsey, A.C.P., Beverley House, Ilkeston.

Miss J. Owen, A.C.P., Fulham Park College, Dornclyffe Road, S.W.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—Bernon's New English and French Dialogues; First Steps to English; Shall and Will.

By C. J. CLAY & SONS.—Breul's Goethe's Iphigenie auf Tauris.

By W. B. CLIVE.—Low and Wyatt's English Literature, 1660-1882; Woodhouse's Cicero de Officiis, Book III.

By MACMILLAN & Co.—Loane's De Vigny's Cinq-Mars; Morris's Byron's Child Harold's Pilgrimage, Cantos I.-IV.

By the UNIVERSITY EXAMINATION POSTAL INSTITUTE.—Cambridge Higher Local French and German Papers; Dodd's History of France, 1180-1814.

Calendar of Queen's College, Galway.

List of Fellows, Members, &c., of the Royal College of Physicians of London.

HUMOURS OF TRAINING-COLLEGE LIFE—A REMINISCENCE.

A TRAINING COLLEGE, it may be thought, is surely one of the last places where one would look for humour, or, if such a thing does exist, it must needs be of the kind generally characterized by the adjective "grim." Strenuousness, hard work, an atmosphere of severe and lofty idealism—for these one is prepared; but for humour?—No; better look elsewhere for that. Life is a serious affair for serious persons within these walls, and matters of high moment are their sole concern. So it may seem: yet even to the life of a training college there is a humorous side, and unhappy indeed is the lot of that student who has no eyes to discern it, though it is undeniably easier to see from

a distance than at a nearer view. To begin with: is it not rather a humorous idea that a training college is a place where women are prepared for a profession which men enter by reason of a certain Heaven-born fitness peculiar to their sex? Men teachers are born, it seems; women teachers are made, if one may adopt the well known saying. It is true that I have never heard this definition of a training college openly held and expressed; but, as far as secondary teachers are concerned, it is certainly implied in the attitude of ninety-nine schoolmasters out of every hundred in this enlightened country, and in the failure which has hitherto attended all efforts to start training colleges for men. This, however, is by the way.

Looking back on her college career, in a critical temper of mind, a student of my acquaintance was heard to say, reflectively and judicially: "Well, at any rate, it's a good preparation for life. If one has stood this, one can stand anything." It was not exactly a rose-coloured view to take of the case, but there was part of the truth in her summing up, at any rate. Doubtless the student in question had her mental eye fixed on the criticism lesson and kindred means of educational grace which form an important part of the "training" to which the student submits herself. These are excellent as discipline, but few there be who find them pleasant.

It has been suggested that to the list of ordeals recorded in ancient times—the ordeal by fire and by water—the present-day equivalent of ordeal by criticism lesson might well be added. To the training-college student fire and water are but trifles in comparison. It is probable that, as humanitarianism is on the increase, the wind of the criticism lesson is now somewhat tempered to the shorn lamb; but in my day the ceremonial was of the most awe-inspiring character, and was surrounded by an atmosphere of solemnity calculated to try the nerves of the boldest. First of all, came the choice of the victims. Each week two of our number were offered up as a sacrifice, and it was one of the excitements of a particular day in the week to scan a certain green-baize notice-board for the names of the ill-fated pair. I can still hear, across the years, the sighs of relief from the respited students, and see the pallid faces of the two on whom the lot had fallen.

There was a curious custom among us whereby each victim had a sort of second, if not exactly to hold the sponge during the fray, to support her comrade in the hour of trial by accompanying her to the place of execution, pinning up her maps and pictures, and seeing that all the preliminary arrangements for the lesson were duly made. Then came the fateful moment, when the student, left entirely to her own resources, stood before the dozen children chosen to be the target of her remarks. Critics to right of her, critics to left of her, critics all round her—principal, college lecturers, fellow-students, and possibly, an interested spectator from a foreign country come to enjoy the spectacle. Who that has ever passed through the ordeal herself can forget it—the entrance of the children; the forced cheerfulness and nervous smile of the teacher; the demure faces of the class, who are, to all appearances, little angels come to earth to smooth the path of budding teachers? Occasionally all goes well. The student is a good teacher and has decent control of her nerves. She knows her subject, and disdains to remember the pencils of the critics. She does not get flustered by unexpected questions on the part of the pupils, or by their unexampled density in seeing her points. But nervousness sometimes deprives her of her wits, and, if the explanation she has prepared beforehand does not succeed in explaining, she gazes blankly and piteously at the children, and repeats her former remarks with a persistence evidently born of the belief of the captain of the Snark Expedition—"What I say three times is true." The keen observer can, at this point, discern a malicious twinkle in the eyes of those good little girls. The teacher's extremity, it is to be feared, is their opportunity, and she founders deeper and deeper into the mire, and the lesson closes in a deadlock or a fiasco. Over the subsequent criticism of the various critics let us draw a veil. These things may be good for the strong; but for weak and timorous mortals they are sore trials. It is not easy to teach one's best in such a fierce blaze of publicity—or so some think who are not reckoned among the failures.

But criticism lessons are not, happily, matters of everyday occurrence. The steady round of teaching in the schools is the ordinary testing time, and here the note of high tragedy is rarely struck. I am sure that the vision of fifteen earnest young women hurrying along the muddy streets off Tottenham Court Road, with trays of sand, bags of vegetables, fish, ice, models, stuffed birds, and pictures, must have cheered many sombre lives in that sombre neighbourhood. These things were, of course, "illustrations," designed to make the way of education easy and delightful to the youthful Londoner. And certainly the children in the crowded schoolroom where we taught did appreciate our efforts to instruct and interest them. Their ordinary teachers did not tempt their intellectual appetites as we did, and, whereas we were "only students" to the more genteel young ladies of the other school, we were known as "the ladies" to the grimy little creatures in the standards of St. —'s. They grinned with delight at the pictures of Westminster Abbey and the Tower, and became wildly excited over the elementary physics lesson, in which ice, test-tubes, and bulbs of mercury played a fascinating part.

One class of infantile children I well remember. They were having a course of object-lessons on vegetables, and their delight in the gradual unfolding of the kitchen onion was only equalled by the pleasure which they got from the "little path" which they found running down the middle of the rhubarb stalk. Their enthusiasm over the beauty of the onion almost made one forget its strength—and this is saying a good deal, it will be admitted.

Do not mistake, however; it was no primrose path that we trod. To be one of half a dozen students teaching simultaneously in the same room is by no means an easy position, especially in hot weather. To the inscription over the school portal: "Holiness unto the Lord," which met our eyes as we entered, we should have liked to add the further words: "Cleanliness is next to godliness." But even outside the courts off Tottenham Court Road one remembers that it takes a world of water to be clean; and, no doubt, our little pupils did their best. But the best was but stuffy—in the mass! Only one who has tried it knows the tremendous physical and mental energy necessary to hold the attention of a class of children in a room where all sorts of interesting lessons are going on around them. Like the Sunday afternoon orators in Hyde Park, you had to talk down rival speakers and compel the attention of your own audience by sheer energy of mind and strength of lungs. If one happened to be feeling a little dull some morning, it was difficult not to resent the aggressive liveliness of one's neighbour, waxing eloquent on the habits of the oyster or the early life of a broad bean, with illustrations. If not skilled in drawing, the teacher of Standard IV. could not help feeling that the wooden-looking duck sitting awkwardly upon her own blackboard cut but a poor figure by the side of the life-like bird produced in a few masterly strokes by the chalk of Standard V.'s teacher. It was impossible to stifle the conviction that Standard IV. saw and appreciated the difference, and were making invidious comparisons. These things were somewhat depressing, and led one to take gloomy views of one's educational career for the rest of the afternoon. But real, thorough-going enthusiasm prevailed over all these minor difficulties and distractions, as in the case of an ardent student who was discovered by the wandering critic, grasping a herring in each hand, holding a class of children perfectly spellbound by her eloquence, and entirely unconscious of the growing fishiness of her hands and the horror-struck expression of the critic's face. These little Londoners were a curious mixture of shrewdness and ignorance. Their notions of country life were most pathetic, and the only basis to proceed from in descriptive geography lessons was their knowledge of the lake in Regent's Park, and, in some cases, of Primrose Hill. From these known objects one had to build up conceptions of oceans and mountains by a process of multiplication, aided by imagination and pictures. "Have you ever seen a bird with three legs?" was the somewhat fatuous question of a nervous beginner, anxious to impress on the class the two-leggedness of these creatures. A pause for reflection. Then a hand went up, and a shrill voice piped up: "Yes, teacher; I know—a dog." Whereat the nervous beginner registered a mental vow not to ask that kind of question again.

But, if the children were interesting, so also were one's fellow-students, of whom there was every variety. There was the clever girl fresh from school; the ex-governess come to learn principles after not a few years of practice; there was the graduate and the fashionable young woman; the shy, nervous girl, and the self-possessed young person, who passed through every ordeal without a tremor. Then there was the encyclopaedic student, to whom we turned for facts in time of need; the political one, who kept us posted in current events; and the wit, who turned aside even the wrath of our college Boanerges in the day of storm and stress. There were the gushing students, who talked much of "the child" and "the teacher's mission"; and the cynics, who confessedly taught for bread and butter, pure and simple, and quite frankly avowed their belief in original sin. Towards the end of the college year, however, these two classes were usually seen to approximate. The idealists lost some illusions, and learnt by more or less bitter experience that, in Carlyle's words, "the ideal has to grow in the real, and to seek its bed and board there—often in a very sorry way. . . . The heroic, independent of bed and board, is found in Drury Lane Theatre only." The cynics, on the other hand, occasionally became so much interested in their work that they almost forgot that bread and butter was the chief end of the teacher, which, if you come to think of it, was a result of which any training college might be proud; for the conversion of cynics into idealists is one of its best reasons for existing at all.

THE MEMORIAL TO ROBERT HEBERT QUICK.

THE following statement and appeal reached us too late for publication last month:—

Amongst those who have encouraged and inspired teachers, and helped to raise and dignify their aims during the last quarter of a century, a high position will unanimously be accorded to the honoured name of Robert Hebert Quick. In all the public work he did for education, his pervading thought was to raise the status of the

teacher—not by artificial or extraneous means, but by giving him an enthusiasm for his work.

Mr. Quick believed that, to make teaching a real profession, it is necessary that teachers should be conversant with contemporary educational movements at home and abroad, and also with what has been done by individuals and by nations towards the advancement, not only of learning, but also of teaching methods and educational aims. Of his own work, "Essays on Educational Reformers," which was written to supply the necessary historical material, it may be said that probably no educational work has been more widely acceptable to teachers, as interpreting the best of what has been said and done in teaching since the Renaissance. The book has also won its place with general readers as an admirable literary production. When it is remembered that Mr. Quick published this book at his own expense, and sustained for many years a considerable pecuniary loss—a loss which was still greater in the case of his magnificent reprint of Mulcaster's "Positions"—it will be recognized that the courage which prompted the publication of these books in the first instance cannot be judged by their present high reputation. It is that unselfish devotion to the highest interests of education, that readiness to speak the right and best word as he knew it, even if those who listened were few, that should make the commemoration of Mr. Quick's work a privilege to those who are conversant with what he has done, and with that spirit of the learner and the teacher which he so excellently combined for the public service.

Mr. Quick gave the introductory lecture on education in the University of Cambridge on October 18, 1879, when courses of lectures on education were begun in an English University. This fact emphasizes his historical position as a pioneer in the establishment of education as a University subject. In that address—"The Schoolmaster, Past and Future"—Mr. Quick said: "The work of the schoolmaster is, I maintain, a very important work. If this is granted, it will follow that any science which influences that work is an important science. If such science exists, it should be studied; if it does not yet exist, but may exist, we should endeavour to search it out."

Words like these, spoken on an historic occasion, form a landmark in the movement for the training of teachers, and it behoves his contemporaries to show that they did not pass unheeded, and that the splendid services which he so persistently and so modestly rendered to education were not unrecognized.

It has, therefore, been felt by many, who regret that no such step was taken at the time of his death in 1891, that the forthcoming publication of his "Literary Remains," by the Cambridge University Press, furnishes a suitable opportunity for raising some memorial to one whose name is held in so much honour, both here and in America; and it has been suggested that such memorial could take no more fitting form than the establishment of a Quick Memorial Library at the Teachers' Guild—an institution with whose aims and work he so fully sympathized, and in which there already exists a nucleus for such a memorial in the nine hundred volumes on modern pedagogy given to the Guild by Mrs. Quick in 1892, and in the valuable collection of works on historical pedagogy which she shortly after placed in its library on loan, and of which she is prepared to make a gift (with due guarantees against its dispersion in the event of the dissolution of the Teachers' Guild) at the request of the Memorial Committee.

It is further suggested that, if sufficient money—say, £500—be subscribed, the whole sum should be invested, and the interest only be devoted to the purchase of books, so that, if possible, the memorial should be permanent.

Subscriptions, marked on envelope "Quick Memorial Fund," may be sent either to John Russell, Cripplegate, Woking, or to Prof. Foster Watson, University College of Wales, Aberystwyth.

The statement is signed by Henry Barnard (U.S.A.), H. Courthope Bowen, Sophie Bryant, H. Montagu Butler, Nicholas Murray Butler (U.S.A.), C. Colbeck, J. Llewelyn Davies, Edward Dowden, A. S. Draper (U.S.A.), J. G. Fitch, G. Stanley Hall (U.S.A.), G. H. Hallam, William T. Harris (U.S.A.), Elizabeth Phillips Hughes, David S. Jordan (U.S.A.), S. S. Laurie, Edward Lyttelton, Frank E. Marshall, J. M. D. Meiklejohn, Joseph Merriman, Caroline E. Rigg, Michael E. Sadler, Francis Storr, James Sully, James Ward, Alice Woods, W. H. Woodward.

REVIEWS.

A SAFE GUIDE.

Demonstrations in Latin Elegiac Verse. By W. H. D. Rouse, M.A. (Clarendon Press.)

To the question: "Are we to go on with Latin verse?" we have often been tempted to reply: "No, it is not worth while, unless the teaching can be made more efficient." Not that the elements of the thing are difficult to acquire, or are an indifferent training for the pupil. On the contrary, few forms of mental discipline are more exacting or more stimulating to the young learner than the attempt to arrange words in a certain rhythm,

with due regard to the rules of language. But, after acquiring these elements, is it then worth while to "go on"? And it is in the higher stages that teaching is apt to be entirely unsystematic, and the attempt to learn for oneself is too often baffled.

The fact is that the niceties of elegiac verse, the style and method of the Latin poets, must be taught, and taught with real intelligence. At present, what generally happens when the pupil is able to write verses of some sort—generally in a "wooden" and prosy manner, is that passages of English are read out for him to twist into Latin somehow. He produces his copy, and then a fair copy is dictated. This fair copy, the work of a recognized scholar, is often itself a poor thing at best. The pupil's copy is returned to him with corrections, and perhaps some alternative suggestions. But all this really takes him no further. He is no nearer to understanding the real art. In time, when he is soon to go to the University, perhaps, it is too frequently discovered that the verses he produces are scarcely of the standard that is required in the "Hertford" examination, or the Civil Service competition. So, as a remedy for an unsatisfactory state of things, he is made to do an increased quantity of verses, and it never seems to occur to the master that, if the boy made verses all day and all night, he would be no nearer to writing tolerable Latin verse. There are schools in which some sixty Latin lines are written in the highest forms every week, and yet not one word of real teaching—of teaching that can bear fruit—is attempted. The result is a prodigious waste of precious time, leading often to disgust and to failure in the high classical examinations. There is no subject taught in the highest forms with such lamentable lack of intelligence as Latin verse: and, above all, as Latin elegiac verse. It is certain that, with care, the secrets of Ovidian verse can be discovered and laid bare to a pupil of ordinary capacity. It does not, of course, follow that all students will be able to write good elegiacs even then. There is no doubt that aptability for Latin verse is confined to a few. But at least these few would write well, and even the many might produce tolerable verses, or, at the worst, much better verses than they produce now.

Mr. Rouse has, with unsparing labour and great ability, produced a really admirable manual on the elegiac of Ovid. He has classified in a most valuable introduction a large number of examples illustrating the various devices and the rhythms employed by the poet in his best work. This introduction is followed by a large selection of passages which Mr. Rouse goes through, showing line by line how the English may be effectively done into Latin. Many of the renderings are extremely happy; and the author, like the practised teacher that he is, contrives to make the lesson really interesting, often even amusing. Most heartily do we commend his work, and we trust that its wide adoption will do something towards reducing what is at present chaos to something like order.

As a second edition must surely be soon called for, we suggest that Mr. Rouse should include in his introduction some paragraphs on elision, and on the writing of passages in correct form without a long pause at the end of the pentameter. This latter point is one well worthy of attention, for Ovid uses the device much more frequently than is usually supposed—and, moreover, with definite restrictions that can be tabulated as clearly as Mr. Rouse has tabulated so many other laws. The author has, indeed, deserved well of all who are condemned to write elegiacs.

A HISTORY OF ENGLISH INDUSTRY.

Landmarks in English Industrial History. By George Townsend Warner, M.A. (Blackie.)

Mr. Warner has not shrunk from the very laborious task of surveying the whole course of England's industrial and commercial progress, selecting the "chief landmarks" in each age, and grouping around these their causes, concomitants, and consequences. It would have been much easier for him to write a much larger book on the subject. Hitherto the main attention has been drawn to the political and constitutional aspects of English history; but a deeper analysis has brought into just prominence the economic features of the life of the people. Mr. Warner's handy volume will be found exceedingly useful and suggestive, and it will probably send the careful reader to larger and more detailed works, if not to the basal documents themselves. The work is written in a lucid and simple style, and the author has prepared himself for the task with obvious diligence. There ought to be room for this instructive book in the curriculum of our schools. It will certainly be welcomed by intelligent youths that have left school but have taken with them

a liberal desire to continue their education, for bettering their ideal of citizenship as well as for personal satisfaction. Mr. Warner reaches the middle of his work before he is quite at the end of his account of the legislation of Elizabeth. If he seems thus to have cramped the exposition of the modern developments, it has yet to be remembered that the preceding centuries form a long stretch of time, and that it is historically important to show the beginnings and successive stages of progress which have brought us gradually into the existing conditions. At the same time, he has anticipated the later period a good deal, by reason of his treatment of the matter by subjects rather than by strict adherence to chronology. The manorial system, the beginnings of town life, the Exchequer system of the Plantagenets, the face of England in the great period of the three Edwards, the Black Death, later developments of towns and guilds, sheep farming and the great woollen industry, the mercantile system—these main heads indicate the lines of the earlier half of the work. Then come the important legislative reforms under Elizabeth—the expansion consequent on an honest coinage; the Act of Apprentices, bringing proper payment of labourers and better work; the Poor Law, diminishing idleness and vagabondage and crime, and recognizing a great principle of social interdependence. The story of the trading companies and the beginnings of colonial expansion have all the interest of a novel of Imperial adventure; and one regrets that it must be so severely condensed. The survey of English industries in the latter half—the bigger half, rather—of the seventeenth century is full of points of extreme interest, some of which have a clear bearing on modern questions. Thus, the history of the influence of foreign incomers, refugees, and others, might well suggest hesitation to some of our politicians, in their schemes for differential treatment. It needs but mention the enormous reclamation of fen lands by Cornelius Vermuyden, a Dutchman, and the immense economic impulse communicated by the Huguenots. The rise and progress of banking is not devoid of romance, apart from its extensive influence in the expansion of industrial and commercial enterprise. The chapter on the growth of Greater Britain brings out forcibly several principles that are even yet in need of constant watch and ward. The chapter on "Machinery and Power" opens out a still wider Imperial influence; and the Agrarian Revolution has not yet entered on its last phase. Mr. Warner is careful to point out, as an essential part of the study, not only the actual facts of change, but the social effects resulting; and this we take to be a most useful, as well as necessary, element in his task. His corrections of the absolute application of *laissez-faire* must always be borne in mind; and he does well to insist on fairness in the exchange of labour as well as on freedom in the exchange of commodities. He is scarcely innocent of the misleading, if picturesque, heresy that trade follows the flag. But it is very seldom one is inclined to question his conclusions or to doubt his judgment in working out his materials to scale. Taken altogether, this useful volume is a piece of honest and skilful workmanship.

THE STUDY OF VOLCANOES.

"The Progressive Science Series." Edited by F. E. Beddard, M.A., F.R.S.—*Volcanoes, their Structure and Significance.* By T. G. Bonney, D.Sc., LL.D., F.R.S. (John Murray.)

The names of Daubeny, Scrope, Judd, and Geikie will naturally occur to the scientific reader in connexion with the later literature of volcanoes; but, as Dr. Bonney remarks, the works of three of these, though not yet superannuated, belong to a generation earlier than our own, and, in the process of physical research, a lapse of twenty years or so is ample justification for a new study of a subject which cannot be said to have approached a condition of finality. Certainly the volcanoes themselves have not been idle in the last twenty years, and many new conditions have been added to a problem which keenly interests and, to a large extent, baffles the scientific inquirer.

What, precisely, is the cause of volcanic eruption? Beyond the obvious facts of the permanent fusion of the earth beneath its thin superficial crust, and the constant production and escape of steam, what are the determining causes of the phenomena with which we are so familiar? How shall we account for, and what should we infer from, the great circle of eruptive activity which is drawn round the world from the extreme point of South America, following the whole western coast of the twin American continent, along the Aleutian Islands, through the Japanese and Philippine Islands, by New Guinea and a string of South Pacific islands to New Zealand, and so down to the Antarctic Circle

again? The chain of this mighty rift in the world's crust is practically unbroken, and beyond it—except for the great diverging cleft to Java, Sumatra, and Burmah—the other volcanic manifestations are, confining ourselves to present activities, isolated and comparatively few in number.

Dr. Bonney deals successively with the "life-history" of volcanoes, their formation and products, their geological history and distribution, illustrating his text by a series of excellent plates. In a final chapter he discusses the various theories which have been advanced in explanation of recorded facts, such as the chemical origin of the molten rock which issues from the craters in the form of lava, and the suggestion of Daubeny that descending water, resolving itself into its elements, supplies oxygen to the previously unoxidized bases. This would certainly produce heat and fusion, with consequent eruption. "But what becomes of the hydrogen? Where are the flames?" Daubeny was asked; and, as flames are not conspicuous in volcanic eruptions, he abandoned his hypothesis, perhaps somewhat prematurely.

Some have supposed magnetic currents to produce local melting of the rock. Such currents, undoubtedly, traverse the earth's crust, and melting metals in the electric arc is a familiar experiment, often of great commercial importance; but there is not evidence to show that these currents are sufficiently localized or strong enough to produce any material elevation of temperature in the rocks through which they pass. Indeed, in the present state of our knowledge, explanations of this kind are regarded with just suspicion as being only *ignotum per ignotius*, a process unjustifiable in any scientific investigation.

We have found this volume very attractive and suggestive, and that, we believe, will be the general verdict of its readers.

CLASSICAL METRES.

On the Use of Classical Metres in English. By W. J. Stone. (Frowde.)

In this very interesting exercise the author attempts to demonstrate that classical metres in English should be written according to the laws of Greek quantitative prosody. In order to understand his argument, it will be well to set down, in his own words, the principles on which he relies. They are as follows:—

1. That accent hardly differs at all now and in classical times, and that, if it differs, the difference is in degree, not in kind.
2. That classical writers did not deliberately in reading make their verses read themselves, in the meaning of the modern phrase, and that their words so read would have sounded as monstrous to them as the word *unexpectedly* pronounced unexpectedly would sound in English.
3. That English words have a distinct quantity to any one who will attend to it, and if pronounced accurately.
4. That the accent in English does not lengthen the syllable at all.
5. That our English ears are so vitiated by the combined effect of reading English accentuated verse and reading Latin and Greek without the true pronunciation or accentuation, that we are, in general, unable to detect quantity.

He gives some specimens of quantitative verse constructed on his principles, and of these specimens we will set down a rendering of Callimachus' celebrated epigram, *Ἐπέ τις, Ἡράκλειτε*:—

Come hither, Heraclitus, a word of thy death, awaking
Me to sorrow, and I thought upon how together
We would see the sun out sweet-counselling: all that is of thee,
Dear Halicarnassian, long, long ago is ashes;
But thy nightingales will abide with us; on them of all things
Else the coming ravisher will not ever set his hand.

Mr. Stone regretfully remarks that he hardly expects to carry his readers with him, and we must confess that we find ourselves unable to agree with his main proposition. We think there is much of value in his pamphlet; but we believe that, in common with so many writers on prosody, he overlooks some important and indisputable facts. With regard to the first of his principles, we cannot help putting him a question. If the accent of English is essentially the same as the accent of Greek, how comes it that the Greek authors tolerate the clashing of a large number of unaccented syllables? Open any Greek author, and you find continually that there are sequences of five, six, or even more unaccented syllables; and, be it remembered, the grave accent does not count.

Again, the close relationship between Greek poetry and Greek music is wholly disregarded by Mr. Stone. He forgets that Homer composed for music, and, what is still more significant, that Greek music disregards the natural accent invariably, and

concerns itself only with longs and shorts. Hence, when Mr. Stone says that the ancients did not make their verses read themselves, the answer is: Perhaps not—neither did Milton, for that matter. But the Greeks did make their verses sing themselves, and, when sung on the Greek principle, some of Mr. Stone's verses—all those, in fact, in which the natural accent clashes with the verse accent—would be grotesque. The only inference that we can draw from this is that accent in Greek was something essentially different from accent in English.

But, further, Mr. Stone does not take account that the theories of Greek *prose* rhythm depended, no less than the theories of Greek verse rhythm, on quantity, not on accent. What use would a prose rhythm have been that was only apparent to the eye, and was not apparent to the ear? Be it remembered, too, that it is the Greek orators who concerned themselves with rhythm, and they wrote for the listener, and—like the lyric and epic poets—only in a minor degree for the reader.

Although, then, we are quite open to conviction, we must confess that, for the present, we remain unconvinced. Mr. Stone seems to think that strict quantitative verse in classical metres ought to exist side by side with accentuated verse—we are not quite sure of his doctrine on this point—but it seems to us that a double system of versification would be extremely inconvenient. Mr. Stone, we are informed, reads his own verses in a manner that affords pleasure to the ear; but we do not see how this can be done without sacrificing the rhythm in all cases where there is a clashing of accent, and unrhymical verse seems to us to be not verse.

IS ADAM SMITH DISCREDITED?

"Famous Scots Series."—*Adam Smith*. By Hector C. Macpherson. (Oliphant Anderson & Ferrier.)

Lord Salisbury has said that we are all free-traders in these days; and doubtless the statement is true, if nothing more is intended by the term than that we all believe, in some vague general way, that trade flourishes best when least hampered by restrictions. We have, however, lost our fathers' whole-hearted enthusiasm for political economy and its train of general propositions. It is not because we believe, with Ruskin, that political economy is not a science, in the true sense, but because the intense desire for scientific generalizations, common to all the earlier writers on the subject, led them into the statement of rigid laws before the relations and effects of different conditions of social and industrial life had been sufficiently determined. No better way of testing the truth of the conclusions of the earlier writers could be found than by applying them to the novel conditions of a later age. It is by such a method alone that a too rigid law, arrived at by logical deduction from insufficient data, can be declared untenable.

In this book, Mr. Macpherson has, to some extent, attempted such a criticism of "The Wealth of Nations"; and he claims that the main principles underlying that work harmonize with the conclusions arrived at by Herbert Spencer, in his application of the theory of evolution to social development. This, however, he has not adequately shown. He has attempted too much within his allotted limits, and, consequently, in its present form, the book is not satisfactory as a biography nor complete as a review of Adam Smith's philosophical work. This is to be regretted, for Mr. Macpherson shows himself to be admirably qualified for the latter and more important task.

Buckle suggested that the two principal works of Adam Smith—"The Theory of Moral Sentiments" and "The Wealth of Nations"—are complementary parts of one great scheme, in which he endeavoured to deal with human nature as a whole. The philosophers of the eighteenth century, whatever their deficiencies, seldom lacked comprehensiveness. Mr. Macpherson, with equal confidence, presses home a general principle and denounces severely the present-day mania for territory grabbing; but it is idle to preach to the man in the street the efficacy of cheap products and honest work to win new markets, when he sees more and more of the earth's surface girt with a ring of protective tariffs, making the cheapest and best wares of the producer dear to the consumer. As a true disciple of Adam Smith, he is no lover of trade unions. Doubtless the author of "The Wealth of Nations" would be horrified at the artificial clogging of industry which they involve. In his day, however, rings, monopoly, and the power of immense capital were unknown; and the reconciling of these with the interests of labour still remains unsolved, in spite of all the laws of political economy and Government Boards of conciliation.

GENERAL NOTICES.

CLASSICS.

The Hellenica of Xenophon, I. and II., edited by G. M. Edwards (Pitt Press), is designed "chiefly for those students who have already some knowledge of Greek, but are not advanced enough to grapple with the difficulties of Thucydides." Though we hold that there are more suitable subjects for such students than the dreary "Hellenica," there is no doubt that this edition will be of use to those who take a contrary view. We observe that in II. 3, 31, Mr. Edwards accepts with enthusiasm Dr. Postgate's ἀπολέπει for ἀποβλέπει of the MSS.—*ὁ κόθορνος ἀμύττει μὲν τοῖς ποσὶν ἀμφοτέροις δοκεῖ, ἀποβλέπει δὲ ἀπ' ἀμφοτέρων.* The emendation is, without doubt, very attractive and, perhaps, right; but we are not sure that it renders the sentence appropriate to the context in which it appears; nor do we see why the Greeks should have tolerated the "reversible boot" if its precise peculiarity was that it rubbed the skin off whichever foot you wore it on. On that supposition, a pair of "reversible boots" must, indeed, have been a thing to avoid.

The Medea of Euripides, edited by P. B. Halcombe (Blackie), is something of a novelty. The choruses are not given in the original, but only in a prose translation. We should have preferred to see both text and translation. There are brief notes and a vocabulary. The book is likely to enable young students to understand how a Greek play was presented.

Lower Latin Prose, by K. P. Wilson (Blackwood), is an intermediate book intended to cover the ground between a beginner's book and an advanced Latin prose. The editor proceeds systematically, dealing, first, exhaustively with the simple sentence, then with the compound, and, lastly, with continuous pieces. Thus, the first two parts are in the nature of what is generally called "a Latin course." The "simple sentence" is intended to accompany the reading of Cæsar, and the compound is to go with Livy and Cicero. This is a well planned book, the vocabularies are useful, and the teaching sound. We fancy that rather too much is contained in the volume, and that it would be better to divide the book into two, or even three, parts.

Lower Latin Unseens, by W. Lobban (Blackwood), is a selection of two hundred passages of prose and verse, intended to lead up to a higher volume in the same series. There are some hints on translation, which may be turned to good account by a careful teacher, but will probably be rather beyond the capacity of the pupil.

Demosthenes, On the Crown, edited by Evelyn Abbott and P. E. Matheson, is uniform with the two previous volumes of Demosthenes for which the editors are responsible. Consequently there is no critical appendix, and no adequate information about the text. Nevertheless, having suffered much from the other English editions of the speech, we are duly grateful to Messrs. Abbott and Matheson for a competent edition that is a great improvement on those hitherto in use in our schools. Almost any page of the commentary will demonstrate this superiority. Thus the word *πρόσχημα*, which may mean a pretext, but certainly cannot bear that meaning if the context in which it appears in this speech (§ 178) is correctly interpreted. The difficult passage *οὐδὲ γὰρ ὄν τευχεν ἦν* is reasonably dealt with, and, in all cases where doubts arise, the views of the principal editors are given and discussed. In § 104 we think that the note and reading of Rehdantz-Blass with regard to *συνεκαίθεκα* should have received notice, and that the reading *ἐν Μουρυχία* should not be retained without reason given. The book is certain to become the standard edition of the speech in England until—what may some day happen—a better shall appear.

Cicero, Philippic Orations, I., II., III., V., VII., edited by J. R. King (Clarendon Press), is a convenient volume, the notes and introductions of which are drawn mainly from the editor's larger edition of the whole series of speeches against Antony. Mr. King refers constantly to Halm's views, and his own are always worthy of consideration. Inasmuch as the merit of this edition has been already acknowledged, it is unnecessary to say more than that the volume, like that noticed immediately before it, is sure of a place in our schools.

Cicero, De Officiis, Books III., edited by W. J. Woodhouse (Clive), is a sound and useful piece of work. The book, though, of course, intended mainly for a particular examination, would prove a suitable introduction to the philosophy of Cicero to any University student, the more so as Mr. Woodhouse has himself provided the translation in the same series. Mr. Woodhouse very justly remarks that the late Dr. Holden's edition "mostly reproduces the notes of the German editors." Dr. Holden's books are much esteemed, and, to some extent, justly; but he was one of the most extensive "lifters" from the German that even English editing has produced. Often he merely translates his German authority, and not always correctly. It should be added that the Introduction includes some valuable data with regard to the style and structure of the period as used by Demosthenes.

SCIENCE.

"Arnold's Practical Science Manuals." Edited by Prof. Meldola.—*An Experimental Course of Chemistry for Agricultural Students.* By T. S. Dymond. (Arnold.)

The aim of one who organizes a course in any science for students who belong to some particular industry should not be to pick out such facts of the science as relate to that industry, as the greedy boy picks the plums out of the pudding, but to utilize the phenomena which form part of the everyday life of his students as the basis for his teaching. That is what Mr. Dymond has done, and we congratulate him on his success in dealing with a difficult problem. Technical education classes in chemistry in rural districts cannot do much better than follow the course here adopted.

An Introduction to Practical Physics. By D. Rintoul, M.A. (Macmillan.)

This excellent manual bears the stamp of the well managed laboratory on every page. Whether the subject is the measurement of a cylinder, the determination of a boiling point, or the parallelogram of forces, we always find clear instructions, which are just sufficient to make the pupil do his work properly, without giving him anticipations of his results, which are so apt to spoil the thoroughness of his work. We can cordially recommend this book to teachers of elementary science.

"Text-Books of Technology." Edited by Prof. W. Garnett and Prof. J. Wertheimer.—*Practical Mechanics.* By S. H. Wells. (Methuen.)

As a guide to the practical study of mechanics, this book should be of great value. From the beginning experimental and graphic methods of measuring forces are used concurrently, and the plan and method of the book bear evidence of careful thought and practical experience. The subject-matter covers the parallelogram of forces, moments, levers, elasticity, friction, ordinary mechanisms, hydraulics, fly-wheels, &c.

A Text-Book of Physics:—Sound. By J. H. Poynting and J. J. Thomson. (Griffin.)

This is the first published section of what should be an important text-book when complete. The portions we have read are very clearly written, and the names of the authors are a guarantee of the scientific accuracy and up-to-date character of the work.

An Introduction to Practical Quantitative Analysis. By H. P. Highton, M.A. (Rivingtons.)

We have here a well designed course of quantitative work, suitable for lessons of only one hour's duration. The instructions for the work to be performed are clear, many little details indicating the practical knowledge of the author.

"University Tutorial Series." Edited by William Briggs, M.A.—*A Text-Book of Botany.* By J. M. Lawson, M.A. (Clive.)

Mr. Lawson has combined in this volume a general and comprehensive introduction to structural and physiological botany with a special treatment of the types set for the London Intermediate and Preliminary Science Examinations. These types he elucidates both in text and by illustration, aiming, not unsuccessfully, at simple and clear exposition. The book has all the merits which we are accustomed to look for in the "Tutorial Series," being carefully prepared and produced, and practically adapted for the needs of candidates.

An Intermediate Text-Book of Geology. By Charles Lapworth. (Blackwood.)

Though founded on the well known work of Page, of which it constitutes the twelfth edition, the change of name from "Introductory" to "Intermediate" exactly expresses the change of scope in the present work. A large part has been rewritten, and considerable additions have been made, especially in foreign stratigraphy, so that the work is now well up to date, and the imperfections that marred certain portions of the previous edition have been removed. Either for the young beginner who has mastered the elementary notions of geology on the lines of Watts's book, or for the adult whose ideas have been gained in the work of a field club, we can suggest no better text-book than this for extending his knowledge. The conscientious which marks all parts is saved from dogmatism by the clear statement of rival views on disputed points, while it avoids the encumbrance of details which render many larger works unreadable.

"Organized Science Series."—*Advanced Inorganic Chemistry.* By G. H. Bailey, D.Sc., Ph.D. (Clive.)

This is a well planned and well executed sequel to the same author's elementary work. Instead of being a mere repetition of the facts required to be known, the book has a unity based on modern ideas of the constitution of matter. A list of suggested illustrative experiments is given in an appendix; while another appendix gives a better introduction to crystallography than we have seen in any book of the kind. The work meets the requirements of the Science and Art "Advanced Stage" syllabus, and we can recommend it to teachers of chemistry.

"University Tutorial Series"—*General Elementary Science*. Edited by W. Briggs, M.A., &c. (Clive.)

This second edition contains a few alterations and improvements, but not of a fundamental kind.

Arithmetical Chemistry, Part I. By C. J. Woodward, B.Sc. New Edition. (Simpkin, Marshall, & Co.)

This useful little book is somewhat enlarged in the present edition. As it gives advice on all points connected with the application of arithmetical methods to practical chemistry, it should be of value in any laboratory.

MODERN LANGUAGES.

Alfred de Vigny, Cinq-Mars. Adapted and Edited by G. G. Loane, M.A. (Macmillan.)

One of the best historical novels in the French language has been suitably condensed and carefully edited; it will, no doubt, be read with delight by hosts of boys. The hundred pages of text should not take up more than a term, as this is a book eminently suited for rapid reading. The notes are clear and to the point. We have noticed little that calls for remark. In the note on page 20, line 1, read "before a feminine adjective." Surely the "nearest English" for *en cuire* (page 45, line 3) is "we made it hot for him," or "he had a hot time of it." In the note on page 81, line 7, "one at a time" seems superfluous. But these are mere trifles; and we gladly conclude by congratulating Mr. Loane on producing a good book.

Ch. Perrault, Contes des Fées. (Relfe.)

Text, notes (of the conventional kind), vocabulary (very awkwardly arranged), and irregular verbs. The editor prefers to remain anonymous, though there is nothing reprehensible in his work; certainly it also has no conspicuous merit.

French Historical Unseens for Army Classes. By N. E. Toke, B.A. (Blackwood.)

We can recommend this book most warmly—it represents good and careful work and provides interesting and useful reading matter. It consists of 107 extracts bearing on the history of the last three centuries, fifty specimens of French literature, from Malherbe to Pierre Loti; short biographies (in English) of fifty-four authors; a brief outline of French history (thirty pages); and sundry biographical and literary notes. The book is well printed; and, altogether, may be regarded as perhaps the very best yet published for the use of Army classes.

Second German Exercises. By H. W. Eve, M.A., and F. de Baudiss. (Nutt.)

Mr. Eve's Grammar is well known, and used by many teachers. These exercises will, therefore, be welcome. They are the "Elementary Exercises" rewritten throughout. A Key is supplied by the publishers.

German Test Papers. By J. A. Joerg. (Sonnenschein.)

A book for the examinee; the kind of thing which will be perpetrated as long as examinations remain as they are. The book contains a large number of passages for composition, none for unseen translation; questions on grammar, of which we give the following samples:—"When do you translate 'what' and 'which' by *welches*, both in the singular and plural?" "Why can *Fürst, Graf, Held, Narr*, not be considered monosyllables?" [Why, indeed?] "How do you translate 'one's' standing before a substantive?" "Give the various translations of *state, condition, burn, appear, author, cause, leave, severe, continue, number, conquer.*" From Sandhurst papers Mr. Joerg has collected a number of questions on "literature" and "history," which had apparently been set for the encouragement of cramming. We have no liking for books of this stamp.

Fontane, Vor dem Sturm. Edited by Aloys Weiss, Ph.D. (Macmillan.)

Mr. Siepmann was fortunate in securing this volume for his series; for the "Roman aus dem Winter 1812 auf 13" is a good story well told, likely to interest young readers. It is furnished with brief and satisfactory introductions by Prof. Weiss, who has also written capital notes. The translations are good, as a rule; but, we refuse to accept "arbitrariness," "consequentialness," and "beautifulness." Is *senden* a strong verb (note on page 2, line 10)? *Ich anerkenne* (page 5, line 11) is a recognized provincialism. Page 8, line 10: add *Mod. German Feldstuhl*. Page 15, line 16: the form *Lichterchen* requires explanation. Page 26, line 28: substitute *Bände* for *Banden*. Page 37, line 26: the "hypothetical clause without *wenn*" becomes clear as soon as it is shown to have been a question originally. Page 49, line 19: the whole point of the explanation is lost; in accordance with a vow, Isabella wore her clothes until they became a brownish yellow. Page 54, line 18: "euophony" is a term no longer used by philologists. Page 73, line 3: in *Weg und Steg* there is rime, not assonance. Page 77, line 4: the adverb used to be *schöne*. We are surprised to see the note on page 82, line 7, in which Prof. Weiss recommends *derselbe*—what would the Allgemeine Deutsche Sprachverein say? Page 158, line 23: *voilà* is no longer explained as going back to an imperative. There is little to say about Mr. Siepmann's appendices. The fourth this time deals with word-formation, and contains some useful notes on the "suffixes of concrete sub-

stantives." Here also we miss an explanation of *Lichterchen* (cf. *Männerchen* and even *Geisserchen*); and what is the exact meaning of "stem *pa*" after *Vater*? The *ig* of *Essig* has nothing to do with the old suffix *-inc*; nor should *Loch* have been given under words with *-ich*, owing to the peculiar development of its *ch*.

Goethe, Iphigenie auf Tauris. Edited by Karl Breul, Litt.D., Ph.D. (Cambridge University Press.)

We have taken occasion before now to express our regret at the multiplication of editions of the same text; it represents a waste of energy, and is often merely due to the setting of a book for an examination. We have already several editions of the *Iphigenie* for use in English schools; but, when it was known that Dr. Breul was giving his attention to this play, the fresh contribution to our editions of the classics was awaited with great interest. Since he first came to Cambridge, some fifteen years ago, he has found time to edit many a text in the scant leisure which his manifold duties left him. There is a certain crudeness in some of the early work, but this was natural, and can only serve to increase our appreciation of his later books. We do not hesitate to say that the hopes entertained as to his "Iphigenie" were thoroughly justified. The volume before us takes rank at once as the standard edition. There is no need to insist in detail on its merits; for we confidently expect that every student of German literature in this country will read it carefully and gratefully.

Hints on Teaching German. By Walter Rippmann, M.A. (J. M. Dent & Co.)

This very simple and sensible little book includes "a running commentary to 'Dent's First German Book and German Reader.'" Mr. Rippmann sets out by comparing the "dead" method, the "translation" method, and the "living" method of teaching a language; and dwells on the use of pictures in association with new words. His hints are in most cases very much to the point, and well calculated to encourage the learning of German by English boys and girls.

Key to Appendices of "Sappho." By Otto Siepmann. (Macmillan.)

Mr. Siepmann very thoroughly and consistently carries out the essential ideas of his valuable "German Series." This Key to Mr. Rippmann's edition of Grillparzer's "Sappho" is, of course, supplied to teachers only.

A First Italian Course. (The Italian Principia, Part I.) By Prof. Ricci. Revised by Prof. Coscia. (Murray.)

This is a sixth edition of the late Prof. Ricci's Italian "Principia," containing grammar, exercises, delectus, and vocabulary; carefully revised by Prof. Coscia, of Oxford. There is much to be said for the "Principia" pattern, which implies a constant drill in the grammatical forms, combined with the constant formation of simple sentences in both tongues, the sentences from English into Italian corresponding in some measure with parallel sentences from Italian into English. The Italian words in the grammatical part are accented throughout. In the vocabularies Italian forms are compared with the older Latin forms; but the occasional references to Teutonic forms are not always happy or conclusive, as: *bugia*, "lie" (G. *böse*, "wicked"); *poltrone*, "coward" (old form, *poltro*, "lazy"; O. G., *bolstar*; E. *bolster*).

Russian Reader: Lermontof's "Modern Hero," with English Translation. By Ivan Nestor-Schuurmann. (Cambridge University Press.)

A very serviceable Reader, with the two texts on opposite pages. A little more, and the utility of the book would have been greatly increased. The editor believes in saving labour and in learning languages by early comparison of texts; and he recognizes that those who study Russian are, "for the most part, men whose faculties are more or less trained; and busy men . . . to whom time is of the first importance." Now, this would have been just the book for a busy, intelligent man, if the editor had prefaced it with ten pages on the Russian alphabet, pronunciation, and chief grammatical forms.

MISCELLANEOUS.

The Art of Writing English. By Prof. J. M. D. Meiklejohn, M.A. (A. M. Holden.)

In the course of his "Art of Writing English," Prof. Meiklejohn warns us against using too many superlatives. We hope he will pardon us if, just for this once, we say that his book appears to us the clearest, fullest, most practical, and most interesting handbook on the subject that we have ever read. It deals briefly and suggestively with all essential parts of the subject: punctuation, paraphrasing, essay-writing, letter-writing, *précis*-writing, the use of idiomatic phrases, English and Romance words, figures of speech, synonyms, precision, pith, emphasis, the diction of prose, and common errors. His method is to teach rather by example than by precept. For instance, in the chapter on "what a sentence is," only four general rules are laid down—viz., (1) The sentence must not be overcrowded with words or with ideas; (2) the right words must be used; (3) there must be a pleasant rhythm; (4) the sentence must have unity." These rules are then illustrated by examples, and the merits or defects of each are pointed out. This method of teaching through the concrete will be found of great value to the young student in such chapters as those on paraphrasing and essay-writing. In his preface the author modestly

says: "Whatever utility may exist in this book is to be found chiefly in its exercises." The exercises are very numerous and are all on practical points. We fully admit their utility; but we think that there are many other elements in the book for which both teacher and pupil will thank the Professor, more especially for the clear directions as to the material points to attend to and the simple rules for working at them. The principle of *common sense* is the basis of all. The teacher will approve the dictum that all exercises should be short, for "correcting exercises is the bane of the teacher's profession. It paralyses his mental powers and granulates the fibre of his brain." And the student is told—not in the chapter on *irony*—to credit even the examiner with common sense. We need hardly say the study of the best authors is constantly insisted on. "Imitate! imitate! imitate! and you will come out all right." This we have heard before. The practical value of this book is that it shows what to imitate and how to do it."

Manual of English Grammar and Composition. By J. C. Nesfield, M.A. (Macmillan.)

This volume contains a treatise on English grammar, with special reference to analysis and parsing, another on composition, and a third on the figures of rhetoric and the enlargement of vocabulary, a fourth on the main divisions of prose and poetry and prosody and poetic diction, and, finally, a sketch of the sources of our language and the principal ways in which each has influenced it. It is very carefully written; the illustrations are numerous and well chosen, and there are plenty of exercises. We cannot help thinking, however, that it suffers from an attempt to include too much in a small space. The type, for instance, though good, is smaller and the pages are more crammed than is desirable in a school-book. The opening section appears to us the least satisfactory. It begins with a chapter on the parts of a sentence, and goes on in chapter ii. to define the parts of speech. Moreover, though we are told a good deal about the *subject* and the *predicate*, there does not appear to be any definition of the *object* of a verb. The *subject* is defined as "the word or words denoting what we speak about." But we speak quite as much about the object as the subject. In such a sentence as "the cat ate the mouse," how will this definition teach a child that "mouse" is not the subject? The main part of the book, however, is not open to criticism of this character, and some parts of it are of unusual merit.

A Class-Book of Physical Geography. By William Hughes, F.R.G.S. Revised and largely rewritten by R. A. Gregory, F.R.A.S. (Philip & Son.)

We are glad to welcome our old friend, "The Outlines of Physical Geography," by Prof. Hughes, in a new form, enlarged and brought up to date. It has been practically rewritten. We look in vain for the somewhat magniloquent language of our old school-book. Such phrases as: "The Sacred Scriptures, whose testimony is received by all men of unclouded minds," &c.; and "Man, the lord of creation," have disappeared, and are replaced by the more prosaic language of modern science. The book, however, has lost nothing of its interest, while it has gained considerably in fullness and, through the advance of knowledge, in accuracy. Thus several subjects, such as the Ocean, the Atmosphere, and Agents of Change, formerly treated in single chapters, are now divided, and each section has a chapter devoted to it. There are many new illustrations and maps, and these, as a rule, are good. The type is much larger, and the volume is more attractive in appearance than its predecessor. We wish it as great popularity and usefulness.

British Rule and Modern Politics. By Hon. Albert S. G. Canning. (Smith, Elder, & Co.)

We gather from a prefatory note that the object of this discursive book is "to examine the results of British power and thought in promoting civilization." The work is, however, so unmethodical, and, we feel bound to say, the reflections are so obvious and unconnected, that it is difficult to offer any serious criticism. The following may be taken as a specimen: "Politics, often the favourite subject for jokes, wit, and merriment in Britain, especially in London, are literally no joke in Ireland, but become revelations of hereditary hatred, class jealousy, and religious prejudice. These causes of irritation influence many Irish minds about political questions affecting their divided country." Readers of "Pickwick" will be inclined to suspect that we have here a volume of the same class as Count Smolitorok's "great work on England."

The Speaking Voice, Part II. By Mrs. Emil Behnke. (J. Curwen & Sons.)

We noticed quite recently the first part of Mrs. Behnke's valuable handbook. Part II. contains a variety of ingenious exercises for training the muscles of articulation, for pronouncing the vowels properly, and for curing other faults of pronunciation. According to Mrs. Behnke, the harsh and strident sounds that tear our own throats and afflict our pupils' ears are unnecessary. Our voices, if we will, may be as melodious as those of the singing birds. Why do we not all try, like Chaucer's Monk, "to make our English sweet upon our tongue"? The difficulty of finding teachers is, perhaps, our reason. On this point a little parenthesis or "aside" of Mrs. Behnke's is significant—"the teacher's vowels must, of course, be perfect."

The Secret of Achievement. By Orison Swett Marden. (Nelson & Sons.)

Another volume in Messrs. Nelson's "Self-Effort Series." The author's object is to stimulate the young by setting before them ideals of noble character. He sums up his method by a quotation: "The young," says Timothy Titcomb, "have been preached to, lectured to, taught, exhorted, advised. They have seldom been talked to." In a series of chatty chapters on Moral Sunshine, Honesty, Purity, Trifles, Self-Control, Tenacity of Purpose, and the like, he has massed together a great number of interesting and often amusing stories bearing on the matter in hand, and enforces them by many sage aphorisms and kindly counsels. The book is thoroughly manly and sensible. It is too interesting to be lightly laid down, and no one, young or old, who has been beguiled by its stories can fail to be stimulated by its enthusiasm for all that is noble. It is a book that boys will read, and we strongly commend it to those who have the charge of school libraries. It is illustrated by portraits of some eminent men.

"Modern Language Series." Edited by Walter Rippmann, M.A.—*Elements of Phonetics, English, French, and German.* Translated and adapted from Prof. Viëtor's "Kleine Phonetik," by Walter Rippmann. (Dent & Co.)

Mr. Rippmann has done well to add this little volume to his excellent series of modern language text-books. It is a good deal more than a mere translation, for no pains have been spared to bring together the substance of all that has been recently written by scholars on this attractive, but difficult, subject. Prof. Viëtor is not always a safe guide on English pronunciation: 'ho:ilinis does not represent "holiness," nor memeri "memory," nor a:mone "almoner." The following statement is particularly unfortunate:—"Final [e], even where it is not = er, or, &c., in uneducated speech, often takes a [r] sound: 'idea of' [aidi:er ev]. This is now sometimes heard even in educated speech." No educated person could slip in the r, except through carelessness, or a defective organ; or entirely ignore it in final er and or; or sound the a in "idea" like the o in "of."

The Grammar of Painting: or First Studies in Painting. Arranged in a Course of Brush Work for Young Students. By Helen and F. Emily Phillips. With a Preface by Katharine Phillips. Two vols. (Newmann & Co.)

The text and plates of these two volumes are alike very satisfactory, and the modest claim of the authors to have provided a manual of suggestions for young students and kindergarten teachers may be fully allowed. The succession of studies is not merely haphazard; it is in some degree historical, illustrating successive national ideas and schools of art. The directions for the student are plain, practical, and common-sense; the examples are thoroughly artistic in their treatment and production; and there is just enough upon some of the leading principles of art to instruct and interest an intelligent young painter.

Brush Drawing for Infants. By Helen Forbes. (Nelson & Sons.)

This is an unpretentious elementary course, fairly suitable for a first introduction to colour work, though some of the pictures are a little too elaborate for genuine "brush-drawing."

A Book of Beasts and Birds from Bible Lands, Verified from the Monuments, and Pictured from Life. By R. E. Holding. (Moffatt & Paige.)

If we begin by saying that Mr. Holding has many artistic qualifications for his task, and that he has caught the characteristics of most of his beasts and birds in an admirable manner, we may be allowed to add that he cannot (artistically) picture an animal from life and verify it from "the monuments." In one or two instances his drawing looks as if it had suffered by too much verification.

Twenty-four Test-Papers in Practical and Solid Geometry. By George Grace, B.Sc. (Macmillan.)

These well devised problems in what is known at South Kensington as "Science Subject 1, Elementary Stage," are carefully printed on twenty-four sheets of cartridge paper; and they are all that could be desired for a practical preparatory course.

Rhymes of Ironquill. (George Redway.)

A cheap English edition of an American book of serio-comic verse. It contains things good and bad, witty and feeble. "Scramble" rhymes with "Alhambra!"; "quarters" with "orders"; "optic" with "kaleidoscopic"—but the approximations are usually closer. Here is a fragment on the "Siege of Djkixprwb":—

"Before a Turkish town the Russians came,
And with huge cannon did bombard the same.
They got up close and rained fat bombshells down,
And blew out every vowel in the town.
And then the Turks, becoming rather sad,
Surrendered every consonant they had."

"Professor Meiklejohn's Series."—*One Hundred Short Essays in Outline.* (A. M. Holden.)

This collection of a hundred skeletons of essays, each occupying a page, is as good and serviceable as any teacher could desire for his younger classes in English composition. The subjects are partly classi-

fed and partly miscellaneous, and their subdivision is very simple and complete. The sharpest boys and girls will dash off their themes without much effort, but when they have worked through the book they will scarcely fail to write a passable essay.

Childe Harold's Pilgrimage: a Romaunt, by Lord Byron. Cantos I.-IV. Two vols. Edited, with Notes and an Introduction, by Prof. Edward E. Morris. (Macmillan.)

Byron's fervid poem, so sublime at its best, so full of little rifts and pitted specks, deserves to be formally studied, and may be relied upon to elevate the student. We would not use it indiscriminately, either for style or for edification; yet not to read it is to be ignorant of so much! Prof. Morris has done his part with the care and completeness which those who know his previous editions will expect of him.

One Hundred Stories for Composition. (Blackwood.)

This is a collection of well told anecdotes, of just the right length to read to a class and get reproduced in ten minutes. There is a tendency in such lessons for the exact words to be committed to memory, and the author has sought to obviate this difficulty by writing each anecdote twice, in slightly varied form. We do not think that this plan will go far towards counteracting the tendency to repeat the given form, and, on the other hand, it is apt to produce confusion. The anecdotes are so short that one reading ought to suffice, and the space that would be thus set free in this useful little manual might be well filled with some other variety of material for composition.

In Danger's Hour. (Cassell.)

Though evidently intended as a reader, this book might also be used for composition lessons, since it supplies a teacher with correct names, dates, and other details for stories of heroism which float vaguely in his memory, such as the wreck of the "Birkenhead," incidents in the Indian Mutiny, and so on. Many of the tales are quoted from well known writers, the style is good throughout, and the frequent illustrations would prove useful for blackboard sketches, or merely to help a teacher in his descriptions.

The Adventures of Ulysses. (Horace Marshall.)

We have here Charles Lamb's beautiful adaptation of Chapman's Homer, edited by E. E. Speight, and introduced in a scholarly manner by Sir George Birdwood. If, according to Herbart, the "Odyssey" is a perfect reading book for children, this edition will meet a felt want. The only drawback to its use in this way is the kind of illustration employed: interesting enough to those who understand ancient art, these reproductions of badly preserved friezes and drawings simply make children laugh when they ought to be impressed, and are no aid to their imagination. The frontispiece is a delightful exception—Turner's grand conception of Ulysses deriding Polyphemus.

Chaucer for Schools, with the Story of his Times and Work. By Mrs. H. R. Haweis. (Chatto & Windus.)

Mrs. Haweis was just able before her death to revise this enlarged and corrected edition of her "Chaucer for Schools." As it now stands, it is a monument to her industry and literary sympathy. As a reading-book, an introduction to Chaucer, and a first course of Early English literature, we have a high opinion of it. There are good introductions on the life and contemporaries of Chaucer, on his language and metre, and the selected passages run side by side with a graceful paraphrase.

"The New English Series." Edited by E. E. Speight, B.A.—*The Temple Reader.* By E. E. Speight. *Selections from the Poetry of Wordsworth.* With an Introduction by Dr. Edward Caird. (Horace Marshall & Son.)

Mr. Speight's capital Reader, which we noticed on its first appearance, is already in a second edition. The eighty pages of readings from Wordsworth, chiefly lyrical, to which Dr. Caird has contributed a short introduction on the poet's characteristics as a singer, are well chosen and very clearly printed. Dr. Caird, by the way, speaks of Wordsworth's "one clear harp in divers tones," referring to Tennyson's

"I hold it truth with him who sings
To one clear harp in divers tones,
That men may rise on stepping-stones
Of their dead selves to higher things."

Did Tennyson mean Wordsworth? The present writer cannot recall the passage of Wordsworth which the Master of Balliol must have in his mind. A poem of Longfellow's begins thus:

"Saint Augustine, well hast thou said
That of our vices we can frame
A ladder, if we will but tread
Beneath our feet each deed of shame."

It seems about as reasonable to speak of the "divers tones" of Augustine as of those of Wordsworth. But the idea of the ladder, or stairs, or stepping-stones, occurs in other writers, and the point as to the reference is scarcely cleared up.

"Bell's Cathedral Series." Edited by Gleeson White and Edward F. Strange.—*York.* By A. Clutton-Brock. *Gloucester.* By H. J. L. J. Massé, M.A. (Bell & Sons.)

Though precise comparison would be foolish, we are disposed to say

that there are few more interesting ecclesiastical buildings in England, from the historical point of view, than York Minster and Gloucester Cathedral, which are here adequately described and portrayed. There is no question about the extreme old age of the Christian Minster in York, which dates historically from the seventh century, though none of the existing buildings can be traced to a date before the eleventh. The late Mr. Freeman took a warm interest in the records of this Norman, Early Gothic, and Perpendicular edifice, and the two great fires of the present century, with the subsequent renovations, gave more than ordinary facility for verifying the relics of successive constructions. Mr. Clutton-Brock has given a great deal of attention to his subject, and his account of it is clear and concise. Mr. Massé has done justice to the marvellously beautiful cathedral of Gloucester, and his volume is attractive both by its illustrations and by its text.

English Versification: A Complete Practical Guide to the Whole Subject. By E. Wadham. (Longmans.)

There are good points in this little book, and we do not doubt that the student may learn a great deal from it; but he must be wary. Take page 57, for instance—"profúgus" is given as a correct Latin pronunciation. "Latin," Mr. Wadham airily says, "being a dead language, we treat it as we please; but in English nothing is more vital than accent. . . . Fancy reading: 'This is the forest primeval.' . . . But such would be only analogous." Evidently the author holds that Latin hexameters ought to be scanned with a good thump at the beginning of every foot. As for Mr. Wadham's style, here is a sentence on the same page, of which we cannot make head or tail: "The English hexameter, from its very structure, tends to the rise almost throughout, even more than crown verse; with mid-cæsure, unless, indeed, remaining slow, it unavoidably does, the last member being set so by rule, the first not having scope to be other, a quick foot in the second place being debarred, even more completely than a slow one in the sixth."

From Messrs. Gill & Sons we have some specimens of an entirely new series of "Cartographic" Wall Maps by George Gill, F.R.G.S., which challenge particular attention on more grounds than one. The size, to begin with, is eighty inches by sixty, so that, even for the largest schoolrooms, each map is almost equivalent to a piece of furniture. The drawing of the maps is excellent, being treated with great boldness, the outlines and physical features all well brought out, and the typography (a most important point) legible at a considerable distance. The colouring is marked, but nowhere too obtrusive, and on the darker blue of the ocean the place names are printed in white letters. So far as we have observed, these maps are geographically correct, up to a late stage of information or political change. In the map of Africa, for instance, the Cape to Cairo railway is duly traced, the completed and projected portions being properly distinguished. In all the maps the railway systems are plainly indicated. The series includes England and Wales, Scotland, Ireland, Europe, Africa, India, Asia, North America, and the World on Mercator's projection. Each map is mounted on linen and varnished, with wooden rollers. The "Cartographic" Wall Maps are certainly of exceptional and remarkable value, and we make no doubt that their merits will secure for them a high reputation.

Our Reprints for the month include *P's and Q's; or, the Question of Putting Upon*, and *Little Lucy's Wonderful Globe*, in one volume, by Charlotte M. Yonge (Macmillan)—a very charming illustrated book for girls; *Lyra Innocentium*, by John Keble (Methuen's "Library of Devotion")—with brief notes and introduction by Walter Lock, D.D.; *Schiller, Tasso, La Fontaine*, and *De Sévigné* (Blackwood's "Foreign Classics for English Readers"); *Poems, including "In Memoriam,"* by *Alfred Lord Tennyson* (Macmillan)—the noblest poem in the English language for sixpence: may it sell by the hundred thousand!

WE HAVE ALSO RECEIVED the following publications and new editions:—

Willing's Press Guide, 1899—the twenty-sixth annual issue of a very useful and comprehensive publication.

In the Guiana Forest: Studies of Nature in relation to the Struggles for Life, by James Rodway, F.L.S., with Introduction by Grant Allen (Fisher Unwin)—a third edition of an exceptionally interesting and well illustrated volume of physical observations.

Royal Graduated Drawing Books: Book 14, Advanced Geometrical Drawing (Nelson & Son)—the last book of an exceptionally commendable series of freehand and geometrical drawing books.

The Waverley Drawing Test Book (McDougal)—copies only for the first standards.

Semi-Vertical Copy Books (McDougal)—clear and well defined headlines; *Civil Service Copy Books* (Relfe Brothers)—mercantile headlines; *Globe Copy Books* (John Heywood).

Elementary Physics and Chemistry: First Stage (McDougal)—a very simple and suitable introduction.

Elementary Mensuration of Plane Surfaces: Stages I. and II. (McDougal)—clear demonstrations and numerous examples.

MATHEMATICS.

14121. (C. N. CAMA.)—If two parabolas touch at P, and their axes meet at O, the intersections of the focal distance to P of one with the axis of the other lie on a circle which passes through P and O. Hence, if S, S' be fixed points on fixed lines meeting at right angles in O, and two systems of parabolas be drawn having S, S' for their foci, and axes OS, OS', such that each parabola of one system touches the corresponding parabola in the other system, all the points of contact lie on a fixed circle. Generally, four parabolas of one system can be drawn to touch a given parabola of the other system. If the axes be parallel, show that the corresponding locus is a straight line.

Solution by the PROPOSER.

Let S, S' be the foci, P the point of contact, SU, S'U' the axes, T, T' the intersections of SP, S'P with the respective axes. Then $\angle SPU = \angle OOU'$, $\angle S'PU' = \angle OOU'$; therefore $\angle SPT = \angle S'OU'$; therefore O, P, T, T' are concyclic (Fig. 1).

Fig. 1.

Fig. 2.

Fig. 3.

If the $\angle SOS'$ be a right angle, it follows that $\angle SPS'$ is so also; therefore P lies on a fixed circle, viz., the one with SS' as diameter (Fig. 2). Also, if the axes are parallel, it will be seen that P lies on SS', which is therefore its locus (Fig. 3).

Now, if a particular parabola with focus S be drawn, and the circle round SOS' cut it in P, it will generally cut the parabola in three other points which will therefore be the points of contact of three other parabolas of the second system.

14058. (Rev. T. MITCHELSON, B.A.)—If (h, k) be a point external to the ellipse, $a^2y^2 + b^2x^2 = a^2b^2$, and θ the angle at which a tangent from the point is inclined to the major axis, then

$$2hk = (h^2 - a^2) \tan \theta + (k^2 - b^2) \cot \theta.$$

Solution by G. BIRTWISTLE.

A line through (h, k) making an angle θ with major axis of ellipse is $(y - k) = \tan \theta (x - h)$ or $y - x \tan \theta = k - h \tan \theta$.

This touches the ellipse, $x^2/a^2 + y^2/b^2 = 1$, if

$$a^2(-\tan \theta)^2 + b^2(1)^2 = (k - h \tan \theta)^2,$$

$$\text{or } (h^2 - a^2) \tan^2 \theta - 2kh \tan \theta + (k^2 - b^2) = 0,$$

$$\text{or } 2kh = (h^2 - a^2) \tan \theta + (k^2 - b^2) \cot \theta.$$

14017. (D. BIDDLE.)—In the straight line AB a point K is taken, such that

$$AK : KB = 1 : n,$$

and another straight line BC, forming any angle with AB, is divided into r equal parts by points p_1, p_2, \dots . The parallelogram ABp_1Q being completed, and the necessary joins being effected, KQ intersects Ap_1, Ap_2, \dots in k_1, k_2, \dots . Prove that

$$Ak_1 : k_1p_1 = 1 : n + 1, \quad Ak_2 : k_2p_2 = 1 : n + 2, \quad \dots,$$

$$\text{and } Ak_r : k_r p_r = 1 : n + r.$$

[Of course, parallels to BC from k_1, k_2, \dots divide AB in corresponding

ratios. But it would be interesting if the above theorem could be utilized for the summation of the reciprocals of successive numbers.]

Solution by H. W. CURJEL, M.A., and many others.

Draw $Bq_1q_2 \dots q_r$ parallel to KQ , cutting $Ap_1Ap_2 \dots Ap_r$ in q_1, q_2, \dots, q_r . Then $Ak_r : k_r q_r = 1 : n$, and $\triangle Bq_r p_r$ is similar to $\triangle Qk_r A$; therefore

$$q_r p_r = r \cdot Ak_r; \text{ therefore } Ak_r : k_r p_r = 1 : n + r.$$

[The rest in Volume.]

14067. (Professor E. LEMOINE.)—Soit M un point dont les coordonnées normales sont x, y, z par rapport à un triangle de référence ABC; AM, BM, CM coupent BC, CA, AB en A', B', C'; A_1, B_1, C_1 sont les milieux des hauteurs du triangle ABC. Trouver le lieu de M si A'A₁, B'B₁, C'C₁ sont concourantes en un point N.

Solutions (1) by the PROPOSER; (2) by R. TUCKER, M.A.

(1) Le lieu est la cubique $\Sigma yz (b^2y \cos C - c^2z \cos B) = 0$.

Remarques.—La cubique passe par les trois sommets. Elle passe par le point $1/(a \tan A), 1/(b \tan B), 1/(c \tan C)$, par l'orthocentre et par le point de NADEL $(p - a)/a, (p - b)/b, (p - c)/c$, et par ses transformés continus en A, B, C. Les points N sont respectivement le barycentre, l'orthocentre, le centre du cercle inscrit et ceux des cercles exinscrits. Le lieu des points N est la cubique $\Sigma ayz (by - cz) = 0$.

Elle coupe les côtés aux points où les coupent les droites qui joignent les sommets au point $1/(a \tan A), \dots$

(2) A_1 is $1, \cos C, \cos B$, and A' is $0, y, z$; therefore equation to A_1A' is $(z \cos C - y \cos B) a - xz + yz = 0$.

Hence locus is

$$\begin{vmatrix} z \cos C - y \cos B & -z & y \\ z & x \cos A - z \cos C & -x \\ -y & x & y \cos B - x \cos A \end{vmatrix} = 0;$$

i.e., the cubic $\Sigma a^2x^2 (y \cos B - z \cos C) = 0$.

The locus therefore passes through A, B, C, the centroid, and the orthocentre.

14014. (Professor SANJANA, M.A.)—In the triangle ABC, AD is the median from A; AE and AE' are the internal and external bisectors of the angle A. Prove that

$$AD \cos \angle DAE = \frac{1}{2} (AB + AC) \cos \frac{1}{2} A,$$

$$\text{and } AD \cos \angle DAE' = \frac{1}{2} (AB - AC) \sin \frac{1}{2} A.$$

Also apply these equalities to prove FEUERBACH'S theorem.

Solution by E. P. BARNETT, B.A.; and L. E. REAY, B.A.

In figure AN = AC, N being in BA produced: $ADA' = 2AD, A'P, Bm, pn, Cm, AE'$ perpendicular to AE, $Mm, A'a', Nn$ parallel to AE. Then BA' is equal and parallel to AC, therefore

$$Ba' = aC = pn;$$

therefore Pn is equal and parallel to AN, Pm equal and parallel to $A'B$; therefore

$$Nn = AP \text{ and } Bm = A'P,$$

or $(AB + AC) \cos \frac{1}{2} A = 2AD \cos \angle DAE$

$$\text{and } (AB - AC) \sin \frac{1}{2} A = 2AD \sin \angle DAE' = 2AD \cos \angle DAE'.$$

[FEUERBACH'S theorem, referred to in the Question, is that the nine-point circle touches the inscribed and escribed circles of a triangle; and Prof. U. C. GHOSH solves this part of the Question as follows:—In the figure given on p. 105 of CASEY'S *Sequel* (4th edition), let Σ be the centre of the nine-points circle, and draw $\Sigma N'$ parallel to ON. Then

$$ON = AN - AO = AF \cos \theta - r \operatorname{cosec} \frac{1}{2} A,$$

where $\theta = \angle FAN$, and $\Sigma N' = \frac{1}{2} FH = \frac{1}{2} R \sin (\frac{1}{2} A + B)$;

$$\text{therefore } ON - \Sigma N' = AF \cos \theta - \frac{1}{2} R \sin (\frac{1}{2} A + B) - r \operatorname{cosec} \frac{1}{2} A.$$

$$\text{And } FN = AF \sin \theta \text{ and } FN' = \frac{1}{2} FG = \frac{1}{2} R \cos (\frac{1}{2} A + B);$$

$$\text{therefore } NN' = AF \sin \theta - \frac{1}{2} R \cos (\frac{1}{2} A + B).$$

Therefore

$$\Sigma O^2 = AF^2 + \frac{1}{2} R^2 - AF \cdot R \sin (\theta + \frac{1}{2} A + B)$$

$$- 2AF \cos \theta \cdot r \operatorname{cosec} \frac{1}{2} A + r \cdot R \operatorname{cosec} \frac{1}{2} A \sin (\frac{1}{2} A + B) + r^2 \operatorname{cosec}^2 \frac{1}{2} A.$$

[The rest in Vol.]

14071. (Professor G. B. MATHEWS, F.R.S.)—Prove that the envelope of the line $\lambda \xi (\mu \eta^2 - \nu \zeta^2) x + \mu \eta (\nu \zeta^2 - \lambda \xi^2) y + \nu \zeta (\lambda \xi^2 - \mu \eta^2) z = 0$,

subject to the condition $\eta \zeta + \zeta \xi + \xi \eta = 0$,

is, in general, a curve of the third class and fourth order; and investigate the relations connecting λ, μ, ν in any exceptional cases.

Show how this analytical problem is connected with the following:—The sides BC, CA, AB of a triangle inscribed in a conic meet a fixed line

u in the points α, β, γ ; P is any point on the conic, and $Pa, Pb, P\gamma$ meet the conic again in A', B', C' . It may be proved that AA', BB', CC' meet in a point Q on u ; it is required to find the envelope of the line PQ as P moves round the conic. [A special case is the envelope of the axis of a parabola which touches three given lines.]

Solution by Rev. J. CULLEN.

If we eliminate η (say) between the equation of the given line and the condition $\eta\zeta + \xi\zeta + \eta\xi = 0$ and put $\zeta = \rho\xi$, we get

$$\rho^3L + \rho^2M + \rho N + K = 0 \dots\dots\dots (1),$$

where $L, \&c.$, are of the first degree in $x, y,$ and z . Hence, since this line is a tangent to the curve, it is clear that in general only three tangents can be drawn from any assigned point. The curve is therefore of the third class. Also, since the discriminant of a cubic is of the fourth degree in the coefficients, it is also of the fourth order. $\lambda, \mu,$ and ν are included in $L, \&c.$, so that in any exceptional case the conditions can be easily determined. Taking ABC as the triangle of reference, the circumscribing conic is $lyz + mzx + nxy = 0$; let u be $lx + my + nz = 0$ and P be $x/x' = \dots = \dots$. Then, in the ordinary manner, we find Q to be

$$xx'/l = \dots = \dots$$

Therefore the line PQ is

$$x'l(y'^2m'n - z^2mn)x + \dots + \dots = 0;$$

and putting $x' = lx, \&c.$, we see that the envelope of this line is of the same form as that of (1), differing only with regard to its constants.

13970. (C. E. HILLYER, M.A.)— F is a given point within an ellipse; CF meets the curve in P . Required to draw through F a straight line meeting the curve in Q , so that the angle between FQ and the tangent at Q is equal to that between CP and the tangent at P .

Solution by the PROPOSER.

In CF produced take E so that

$$CE \cdot CF = CA^2 + CB^2.$$

Let OK , the polar of F , meet CE in K . Take Y the image of E with respect to OK . Draw tangents YQ, YR from Y to the ellipse; then FQ, FR shall be the straight lines required.

For, if YQ meet OK in O , then QF is the polar of O .

Therefore (by Quest. 13359) QF and EO are antiparallel with respect to the angle between the conjugate diameters CP, CD , i.e., if QF meet CD in L ,

$$\angle FLC = \text{OEK}.$$

But, since CL is parallel to OK ,

$$\angle FQO = \text{QOK} + \text{FLC} = \text{EOK} + \text{OEK} = \text{OKC}$$

$$= \text{angle between } CP \text{ and the tangent at } P.$$

14023. (Rev. T. ROACH, M.A.)—Point out the fallacy in the following statement:—

$$\tan^{-1} \frac{x}{1-x^2} + \tan^{-1} \frac{2x}{1-x^2} = \tan^{-1} \frac{3x(1-x^2)}{1-4x^2+x^4}$$

Now, when $x = 1$, we have

$$\tan^{-1} \infty + \tan^{-1} \infty = \tan^{-1} 0; \text{ therefore } \frac{1}{2}\pi + \frac{1}{2}\pi = 0.$$

Solution by Professor UMES CHANDRA GHOSH, M.A.; G. W. PRESTON, B.A.; and many others.

$\tan^{-1} \infty = n\pi + \frac{1}{2}\pi$ and not $\frac{1}{2}\pi$ only, and $\tan^{-1} 0 = n'\pi$ and not 0 only,

where n and n' are any integers. Hence

$$\tan^{-1} \infty + \tan^{-1} \infty = n\pi + \frac{1}{2}\pi + m\pi + \frac{1}{2}\pi = (n+m+1)\pi = \text{a multiple of } \pi = \tan^{-1} 0.$$

[Mr. BICKMORE observes that $\tan^{-1} y$ is an inverse symbol, and requires definition: "the least positive angle with tangent $y = \tan^{-1} y$." Then

$$\tan^{-1} y + \tan^{-1} z = \tan^{-1} \left\{ \frac{(y+z)/(1-yz)}{1} \right\},$$

if $\tan^{-1} y$ and $\tan^{-1} z$ be each $< \frac{1}{2}\pi$. But in the case considered each is equal to a right angle, so that their sum is two right angles. Hence the true formula is, in this case,

$$\tan^{-1} y + \tan^{-1} z = \pi + \tan^{-1} \left\{ \frac{(y+z)/(1-yz)}{1} \right\}.$$

13966. (R. F. DAVIS, M.A.)—If B, C are given fixed points, and the angle BPC is constant, prove geometrically that the complete envelope of the inscribed circle of the triangle PBC is the base BC , and a parallel to a two-cusped epicycloid.

Solution by the PROPOSER.

The circumcircle of the triangle PBC is fixed; and, if E is the middle point of its arc BC , then, by a well-known property, I , the incentre, lies on PE and $EI = EB = EC$.

The question therefore may be stated thus: Find the envelope of a circle whose centre moves along the circumference of a fixed circle, and

which touches a given right line (WILLIAMSON'S *Diff. Cal.*, Chap. xv., Ex. 15).

By considering the ultimate intersections of two consecutive circles of the series, the determination of the envelope is identical with the determination of a certain locus. Bearing in mind the fact that the common chord of two circles bisects common tangents and is perpendicular to the line of centres, we now require to solve the question:—If I be any point on the arc of a given circle cut off by a given chord BC , and IM perpendicular to BC , find the locus of the image of M in the tangent to the circle at I .

An examination of the particular case when BC is a diameter of the given circle easily discloses the locus required is the epicycloid formed by rolling upon the given circle a circle of half its dimensions.

When BC is no longer a diameter, but at a distance ($= d$) from the centre, the locus required is the curve formed by setting off a distance d along the normals to the epicycloid drawn internally.

14022. (B. N. CAMA, M.A.)—The pedal equation of a curve is given by $r^3 = pa^2$. In polars, this reduces to the lemniscate $r^2 = a^2 \sin 2\theta$. Can it be shown in a similar manner that the same equation may as well represent a fixed circle?

Solution by H. W. CURJEL, M.A.

The equation $a^2p = r^3$ gives $a^2u^6 = u^2 + (du/d\theta)^2$, of which $r = a$ is a singular solution. This represents the envelope of the lemniscates $r^2 = a^2 \sin(2\theta + a)$ represented by the general solution.

14045. (Professor SANJANA.)—In a triangle ABC both $AO = AI$ and $BO = BI$, where O and I are the circum- and in-centre, respectively. Determine the angles.

Solution by H. J. WOODALL, A.R.C.S.; Professor T. SAVAGE; and many others.

(1) If O and I are on the same side of AB , they must be coincident; whence we get the equilateral triangle.

(2) If O and I are on opposite sides, then $\angle OAB = \angle BAI = \angle IAC$.

But OAC is an isosceles triangle, and is similar in all respects to OBC . Therefore the three angles BAC, ACB, CBA are as $2 : 6 : 2$, and hence they are $36^\circ, 108^\circ, 36^\circ$, respectively.

[The PROPOSER remarks:—

As $AIBO$ is a rhombus, $IO = 2ID = 2r$;

thus $R^2 - 2Rr = 4r^2$;

whence $R = r(\sqrt{5} + 1)$,

i.e., $r/R = \sin IAD = 1/(\sqrt{5} + 1) = \frac{1}{2}(\sqrt{5} - 1)$.

Hence $IAD = 18^\circ$.]

QUESTIONS FOR SOLUTION.

14164. (Professor ELLIOTT, F.R.S.)—If a, b are positive moduli, and $\alpha - \beta$ lies between 0 and 2π , and if $f(x)$ is a function of the complex variable $x = re^{i\theta}$ which approaches definite limits $f(0)$ and $f(\infty)$ as x becomes infinitely small and infinitely great within the sector from $\theta = \beta$ to $\theta = \alpha$, and is holomorphic within and on the bounding lines of the sector except for simple poles at c_1, c_2, \dots, c_n within the sector, prove the FRULLANIAN formula

$$\int_0^\infty \frac{f(ae^{i\alpha}x) - f(be^{i\beta}x)}{x} dx = \{f(\infty) - f(0)\} \left\{ \log \frac{a}{b} + i(\alpha - \beta) \right\} - 2\pi i \sum_{r=1}^n \left[(x - c_r) \frac{f(x)}{x} \right]_{x=c_r}$$

the variable x being real.

14165. (Professor CROFTON, F.R.S.)—If $8n+1$ is prime, prove that n^3-2^n is divisible by $8n+1$, if n is even. Also n^3+2^n is divisible by $8n+1$, if n is odd.

14166. (Professor G. B. MATHEWS, F.R.S.)—Prove the following theorems with respect to the Diophantine equation $xy(x+y) = z^n$, where n is a given positive integer:—(1) If $n = 3m$, there is no solution. (2) If $n = 3m+1$ or $3m+2$, there is a unique solution in which $x/y = a/b$, any given rational fraction in its lowest terms, and where the G.C.M. of x and y involves no perfect n th power. (3) If this solution be denoted by (ξ, η, ζ) , the general solution is $(\lambda^n\xi, \lambda^n\eta, \lambda^n\zeta)$, where λ is any positive integer. (4) The general solution of $xy(x+y) = x^5$, for which $x/y = 16/11$, is $x = 689904\lambda^5$, $y = 474368\lambda^5$, $z = 13068\lambda^5$.

14167. (Professor NEUBERG.)—Soient A_1, B_1, C_1, \dots les mineurs du déterminant

$$H = \begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix}.$$

Démontrer que $(B_1C_2A_3 - B_2C_3A_1) = H(b_1c_2a_3 - b_2c_3a_1)$.

14168. (The late Professor WOLSTENHOLME, D.Sc.)—Given a quadric ($u = 0$) and two fixed points O, O' , S, S' denote the plane sections of u by the polar planes of O, O' ; prove that, if any straight line through O meet the quadric in points P, P' , the two cones whose vertices are P, P' and base the plane section S' will intersect in a second plane section whose locus is the quadric ($v = 0$) containing S, S' , and such that O is the pole of S' , and O' the pole of S . So also, if QQ' be any chord of u passing through O' , the locus of the second plane of intersection of the cones whose vertices are Q, Q' and base S is the same quadric.

14169. (Professor COCHEZ.)—Etudier la courbe $(2x+3y)^2(x-y) + x + y = 0$.

14170. (Professor SANJANA, M.A.)—Let Q be the orthocentre of the pedal triangle of ABC ; let S, K, T be the circum-, cosine-, and TAYLOR-centres of ABC . Prove that S, K, T, Q are collinear; that T bisects SQ , and that K divides it in the ratio $1 : 1 + 2 \cos A \cos B \cos C$.

14171. (Professor UMES CHANDRA GHOSH.)—Putting $a = 0$ in the well-known formulæ

$$\int_0^{\infty} e^{-ax} \cos rx \, dx = \frac{a}{a^2+r^2} \quad \text{and} \quad \int_0^{\infty} e^{-ax} \sin rx \, dx = \frac{r}{a^2+r^2}$$

we get $\int_0^{\infty} \cos rx \, dx = 0$ and $\int_0^{\infty} \sin rx \, dx = 0$;

that is, $\sin \infty = 0$ and $\cos \infty = 0$; and, differentiating CAUCHY'S integral

$$\int_0^{\infty} \frac{\tan ax}{x} \, dx = \frac{1}{2}\pi$$

with respect to a , we get $\tan \infty = 0$. Are there any other ways by which we can arrive at the same results?

14172. (Professor THOMAS SAVAGE.)— ABC is an isosceles triangle; DE , a parallel to BC , intersects AB, AC in D, E respectively. If DE, DB, EC are all equal, show that BC is not one of the equal sides of the triangle.

14173. (D. BIDDLE.)—The sides of a triangle being given, $a > b > c$, draw a line parallel to one of them, such that the quadrilateral formed shall have the maximum area possible in proportion to its perimeter, and find both area and perimeter.

14174. (Rev. Dr. FLEETH.)— AB is the diameter, and AC , the half of AB , is the radius of the generating circle ADC . Assume any chord AD . Join CD , producing it to F , so that AD is equal to DP . Hence P is a point in a major trisectrix. Join AP , producing the line to AP_1 , so that CP is equal to PP_1 . Join CP_1 . Thus P_1 is a point in a supertrisectrix major. Produce AP_1 to P_2 , so that CP_1 is equal to P_1P_2 . Join CP_2 . Hence P_2 is a point in a bisupertrisectrix major. Bisect AC in R , and join P_2E . Let the angle $AP_2C = \theta$, $AC = r$, $CP_2 = R$, and $AP_2 = R'$. Then

$$R = r \frac{\sin 12\theta}{\sin \theta} \quad \text{and} \quad R' = r \frac{\sin 13\theta}{\sin \theta}.$$

Show that (1) in the isosceles position AP_2C is an isosceles triangle having each base angle the dodecuple of the vertical angle AP_2C ; (2) regarding the angle P_2AC , the curve is a dodecasetrix; (3) adopting the angle P_2CB , the curve is a tridecasetrix; (4) on AC in the isosceles position by means of the isosceles triangle AP_2C a regular icospentagon is describable; (5) trace the curve; (6) find its area, tangent, and rectangular coordinates. [Note by PROPOSER.—It is not intended at present to continue these regular polygons and polygonal curves, unless a demand should appear for them. One purpose of the PROPOSER, however, has been accomplished, namely, to indicate that by either trisectrix an isosceles triangle of 20° is obtainable; also, an angle of 21° being geometrically constructible, by subtraction an angle of 1° results. This, being trisected, gives $20'$, which,

bisected, $10'$, and quinsected by either quinsectrix, $12'$, from which, $10'$ being subtracted, there is a remainder of $2'$, or, bisected, of $1'$. Finally, trisecting an angle of $1'$, there results an angle of $20''$, which, bisected, becomes $10''$, and, quinsecting an angle of $1'$, we have $12''$, from which, $10''$ being deducted, there will remain an angle of $2''$, which, bisected, becomes $1''$. So that, by means of the PROPOSER'S polygonal curves, angles of $1^\circ, 1',$ and $1''$ can be described.

14175. (R. TUCKER, M.A.)—The normal at P , on a parabola, meets the directrix at Q . Show that QS meets (1) the tangent at P , (2) the diameter through P , (3) the polar of Q , in three cubic curves.

14176. (R. F. DAVIS, M.A.)— $ABCD$ is a concyclic quadrilateral, and E, F, G are the intersections $(AB, DC), (AD, BC),$ and (AC, BD) respectively. Show that the focus escribed to $ABCD$ is the foot of the perpendicular from G on EF .

14177. (B. N. CAMA, M.A.)—Prove that the locus of the intersection of tangents, including a given angle β , to the spiral $r = a^{\theta} \cot^{\alpha}$ is the copolar spiral

$$\frac{r \sin \psi}{\sin \alpha} = a^{\theta + \psi - \alpha} \cot \alpha,$$

where ψ is given by

$$\cot \psi = \frac{k - \cos \beta}{\sin \beta},$$

and ak is the vectorial distance of a point on the original curve whose vectorial angle is β . Show also that the locus touches the circle round the triangle formed by the tangents and the chord of contact.

14178. (Rev. W. ALLEN WHITWORTH, M.A.)—Establish the following rule to determine whether a given number be an ace, deuce, threec, or quart; that is, whether it be the sum of 1, 2, 3, or 4 integral squares. Cast out all square factors and examine the residual quotient. If this be unity, the number is an ace. If it be of the form $8N + 7$, the number is a quart. If it be of the form $4N + 1$ or $2(4N + 1)$, the number is a threec or a deuce, according as $4N + 1$ does or does not contain a prime factor of the form $4n - 1$. If it be of any other form, the number is a threec. For example,

- 1992 = $22^2 + 22^2 + 32^2$,
- 1993 = $12^2 + 43^2$,
- 1994 = $25^2 + 37^2$,
- 1995 = $23^2 + 25^2 + 29^2$,
- 1996 = $14^2 + 30^2 + 30^2$,
- 1997 = $29^2 + 34^2$,
- 1998 = $3^2 + 30^2 + 33^2$,
- 1999 = $2^2 + 23^2 + 25^2 + 29^2$.

14179. (G. H. HARDY.)—Find a root of $x^3 + 3x(\beta - 1/\beta)^3 = 4$. If A, B, C denote the quantities $8/(1+3x^2), \frac{1}{3} \{x(3+x^2)\}, \frac{1}{3} \{(4-x^2)/3x\}$, then, if $A = B$, each is $\pm \sqrt{\{ \pm \sqrt{1+C} \pm \sqrt{C} \}}$. Fix the signs when x is real and positive.

14180. (W. C. STANNAM, B.A.)—If O is a fixed point, and PQ is any chord of a conic drawn through one of its foci (S), and if OP, OQ meet the conic again at P' and Q' , $P'Q'$ passes through a fixed point (Z), and, conversely, if $P'Q'$ is any chord through Z , and if OP', OQ' meet the conic again at P and Q , PQ passes through S .

14181. (H. MACCOLL, B.A.)—Let A and B be two events which are not mutually independent. Show that, if the dependence of A upon B is equal to the dependence of B upon A , then the chance of A happening is equal to the chance of B happening. Definitions.—The fractional symbol a/β (when a and β are statements) denotes the chance that a is true on the assumption that β is true; the symbol a/ϵ denotes simply the chance that a is true, nothing being taken for granted but the data of the problem. The symbol $\delta a/\beta$ denotes $a/\beta - a/\epsilon$, and is called the dependence of a upon β , or of the event A , asserted by a , upon the event B , asserted by β .

14182. (Rev. J. CULLEN.)—A triangle $A'B'C'$ is obtained by revolving a given triangle ABC on a point A in its plane through an angle θ ; $A''B''C''$ is similarly obtained by revolving ABC on A' , the isogonal conjugate of A in an opposite direction $(-\theta)$. Prove that (1) the six intersections of the homologous sides of $A'B'C'$ and $A''B''C''$ with those of ABC lie on a circle C_6 . (2) As θ varies the locus of the centre of C_6 is the perpendicular to AA' through its mid-point. (3) The envelope of C_6 is the inscribed conic whose foci are A and A' . (4) If A lies on the circum-circle of ABC , C_6 becomes a right line whose envelope is a parabola.

14183. (R. KNOWLES, B.A.)— $ABCDEF$ is a pentagon inscribed in a conic; the lines joining the poles of AB, BC, CD, DE, AE to the points D, E, A, B, C respectively meet the curve in A', B', C', D', E' ; prove that the five lines joining the pole of $A'B'$ to $D', \&c.$, are concurrent.

14184. (J. J. BARNIVILLE, B.A.)—Prove that

$$\frac{1}{2^3 + 3^3 - 1} + \frac{2}{5^3 + 1} + \frac{3}{8^3 - 2} + \frac{6}{13^3 + 3} + \dots = 17/90,$$

$$\frac{1}{2 \cdot 3} + \frac{7}{5 \cdot 8} + \frac{57}{13 \cdot 21} + \frac{285}{34 \cdot 55} + \dots = 1,$$

$$\frac{7}{3 \cdot 5} + \frac{31}{8 \cdot 13} + \frac{183}{21 \cdot 34} + \frac{835}{55 \cdot 89} + \dots = \frac{3}{2}.$$

14185. (REV. T. MITCHESON, B.A.)—If R is the point of intersection of the normals drawn from the ends of semi-conjugate diameters of an ellipse, show that the distance of R from the centre is

$$x_1 y_1 a^{-3} b^{-3} (a^2 - b^2) \{ b^2 (bx_1 - ay_1)^2 + a^2 (bx_1 + ay_1)^2 \}^{\frac{1}{2}},$$

(x_1, y_1) being the extremity of one of the diameters.

14186. (LT.-COL. ALLAN CUNNINGHAM, R.E.)—Show that the sum of the cubes of any number (> 2) of integers in arithmetical progression may always be resolved into three factors.

14187. (ROBERT W. D. CHRISTIE.)—Let n and N be any integers whatever; then three factors of N are:—

$$(1) n, \quad (2) [N + \{(n^2 - N)/2n\}^2] \pm (n^2 - N)/2n,$$

and, if $(n^2 - N)/2n$ is integral, all the factors are.

14188. (SALUTATION.)—Bisect AB (= unity) in C , and AC in D ; on AB describe a semicircle; from A, D draw parallel lines intersecting the semicircle in P, Q respectively; S, T being the projections of P on AB , and of S on DQ , prove that $4ST$ is the sine of an angle = $3PAB$.

14189. (V. DANIEL.)— XY is the line $x \cos \alpha + y \sin \alpha = p$, referred to rectangular axes through O . If a point move along the zigzag line $OPP_1P_2P_3 \dots$ (which is such that OP is perpendicular to XY , PP_1 to YO , and, generally, P_nP_{n+1} perpendicular to $P_{n-1}P_n$), it will ultimately arrive at a point S . Similarly, if it move along $OPp_1p_2p_3 \dots$, it will ultimately arrive at a point S' . Prove (1) S and S' are the foci of an ellipse inscribed in the triangle YOX , and its major axis is

$$p/\sqrt{(1 + \cos^2 \alpha \sin^2 \alpha)}.$$

(2) OX, OY subtend right angles at S and S' respectively, and hence that three pairs of triangles are similar, namely, $OSX, OS'Y$; $OSY, XS'Y$; $OS'X, XS'Y$. (3) If SS' produced intersect the axes in T and T' , $OS^3 \cdot OT' = OS'^3 \cdot OT$. (4) When YOX is isosceles, the ellipse has eccentricity = $1/\sqrt{5}$.

14190. (C. E. HILLYER, M.A.)—If P be a point on the circumcircle of ABC , whose orthocentre is H , and a, b, c be the orthocentre of the triangle PBC , b of the triangle PCA , and c of the triangle PAB ; prove (1) that B, a, H, C are concyclic; (2) that the SIMSON-line of P with respect to the triangle ABC is also the SIMSON-line of a with respect to the triangle HBC , and of b with respect to HCA , and of c with respect to HAB ; (3) that this line bisects Aa, Bb, Cc , and PH .

14191. (PROFESSOR H. LANGHORNE ORCHARD, M.A., B.Sc.)—Find the roots of the quadratic equation

$$8x^2 - 2(n^4 + 2n^3 + 3n^2 + 2n)x + n^6 + 3n^5 + 3n^4 + n^3 = 0,$$

and exhibit each as a series.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXIX. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, March 9, 1899.—Lt.-Col. Cunningham, R.E., V.P., in the Chair. Fifteen members present.

The following gentlemen were elected members:—Prof. L. E. Dickson, University of California; Prof. A. C. Dixon, Queen's College, Galway; and Mr. H. Hilton, B.A., Fellow of Magdalen College, Oxford.

Mr. J. G. Leatham, M.A., was admitted into the Society. Dr. J. Larmor, F.R.S., made a few remarks on the phenomenon of Zeeman and its bearing on the problem of the origin of spectra. Dr. Hobson, F.R.S., and Mr. R. Hargreaves, M.A. spoke on the subject of the communication.

Dr. Macaulay gave an account of a note by Mr. G. B. Mathews, F.R.S., on "Involution."

The following papers were given in abstract:—

"Note on the Expansion of $\tan(\sin \theta) - \sin(\tan \theta)$ in powers of θ ," by Mr. R. H. Pinkerton, M.A.

"Note on a Property of Groups of Prime Degree," by Prof. W. Burnside, F.R.S.

"Note on the Invariant Total Differential Equation in Three Variables," by Prof. J. M. Page, University of Virginia, U.S.A.

CASSELL'S EDUCATIONAL LIST.

A NEW READING BOOK JUST PUBLISHED.
Price 1s. 8d., in blue cloth; handsomely bound in cloth gilt (suitable for Prizes), 2s. 6d.

IN DANGER'S HOUR; or, Stout Hearts and Stirring Deeds.
With an Introduction by H. O. ARNOLD-FORSTER, M.P. 240 pp. Extra crown 8vo. With Original Coloured Plates and Numerous Illustrations.

OPINIONS JUST RECEIVED.

"In Danger's Hour' is an ideal book. The illustrations and type are exquisitely dainty. I have seen no three-and-sixpenny book which has so struck my fancy. The price is marvellously low."—Miss PATTENDEX, The Priory School, Thirsk.
"Forty years' experience of reading books for boys both in large and small schools tells me that no book will prove to be more popular than 'In Danger's Hour.' It is well printed, strongly bound, and splendidly illustrated."—MR. E. RICHARDSON, The High School, Thirsk.

CASSELL'S FRENCH DICTIONARY. 515th Thousand.
1,150 pp. 3s. 6d. Superior binding, 5s.

"Has become a standard work in this country, being used in the best schools, recommended by many of the first professors of the day, and generally found a reference book of the highest value and importance."—*Daily Chronicle*.

CASSELL'S GERMAN DICTIONARY. 222nd Thousand.

1,201 pp. 3s. 6d. Superior binding, 5s.
"Is the best of the smaller German dictionaries in the field, and this is faint praise."—*Journal of Education*.

CASSELL'S LATIN DICTIONARY. 102nd Thousand. 927 pp.
3s. 6d. Superior binding, 5s.

"Is the handiest, the most useful, and certainly the very cheapest to be met with."—*Rock*.

THE NEW LATIN PRIMER. By Prof. J. P. POSTGATE. 2s. 6d.

THE FIRST LATIN PRIMER. By the same Author. 1s.

LATIN PROSE FOR LOWER FORMS. Being a Series of Exercises adapted to the New and First Latin Primers. By M. A. BAYFIELD, M.A. 2s. 6d.

A FIRST SKETCH OF ENGLISH LITERATURE. Comprising an Account of English Literature from the Earliest Period to the Present Date. By HENRY MORLEY, LL.D. Thirty-first Thousand. 1,099 pp. Crown 8vo, cloth, 7s. 6d.

THE STORY OF ENGLISH LITERATURE. By ANNA BUCKLAND. Fourteenth Thousand. Cheap Edition. Cloth boards, 3s. 6d.

ELEMENTARY PHYSIOLOGY FOR STUDENTS. By ALFRED T. SCIOFIELD, M.D., M.R.C.S., &c. With Two Coloured Plates and a large number of other Illustrations. Revised Edition, price 5s.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & CO., LTD., LUDGATE HILL, LONDON.

NOW READY.

NICIAS AND THE SICILIAN EXPEDITION. By Rev. A. J. CHURCH, M.A., formerly Professor of Latin in University College, London. Crown 8vo, cloth, 1s. 6d.

HANNIBAL AND THE GREAT WAR BETWEEN ROME AND CARTHAGE. By W. W. HOW, Fellow and Tutor of Merton College, Oxford. With Three Plans. Crown 8vo, cloth, 2s.

SEELEY'S CHEAP SCHOOL SERIES.

Conducted by the Rev. A. J. CHURCH, M.A., sometime Professor of Latin at University College, London.

Each Volume contains sufficient matter for the work of one term, with Notes by a competent Editor of practical experience in tuition; and is well printed and strongly bound in cloth.

NEW VOLUMES.

LATIN VOCABULARIES. Arranged according to subject. By A. W. READY, R.A. 16mo, cloth, 8d.

LATIN EXERCISES. Third Part. By Rev. A. J. CHURCH, M.A. 16mo, cloth, 8d.

These two volumes may also be had, bound together in cloth, 1s.

Ovid. Elegiac Verse. With Vocabulary. 8d.

Ovid. Metamorphoses. With Vocabulary. 8d.

Horace. Select Odes. 8d.

Cæsar. Selections. 8d.

Cicero. Select Passages. 10d.

Livy. Select Passages. 8d.

Phædrus. Select Fables. With Vocabulary. 8d.

Cornelius Nepos. Select Lives. With Vocabulary. 8d.

A Latin Delectus. 8d.

Easy Latin Reading Book. 8d.

A Latin Exercise Book. Part I. 8d.

A Latin Exercise Book. Part II. 8d.

Latin Prose through English Idiom.

By Rev. E. A. ABBOTT, D.D. 2s. 6d.

First Latin Grammar. 1s.

The Stories of the Iliad and the Æneid. A Classical Reading Book. By Prof. CHURCH. 1s.

Priora Latina. A First Latin Book. 1s.

First Latin Dictionary. 1s. 6d.

Milton. "Comus." 8d.

Milton. "Samson Agonistes." 1s.

Cowper. Two Books of the "Task." 8d.

Goldsmith. "The Traveller." 8d.

English Verse for Repetition. Part I. 1s.

English Verse for Repetition. Part II. 1s.

Literary Selections for Practice in Spelling. 1s.

Algebra. By E. PROWDE SMITH. 1s.

Euclid. 1s.

Arithmetical Exercises. 1s. (To be had with or without Answers.)

French Grammar. 1s. 6d.

DR. ABBOTT'S SCHOOL BOOKS.

VIA LATINA. A First Latin Book. Crown 8vo, 3s. 6d.

HOW TO WRITE CLEARLY. Rules and Exercises on English Composition. 1s. 6d., cloth.

HOW TO PARSE. An Attempt to apply the Principles of Scholarship to English Grammar. 3s. 6d., cloth.

HOW TO TELL THE PARTS OF SPEECH; or, Easy Lessons in English Grammar. 2s., cloth.

ENGLISH LESSONS FOR ENGLISH PEOPLE. By the Rev. EDWIN A. ABBOTT, D.D., and Prof. J. R. SEELEY, M.A. 4s. 6d.

LONDON: SEELEY & CO., LIMITED, 38 GREAT RUSSELL STREET.

Macmillan & Co.'s New Books

No. 3 NOW READY.

 OUR CHESS COLUMN. CORRESPONDENCE. CALENDAR.

ENGLISH.

MACAULAY'S ESSAY ON MILTON. With Notes, Abstract, Chronological Summaries, &c., by H. B. COTTERILL, M.A., Silver Medalist of the Society of Arts. Globe 8vo, 2s. 6d. [*Macmillan's English Classics.*]
 CHILDE HAROLD'S PILGRIMAGE. A Romance. By Lord BYRON. Edited, with Notes and an Introduction, by EDWARD E. MORRIS, Professor of English in the University of Melbourne. Cantos I. and II., globe 8vo, 1s. 9d. Cantos III. and IV., globe 8vo, 1s. 9d. [*Macmillan's English Classics.*]
 SHORT STUDIES OF SHAKESPEARE'S PLOTS.—King Lear. Richard II. By CYRIL RANSOME, M.A. Globe 8vo, sewed, 9d. each. [*Educational Times.*—"Simple and popular expositions, very helpful to young students."]
 INTRODUCTION TO ENGLISH LITERATURE. From Macmillan's Advanced Reader. Globe 8vo, sewed, 6d.
 THREE STUDIES IN LITERATURE.—Francis Jeffrey, Newman as a Prose Writer, Matthew Arnold. By LEWIS E. GATES, Assistant Professor of English at Harvard University. Globe 8vo, gilt top, 6s.

ENGLISH GRAMMAR AND COMPOSITION.

ENGLISH GRAMMAR PAST AND PRESENT. Part I.—Modern English Grammar; Part II.—Idiom and Construction; Part III.—Historical English: Word-building and Derivation. By J. C. NESFIELD, M.A. Globe 8vo, 4s. 6d.
This book is suitable for the London Matriculation Course.
School Guardian.—"Entitled to considerable praise and a hearty welcome."
Educational Times.—"His book gives evidence of good judgment and experience in teaching."

MANUAL OF ENGLISH GRAMMAR AND COMPOSITION. I.—Parsing and Analysis; II.—Composition: Force and Property of Diction; III.—Enlargement of Vocabulary: Figures of Speech; IV.—Prose and Poetry; V.—History of the Language. By J. C. NESFIELD, M.A. Globe 8vo, 2s. 6d.
Guardian.—"The whole of Mr. Nesfield's work is stamped with the impress of individual thought, and with the earnest desire to remove those absurdities of grammatical classification and terminology which are the despair of the teacher, and one of the chief drawbacks to the attainment by English grammar and literature of that high place in the school curriculum which should naturally be its due."

MATHEMATICS.

A HISTORY OF PHYSICS IN ITS ELEMENTARY BRANCHES, including the Evolution of Physical Laboratories. By FLORIAN CAJORI, Ph.D. Extra crown 8vo, 7s. 6d. net.
 TWENTY-FOUR TEST PAPERS IN PRACTICAL, PLANE, AND SOLID GEOMETRY (Science Subjects), Elementary Stage. By GEORGE GRACE, B.Sc. Lond., A.R.C.Sc. Lond., First Class Honours in Solid Geometry, &c. Printed on cartridge paper, price 2s.
 Third Edition. Now ready.
 ELEMENTS OF DESCRIPTIVE GEOMETRY. By J. B. MILLAR, M.E., Civil Engineer. Third Edition. Crown 8vo, 6s.
Nature.—"A very serviceable exposition of the subject."
 PUBLIC SCHOOL PROTRACTOR SCALE. Twelve in a packet. Price 6s.

HISTORY.

LONDON: LONGMANS & CO., PATERNOSTER ROW.

COLLEGE OF PRECEPTORS.

Lectures for Teachers on the Science, Art, and History of Education.

MORAL EDUCATION.

To be delivered by JAMES SULLY, M.A., LL.D., Grote Professor of the Philosophy of Mind and Logic at University College, London.

The First Course of Lectures (27th Annual Series) commenced on Thursday, February 16th, at 7 p.m.

This Course, consisting of Twelve Lectures, will deal with the Development of the Will and Character. The aim of this branch of education will be elucidated by a reference to the ethical conception of good or virtuous character, and its methods by a reference to the psychological laws of development. Attention will be paid throughout to the special circumstances and needs of the school teacher.

Directions will be given as to reading, and care will be taken, by the setting of papers and by conversation, to give students a real grasp of the subjects of the Course.

SYLLABUS.

I.—The Conception of Moral Education—The Aim of Moral Education—The Idea of the Good Man not Determined by Current Standards—The Ethical Conception of the End of Action and its Historical Development—Happiness and Moral Perfection—Relation of the Self to other Selves—The Service of Humanity—Dutiful conduct and Virtuous Character—The Connexion between Moral and other Excellences—The Intellectual Side of Virtuous Character: Reasonableness—The Emotional Element in Moral Perfection: Enthusiasm—Types of Virtuous Character.

II.—The Material on which Moral Education works—Different Conceptions of Child-Nature—View that Goodness and Badness are alike acquired (Locke)—Theory of Innate Badness—Theory of Innate Goodness (Rousseau)—Scientific View of Natural Tendencies—Evolution and Heredity as explaining Natural Tendencies—Significance of Brutal and of Human Characteristics in the Child—Passionateness, Combativeness, &c.—Germ of Respect for Order and Law—Imitation as furthering Moral Adaptation—Rudiments of the Social Affections—Early Modifications of Natural Tendency by the Influence of the Home and Companions.

III.—The Methods of Moral Education—Presuppositions of Moral Education: Personal Authority and the Power to Control Children's Actions—Negative and Positive Sides of Moral Control—The School as a Restraining System—The School as developing the Ideal Self—Indirect and Direct Action of Positive Training—The Teacher as working on Moral Growth through Ideas—The Cultivation of Social and Moral Feeling—The Development of the Good Will as entering into School Discipline—Moral Growth as depending on the Action of a Community—The Moulding of the Individual by acting upon the School Community—Moral Function of the Day and the Boarding School.

IV.—Development of the Intelligence as furthering Moral Education—The Observation of Moral Facts—Extension of Field of Observation by presentation of others' Moral Experiences—The Apperception of Moral Presentations—Children's Manner of Apperception—The part of the Educator in the Selection and the Interpretation of Moral Facts—The rôle of History and of Fiction in the Development of Moral Ideas—Simplification of Facts by Stories of Child-Life, Fables, &c.—Later Stage of Moral Instruction—Inductive Building-up of more Abstract Moral Conceptions—Exercising the Child in the Analysis and Classification of Moral Facts—The Construction of Ideas of "Me and My World," the Actual and Ideal "Me," &c.

V.—The Cultivation of Feeling as furthering Moral Education—The Place of Feeling in Mental Life as a Whole and in Moral Growth—The Idea of a Cold Morality—Moral Estimate of Children's Feelings—Violence of Feeling and Enthusiasm—Affectation of Feeling and Sentimentalism—The Egoism of Early Feeling—The Duty of the Teacher to respect the Egoistic Feelings of the Child—The Injury of the Moral Nature by Indifference or Apparent Injustice—Injuries due to Failure to Understand the Individual Child—The Sensitive Child and its Varieties—The Problem of Encouraging Self-confidence—The Moral Effects of Showing Sympathy and Kindness to Children—The Hardening Effect of School Life on Feeling, and its Ethical Significance.

VI.—The Action of School Life on the Social Feelings, and its Ethical Importance—Development of Respect for the Higher Personality and for Authority—The Child's Sensitiveness to Blame and Praise—The Delight of Pleasing—The Action of the Community on the Child's Social Feelings: Rivalry and the Love of Co-operation—Example and its Effect on Feeling—Warning Examples and Moral Dislikes—The Admiration of Heroes—The School Community as developing Sympathy—The Ethical Value of School Friendships—Beginnings of a Respect for Law as such—How the Experience of the School develops the Feeling of Justice—Collective or Communal Sympathy as a Basis of Moral Sentiment.

VII.—The Higher Development of Moral Feeling—The Presentation of a Model of Good Feeling by the Teacher—The Methodical Exercise of the Better Feelings: Encouragement of Sympathy with others—Working against Childish Prejudices—The Formation of a Habit of Impartial Sympathy—The Exercise of the Feelings in the Development of Just Appreciations of Goodness—The Action of Historical and Fictitious

Character on the Growth of Moral Feeling—The Control and Guidance of Children's Pity—The Conflict and Reconciliation of Justice and Mercy—Influence of the Direction of Moral Admiration on the Growth of Ideal Conceptions of Goodness—The Privacy of the Child's Moral Feeling and its Respect by the Teacher—The Supreme Need of studying the Emotional Nature of the Individual Child.

VIII.—Moral Education as concerning itself ultimately with the Will—Nature of Volition and its relation to Thought and to Feeling—Action of the Teacher on the Child's Will—This Action rendered difficult by the Weakness of the Child's Will and the Limitations set to its Field of Activity—Whence Two Characteristics of Moral Training: (a) its Prospective Character as preparing for Later Conduct, (b) its Reliance on Authority and Systematic Discipline—Moral Education as emphasizing the Development of Moral Ideas, Feelings, and Desires (Herbart)—The System of Authoritative Control as interfering with the Child's Spontaneous Action and as enforcing New Modes of Activity by the Introduction of New Motives—The Education of the Will as surmounting these Limitations—The Moral Influence of the Educator as permeating and transforming Governmental Control—The Problem of rendering Prescribed Lines of Action Natural to the Child—Education as developing in its turn a New Spontaneity: "Moral Freedom."

IX.—Primary Education of the Will—Characteristics of Children's Actions—The Dominion of Instinct and Passion—Mischievous Directions of Early Action—The Institution of Authority and Government as a means of controlling Children's Actions—The Operation of Educational Restraint on the Growing Will—The Prohibition of Actions in the Home and the School—Natural Attitude of Children towards Prohibitions—The Attitude of Disobedience and its Variations—Different Moral Values of Obedience—The Gentle or Yielding and the Resistant Child—Some Problems respecting Punishment.

X.—The Operation of Authority as going beyond mere Arrest of Mischievous Activity—Government as Complicated from the First by the Personal Element in Authority—How this Element gives Moral Influence to Restraining Government—The Child's Wish to Avoid giving Offence—Appeals to the Child's Good Feeling and Reasonableness—The Methods of calling forth Efforts of Will—Moral Suggestion and its use in Education—The Desire to Please and to Gain Credit—The Judicious Use of Praise—The Appeal to Imitativeness and the Use of Example—The Judicious Use of the Motive of Emulation—The Fixing of Effort in Definite Directions—The Value of the Principle of Habit in Early Moral Training.

XI.—The Organizing of Control into an Intelligible System—The Generalizing of Commands into Rules of Conduct—The Rule as Permanent Command and as Valid for all alike—The Explanation of Rules—The Special Rules of School Discipline: Orderly Behaviour, Industry, &c.—How the Rules of School Life develop the Idea of a Social System and of Common Duties—The Part of the Teacher in enforcing the Rules of Virtue: Truthfulness, Honesty, &c.—How the Teacher's Personality contributes to the Acceptance of Moral Rules—Rewards of Good Conduct—Moral Discipline as developing Standard Ideas of Conduct—The Use of Striking Examples in recommending Rules of Virtuous Conduct—The Habit of Virtuous Conduct as preparing for Moral Freedom.

XII.—Later Stages of Education of Will and Character—The Connecting of Moral Instruction with Moral Discipline—Treatment of Unusual and Exceptional Cases of Conduct—Mistaken Sense of Duty and Conscientious Obstinacy—The Respecting of Moral Individuality—Action of the Teacher on the Collective Moral Tone—Problem of correcting Wrong or Defective Moral Notions and Standards—False Ideas of Honour: Reflections of Low "Conventional" Morality, &c.—Inculcation of Duty in the Face of Numbers—The Gradual Enlargement, by the Teacher, of the Field of Virtuous Conduct—The Encouragement of Public Spirit and Participation in Public Causes—The Preparation for Self-controlled Conduct—The Educational Use of Posts of Trust and the Gradual Devolution of Moral Responsibility on the Pupil.

The Fee for the Course of Twelve Lectures is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

Names to be sent to the PRINCIPAL not later than June 15th. F. MABEL ROBINSON, Secretary.

BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W. DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

(Recognized by the Cambridge Syndicate.)

Head of the Department—Miss H. ROBERTSON, B.A.

The Easter Term began on Monday, April 24th. The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

F. MABEL ROBINSON, Secretary.

HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

TRAINING COLLEGE FOR SECONDARY TEACHERS, with School for Girls and Kindergarten.

HIGHBURY HILL HOUSE, LONDON, N.

Principal—The Rev. DAVID J. THOMAS, M.A. Vice-Principal—Miss PENSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers' Diploma of the College of Preceptors.

A Cambridge Higher Local Class for intending Teachers.

ST. GEORGE'S TRAINING COLLEGE, for WOMEN TEACHERS.

This College provides a complete course of training for well-educated women who intend to become Teachers. The Course includes attendance at Professor Laurie's Lectures on Education at the University of Edinburgh, and practice in Class-Teaching in several schools.

ROYAL INDIAN ENGINEERING COLLEGE, COOPER'S HILL, STAINES.

The Course of Study is arranged to fit an Engineer for employment in Europe, India, and the Colonies. About Forty Students will be admitted in September, 1899. The Secretary of State will offer them for competition Twelve Appointments as Assistant Engineers in the Public Works Department, and Three Appointments as Assistant Superintendents in the Telegraphs Department.

For particulars apply to SECRETARY at College.

THE HYGIENIC HOME

AND

COLLEGE OF PHYSICAL CULTURE

provides a thorough training for ladies (as teachers) in the principles and practice of Hygiene, Swedish Gymnastics, and Vegetarian Cookery.

The course extends over two years, and complete theoretical, as well as practical, training is given. Examinations are held and certificates given to successful students.

There are good openings for qualified teachers, who after training here are assisted to obtain posts. The College is situated in Worcester-shire, six miles from Birmingham, and half-a-mile from Halesowen Station; the old historic mansion, The Leasowes, having been adapted for this purpose.

The Leasowes stands in its own extensive grounds, and is surrounded by beautiful woods. Its bracing air, elevated position, and charming situation make it an ideal place for a College of Health. It has an excellent Gymnasium fitted with Swedish apparatus, also fine Gardens.

Elocution, Dancing, Gardening, Games, &c., are also taught as a means of Health and Physical Culture.

Students are admitted in September, age 18 to 30. Apply for particulars to Miss ANSTAY, The Leasowes, near Halesowen, Worcester-shire.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant-Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference. Incorporated Association of Headmasters. College of Preceptors. Teachers' Guild. Welsh County Schools' Association. Private Schools' Association. Association of Headmasters of Preparatory Schools. Association of Headmasters of Roman Catholic Schools. Assistant-Masters' Association. Association of Technical Institutions. Oxford Appointments Committee. Cambridge University Scholastic Agency.

The rates of commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

THE FROEBEL EDUCATIONAL INSTITUTE, TALGARH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Mr. W. MATHER.

Treasurer—Mr. C. G. MONTEFIORE.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

Principal—Madame MICHAELIS.

KINDERGARTEN AND SCHOOL.

Headmistress—Miss M. BOYS SMITH.

REIGATE GRAMMAR SCHOOL.

In consequence of the resignation of the present Headmaster the HEADMASTERSHIP will become Vacant in September next (after the Summer holidays), and the Governors will be prepared to receive applications for that office, with copies of testimonials (not exceeding three) on or before the 15th day of May next. The Headmaster must be a Graduate of some University in the British Empire. The Headmaster's house and schools are of modern erection, the latter providing accommodation for about 120 boys. The premises include a playground and master's garden. The population of the borough in which the school is centrally located, is about 25,000. The Master will receive a stipend of £150 a year, and a capitation fee of £3 on each boy, and he will be allowed to receive 15 Boarders at a charge of £45 each, exclusive of school fees. For further particulars apply to Mr. G. CATTERSOLL SMITH, Clerk to the Governors, High Street, Reigate.

UNIVERSITY EXAMINATION POSTAL INSTITUTION.

Head Teachers' Criticisms.

Rev. W. H. HOWLETT, M.A. Oxon., Headmaster of Bury School, writes:—"I have much pleasure in bearing testimony to the excellence of your wall map of Africa. It is well printed, with sufficient, and yet not excessive, detail. The caravan routes and spheres of influence are carefully and accurately marked. It is extremely useful."

G. E. CLARK, Esq., Principal of Clark's Civil Service College, writes:—"The Cartographic Wall Maps serve our purpose admirably, and, having now arranged for their use in the central college, we shall introduce them into our branch establishments."

Miss RONDELL, Headmistress of the Kendrick School, Reading, writes:—"Your maps are excellent."

J. C. UNDERWOOD, Esq., F.R.G.S., writes:—"Admirable maps for teaching purposes, in fact, models of what school maps should be."

S. LEIGH, Esq., B.A. Lond., writes:—"A splendid production at the price."

A. S. TETLEY, Esq., M.A. Cantab., writes:—"A really artistic production. I have never seen a map so beautifully coloured."

H. MATHWIN, Esq., M.A., writes:—"Your maps are excellent, and a marvel of cheapness."

Rev. H. E. MOCATTA, M.A. Oxon., writes:—"The maps supply a decided want, being extremely clear and well arranged, and can easily be seen by pupils sitting at a distance."

Miss ETHELWYN M. AMERY, B.A. Lond., writes:—"Yours are quite the clearest maps we have."

Rev. A. W. CALLIS, M.A. Oxon., writes:—"The map of England and Wales is an excellent one. I have never seen a coast line and the names upon it so well brought out."

CASSELL'S EDUCATIONAL LIST.

Just Published.

IN DANGER'S HOUR; or, Stout Hearts and Stirring Deeds. With Introduction by H. O. ARNOLD-FORSTER, M.P. With Original Coloured Plates and numerous Illustrations. Price 1s. 8d., in blue cloth; or, handsomely bound in cloth gilt, suitable as a Prize Book, 2s. 6d.

"Forty years' experience of reading books for boys both in large and small schools tells me that no book will prove to be more popular than 'In Danger's Hour.' It is well printed, strongly bound, and splendidly illustrated, and I shall be much mistaken if Messrs. Cassell do not soon reap the benefit of their labour and outlay."—MR. E. RICHARDSON, M.A., High School, Thirsk.

Just Published. An Entirely new and Enlarged Edition.

OPTICS. By Dr. HAUGHTON. Revised and, to a great extent, Re-written by the Rev. ISAAC WARREN, of Trinity College, Dublin. With additional Illustrations. 2s. 6d.

This important educational work originally appeared in "Galbraith and Haughton's Scientific Series," when it obtained a considerable popularity. In the present edition it has been brought thoroughly up to date. It is the book appointed in this subject for the Sophister Classes, and for the ordinary Degree Examination (i.e., B.A. Degree in Arts) in the University of Dublin.

CASSELL'S FRENCH DICTIONARY. 515th Thousand.

1,150 pp. 3s. 6d. Superior binding, 5s.

"Has become a standard work in this country, being used in the best schools, recommended by many of the first professors of the day, and generally found a reference book of the highest value and importance."—*Daily Chronicle*.

CASSELL'S GERMAN DICTIONARY. 222nd Thousand.

1,201 pp. 3s. 6d. Superior binding, 5s.

"Is the best of the smaller German dictionaries in the field, and this is faint praise."—*Journal of Education*.

CASSELL'S LATIN DICTIONARY. 112th Thousand. 927 pp.

3s. 6d. Superior binding, 5s.

"Is the handiest, the most u-eful, and certainly the very cheapest to be met with."—*Book*.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & CO., LIMITED, LUDGATE HILL, LONDON, E.C.

NOW READY. Demy 8vo, cloth, 666 pp., price 2s. 6d., free by post. To Members of the College the price is 1s., or 1s. 6d. free by post.

THE

CALENDAR

OR

The College of Preceptors.

FOR THE YEAR 1899:

CONTAINING

All information respecting the objects and operations of the College, Lists of Officers, Examiners, and Members, the Regulations of the various Examinations, &c., with an Appendix containing the following Examination Papers:—

1. Papers set at Examination of Teachers for Diplomas, Midsummer, 1898.
2. Do. do. do. Christmas, 1898.
3. Papers set at Examination of Pupils for Certificates, Midsummer, 1898.
4. Do. do. do. Christmas, 1898.
5. Papers set at Professional Preliminary Examination, March, 1898.
6. Do. do. do. September, 1898.
7. Papers set at Junior Forms Examination Midsummer, 1898.
8. Do. do. Christmas, 1898.

* * Nos. 3, 4, 5, and 6 may be had separately, price, free by post, 7d. each set. Nos. 7 and 8, price, free by post, 4d. each set.

LONDON: FRANCIS HODGSON, 89 FARRINGTON STREET, E.C.

APPROVED SCHOOL BOOKS BY DR. CORNWELL, F.R.G.S.

"We are qualified by ample trial of the books in our own classes to speak to their great efficiency and value. We have never known so much interest evinced, or so much progress made, as since we have employed these as our school-books."—EDUCATIONAL TIMES.

A School Geography. 87th Edition; 3s. 6d., or, with 30 Maps, 5s. 6d.

"Very superior to the common run of such books. It contains a good deal of useful matter of a more practical kind than usual, which the exercises are likely to impress on the mind more deeply than by the parrot system."—*Athenæum*.

A School Atlas. Consisting of Thirty Small Maps. A Companion Atlas to the Author's "School Geography." 2s. 6d., or 4s. coloured.

Geography for Beginners. 67th Edition; 1s., or, with 48 pp. of Questions, 1s. 4d. Questions, 6d.

"A very useful series of Educational Works, of which Dr. Cornwell is either author or editor. It ('The Geography for Beginners') is an admirable introduction. There is a vast difficulty in writing a good elementary book, and Dr. Cornwell has shown himself possessed of that rare combination of faculties which is required for the task."—*John Bull*.

Spelling for Beginners. A Method of Teaching Reading and Spelling at the same time. 4th Edition, 1s.

Allen and Cornwell's School Grammar. 64th Edition; 2s. red leather, or 1s. 9d. cloth.

"The excellence of the Grammar published by the late Dr. Allen and Dr. Cornwell makes us almost despair of witnessing any decided improvement in this department."—*Athenæum*.

Arithmetic for Beginners. Combines simplicity and fulness in teaching the First Four Rules and Elementary Fractions. 9th Edition. 1s.

Grammar for Beginners. An Introduction to Allen and Cornwell's "School Grammar." 87th Edition; 1s. cloth, 9d. sewed.

"This simple introduction is as good a book as can be used."—*Spectator*.

The Book is enlarged by a Section on Word-Building, with Exercises for Young Children.

The Young Composer: Progressive Exercises in English Composition. 48th Edition, 1s. 6d.

Key, 3s.
"The plan of the work is very superior. We are persuaded this little book will be found valuable to the intelligent instructor."—*Westminster Review*.

Poetry for Beginners: A Selection of Short and Easy Poems for Reading and Recitation. 13th Edition, 1s.

The Science of Arithmetic. A Systematic Course of Numerical Reasoning and Computations; with very numerous Exercises. By JAMES CORNWELL, Ph.D., and Sir JOSHUA G. FITCH, LL.D. 26th Edition. 4s. 6d.

"The best work on arithmetic which has yet appeared. It is both scientific and practical in the best and fullest sense."—*London Quarterly*.

Key to Science of Arithmetic. With the Method of Solution to every Question. KEY, 4s. 6d.

"Eminently practical, well stored with examples of wider range and more varied character than are usually given in such books, and, its method of treatment being thoroughly inductive, it is pre-eminently the book for general use."—*English Journal of Education*.

London: Simpkin, Marshall, Hamilton, Kent, & Co., Limited.—Edinburgh: Oliver & Boyd.

SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French. Price 2s. 6d. cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly*.
"The English Idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.

"The exercises in the use of idioms are specially good."—*Bookman*.
"Will be found serviceable for rapid drill in the hands of a judicious teacher."—*Educational Times*.

"Would afford useful practice for intending candidates."—*Education*.
"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints, and one or two slips that we have noticed."—*Journal of Education*.

"We are great advocates of abundant exercises, hence our immediate approval of this book."—*School Guardian*.

"We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

THE PUBLIC SCHOOL SPELLING CARD.

Thirtieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than 15 years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

French Essentials and French Conversation Sentences.

Second Edition. Price 2s., cloth; 1s. 6d., boards. By the same Author.
"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"Students preparing for examination in French Grammar and Composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

London: BELFE BROTHERS, Ltd., 6 Charterhouse Buildings, Aldersgate, E.C.

CASEY'S EUCLID.

THE ELEMENTS OF EUCLID,
BOOKS I.—VI., and PROPOSITIONS I.—XXI. of BOOK XI.
Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises.
By JOHN CASEY, LL.D., F.R.S., Fellow of the Royal University of Ireland, Vice-President, Royal Irish Academy, &c., &c.
Tenth Edition, price 4s. 6d., post-free; or in Two Parts, each Half-a-Crown.

A KEY TO THE EXERCISES
IN THE SIX BOOKS OF CASEY'S "ELEMENTS OF EUCLID."
By JOSEPH B. CASEY, Tutor, University College, Dublin.
Second Edition. Small 8vo, price 6s.

A SEQUEL TO THE
FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID."
Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth. Now ready.
Now Ready, Second Edition, Revised and Enlarged, 564 pp., price 12s.

A TREATISE ON THE
ANALYTICAL GEOMETRY
OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS.
Containing an account of its most recent Extensions, with numerous Examples.
New Edition. Crown 8vo.

A TREATISE ON
ELEMENTARY TRIGONOMETRY.
With numerous Examples and Questions for Examination.
Third Edition. Small 8vo, 148 pp., price 3s.

KEY TO THE EXERCISES
IN THE TREATISE ON ELEMENTARY TRIGONOMETRY.
With numerous Examples and Questions. Second Edition. Price 3s.

A TREATISE ON
PLANE TRIGONOMETRY.
Containing an account of Hyperbolic Functions, with numerous Examples.
Crown 8vo. Second Edition.

Crown 8vo, price 5s.
A TREATISE ON
SPHERICAL TRIGONOMETRY,
AND ITS APPLICATION TO GEODESY AND ASTRONOMY.
With numerous Examples.

HODGES, FIGGIS, & CO., LIMITED, 104 GRAFTON STREET, DUBLIN.
LONDON: LONGMANS & CO.

CAMBRIDGE UNIVERSITY PRESS.

CAMBRIDGE COMPOSITIONS, GREEK AND LATIN. Edited for the Syndics of the Press, by R. D. ARCHER-HIND, M.A., and R. D. HICKS, M.A., Fellows and Classical Lecturers of Trinity College, Cambridge. Crown 8vo, 10s.

Times.—"In spite of the claims and attractions of a score of competing subjects, the sway of the classics is still as strong as ever, and University men are found to write Latin verse and Greek prose as good as any that was written under the sway of Hawtrey and Kennedy. The volume called 'Cambridge Compositions' deserves to be called a new 'Arundines Cami.' The editors, Messrs. Archer-Hind and R. D. Hicks, both Fellows of Trinity, are two of the best known Cambridge scholars of the day, and their contributors include such a gallery of Senior Classics and the like as have probably never been brought together in one book before."

LIFE AND REMAINS OF THE REV. E. E. QUICK. Edited by F. STORR, B.A. Crown 8vo, with Portrait. [Nearly ready.]

RUSSIAN READER: LERMONTOV'S MODERN HERO. With English Translation and Biographical Sketch, by IVAN NESTOR SCHNEURMAN, Author of "The Russian Manual and Aid to Russian Composition." Extra fcap. 8vo, 8s.

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University.

GEOMETRY FOR YOUNG ENGINEERS. An Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, M.A., Headmaster of Oundle School. 1s. 4d.

VERGIL.—ÆNEID IX. Edited, with Introduction, Notes, and Vocabulary, by A. SIDGWICK, M.A. 1s. 6d.

CAMBRIDGE HISTORICAL SERIES. New Volumes.

Edited by G. W. PROTHERO, Litt.D., Professor of History in the University of Edinburgh.

SCOTLAND. By P. HUME BROWN, M.A., LL.D., Author of "The Life of George Buchanan," "The Life of John Knox," &c. Two Vols. Vol. I. TO THE ACCESSION OF MARY STEWART. Crown 8vo, with 7 Maps, 6s. [Vol. II. in the press.]

Glasgow Herald.—"Far higher than an educational manual. Marks indeed a substantial advance in the method of writing Scottish history and a notable development of Scottish scholarship."

Literature.—"In Mr. Hume Brown's hands the history of Scotland seems for the first time an intelligible whole, not a series of unconnected episodes."

Academy.—"A well informed and vigorous sketch—the work of a man who knows his authorities."

A HISTORY OF THE COLONIZATION OF AFRICA BY ALIEN RACES. By Sir H. H. JOHNSTON, K.C.B., H.B.M. Consul at Tunis. Crown 8vo, with 8 Maps, 6s.

Daily News.—"Among the multitude of popular books on Africa, there was room for one which should give a concise account of the successive attempts of alien races to colonize it. In this volume we have the desired account, written by the most competent living authority. His 'Colonization of Africa' is a model of what an historical summary and handbook should be. It is just the kind of book for readers who want to acquire a general idea of the ebb and flow between East and West in Africa, and of the relation of the European movement now in progress to movements in the past."

CAMBRIDGE LOCAL EXAMINATIONS, 1899.

THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

Athenæum.—"The Pitt Press Shakespeare can stand in competition with any of the numerous editions of the sort now showered upon reviewers. This instance of it does credit to Mr. Verity, who is an excellent editor; he does not overdo the philology, and adds an excellent glossary of difficult words."

School World.—"Every page shows careful scholarship and a ripe literary judgment. It would be difficult to praise this work (or this series) too highly."

KING RICHARD II. With Introduction, Notes, Glossary, and Index. By A. W. VERITY, M.A., sometime Scholar of Trinity College. 1s. 6d.

PITT PRESS SERIES.

AUTHOR.	BOOK.	EDITOR.	PRICE.
Macaulay	Lays of Ancient Rome, &c.	J. H. Fether	1 6

School World.—"Is in thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. . . . The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."

Milton	Paradise Lost, Books I. and II.	A. W. Verity	2 0

ENGLISH GRAMMARS.

NEW AND ENLARGED EDITION.

THE ELEMENTS OF ENGLISH GRAMMAR. By A. S. WEST, M.A., Trinity College, Cambridge. 2s. 6d.

Prefatory Note to the Enlarged Edition.—"Some hundreds of additional Questions and Examples are given in the present edition, and in a few places the wording of the text has been altered. The numbers of the paragraphs remain the same."

Guardian.—"We note with satisfaction that Mr. Alfred West's 'Elements of English Grammar' has now reached its second edition and twenty-sixth thousand, thus tending to justify the prophecy as to its future popularity which we ventured to utter on its first appearance in 1893. . . . For thoughtful students in the upper forms of secondary schools we know of no more suitable work."

AN ENGLISH GRAMMAR FOR BEGINNERS. By the same Author. 1s.

Schoolmaster.—"It is a capital little work, which we can heartily recommend."
School World.—"The smaller of these two works ought to be extensively used for the teaching of junior forms. Its matter is arranged with the greatest care, its explanations are full, and easily adapted to juvenile intelligences. . . . Altogether the book is worthy of high commendation."

PITT PRESS MATHEMATICAL SERIES.

PITT PRESS SERIES. New Volumes.

JUVENAL.—SATIRES. Edited, with Introduction, Notes, and Index, by J. D. DUFF, M.A. 6s.

Extract from Preface.—"Perhaps it is reason enough for adding another to the many English editions of Juvenal, that all our recent editors have excluded the Sixth Satire, the most brilliant in detail and by far the longest of Juvenal's poems. The present edition includes 530 lines of this celebrated piece. The Second and Ninth Satires, some paragraphs of the Sixth, and a few lines in other Satires, are not included in this edition."

Guardian.—"We welcome Mr. Duff's volume with great pleasure. It is, in our opinion, the first short edition of Juvenal published in England, and suited to schools, which can be called satisfactory and scholarly. . . . For the present it seems to us the best English school edition of Juvenal."

CICERO.—DE OFFICIIS. Book III. With Introduction and Notes by H. A. HOLDEN, LL.D., Litt.D. (Dublin). New and Revised Edition. 2s.

XENOPHON.—ÆLLENICA, Books I. and II. Edited, with Introductions and Notes, by G. M. EDWARDS, M.A. 2s. 6d.

BOILEAU.—L'ART POÉTIQUE. Edited, with Introduction and Notes, by D. NICHOL SMITH, M.A. 2s. 6d.

Guardian.—"The book should be highly acceptable to adult students of French literature, the more especially as it is the first critical edition published in this country."

The Educational Times.

Red Tape and Inspection.

It would be a nice question to determine the origin of that constitutional infirmity in an Englishman's character which makes him a prey to red-tapeism. That its bacillus has acclimatized itself in his very life-blood is only too apparent to any one having dealings with a Government Department. We, however, are not specially concerned with its operations, except in so far as it affects the interests of education, and we commend the etiology of red-tapeism to philosophic educationists as a subject well worth inquiry. Indeed, the disease is so deep rooted and general that most people have become blind to its existence. A small town in Cumberland cannot make a reservoir to satisfy its notions of cleanliness without an inquiry conducted by the Local Government Board. The fishermen of the Dovey may not vary the size of the mesh of their salmon nets without a similar inquiry held by some official unearthed from the Board of Trade. Through every Government Department the vice is spread. We refrain from giving an instance from the working of the existing Education Department, as we have no desire to cool the growing enthusiasm for the proposals of the Government contained in the new Education Bill. We hope that Kipling is a false prophet when he says:

As it was in the beginning
Is to-day official sinning,
And shall be evermore.

Indeed, it was not so in early days, as witness the old Patent Rolls, when an English King would give a simple warrant to an officer, commanding him, it may be, to take prisoners from Chester to York Castle, and authorizing him to claim safe conduct, with all necessary maintenance, from the King's Sheriffs by the way. All details were left to his discretion, and, if things went wrong, doubtless he suffered. It is true that times are changed and life is more complex; but surely it is worth some pains to endeavour to regain the grand opportunities for the development of force of character and independence which the elasticity of primitive government provided. At any rate, let us jealously guard the small area left for individual initiative.

To know what are the chances that the new Board of Education has of escaping from infection by red-tapeism is a matter of some interest. This depends on the Bill, and we may frankly say that it was the elastic character of the new Education Bill that served to commend it to us from the first. By

Section 3 (1) it is provided that "the Board of Education may, by their officers or by any University or organization approved in that behalf by the Board, after taking the advice of the Consultative Committee hereinafter mentioned, inspect any school supplying secondary education and desiring to be so inspected, for the purpose of ascertaining the character of the teaching in the school and the nature of the provisions made for the teaching and health of the scholars." Now, every schoolmaster will admit that from the standpoint of pure educational influence this is one of the most important sections in the whole Bill. Whatever effect the measure may have on the future of education in this country will depend in the main upon the manner in which this section as to inspection—which, of course, includes examination—is worked. With the exception of those carried on under schemes framed under the Endowed Schools Acts, no school can be compelled to submit itself for inspection. If, therefore, the Board of Education desires to see inspection general—as it doubtless will in the interests of its own success—schools will be able to obtain the benefit of inspection under the conditions most suitable for their own special needs. The frank way in which, in introducing the Bill, the Lord President admitted the desirability of maintaining the optional character of the inspection, shows an unlooked-for and hopeful diffidence in the head of a Government Department as to the advantage of departmental interference. It is in this section especially that the germ of red-tapeism resides. If it should become too rampant, the *status quo* can be regained by any school—other than the excepted class above mentioned—desiring independence by simply not offering itself for inspection. Nevertheless, it is important to understand the pitfalls which exist within Section 3.

It is not clear, on the wording of this section, whether it is implied that the Consultative Committee has the right to give advice only as to what particular Universities or institutions should be the inspecting bodies, or whether the Committee's advice may extend to giving counsel with respect to the subjects as well as mode of inspection. The former construction seems the grammatical one, and therefore, as Acts of Parliament know no punctuation, the legal one. But, if so, it confines the action of the Consultative Committee within absurd limits in this respect, and the hand of the Government Department will be subject to no control in the very sphere where red-tapeism is most fatal to healthy development. The Duke of Devonshire's speech, indeed, would make us think that the second construction is what the framers of the Bill intend to express. The wording of this section must be made free

from ambiguity when the Bill reaches Committee. If the Consultative Committee is to become an effective Privy Council in educational matters, as we hope it may, its advice must be sought in all questions relating to inspection and curriculum.

The importance of this lies in the fact that, left to itself, the Board, through its permanent staff, would almost inevitably develop a rigid and formal system. Such a system is useless as a test of real efficiency, and cramping and sterilizing in its effect upon the curriculum of schools and the originality of teachers. The influence of the existing local examinations in determining the course of instruction in ordinary secondary schools is, we think, under-estimated. In their multitude and variety, however, there is safety. It is to be hoped that the example of the Central Board under the Welsh Intermediate Education Act will not be followed, and that every means will be adopted to prevent the new Board from creating itself into a central examining body. This can only be obviated by a strong Consultative Committee with full advisory jurisdiction. There seems to be no reason why a distinction should be drawn in the matter of inspection between schools working under schemes framed under the Endowed Schools Acts, now under the jurisdiction of the Charity Commissioners, and the other secondary schools of the country. It would appear from the Bill that the right to control the inspection of such schools, when transferred from the Charity Commissioners, would pass to the Board without being affected by the provisions of Section 3, which only applies to schools desiring to be inspected. Schools under the Charity Commissioners are already subject to inspection, at the will of the Commissioners, under the terms of their schemes, and are not in a position to express a free desire. These are matters of substance, but in no way hostile to the spirit of the Duke of Devonshire's speeches on the first and second readings of the Bill; and we think there ought to be no difficulty in getting them put outside controversy when the Bill is in Committee.

NOTES.

THE House of Lords has read the Board of Education Bill a second time, after a sufficiently interesting discussion. The Duke of Devonshire (who began the month by nearly soliloquizing himself out of public life) admitted once more the incomplete and tentative character of the Bill, and repeated his reasons for thinking that a Central Authority ought to be created in advance of the Local Authorities. He regretted that the Archbishop of Canterbury had introduced the religious question, seeing that there is nothing in the Bill which proposes to change the present administration of endowments in respect of religious instruction. Of course the Duke knew that this was not the precise point with the Archbishop and the two Convocations. They desire, not simply to keep the administration as it is, but to make a step in advance, and secure a greater provision of religious instruction. It is their duty to desire that, just as it is the duty of the State to secure equal treatment, respect for conscience, and education unobstructed by controversies. As for the general scope and policy of the Bill, the Archbishop had nothing but what was good to say of it.

THE BISHOP OF WINCHESTER expressed an opinion which agrees precisely with that of the majority of schoolmasters, and with that which has been often stated in these columns. He said that it was a most perilous thing to deal with secondary organization at all, but that it was a peril which had to be faced, and which could not be faced wisely without moving slowly. And he added that, if this particular measure was not heroic, it was at least practical. With respect to the Consultative Committee, the Duke of Devonshire postponed any detailed explanation until the next stage of the Bill. Nevertheless, he made a somewhat important statement. The Government do not propose that the Consultative Committee shall have any statutory character: "its functions are to be such as the Minister on his responsibility may entrust to it, and upon him will rest the responsibility for its action." Theoretically, that is right enough. The presumption is that, when you have a responsible Minister, you can make him do what you want. But the practice is often different from the presumption. At all events, the responsible Minister ought to be in the House of Commons, where representative men can get at him.

WELSH education has lost a sympathetic friend in the person of Mr. T. E. Ellis, M.P., who was Warden of the Guild of Graduates of the University. The late Mr. Ellis did much, on the political side especially, to bring the University itself, and notably the Guild of Graduates, into existence. Owing to the exigencies of the case, Wales tends to attach great prominence to men who aid the cause of education on the political side, and in Mr. Ellis it was fortunate in having a man who, by his education at Aberystwyth and at New College, Oxford, as well as by his experience for some time as a private tutor, had some practical acquaintance with educational difficulties. His successor as the representative of Merionethshire, Mr. O. M. Edwards, M.A., Fellow and Tutor of Lincoln College, Oxford, though in many respects a very different man from the late Mr. Ellis, has had a much more brilliant academic career than any of the other Welsh members of Parliament, and, indeed, than most men in the House of Commons. If he proves equally capable as an administrator and a man of affairs, he may well hope to achieve further distinction.

WHATEVER decision may be finally reached as to the proper capacities, faculties, and qualities of the sexes, he will be a bold man who will deny that Woman possesses a high degree of courage. The approaching International Congress of Women affords an excellent illustration. "International" is a large word, and men who have conducted international congresses on any single subject, such as labour, arbitration, temperance, have been known to faint and grow weary by the way. But Woman's International Congress will embrace not only one great theme, but five sections—to wit: Educational, Professional, Legislative and Industrial, Political, and Social. Educationists rarely find a common ground for a conference; they split into secondary (headmasters, headmistresses, &c.), elementary (Board, voluntary), technical education, and so on. We are far from saying that this is the only way to confer, although, perhaps, a conference on education in general might have proved what is vulgarly called "a large order." The second, the professional section of our International seems an even larger one, for

medicine, art, science, the drama, music, literature, journalism, agriculture, nursing, women as inspectors, clerical work, horticulture, handicrafts, are all drawn out before our rolling eyes. We can only say: "*Tout, tout est là,*" and wish the promoters a happy issue out of this great synthetic effort.

To those interested in education, and especially in co-education, a recent article in the *Spectator*, entitled "Women and Science," must have proved of more than common interest. Mrs. Ayrton's paper, before the Institute of Electrical Engineers, on "The Hissing of the Electric Arc," causes the writer of the article to observe that he understands the admiration the lecture elicited better than the surprise. He asks: "Why any surprise? The whole educational history of the last thirty years shows that women have a distinct proclivity towards science and mathematics, finding them less exhausting and easier than either history or classics." The writer then goes on to say that women, so far from being incapable of studying the exact sciences, have a natural capacity for comprehending them; that women draw deductions with singular rapidity and accuracy, leaping to conclusions which have caused acute observers to credit them with a special faculty of insight, differing not only in degree, but in kind, from that of men; that the feminine interest in details should make women acute observers, and that their thought runs best on concrete and not on abstract bases—"they think along a groove, so to speak, better than men." The feminine defect is, according to this writer, not lack of the power of rigid thinking, but deficiency of imagination and creative force. "They take everything too hard." A Laplace or a Lord Kelvin will appear more readily among women than a Paul of Tarsus or a Shakespeare. But we hardly agree with our contemporary's statement that there is not a Board school in the country where inspectors do not find that girls beat boys as arithmeticians. We rather think that the contrary is the experience, not because of the inferior ability of girls, but because they spend less time on the subject, in order to make room for sewing and cookery. It is at least certain that our stock notions of the relative capacities of the sexes need clearance or rearrangement.

Is it possible that the old-fashioned notion of girls being more deft and neat-fingered than boys will ere long disappear? It was expected—not unreasonably—that much practising at the piano and sewing of samplers and garments had made the girls specially deft. As in past days very few persons taught both sexes, and they were often themselves not acute observers, the statement passed without question. But now, at polytechnics, technical schools, and chemical laboratories, men who have been trained to observe and compare tell us that girls are far more awkward than boys in dealing with delicate chemical and scientific apparatus; they break and throw out of order; measure carelessly and inaccurately; and are easily beaten in delicacy of manipulation by boys. Who could have expected it? We suggested to the Doctor of Science who made the comparison that perhaps his girl pupils were "new" girls, who did not sew. But it was found that they devoted three hours weekly to the subject; and, besides, similar evidence is now coming from other quarters. Probably some measure of the boys' superiority will be traceable to better muscular development by

means of games. It would be interesting to learn the opinions of other natural-science professors who have opportunities for comparison.

An important principle in University administration is involved in the "strike" of Russian students which is now going on. It is calculated that twenty thousand students are implicated, representing all the higher educational institutions in St. Petersburg, four in Moscow, two in Kharkov, three in Kiev, and one in Odessa. Very briefly stated, the disturbance arose in this way. The Rector of St. Petersburg University, who had made himself unpopular among the undergraduates, was hissed at the official celebration of the University anniversary on February 20. That day is usually marked by celebrations in honour of the University by students and officials alike. This year, rather less than a week beforehand, the Rector issued notices forbidding any students to take any part in gatherings of their own under penalty of punishments *laid down in the General Penal Code and imposed by the Justices of the Peace*. That is to say, the Rector deliberately associated himself with the police by calling in their help in the matter of University discipline. This is a serious step, since the jurisdiction of the Rector does not extend beyond the limits of the University, and the general police measures do not apply within those limits. Hence the hissing.

WHAT happened next was this: Most of the undergraduates left the University at about one o'clock by the back doors; but the minority, who belonged to the well-to-do classes, left by the front doors, and found the ice by which they should have crossed the river cut, and the Palace Bridge held by a detachment of mounted police. Other people joined the students, making a crowd of about five hundred people. These, without any show of violence, turned quietly to another bridge, when they were set on by the police and brutally assaulted with heavy Cossack whips. This lasted for nearly an hour. Many of the students and four of the professors were seriously injured, and one woman student and one peasant have since died of their injuries. Every one confesses that the students behaved with remarkable self-control, and refrained from retaliation. It is not claimed that they were in league with any political agitators outside, and the action of the police has for once raised an almost universal indignation in the Russian Press and among the general public. Next day large indignation meetings were held by the undergraduates, and it was resolved to discontinue all attendance at lectures until satisfactory assurance was given to the students that they should enjoy personal security and freedom from such injustice in the future. Similar resolutions were arrived at by the students of the other Russian Universities mentioned above, and the issue of this widespread disaffection is being awaited with much interest. The Czar has expressed his sympathy with the movement in favour of greater freedom for the Russian students, and has admitted that it will be a bad day for Russia when her students submit silently to horsewhipping. Meanwhile, the whole affair is being investigated, and the conduct of the police is to be carefully judged. It is sincerely to be hoped that the Russian students will have justice done to them, and that this incident may lead to greater freedom in the future.

THE last report of the Swanley Horticultural College shows that there is again an increase in the number of women adopting gardening as a profession; and it shows, further, that their prospects are distinctly bright. It is a pleasure to know of a calling in which the demand is still greater than the supply, which seems to be the case here. Skilled women of scientific training are desired both for public institutions and for private houses. At the present time, there are thirty-three women students at the College. The training course lasts for two years and costs £70 a year, which secures board and residence in a separate house near the College, with a lady superintendent at the head. Scholarships are given by the County Councils of Essex, Kent, London, and Berkshire. Among other appointments of former students the following may be mentioned. One girl is a sub-foreman at Kew; another is head-gardener in a private establishment, with several men under her; and a third is at Miss Dove's School, Wycombe Abbey, where she superintends a number of men, and teaches the girls to manage the geraniums and artichokes which they grow on their little garden plots. Altogether, thirty-eight past students are earning their living in private or public gardens. The curriculum at the College includes scientific lectures, the growing of fruit, flowers, and vegetables, management of beehives, making of bouquets, decoration of tables. Though most of the students are English, there are several Scottish girls at the College and a few Irish, whilst one comes from Holland and another from Sweden.

SUMMARY.

THE MONTH.

THE Board of Education Bill was read a second time in the House of Lords on April 25. We comment upon the discussion in our Notes for the month. The Duke of Devonshire, replying to certain criticisms, said:

He assumed that the alleged inadequacy of the Bill consisted in the fact that it did not propose to deal in any way with the constitution of the Local Authorities. The Government had attempted to deal with it in the Education Bill of 1896, but he could not say that that proposal received any very enthusiastic support. As he pointed out when he introduced the Bill, the Government had thought it would not be wise to deal with Local Authorities before they had constituted the new Central Authority. But he saw no insurmountable reason why a measure dealing with the Local Authorities should not be introduced next Session. As to the inspection of schools, he on the first reading had guarded himself against the erroneous assumption which had got abroad as to the nature of the complete and systematic inspection of all secondary schools, public, endowed, proprietary, and private, which might desire inspection. There were eight hundred public schools, and not less than five thousand private and proprietary schools. For anything like an adequate inspection, even of the eight hundred public schools, a large and highly paid staff would be required, and for financial reasons the Government thought it was not likely for some time that such a staff would be placed at the disposal of the Education Board. But there were provisions in the Bill by which in the future the Central Authority might devise a scheme which would inspire general confidence, and induce Parliament to supply the funds necessary for a complete and systematic inspection of all secondary schools. Of course, in the case of instruction which was aided by the State, inspection was an absolute necessity.

THE Secretary of the London University Commission, Mr. T. Bailey Saunders, informs us that the Commissioners are prepared to consider applications from duly qualified teachers and lecturers giving instruction of a University type in public educational institutions situate within a radius of thirty miles from the University buildings, who desire to be recognized as teachers of the University. By a "public educational institution" the Commissioners understand to be meant an institution for general education, or for any special kind of education, which is not carried on for private gain or profit. Applications, stating the applicants' qualifications, should be addressed to him, at the

office of the Commission, 32 Abingdon Street, Westminster, S.W., on or before Saturday, May 13, 1899. It will be convenient if teachers and lecturers in physics, chemistry, or other subjects the effective instruction in which requires laboratories and expensive apparatus would state what resources of that character they have at their disposal. Teachers or lecturers on whose behalf applications have already been made by their colleges or schools need not repeat them.

UNDER the final scheme of the Charity Commissioners for the future management of Dean Colet's foundation a school for girls will be established, which will be controlled by a governing body of thirteen members, to be nominated as follows, viz., seven by the governing body of St. Paul's School, two by the London County Council, two by the School Board for London, and two by the general body of the girls' school. Three of the governors are to be women. The school is to be erected on a site within or in the immediate neighbourhood of the administrative county of London, and accommodation is to be provided for about four hundred girls. The headmistress is to receive a yearly stipend of £200, with a capitation grant of not less than £2, and not more than £3, a year. Exhibitions of the value of £500 are to be established, and, in addition, scholarships, entitling the holders to exemption from the payment of tuition fees, are to be maintained at the rate of one scholarship for every ten pupils. As far as St. Paul's School is concerned the scheme practically follows the lines of the one under which the school has been conducted of late years. The provisions with reference to the girls' school are, of course, new.

THE Committee appointed by Her Majesty's Treasury—familiarly known in scientific circles as "Lord Rayleigh's Committee"—to consider the desirability of founding a National Physical Laboratory had been invited to formulate a scheme of organization and administration. The matter has proceeded so far that Government will now ask Parliament for a grant of £4,000, to be continued for five years, and, as well, to make provision for a sum of about £12,000 for the erection of suitable buildings and laboratory equipment. Discussion of the question showed that it would not be feasible to establish an institution of so extensive a character as the well known Berlin Reichsanstalt, but a middle course was suggested which met with approval. It is intended to enlarge and adapt the existing Kew Observatory, situated in the Old Deer Park at Richmond, to some of the needs of the scheme, and, further, to erect new buildings on Crown land in the vicinity of the Observatory, these to form laboratories for research. While the initial expense of building and furnishing must of course be heavy, the taxpayer will probably not grumble at this serious attempt to stem the tide of foreign competition. It may be expected that makers of delicate scientific apparatus will in future send them to Kew to be adequately tested, instead of to Germany.

At a meeting of the Liverpool City Council, in the first week of April, the Lord Mayor submitted the following resolutions, passed at a conference of representatives of educational authorities in Liverpool, held on March 6. The resolutions were referred to the Technical Instruction Committee:—

(1) That it is desirable to appoint an advisory or consultative Committee, to consider the question of the correlation of the various educational bodies in the city, and the steps which may be taken for the promotion of an effective system of secondary education. (2) That it be respectfully recommended to the City Council to reorganize the Technical Instruction Committee, so that it shall include representatives nominated by the School Board, University College, and the secondary schools, in the following proportion:—a majority by the City Council, one-third by the School Board, and the remainder to be co-opted by those already chosen, and that such body consist of thirty-one members, and be the Committee appointed for these purposes. (3) That the Technical Instruction Committee, constituted as in the preceding resolution, apply to the Science and Art Department for recognition under Clause VII. of their "Directory" as an organization for the promotion of secondary education.

All the great towns seem to be agreed on these general lines of organization.

On April 5 the Aberdeen School Board had Mr. Bryce all to themselves for the purpose of a conference on various educational subjects. Dealing with the question of the secondary authorities under future legislation, Mr. Bryce said:

The English question was very different from the Scotch question

In England the School Boards dealt only with elementary education, whereas in Scotland the whole field of education was within their province in the burghs. In England, therefore, the problem presented itself in a different form. The Royal Commission on Secondary Education, over which he had the honour to preside, recommended a compromise so far as England was concerned. They said there were two or three authorities concerned in education. There was the County or Borough Council, which had control of the money under the Act of 1890; there were also the School Boards; and the Commission proposed a system in which there should be an authority to control secondary education in England composed of three equal parts, one part elected by the Burgh Council, which had control of the money; another part elected by the School Board, and the third part chosen by the other two, giving representation to persons of educational experience. He should like to guard himself against expressing a positive opinion as to what would be the best solution for the case of Scotland, because something must depend upon what they could pass, and how it would be found possible to deal with those who had the funds now in their hands, and who might consider they had a claim to the fund under their disposition—he should like to consider how these bodies might be dealt with. As he had said, he thought the claim of the School Boards in Scotland was decidedly stronger than those in England, and he thought, as a matter of principle, School Boards ought to be the principal authorities on secondary education in Scotland.

At the meeting at Bristol University College on April 13, presided over by the Bishop of Hereford, the following resolutions were passed:—

(1) This meeting being of opinion that the memory of Edward Colston should be perpetuated, not only by political or other societies, whose chief object is the giving of annuities and doles, but also by promoting the cause of higher education in the city, it is hereby resolved that such a society be formed, bearing the title, "University College Colston Society," and having for its object the endowment of Colston Chairs in connexion with University College, Bristol, or assisting University College, Bristol, in such other manner as the Committee of the Society may approve. (2) That the Committee consist in the first instance of the Council of Bristol University College, with power to add to their number, and that one-third of the Committee retire annually; that this Committee appoint a treasurer and an hon. secretary, who shall also be members of the Committee; that annually a president be elected, whose duty it shall be to preside at a dinner (which this year shall be held on November 21) and to collect subscriptions.

THE London County Council has delegated to its Technical Education Board such new powers and duties as it has acquired by receiving recognition under Clause VII. of the "Directory of the Department of Science and Art" (page 498). The Board is communicating with the various schools and institutions which are in receipt of grants both from the Board and from the Department, with a view to making the necessary arrangements for carrying out the provisions of Clause VII. The new Board recently appointed consists of twenty representatives from the London County Council, three from the London School Board, two representing the City Parochial Charities Foundation, three appointed by the City and Guilds of London Institute, three from the London Trades Council, and one each from the Incorporated Association of Headmasters and the National Union of Teachers. There are in addition two co-opted members. The Board has decided to introduce some important changes into the regulations for intermediate county scholarships, and the alterations will take effect in the examination to be held in June, 1900.

THE *City Press* learns, on excellent authority, that some good result is likely to attend the action taken by the Corporation in connexion with the allegation that the School Board for London has been illegally spending the ratepayers' money upon secondary education. The School Board has been directed to prepare a statement of its case in order that the matter may be thoroughly sifted by the authorities. It is almost impossible, our contemporary says, for even the most enthusiastic supporters of the Board to contend that education is being kept within limits, and consequently not a little difficulty will be experienced in returning a definite answer to the question put. "Not only has the Board been instructed to reply to the contention of the Corporation, but we hear that the Committee of Council on Education have given directions for the members to prepare a statement showing what part of the expenditure falls within what can be regarded as elementary education, and what has been incurred on the teaching of subjects of a more advanced standard."

THE Secretary of Truro College writes to say that, "as there appeared to be some uncertainty as to the position of our middle-class schools in relation to eligibility for aid from the technical education funds," he asked the Secretary of the Cornwall County Council Committee to be good enough to procure definite information on the point, and the following reply was received from the Department of Science and Art:—

In reply to your inquiry, I am directed to inform you that no minute has been issued relative to aid being given out of technical education funds to secondary schools carried on for profit with dividends restricted to 5 per cent. per annum, and that it appears to this Department that such aid would be contrary to Section 1 (1) (f) of the Technical Instruction Act, 1889. The Department understands that, if, instead of share capital, debentures limited to 4½ per cent. were raised, the school would be held by the Local Government Board auditors as eligible for aid under the Technical Instruction Act. In this connexion your attention is drawn to the opinion given in the fortieth annual report of the Department, page 54, section 6.

THE new Principal of St. John's Hall, Highbury, is the son of Mr. W. T. Greenup, A.C.P., of Mount House School, Ryde. He has made a special study of the Semitic languages, and is one of the Examiners for the Cambridge Theological Tripos. The *Record* says:—

Mr. Greenup comes to his new work with academic distinctions of the highest order. He was Hebrew Exhibitioner, Foundation Scholar, and Hughes History Exhibitioner of St. John's College, Cambridge. He won the Carus University Greek Testament Prize, the Hebrew Prize, and first Jerome Septuagint Prize. He was Naden Divinity Student of St. John's College, and Tyrwhitt Hebrew Scholar. He took his B.A. (Part I. Theological Tripos) in 1889, and in the following year he took a First Class in Part II. of the Theological Tripos, distinguishing himself in Old Testament (Hebrew and Septuagint). He proceeded to his M.A. in 1893, and in the following year he took an *ad eundem* M.A. degree at Dublin. In 1893 he became a member of the Royal Asiatic Society, and in 1894 of the Asiatic Institute of Paris. Ordained deacon in 1890 and priest in 1891, he held his first curacy at St. Matthew's, Cambridge, proceeding in 1893 to a curacy at Culford, Suffolk. In the same year he became chaplain to the Earl of Cadogan. In 1897 he was presented by his college to the living of Alburgh, Harleston, Norfolk. He is the author and editor of "Short Commentary on Lamentations" (1893); "The Targum on Lamentations," translated into English, with Notes, 1893; "The Commentary of Rabbi Tobia ben Elieser on Eschah" (edited for the first time, with Introduction and Notes), 1896. As a younger man, Mr. Greenup worked under clergy of assured Evangelical sympathies in Cambridge, and in his present parish he has been taking up the cause of the C.M.S. and the Bible Society.

WE regret to record the death of Sir Monier Monier-Williams, K.C.I.E., Boden Professor of Sanscrit in the University of Oxford, which took place at Cannes from pneumonia supervening on influenza. He was born at Bombay in 1819, his father having been an officer in the Royal Engineers, who was Surveyor-General of the Bombay Presidency. His twin brother was killed in a border war in India when he was twenty years of age. He was educated at King's College, Haileybury, and Balliol College, Oxford, of which he was a Fellow, and in 1843 was elected Boden Sanscrit Scholar at Oxford. His linguistic powers were marvellous, and alike at Cheltenham and Haileybury his teaching was the talk of the day. He founded an Indian Institute at Oxford, the foundation stone of which was laid in 1883 by the Prince of Wales. His journeys in India to secure fresh support for the Institute, his membership of most of the Oriental societies of Europe and India, his great Sanscrit English Dictionary, his edition of the Sanscrit drama of the "Lost Ring," all testified to his interest in the one subject to which he devoted his life.

MR. ALMARIC RUMSEY, Professor of Indian Jurisprudence at King's College, London, and formerly assistant-solicitor to Her Majesty's Customs, died on Saturday, at his residence, at Balham, in the seventy-fourth year of his age. He was educated at Rugby and Oxford, and was called to the Bar at Lincoln's Inn, practising as an equity draftsman and conveyancer. From 1868 to 1875 he was assistant-solicitor to Her Majesty's Customs, being retired on the reorganization of his department in 1875. In 1880, on the establishment of the Chair of Indian Jurisprudence at King's College, London, he was appointed the first Professor, and has ever since occupied the position. Prof. Rumsey was well known in the literary world as a reviewer in various periodicals and journals, and in the legal as author of several standard works.

In a circular issued to associations under the Voluntary Schools Act recently, Sir George Kekewich expressed the satisfaction of the Education Department at the numerous reports testifying to the improved appearance and equipment of the schools which have resulted from the aid grant. "My Lords" have also been glad to notice the good work that has been accomplished by some associations in making better provision for the training of pupil-teachers and the promotion of centres for cookery and manual instruction. They believe, too, that association has widened and quickened the interest in voluntary schools. On the other hand, they have noticed, with regret, that in some districts (urban more commonly than rural) voluntary subscriptions have shown a marked tendency to decline.

OUR Welsh correspondent writes:—The Annual Collegiate Meeting of the Guild of Graduates of the University of Wales was held this year at Bangor. The news of the death of the Warden (Mr. T. E. Ellis, M.P.) arrived during the morning meeting. The chair was occupied by Prof. Anwyl, M.A. A paper on "Geoffrey of Monmouth" was read by Prof. W. Lewis Jones, M.A., and another, on "Technical Instruction in Schools," was forwarded by Mr. W. Lewis, B.A., Headmaster of Llanelly. Both papers were followed by interesting discussions, in which Prof. J. E. Lloyd, Principal Reichel, Prof. D. M. Lewis, M.A., and others, took part. Owing to the death of the Warden, it was decided to postpone the afternoon meeting for the election of officers to another date.—On April 17 the Old Students' Association held a reception in the College Library. The new President, in place of the late Mr. Ellis, is Mr. D. E. Jones, B.Sc., one of the Inspectors for the Science and Art Department, South Kensington. Mr. Jones is an old student of the College, who took the degree of B.Sc. in the University of London with First Class Honours. He was subsequently Professor of Physics at Aberystwyth, and has acted as Clerk to the Guild of Graduates with marked success.—The Annual Extra-Collegiate Meeting of the Court of the University was held at the Guildhall, Swansea, on April 21. Votes of sympathy were passed with the families of Lord Herschell, one of the honorary graduates of the University, and the late Warden of the Guild of Graduates. The business was mainly academic.—The Court of Governors at Bangor has passed a resolution, already foreshadowed some time ago in these notes, petitioning the University Court to put into force the clause of the Charter which states that theology may be made a subject for the Degree of the University in Arts, notwithstanding the fact that the constituent colleges cannot, by their charters, teach theology. Provision is made in the Charter that, in the event of theology being recognized as a subject for the degree of B.A., one year of the qualifying period of residence at a constituent college may be compensated for by a term of residence of two years at an approved theological college. This petition will probably raise points which will have a profound influence upon the future of the University.—The Executive Committee of the Central Welsh Board for Intermediate Education met at Shrewsbury on April 13 and 14. Another meeting was held at Welshpool on April 28.—A meeting of the Central Welsh Board for Intermediate Education was held at the Council Chamber, the Town Hall, Welshpool, on April 28. The financial report of the Executive Committee was presented, and also the regulations for the annual examinations of 1900, including the regulations for the award of certificates. The new regulations (in accordance with the view recently expressed in your columns) that such would probably be the case, lay special stress upon the importance of making such subjects as history, translation, and the like, means of teaching the children of the Welsh county schools to express themselves in clear and idiomatic English. The regulations state that, throughout the examination, special importance will be attached to handwriting, orthography, and composition. It is the aim of the Central Welsh Board to make the county schools into genuine educational centres in the fullest sense, and not places for the acquisition merely of crude and undigested knowledge. It is the policy of the Board to lay more and more stress upon the ethical and the æsthetic, as well as the intellectual, sides of school life.

UNIVERSITIES.

THE readers of this journal will probably have seen London. the public announcements of the appointment of the Earl of Kimberley to the Chancellorship of the University. The appointment was, according to usage, notified by

the Premier to the Vice-Chancellor, and was announced by him to the Senate on April 19. In this instance there is a reversion to the older practice of appointing a great noble who has held high political office—the numerous posts occupied by Lord Kimberley having mostly been of the very greatest importance or dignity next to the Premiership. Lord Kimberley was appointed a Fellow by the Crown as far back as January, 1859, and his warrant of appointment bore the same date as that of Mr. Osler, who was the first Fellow appointed, under the revised Charter of 1858, on the nomination of Convocation, and who is still a Fellow. The elevation of Lord Kimberley leaves a vacancy in the body of the Senate which will have to be filled up by a Crown appointment.

Another vacancy in the Senate has been caused by the lamented death of Sir William Roberts, M.D., F.R.S., whose serious illness was reported last month. Sir William was comparatively young as a Fellow, having only been appointed (by the Crown) in April, 1892, and the appointment of his successor will also devolve upon the Crown. Sir William was recently appointed representative of the Senate upon the General Medical Council, in succession to Sir Samuel Wilks.

It is rumoured that the Inns of Court, after standing silently aloof from the long-continued movement for reforming the University, are now inclined to join in under the Cowper scheme, as modified by the University Act and the Statutory Commission. It is highly desirable that they should do so, and should thus place themselves at the head of the Laws Faculty. The University examinations in Laws as at present organized are but an indifferent success; partly because they give no professional privileges, whereas the M.B. degree gives an independent licence to practise medicine; and partly because the regulations, which still stand pretty nearly as when last revised (1865), do not meet present requirements. The Senate and Convocation, indeed, had rival schemes of revision before them for two or three years, and a draft of the final form of the regulations was laid before the Senate in January of this year; but it was resolved to reserve them "for the consideration of the authorities of the reorganized University." One detail, however, was adopted, and is of importance to intending candidates—the series of examinations will be held, for the last time, in January (as at present) in 1901; thenceforward they will begin on the third Monday in October, beginning with October, 1901, so that two series of examinations will be held in that year.

THE LAW AND THE SCHOOLMASTER.

IV.

THE confidence placed in the English schoolmaster by the general consent of the community is well illustrated by the fact that in the whole extent of legislation dealing with education—Endowed Schools, Elementary, and Welsh Intermediate Acts—Parliament has not thought it necessary to legislate with reference to the punishment or expulsion of pupils. The law as to this is simply that contained in the common law of the country as declared by judicial decisions. Consequently, the judges, with the recollection of the Orbilian system of punishment prevalent in their schooldays, do not, as yet, incline to rose-water discipline. Clear principles defining the right and limitations of punishment have, however, been established.

The right of a schoolmaster to punish a pupil is derived from the parental authority delegated to him by the parent. By this delegated authority, the schoolmaster, as already explained, is placed *in loco parentis*, unless it is expressly limited. As the law justifies a parent in inflicting corporal punishment on his child, when he honestly considers such correction necessary, it similarly justifies a schoolmaster. The right is not limited to corporal punishment, but extends to detention and restraint, and any other reasonable means. Therefore, unless qualified by special contract, the master has the power of judging when and to what extent a punishment is required. The general law is thus declared in the judgment of Mr. Justice Field in *Hutt v. Governors of Haileybury College*—a case decided in 1888.

So much, indeed, is self-evident from the mere statement of the measure of the master's authority. It is the application of the law to particular facts which is often difficult; but, as long as a reasonable discretion is exercised, after taking the offence and the pupil's age and power of endurance into consideration, the law will not interfere.

For the purpose of drawing attention to an important declaration of the law as to excessive punishment, I must refer to the extremely painful case of *Reg. v. Hopley*, tried in 1860 before

Chief Justice Cockburn. In this case Hopley, a schoolmaster, was indicted for manslaughter. He had written to the father of his pupil—admittedly an obstinate boy—complaining of his obstinacy, and stating that, if the boy were one of his own, he would work a cure by severe thrashing. The father wrote back approving of the suggested treatment; whereupon, as the evidence showed, Hopley caned the boy one night with a thick stick for nearly two hours, and again after the boy had been taken to bed. The poor lad was found dead in the morning. It was clear, from the marks on the body, that he had been the victim of fiendish cruelty, which was the immediate cause of his death. The jury found a verdict of manslaughter, and Hopley was sentenced to four years' penal servitude. In his summing up to the jury, Chief Justice Cockburn thus stated the law: "By the law of England a parent, or a schoolmaster, who for this purpose has the parental authority delegated to him, may, for the purpose of correcting the evil in the child, inflict moderate and reasonable punishment; always, however, with this condition, that it is moderate and reasonable. If administered for the gratification of passion, or of rage, or if immoderate and excessive in its nature and degree, or if it be protracted beyond the child's powers of endurance, or with an instrument unfitted for the purpose, and calculated to produce danger to life or limb, in all such cases the punishment is excessive, the violence unlawful, and, if death ensues, it will be manslaughter." Indeed, the law might be put even higher: it would be manslaughter at the very least, and, if the punishment was inflicted merely for the gratification of passion, regardless of any consequences, the offence would be murder. The law does not prescribe either the instrument or the method of punishment, although in the case of *Gardner v. Bygrave*, in the year 1889, the magistrate fined a schoolmaster for caning a boy on the hand, because he thought that caning on the hand, however inflicted, was necessarily attended by risks of serious injury. However, on appeal to the High Court, Justices Mathew and Wills quashed the conviction, saying, in their judgment, that, as no injury had in fact been caused, the punishment was properly inflicted, and that there was nothing in the law of England which made caning on the hand illegal.

In addition to the right which a schoolmaster has to punish a boy for what are strictly school offences, it is well to note that this right extends to cases of misconduct on the way to or from school, as was decided by the case of *Cleary v. Booth*, in the year 1893.

In considering the law as to expulsion, the principle of delegation has no application. The right to expel a boy—whatever it may be—is the right to put an end to the *contract* entered into between the schoolmaster and parent, and governed, therefore, by the ordinary law of contract. Now, it is an implied term of every contract that one party should not make its performance by the other impossible. For this purpose the pupil is identified with his parent, and consequently impliedly undertakes to be of good behaviour. A contract, however, may not be put an end to at pleasure, but only for good cause. So that a schoolmaster must always be prepared to show the existence of a reasonable cause for the exercise of his right of expulsion. A less discretion is given to masters in respect of this right than in that of punishment, as the consequences are more serious to the boy (*Hutt v. Governors of Haileybury College*). The law is much the same as that of master and servant in this respect, and it is well to understand that, if there be good cause known to the schoolmaster, the dismissal is justifiable, though the cause relied on is not that which has been alleged at the time.

A curious and interesting case, in which the law as to expulsion is clearly stated, is that of *Fitzgerald v. Northcote*, tried before Chief Justice Cockburn, in the year 1865. It was most strenuously fought, and has the distinction of having engaged the services of Sir William Harcourt, Lord Russell, the present, and Lord Coleridge, the late, Lord Chief Justice, as counsel. Fitzgerald, the son of an Irish judge, was a lay student at an English Roman Catholic college, where there were also clerical students. For some reason, which was thought to be the social difference between the two classes, much ill-feeling was shown by the lay towards the clerical students. This culminated in the formation of a secret society, of which Fitzgerald was the promoter, known as the "A. B. C." (Anti-Bunker Confederation) for the purpose of obtaining and circulating information as to the antecedents of the clerical students, who were known as "bunkers" by their polite fellows. A note-book, containing the collected information, was forcibly taken out of Fitzgerald's possession when confined to a room as the principal offender, and he was expelled.

The action was not brought by the father for wrongful expulsion, but by the boy (suing, of course, by his father) for assault and imprisonment, and he actually obtained a verdict for £5 damages from the jury. The case, although nominally brought for assault and imprisonment, practically resolved itself into a question of whether expulsion could be justified, as the Chief Justice ruled that it was proper, under the circumstances, to take the note-book forcibly in order to obtain light on a matter connected with the welfare of the college. To understand the result, however, it must be observed that, at the trial, the defendants, the college principals, based their defence on the ground of the existence of a secret society *injurious to the interests of the college*.

Although, if proved, that would be a good defence, the jury negatived its existence; by which they must have meant that the society, which undoubtedly existed, was not seriously injurious, and that other means than expulsion might have been used to maintain discipline. In this case there was clearly a long course of breaches of discipline on the part of the boy, other than his connexion with the secret society, which would have justified his expulsion if made on that ground; but, by the manner in which the case was conducted, such a defence was waived, and it became necessary, in order to make the defence relied upon effective, not only to prove the existence of the secret society, but also its injurious influence.

In summing up to the jury, the law as to expulsion was stated by Chief Justice Cockburn to the following effect:—"The power of expulsion is not a discretionary power, but only when reasonable cause can be shown. In judging of the cause, however, great regard must be had to the schoolmaster's necessary discretion as to the enforcement of discipline. The wilful breaches of its reasonable rules may be sufficient cause, and the repetition of acts of disobedience—each, in itself, separately insufficient—may be sufficient as showing a persistent disregard of discipline and a habit of disobedience."

The above statement doubtless lacks definiteness; but the effect is that either a serious, deliberate breach, or a continued course of minor breaches, of discipline would justify expulsion, and that, provided a schoolmaster uses his discretion honestly, in the interests of the general discipline of his school, considerable latitude will be allowed him in its exercise.

ARTHUR E. HUGHES.

THE GROWTH OF THE CHILD-MIND.

At the Members' Evening Meeting of the College of Preceptors on April 19, the Chair having been taken by Mr. James Wilson, Professor Woods Hutchinson, M.A., M.D., delivered a lecture on "The Growth of the Child-Mind."

Dr. HUTCHINSON said that any attempt to make education natural and rational must be based upon a knowledge of the child-mind. The great service of Pestalozzi and Froebel was an attempt to make formal education harmonize with the instinctive or natural method. Their instinct and intentions were most admirable, and their results immensely beneficial; but their knowledge of the actual nature and growth-tendencies of the child was defective, as might have been expected in an age when there was no rational physiology, and a scientific psychology had not even been dreamed of. And their successors and disciples have improved upon their original defects in a remarkable way. At last it became obvious that a painstaking study of the child himself was absolutely necessary to furnish a basis, and the now famous "Child-Study" movement sprang up. If the child could no longer be regarded as simply a fractional part or smaller copy of an adult, some other parallel or standard for his course of growth was needed. This had been supplied in the "Culture Epochs" theory, by the growth of the mind of the race. The theory had a wide and distinguished parentage: Goethe, Rousseau, Herbert Spencer, and Herbart, all having suggested it independently. The Herbartians, Ziller and Rein, were however the only ones who had attempted to give it a practical application by constructing a scheme of school-work based upon it. Ziller divided the child's development into eight epochs, each corresponding to a stage of civilization. The central subjects for the successive years of the curriculum are: (1) Fairy Tales, (2) "Robinson Crusoe," (3) The Patriarchs, (4) Judges in Israel, (5) Kings in Israel, (6) Life of Christ, (7) History of the Apostles, (8) History of the Reformation. Each of these occupies one school year, from the sixth to the fourteenth. Arbitrary, and in some respects

irrational, as the arrangement obviously was, chiefly valuable as an ingenious working plan, it had decided advantages. It met the interests of the child, it provided an orderly and rational succession of subjects of study, and it found an abundant supply of ready-made material in each grade. As, however, the problem had never been worked out from the point of view of the anthropologist, the lecturer a few years ago began an attempt to follow it out along this line—first, by a year's course of lectures to teachers upon anthropology, and then organizing ten or twelve of those teachers into a *Seminar* for the study of the corresponding history of the child-mind. Although little more than a beginning was made in the two years of two meetings a week, yet some interesting results were reached. The conclusion was irresistible that there was a sound physical basis for the alleged parallel, although no hard-and-fast lines could be drawn between the successive stages. After careful deliberation, it was decided to adopt the different methods of food-getting as the basis for division into stages, as least open to objections and most uniform in its results. The stages passed through upon this basis appeared to be five:—

1. Root and Grubs Stage	Birth to 5 years	Height, 3rd year
2. Hunting and Capture Stage	4-12 years	" 7th "
3. Pastoral Stage.....	9-14 "	" 10th "
4. Agricultural Stage	12-16 "	" 12th "
5. Shop and Commercial Stage	14-40 "	" 18-20th "

The stages are by no means mutually exclusive; indeed, they might be best compared to a series of ascending steps, each of which rests upon the broader basis of all those below it. As to the existence of a "root and grubs" stage of the child's existence, in which the chief criterion for everything is his mouth, and his sole classification of the universe into "nice" and "nasty," no argument was needed. They had all seen it and laughed at it scores of times. The hunting and capture stage was equally clearly marked. Stealthy methods and stalking come first, then open chase and direct attack. The first group was well-illustrated by the child's first and favourite game, "Bo-Peep," which preserved the joys of the approach, the ambush, the surprise. The curious persistence of fear of strangers, a fear which had absolutely no basis in experience, and the roundabout "stalking" methods of approach to them, was also most characteristic. Then came the sub-stage of pursuit and attack, illustrated by such games as "Hide-and-Seek," "Blackman," "Prisoner's Base," and the mimic sieges, assaults, and wars. The formation of local "gangs," with recognized territory, formal signals, and "war-whoops" was also suggestive. The curious indifference to pain, merging often into positive cruelty, so distressingly noticeable in children of this age, was another savage survival, apparently a necessary by-product of their normal development. Give them heroes of the "fightingest" kind, who are also men of honour, truth, and gentleness, and they would soon outgrow it, but don't dose them with the lives of the saints. The pastoral stage—characterized by fondness for pets, fondness sufficient to spur him to feed them regularly, desire to have "something of his own," to build huts and houses, and dig caves—was less striking but equally real. Then the agricultural—marked by a passion for gardens, for adding bed to untidy bed, and acquiring landed property generally, with its restraint in the matter of digging up seeds to see if they're growing, of waiting for a crop, developing foresight, of watching the weather-signs. Finally, the commercial stage—the age of "swapping" and selling and "trading," of bulging pockets, of demanding pay for services. Here was the first real recognition of the value and "sense" of arithmetic. If the sacred multiplication-table were reserved till this stage, it would be keenly enjoyed instead of hated as a "grind," and mastered in no time. As to the use of these successive stages as a basis for a course of study, another series of *Seminars*, with experienced teachers, would be necessary, but it gave promise of highest value.

The Rev. J. O. BEVAN considered that one specially valuable feature of the lecture was that the method had been set before them in a scientific manner, while at the same time the lecturer had avoided the use of technical terms. He gathered from the lecture that there were three stages in the development of the child's mind—the development of observation, of judgment, and of will. In the earliest stage the child would have to consider such things as form and colour; but the lecturer had reminded them that judgment was the product of a later stage, and the effort of will to determine between right and wrong, good and evil, would come last. What the lecturer had said as to the

state of religious feeling in Germany somewhat surprised him. His own experience during a recent visit to Germany was that considerable numbers of men attended the religious services, and took a great interest in them. He could not follow what the lecturer said as to the disposition of the child with reference to the infliction of pain. It was well known that boys were indifferent to the pain they inflicted upon lower animals, and also upon their fellows; but such an attitude of mind ought not to be allowed to remain without correction. It seemed to him that this indifference was due to lack of experience on the part of the child, and it was the teacher's duty to make the child understand the nature of pain in order that he might know that what was hurtful to himself was equally hurtful to others.

Mr. MORANT observed that, if the various stages which had been described by the lecturer were essential to the true development of the child's mind, it was obvious that the life of children in large towns must be extremely artificial. The series of stages submitted by the lecturer was a distinct improvement on that of Ziller. In the latter the several stages were mutually exclusive, but in the lecturer's series every stage, instead of being supposed to vanish after its period of predominance was passed, was recognized as continuing through the life of the child, although not in so prominent a degree. This series was more in accordance with known fact, and consequently offered a more rational basis for the grading of studies. The value of the lecturer's views for every teacher must depend to a large extent upon individual notions of right and wrong. That the natural appetites were only expressions of normal phases of the child's development could not be reconciled with the doctrine that these appetites ought to be fought against and suppressed. With regard to the question of cruelty, experience showed that children who had suffered pain were not on that account less willing to inflict it, as readiness to inflict pain resulted, not from ignorance of its operation, but from absolute indifference to the feelings of others.

Miss FINDLAY gave an interesting account of a plan somewhat similar to the lecturer's, which had been tried with much success in Chicago. The plan was based on the struggle for life, and aimed at making the child as far as possible dependent upon his own exertions.

Mr. ORCHARD thought that the lecturer had succeeded in making interesting a somewhat hackneyed subject. There was much ingenuity in the five stages arrangement. Unfortunately, that arrangement did not seem correct. In the cases of some children, it might be difficult to discover, for instance, a "hunting stage." The lecturer had, he thought, been misled by a false analogy. Carpenter had refuted the notion of parallelism between the development of the race and that of the individual. Evolution was an imaginary theory; it was not science, and was opposed to the facts of nature, which must not be confounded with the speculations of certain naturalists. The lecturer had referred to the "primeval savage"; but it had been shown conclusively that the earliest men were very far removed from savages, and Niebuhr had pointed out that no example could be brought forward of an actually savage people having independently become civilized. A remark had been made to the effect that the polytheistic form of religion preceded the monotheistic. Recent investigations by Sayce, Pinches, and others, proved that the contrary was the fact; polytheism being always a corruption of pre-existing monotheism. He protested against the idea that the four or five years old object of experiment was nothing but a thing of "roots and grubs." The little child knew the law of love and the difference between right and wrong, and should be taught the saving truths of Christianity as soon as he could apprehend the meaning of the terms expressing them. With regard to cruelty in a child, the cause was sometimes thoughtlessness, sometimes selfishness. The sin should be pointed out from the first, and be followed by judicial, and judicious, correction. He cordially concurred with the lecturer as to the child having certain growth-tendencies of his own, the teacher's proper aim being to fit the education to the child, not the child to the education.

The CHAIRMAN expressed a hope that the lecturer would on some future occasion have an opportunity of giving them his views as to the appropriate studies for each stage. He had elucidated in an interesting manner a point of view which was not familiar to English teachers. If it were assumed that the mental development of the child corresponded with the mental development of the race, then he did not see why a beginning should be made at the comparatively late period which was identified with the hunting or pastoral stage. Nor would it be sufficient to go back to the earlier time when man's progenitors were hairy animals of arboreal habits. But it would undoubtedly increase the teacher's difficulty very greatly to have to provide for those additional stages. In dealing with this subject there was some danger of creating an imaginary child for the sake of argument, just as political economists created an economic man for the purpose of explaining their theories. He thought it was a mistake for teachers to allow themselves to be fettered by the theories enunciated by men of past and unscientific times, however able these might be. Rather should they consider the facts of life as they bore on the present, and construct for themselves methods which should be in accordance with the principles that underlay all successful education.

Dr. HUTCHINSON having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

CLARENDON PRESS EDUCATIONAL PUBLICATIONS.

Demonstrations in Latin Elegiac Verse. By W. H. D. ROUSE, M.A., formerly Fellow of Christ's College, Cambridge, and a Master at Rugby School. Crown 8vo, cloth, 4s. 6d.

Pp. 268, extra fcap. 8vo., cloth, 3s. 6d.
Marcus Tullius Cicero, Philippic Orations I., II., III., V., VII. With English Notes by JOHN E. KING, M.A., Fellow and Tutor of Oriel College, Oxford.

FORECASTS AND COMMENTS.

May 1, 1899.

• PROFESSOR SILVANUS THOMPSON will give two Fixtures. Tyndall Lectures at the Royal Institution on May 2 and 9, his subject being "Electric Eddy Currents."

* * *

ON May 6 Sir John Lubbock will preside at the annual gathering at the Mansion House of students of the London Society for the Extension of University Teaching. Dr. Hill, Vice-Chancellor of Cambridge University, will deliver an address. On the same day the Bishop of Stepney will take the chair at the annual meeting of the London Society for the Teaching of the Blind.

* * *

ON May 10 the Bishop of London will lay the foundation stone of the new school and institute on Sir John Cass's foundation.

* * *

THE Parents' National Educational Union will hold its third annual conference at the Portman Rooms on May 9 to 12. The Secretary, Miss Blogg, of 28 Victoria Street, S.W., will be happy to supply further information.

* * *

EIGHT free scholarships at the Training School for Teachers of Domestic Economy at the Battersea Polytechnic are offered for competition in July by the Technical Education Board of the London County Council. The names of candidates must be sent to the Secretary of the Board (marked Domestic Economy Department) not later than Saturday May 6, on forms which will be obtainable on application at the Board's offices. The Board will require evidence that the candidates are not in a position to provide their own training without such aid as the scholarships are intended to afford.

* * *

TWO courses of five lectures each are being given under the auspices of the University Extension Society, at Gresham College, E.C., and the Tuesday lectures, on "The Napoleonic Epoch," are delivered by Mr. E. L. S. Horsburgh, who will deal, among other subjects, with Napoleon's Russian campaign, his fall, and escape from Elba, the whole course finishing with Waterloo, the lectures being specially illustrated. The subject of the Friday lectures is "The Modern History of London," Mr. H. B. Wheatley F.S.A., being the lecturer. Further particulars of these courses may be obtained of the Secretary, University Extension Office, Charterhouse, E.C.

* * *

THIS year the University Extension Summer Meeting will be held in Oxford, and will, as usual, be divided into two parts. The first lasts from July 29 to August 9, and the second from August 9 to August 23. The main courses of study will be, (1) history, literature, science, and fine art of the period 1837-1891; (2) Hellenic studies in the nineteenth century, a course designed to summarize the results of recent research in the history, literature, art, and archæology of ancient Greece, and intended especially (though not exclusively) for teachers in secondary schools. There will be also lectures and classes on the history and theory of education in physiology, geology, biology, in English language, in Greek and Latin, and moral philosophy. The inaugural discourse will be delivered on

July 29, by Sir William Anson, D.C.L., Warden of All Souls' and Vice-Chancellor of the University.

* * *

THE London Geological Field Class, conducted by Prof. H. G. Seeley, F.R.S., began their annual series of Saturday afternoon excursions on April 22. Full particulars can be obtained from the Hon. Sec., R. Herbert Bentley, 43 Gloucester Road, Brownwood Park, N. The excursions are arranged this year to cross the trough of the London Basin and the elevated structure of the Weald. The northern base of the London Basin will be seen in the Chiltern Hills at Tring, the London Clay in the Isle of Sheppey, and the Lower Tertiaries at Walton-on-the-Hill. The scenery of the Chalk will be examined about Amersham, and its rock structure and fossils at Northfleet. The beds below the Chalk to be examined are the Upper Greensand and Gault at Merstham and Dunton Green, the Lower Greensand at Redhill and Haslemere. An attempt will be made to examine the escarpment of the South Downs near Poyning and the Devil's Dyke.

* * *

AT Bedford College, London, the entrance scholarship examination will be held on June 27 and 28. The scholarships offered are the Reid (in arts), £31 10s., and the Arnott (in science), £48. Candidates must be under nineteen years of age. Successful candidates will be required to take a full three years' course in Arts or Science, and to enter the College in Michaelmas term, 1899. Entrance forms must be returned not later than June 15.

* * *

THE Civil Service Commissioners give notice that an open competitive examination for clerkships of the superior grade of the Civil Service will be held in August next, concurrently with the open competitions for the Civil Service of India and for Eastern cadetships in the Colonial Service. Forms of application for admission to the examination will be ready for issue in a few days, and will then be obtainable on application by letter to the Secretary, Civil Service Commission, Westminster, London, S.W.

* * *

By permission of the Trustees of the British Museum, Mr. W. St. Chad Boscawen has arranged to deliver a series of five Wednesday afternoon lectures at the Museum upon "The Early History and Archaeology of Egypt and Chaldea." The lectures are being delivered on Wednesday afternoons at 2.30.

◆◆◆

Education Gossip. THE regrettable ill-health of Professor Gilbert Murray, which has compelled him to resign his Chair of Greek in Glasgow University, will also prevent him from giving his promised course of three lectures on Euripides at University Hall, in connexion with the London School of Ethics and Social Philosophy.

* * *

MEANWHILE Mr. Leslie Stephen has begun, for the same School, his lectures on "The English Utilitarians." On April 20 and 27, Mr. Stephen lectured on Jeremy Bentham, and on succeeding Thursdays he will give two lectures on James Mill and two on J. S. Mill. The first lecture of each pair will be mainly biographical and historical. The second will deal with the theories of each in turn, touching more or less upon their relation to contemporary speculation. The lectures of this course will not be followed by the usual discussion class, and there will be no paper work required from students.

* * *

THE new member for Merioneth—if we may anticipate the unopposed return of Prof. Owen Edwards—may be regarded as specially representing in Parliament the historical side of higher education. He was Brackenbury Scholar of Balliol, and took a first in the History School. He won successively the Stanhope, Lothian, and Arnold Prizes; but he was disqualified from taking the Arnold Prize, which is open only to graduates, whereas

Prof. Edwards at the time was travelling on the Continent, and had not taken his degree. After graduating he was elected Fellow and Tutor at Lincoln College, Oxford, being Tutor also at Trinity and Corpus Christi Colleges. At present he is one of the Examiners in the Final School of Modern History.

* * *

THE London Technical Education Board have recently introduced some important changes into the regulations for their intermediate county scholarships. The alterations are the result of the recommendations made by a special sub-committee which was entrusted with the duty of revising the regulations, and it is hoped that the changes will prove beneficial to the numerous schools which prepare candidates for these scholarships. The sub-committee contained representatives of both secondary and elementary schools; and the syllabus which is the outcome of their deliberations is sufficiently comprehensive to embrace all the various types of schools that exist in the Metropolis. The new regulations, which will not come into force until June, 1900, are published in full in the *London Technical Education Gazette* for March.

* * *

THERE is prospect of another polytechnic in London. A meeting has been held to further a scheme for erecting a technical institute on a central site in Hammersmith. The gathering was held under the auspices of the Committee of the Hammersmith Vestry and School of Art, which has been formed for the purpose of establishing an institute estimated to cost £25,000. Sir Joshua Fitch presided, and was supported by Major-General Goldsworthy, M.P., Dr. William Garnett, and others. The chairman commented on the benefits young people may derive from attending polytechnic institutions, which are becoming centres of civilization, intellectual life, and happy companionship. The meeting resolved to support the movement for providing a technical institute for Hammersmith.

* * *

A SCHOLARSHIP for proficiency in the Russian language has been founded at Caius College, Cambridge. This is not, as has been said, the first scholarship offered at Cambridge or Oxford for students of modern languages; but it is none the less satisfactory.

* * *

PREPARATIONS are being made by the British Astronomical Association for the organization of two expeditions to observe the total solar eclipse of May 28, 1900—the one to Portugal, Spain, and Algiers; the other to the United States. That these negotiations may be successfully carried out, it is necessary that members and their friends who hope to take part in one or other of these expeditions should communicate at once with the secretaries of the Eclipse Committee. Mr. E. W. Maunder is director of the European expedition, while the Rev. J. M. Bacon will have charge of the American party.

* * *

MR. YARNOLD, who occupies the first place on the Queen's Scholarship list, is also the winner of one of the Drapers' and Clothworkers' scholarships awarded by the Toynbee Hall Pupil-Teachers' University Scholarship Committee. Seven others, within the first fifty names, have also competed for and won scholarships to take them to the Universities. Of these, two have obtained scholarships at Emmanuel College, Cambridge, and another has won a scholarship at Brasenose College, Oxford. The attraction of the Universities as a means of training for elementary teachers seems to be steadily increasing.

* * *

BEDFORD COLLEGE, London, will celebrate its jubilee on June 22—as Queen's College, Harley Street, did last year. A similar celebration is contemplated by the Women's Department of King's College, London, and it is said that the students are making energetic efforts to celebrate that event by paying off the College debt. The Council of the College is marking its approval of the good work done by this department by throwing open all scholarships and prizes, as well as the

Associateship of the College, to the women students, who will in future compete on equal terms with the men.

THE Earl of Kimberley has been nominated by the Crown to the Chancellorship of London University, in succession to the late Lord Herschell.

THE Professor of Greek in Glasgow University, Mr. G. G. A. Murray, has been compelled to resign his chair for reasons of health. Professor Murray is of Australian birth, and was educated at Eton and New College, Oxford, where his career was exceptionally brilliant. In 1889, at the age of twenty-three, he was elected Professor of Greek in Glasgow University in succession to Prof. Jebb. Except Lord Kelvin, he was the youngest professor ever appointed to Glasgow. In the same year he married Lady Mary Howard, daughter of the Earl of Carlisle, and about the same time produced his novel "Gobi and Shamo." Last year he published his "History of Greek Literature." The income of the chair is about £1,400 a year.

THE Queen has been pleased, on the recommendation of the Secretary for Scotland, to appoint Mr. J. Arthur Thomson, M.A., Extra-Mural Lecturer on Zoology, Edinburgh, to the Chair of Natural History in the University of Aberdeen, vacant by the death of Prof. Nicholson.

DR. ROBERT MUIR, Professor of Pathology at St. Andrews, has been elected to the corresponding chair at Glasgow.

MR. J. BARNES, assistant-master at Truro Grammar School, has been appointed Headmaster of St. John's College, Frome.

MR. JENNINGS, of Newton's School, Leicester, has been appointed Headmaster of Ashby-de-la-Zouch Grammar School.

THE Headmastership of Rich's Grammar School, Lambeth, is vacant by the death of Mr. John Hernaman, A.K.C., who was one of the founders of the National Union of Teachers.

MR. C. J. HUGHES, B.A. London, has been appointed Headmaster, and Miss K. A. Scott, B.A., Senior Mistress, of Aberayron Intermediate School.

MR. W. H. HILL, B.Sc. Lond., L.C.P., has been appointed Headmaster of the Yarm-on-Tees Grammar School, in succession to Mr. R. Reynolds, M.A.

MR. ANGUS M'LEAN, B.Sc., C.E., has been appointed to the post of Principal of the new technical college at Paisley.

MISS L. M. ROBERTS, formerly Warden of the Hall of Residence for Women Students in connexion with University College, Liverpool, has been appointed Principal of the Hostel for Women Students at Durham.

Literary Gossip. AMONGST the memorial celebrations of the month of April was that of a former Chancellor of Oxford University, known to fame as Olivarius P., otherwise Oliver Cromwell. Cromwell was a Cambridge man—they have his portrait at Sidney Sussex—but he seems to have done more for Oxford than for his own University. He issued a warrant for the founding of Durham University; but Oxford and Cambridge maintained that there was no need for a third University, and insisted on their vested interests in the conferring of degrees. So Durham had to wait.

In Scotland Cromwell bestowed some of the confiscated Church lands on Edinburgh University, established by James VI.

When the unfortunate Charles I. was at Glasgow, in 1633, he promised a donation to the University, but the money was not forthcoming. Twenty-one years later the Protector had the grim satisfaction of redeeming the monarch's pledge. On the whole, it would seem that Cromwell deserves a kindly thought on his tercentenary from the friends of education.

THERE is an interesting note in the *English Historical Review* for April on "Hereditary Madness in History," a *propos* of a treatment of that subject in Prof. Lorenz's "Genealogie." The Professor seems to have included John of Gaunt amongst his madmen of royal blood; and his critic aptly says:

If Dr. Lorenz can prove that John of Gaunt was mad, we can tell him how he may lighten his labours. All the reigning houses in Europe are descended from the Duke of Lancaster, so that whenever he meets with a case of insanity in a royal family he can at once point to John as the source of the evil. He will thus be enabled to account for the insanity of the Kings of Bavaria, and he will then be provided with a proof of a case of pathological atavism almost as remarkable as the one he fancies he has found in the House of Brunswick.

In the same *Review* there is a very good instance of historical research on unfamiliar lines in "The Origin of the Japanese State" by the Registrar of London University.

THE British Museum has received a windfall of £50,000 under the will of the late Mr. Vincent Stuckey Lean, who desired that the money should be devoted to the improvement and extension of the Library and Reading Room.

CANON McCOLL, on whom the University of Edinburgh has conferred the degree of D.D., has been a voluminous writer, not only on theology, but also on political questions, especially on behalf of the Christian races in South-Eastern Europe. Of his theological writings published from 1868 onwards, the following were perhaps the most important:—"The Reformation in England," "Science and Prayer," "The Athanasian Creed Rationally Explained," "Lawlessness, Sacerdotalism, and Ritualism," "Christianity in relation to Science and Morals," and "Life Here and Hereafter."

THE *Paidologist*, which is to be published at Cheltenham "three times yearly," as the organ of the British Child-Study Association, made a first appearance in April. The editor boldly states that "it is intended to be unattractive to children and to those who, from lack of special interest in the topics treated of, would be 'bored' by that which the title represents." Does this shut out all hope or expectation of converting the faithless? In any case, the first number of this new magazine has plenty of interest, and we wish it well in every sense.

THE following inset leaflet in the *Paidologist* will explain itself:—

A circular, which has been sent to other members of the B.C.S.A., fell into our hands just as our first number was completed, and already in print. It makes an absolutely false statement—viz., that one of our vice-presidents vivisected a frog for the edification of the B.C.S.A. The lecturer did nothing of the kind. Before the lecture, two frogs had been killed in the quickest and most merciful way, and they had been dead some hours when the doctor used them to show the ordinary phenomena of reflex action. We do not propose to hold any further communication with persons who print accusations the truth of which they have not taken the trouble to ascertain.—EDITOR.

THE first volumes of the "British Anthologies Series," edited by Prof. Edward Arber, will shortly be published by Mr. Henry Frowde. The whole series, which the editor claims to be the first adequate attempt ever made towards an historical national anthology, will contain about two thousand five hundred entire poems and songs written by some three hundred poets. Each volume is distinguished by the name of the chief poet of the period dealt with, and the Shakespeare, Jonson, and Milton anthologies will be issued first.

ANOTHER new edition of Shakespeare is about to appear. Messrs. Bell announce the "Chiswick Shakespeare," to be printed from a special fount of type by the Chiswick Press and illustrated by Mr. Byam Shaw. Mr. John Dennis will supply a short introduction and glossary to each play. The first two volumes will be "Hamlet" and "The Merchant of Venice."

* * *

Messrs. Rivingtons announce for publication during May the following books:—"What is Secondary Education?" a series of short essays by experts on various aspects of the problem; a "Handbook for Public Men and for Parents on the National Organization of Education," edited by R. P. Scott, LL.D., Hon. Secretary of the Incorporated Association of Headmasters; "The Book of Judges," with introduction and notes, edited by the Rev. H. F. Stewart, Vice-Principal of the Theological College, Salisbury; "The Essentials of School Diet; or, the Diet Suitable for the Growth and Development of Youth," by Clement Dukes, M.D., B.S. Lond.; and "Ivry, Book II.," edited, with maps, introduction, and notes, by A. F. Hort, M.A., assistant-master at Harrow School, forming a new volume of Rivingtons' "Middle Form Classics."

* * *

"THE INTERNATIONAL GEOGRAPHY" is the title of a new standard geographical work which Messrs. George Newnes, Limited, have in preparation for early publication under the general editorship of Hugh Robert Mill, D.Sc., F.R.S.E. The object of the work is to give a concise and authoritative account of geographical knowledge at the close of the nineteenth century. Each section is written by a specialist of recognized authority. Among the seventy authors who have taken part in the work are: Sir Clements Markham, F.R.S.; the Right Hon. James Bryce, M.P., F.R.S.; Count Pfeil; Gen. Sir Charles W. Wilson, K.C.B., F.R.S.; Sir Harry H. Johnston, K.C.B.; Sir William MacGregor, K.C.M.G.; Mrs. Bishop; Dr. Nansen; Mr. F. C. Selous; Sir George Robertson; Sir Martin Conway; Sir John Murray, K.C.B., F.R.S.; and Dr. Scott Keltie. Many of the contributions have been translated from French, German, Dutch, Portuguese, Spanish, and Danish MS. After a concise epitome of the principles of geography, each country is described in detail, beginning with its general configuration and geology, followed by an account of the people, manufactures, commerce, important towns, statistical tables, &c. The numerous illustrations are confined to maps, plans, and diagrams, which in every case have been chosen for the light they throw on the surrounding text. There will be a voluminous index, and abundant references to standard works.

DISCIPLINE.

To the public-school master this subject is obviously one of great interest, and of still greater practical importance, and it is also one on which great diversity of opinion obtains. Some of us still hold fast by the traditional public-school system, refusing to countenance modern theories which, nevertheless, are slowly, but surely, making headway in this country, as they have long since done in the United States. Others are willing to admit that the stereotyped methods of dealing with our pupils may be capable of improvement, and it is chiefly for these that this article has been written. I have kept steadily in view the desirability of provoking thought and discussion, and it would give me great pleasure to consider more fully than is possible in the limits of this article any points which may present difficulty to the reader. My proposition, then, will be that the position which we take up on all questions of discipline will depend almost entirely on the views we hold (1) as to the extent of our duty to the parents of our pupils, and (2) as to the relationship which we wish to establish between our pupils and ourselves.

If we recall the conditions of school life twenty-five years ago, we shall probably agree that the form-master, as a rule, knew little, and cared less, as to the views and wishes of the parent. The latter, in most cases, considered that when he had duly entered his boy responsibility ceased (except so far as the payment of bills was concerned). The boy was, consequently, an unknown quantity to his form-master; there was not only no recognized means of communication between the latter and the parent, but any attempt at establishing communication—from either side—would have been deprecated, if not resented. Nowadays, the parent recognizes that, at the best, the master is but an

ally—not a substitute; he knows more than he did on educational matters, and, as a consequence of this increased knowledge, he demands more from the school. He claims to have a voice in any matter of vital importance to his boy. The master, on his side, requires of the parent such facts of his pupil's early life and surroundings as may serve to throw light on his temperament and disposition. He expects not only the moral support of the parent, but in some cases his active personal co-operation. And, lastly, he tacitly admits that educational work is so far a commercial enterprise that the parent has a right to expect his son, once admitted to the school, to be educated, and that the responsibility for failure rests primarily on the master or masters, but not, as used to be and still is too often assumed, on the pupil.

The acceptance of these views as to the relative position of parent and master necessarily involves a readjustment of the relationship between master and pupil. The aims and methods of the former are revolutionized. He regards his form as consisting of so many individuals, and he rarely attempts to legislate for them in the bulk. He recognizes that each boy requires special treatment, and that the measure of his own skill as a schoolmaster is the success with which he discovers and applies the exact treatment required for each boy in his form.

We have now cleared the ground to some extent, and are in a position to consider the practical application of the principles which I have indicated. Let us see the bearing of these as applied to the question of punishments. Broadly speaking, the form-master has to deal with two classes of offences, which I have ventured to term "natural" and "moral," and he may be said to have at his disposal three classes of punishment: impositions, detention, corporal punishment. (Expulsion, as being the prerogative of the headmaster, may be omitted.) The theory which we are to consider may be stated thus: All offences are, in the first instance, to be treated as natural, but, by repetition, all offences tend to become moral. This statement will serve to indicate an important fact—that it is quite impossible to draw any hard and fast line between the one class and the other. It will also be evident that we cannot justly mete out the same punishment to half a dozen different boys who may have committed what is, nominally, the same offence. Let me illustrate the theory by reference to (1) neglect of work, and (2) lying.

Neglect of work is, perhaps, the most frequent of all schoolboy offences. No master would dream of regarding it as a moral offence, unless and until it had become habitual. And is it not highly probable that the giving of impositions for this offence necessarily tends to perpetuate the very fault which they are intended to cure? Are we sufficiently careful to satisfy ourselves in each individual case that the boy knew exactly what he had to do, that he really knew how to do it, and that he really had both time and opportunity? Unless all these conditions are satisfied, the punishment is unjust, and there is no failing so essentially fatal to the schoolmaster as the inability to deal justly with his pupils. But, even if the said conditions were fulfilled, and a clear case of neglect established, wherein lies the virtue of an imposition? It does not remedy the evil; it certainly is not of any value as a deterrent, and it has this peculiarly unfortunate effect—that the pupil assumes that the imposition, when written, wipes out the offence for which it was inflicted. Moreover, if the offence was an isolated one, the punishment was the more certainly undeserved; while, if it was not, it is surely absurd to expect a boy who cannot (for whatever reason) get through his work to-day to get through a similar amount, plus impositions, to-morrow.

"But," it may be said, "you tell us what we ought not to do; tell us what should be done. Are we to allow our pupils to do their work or not as they please? If so, we shall soon get no work at all done." The weakness of this retort lies in the assumption that boys will not work except under compulsion; whereas the fact is that no amount of compulsion ever yet succeeded in getting an ounce of really good work out of a boy. Nothing is more certain than this—that, if a boy is keen, anxious to get on, and interested in his work, he will do well; whereas, if the contrary be the case, the fault is, in nine cases out of ten, the master's and not the boy's. It is our duty to interest, to stimulate, to encourage, and I firmly believe that the vast majority of boys are amenable to such treatment, and that in the few cases where they do not respond they require patience, perseverance, and still more encouragement on our part—not reproof and penalties.

Let us now consider the offence of lying, which is not at all on the same plane with neglect of work. This offence, which includes prevarication, excuses, insincerity, deception of every kind, has its rise in fear, and, as long as this instinct is the cause of the offence, it is difficult to see how the latter can be treated as an infraction of the moral law. Regarding lying as the most serious school offence of which a boy can be guilty, I always allude to it at the beginning of each term, making it quite clear to the boys that dishonesty in word or act will be the one unpardonable offence. But then I never punish a boy for neglect of work. I never allow him to offer an excuse, nor do I ever question or cross-examine a boy in such a way as might lead him to convict himself or any others of any offence. With such treatment lying is practically non-existent, because the fear of punishment for ordinary offences is removed, while, at the same time, the habit of truthfulness is being cultivated. I think, by-the-by, that we

are apt to overlook the fact that these qualities of truth, manliness, industry, and the like are not necessarily natural, but in many cases acquired; that they are capable of development in just as great a degree as are the memory and the understanding.

One further point requires notice. There will from time to time arise abnormal cases, as, for example, of inherent illness, of lying without motive, or of bullying, for which no rule can be laid down. Such cases must be dealt with on their merits, or demerits. My own opinion is that corporal punishment should be reserved for these and the like. They may usually be traced to faulty early training, and to that extent the offender is clearly entitled to pity. But we have a duty to society—the society of school—and its interests are paramount, and must not be imperilled by any palliation of crimes which, if allowed to remain unpunished, would inevitably result in disaster.

HERBERT M. RANKILOR.

BRITAIN'S YOUNGEST UNIVERSITY.

FOR the present, and until such time as Birmingham shall achieve a University, "Wales" stands in the position of Britain's youngest University. The three constituent Colleges had been at work some years before the University was constituted, in 1893. Of these Colleges, the University College of Wales, at Aberystwyth, was opened in 1872; the University College of South Wales and Monmouthshire, at Cardiff, in 1883; and the University College of North Wales, at Bangor, in 1884. Aberystwyth is the pioneer and premier College. It has the handsomest buildings, the longest stretch of history behind it, the largest number of University students, although in this last respect Cardiff runs very close. When Aberystwyth College had been ten or twelve years in existence, a Commission was appointed to inquire into the question of University Colleges for Wales. The Commission recommended that there should be two Colleges, for North and South Wales respectively, that the College then at Aberystwyth be removed to Bangor; that a new one be founded at Cardiff, and that £4,000 per annum of the public money be allotted to each institution. But Aberystwyth clung to its College. It preferred to support the institution rather than dispense with it. As a result of many and strenuous efforts, an additional grant of £4,000 was allotted to Aberystwyth, and in this way Wales has one College more than some might think strictly necessary, especially when one considers her population. Each of the three Colleges has a Training Department for men and women, thus bringing the elementary school teachers into close touch with the University. Cardiff has Schools for Mining and Civil Engineering; Bangor and Aberystwyth have Departments of Agriculture and Rural Economy. In all, in this small country of one and a half million inhabitants, there are now more than a thousand students at work. They are, however, by no means all Welsh; a very large majority of the men are Welsh; amongst the women there is a considerable number of students who belong to the "adjacent peninsula."

If primogeniture counts for anything, Aberystwyth has a natural right to take precedence, and a brief description of the College may not be out of place. It is built on the south side of the town, with a great number of class-rooms and lecture-halls overlooking the sea. The north, or main building, with two towers, which somewhat recall the tower of Pisa to those who know Italy, is now the oldest part; the science wing on the south side is decorated with mosaics more curious than admirable. This wing and the main building were long connected by an ancient and inconvenient block, which was pulled down a short time ago and replaced by the new central block formally opened in the autumn of 1898. The block cost £15,000, exclusive of furniture and equipment; it is not as handsome and distinctive in its architecture as the buildings it connects, but is doubtless light, convenient, and, above all, necessary for the expansion of the work. The main building contains what the students call "The Quad," but what is really a handsome covered hall, affording a meeting ground for professors and students. A few photos, three small Turners and other pictures, some by Lord Leighton, Dante Rossetti, Sir E. Burne-Jones, adorn the walls, and some cases of pottery and so forth run down the centre of the hall. It is surrounded by an inner balcony, on which a large number of professor's class-rooms open. Other notable features are the Library, with a fine sea view and beautiful fixtures, presented to the College by American Welshmen and Welshwomen; and the Examination Hall, with a small stage, which suggests that the drama is not unknown at Aberystwyth. The College is built on a very small space, close to the pier and sea-front; indeed, it intercepts the right of way along the sea-front. At the back it leaves a pavement of shabby width and a narrow roadway. After the fire of 1884, the question was discussed whether it might not be advisable to remove the College further from the town, and obtain a larger space; but proximity has also its advantages, and these were considered to outweigh the disadvantages.

The town numbers eight thousand inhabitants. It is a fashionable watering-place during the summer and early autumn months. The method of disposing of the students is certainly convenient for lodging-house keepers, a class with which Aberystwyth abounds. All the women, to wit, 177, are gathered into a hall of residence, Alexandra Hall, at the extreme north of Marine Terrace; men students, on the

other hand, live in lodgings. Five shillings a week is not an uncommon figure for lodging, and two men together pay 4s. each. A professor assured me that the weekly bill of one of his students came to 11s. 6d., and on this sum he was in the habit of entertaining friends! Fifteen shillings or 18s. a week is quite a common sum for board and lodging, and, as the tuition fee for the College is £10 per annum, it is evident that at least there is the chance at Aberystwyth of reaching a different class from the general run of undergraduates at Cambridge or Oxford. Where a man enters for a scientific course requiring a great deal of chemical paraphernalia, a laboratory fee might make his expenses mount to £15 inclusive, but it never exceeds this sum unless special coaching be necessary. The number of students at the beginning of the 1898-99 session was 407, and of these 190 were women.

It is interesting, at a time when such fierce attacks are being made on the classics as a branch of study, to note how many students devote their time to them. The figures are as follows:—Greek, 154; Latin, 287; English, 245; History, 187; Welsh, 48; French, 138; German, 13; Hebrew, 16; Elementary Logic, 129; Philosophy, 29; Mathematics, 231; Chemistry, 95; Physics, 63; General Biology, 24; Botany, 35; Zoology, 6; Geology, 18; Agriculture, 8; Agricultural Chemistry, 8; Political Economy, 2; Education, 5; Veterinary Science, 8; together with some other subjects with smaller figures attached. It is thus evident that even in a College of yesterday the classics do more than hold their own.

There exists a general impression, vague yet real, that the constitution of a University, its powers and functions, are almost beyond mortal comprehension: none should lightly undertake such a task. I diffidently commit to paper what the College Registrar, Rev. T. Mortimer Green, told me of these abstruse matters, or, perhaps it should be phrased, what I understood the Registrar to say. Wales is the most democratic University that the mind of any man, except, perhaps, an American, has yet conceived. It is more democratic than the Scottish Universities.

Each University College is happy in possession of a Court of Governors. Out of these is selected a Council. Moreover each College has a Senate, mainly composed of the teaching staff. The Senate has charge of all academic matters, such as the framing of Schemes, discipline, and so forth; the Court must sanction everything; the Council is greatly concerned with finance.

The University also possesses a trinity of (1) University Court, including twelve representatives from each College; (2) a University Senate composed of the heads of departments of the three Colleges; and (3) the Guild of Graduates, composed of all the graduates and the three staffs. Members of the Guild become so two years after graduation.

After matriculation, the student must take up a minimum of ten subjects, including elementary logic. Of these, five may be carried to the intermediate stage, and in one a student must specialize. If a student passes in Honours, this is allowed to count as two. The degree course is different from London, in that a student of the latter may take the course in two years, whereas Wales, approving slow assimilation, demands three years.

The University is too young to have specialized; its aim, so far, is general culture. But, though it offers no speciality, the circumstances already referred to have developed two departments which are of first-class importance—the Training Department and Agriculture.

The former is mainly for elementary teachers, although a few secondary students are pursuing their studies at Aberystwyth, practising in the elementary schools just as the elementary students do. The Government course in a training college is for two years, but the Education Department now looks with a more favourable eye on general culture for teachers, and grants encouragement and money aid to all who will work for a third year. This fits in admirably with the degree course, so that a vast majority of the students are working for the degree, whether or not they complete their third year. The great difficulty in this department is that a number of students have matriculated before coming to the University, and others are only ready to matriculate after a year's work. University colleges, from financial and other considerations, cannot always pursue the wisest policy, which, in this case, would be to accept no student below the matriculation standard. The Training Department numbers 110 students, of whom 50 are women. Of the first year, only 2 out of 20 men students had not matriculated; out of 28 women, 12 had not matriculated. The reason why the women fall below the standard is that the Queen's Scholarship does not require mathematics, and women devote much time to domestic economy and sewing. Two years ago it would have been impossible to find so many as twelve matriculated women, so that the standard is rising.

As regards the degree, for which many students are working, men incline to classics, mathematics, natural science; women to English, French, German, history. The love of science receives a fillip from the grants which teachers earn from South Kensington. A degree in English history and literature is an admirable foundation for the elementary school teacher to erect his structure upon; and, perhaps, to Wales, as much as to any other University, is due the idea that the degree is not only for the secondary teacher. Moreover, it is highly useful for elementary teachers to rub shoulders with a world outside

the narrow one of the training college, one of the worst features of which is the development of a self-satisfaction that cannot be shaken, and a poor, mean ideal too soon reached and rarely disturbed by comparison with greater attainment. The Queen's scholars often enter college after four years of pupil-teaching, dull, dazed, mechanical, overworked; happily the recuperative power of the mind is great, and, at the end of the course, many students have been mentally re-made, their horizon widened, their ideal altered. Most of the men are Welsh, and some have a pretty strong accent, since they come from rural districts. The women, on the other hand, are urban, and, generally speaking, come from a higher social class than the men.

The Agricultural Section is of more recent date than the Training Department, and cannot boast such large figures. But it is a solid and practical development which has proceeded from the people's necessities. It is associated with six County Councils, which subscribe £1,200 per annum towards its maintenance. In a recent report, Principal Roberts claimed for it that it is effecting a silent revolution in Welsh agriculture. The Board of Agriculture has also come to its aid, granting at first a subsidy of £250, now increased to £800 per annum. Landowners and farmers are co-operating, and, at great expense, test practically the methods expounded in class-rooms. Theorists, that is, unpractical theorists, would need to tread warily when tests are applied in this way. Farmers can now get access to scientific information and guidance in a way undreamed of before. The Department works in four ways, determined to cast the seed into all sorts of soil. It would be many years before anything could be achieved if Wales waited until farmers could go through the agricultural degree course. There are, therefore, four courses of instruction provided: (1) An elementary seven weeks' course is provided for farmers during the winter months. (2) An advanced course lasting sixteen weeks, and mainly for those who have profited by the first course, begins in October. Both these short courses deal with the essentials of agriculture, and are intended for those who have already practical knowledge of the subject. In both courses students take agricultural chemistry, since it is the basal science of modern agriculture. (3) The diploma course lasts for two full sessions, and is chiefly for boys who have left school and who have had a good preliminary education. Such subjects are studied as botany, physics, mathematics, zoology, in the first year; agricultural engineering, surveying, geology, entomology, veterinary science, in the second. The diploma a student earns is "Associate in Agriculture." (4) The fourth is the degree of B.Sc. in the University of Wales, lasting three sessions, with specialization in agricultural science during the last two sessions, as well as in two or three branches of pure science. Thus agriculture is as well provided for in Wales as anywhere in the kingdom. This is the Aberystwyth College programme in Agriculture; come there, and you will be served with a course. Numbers of people, however, will not do this, and Aberystwyth sends out an Extension lecturer and dairy instructors to catch the farmers in highways and hedges and compel them to learn. Seven hundred lectures have been given in this way between 1891 and 1897 to audiences of 50,000 persons. The travelling dairy schools have had 1,900 pupils. During the summer months, 150 women have come to Aberystwyth to get instruction in butter and cheese-making, and, though, practically, Welsh visitors only get bad and very salt butter, there is always the hope that the leaven will yet leaven the lump. During the 1897-98 session, 51 men were agricultural students—44 took short courses, and 7 the full course. Young Welshmen are likely to benefit by the Agricultural Department; they are enterprising and go-ahead, like the Scotch, not so much rooted and grounded in their ancestors' methods as the average English farmer. It is significant that a Chair of Agriculture was founded at Edinburgh University in 1790; in Wales, 1890-91.

Space fails to tell of the pleasant social life of the College, shared by both sexes, and including debates, lectures, concerts, dramatics, and other social entertainments. The staff may be said to be mixed, since one lady has a post in the Training Department and another teaches needlework. The sexes are almost on an equality, and attend the same classes without distinction or difference. Saving a few students who reside with parents or relatives in the town, the women are all resident in Alexandra Hall, under the care of Miss E. A. Carpenter, of whom it is only fair to say that the great expansion of the College on the women's side is due to her. When she assumed the post of Superintendent in 1887 there were eleven women students. House was added to house under her able management until, in 1896, Alexandra Hall, a handsome structure facing the sea at the north end of the Parade, was opened, accommodating 150 students. Even this has not proved sufficient, and in 1898 a new wing was added, so that the entire building can now hold 207. At present the number is 177.

General studies, used by those who have cubicles, face the "melancholy ocean," as do a large number of study-bedrooms, the dining room, and library. Students obtain board and lodging for a sum varying from 30 guineas per annum for a cubicle, to 40 guineas for a study-bedroom. The completeness of the service arrangements, the excellence of the food, the large amount of liberty accorded, would require an article to themselves. Most people know the unbending rigidity of life in an institution; yet the tired student (not a sick person) at Alexandra Hall may have any meal except dinner in her own room, if

a student will carry the meal upstairs. If the reader add 30 guineas and the college tuition fee of £10, it becomes evident that a young woman can obtain an excellent education for a little less than £42 per annum. This explains why so many Englishwomen flock to the Welsh colleges. It only remains to be said that Aberystwyth air is as fine as the scenery, so that even a pretty severe course of study does not injure, but rather improves, the health of the students.

It is not so well known as perhaps it might be that a Cambridge B.A. in Honours becomes a full-fledged M.A. by the simple process of paying £30 sterling as a contribution to the University chest. You put the money in the slot and out comes the M.A. In Wales this is not allowed. He who would be an M.A. is presented with a list of subjects for theses, from which he must select one and write a dissertation containing internal evidence that he has done original work on his own account. If he has not previously taken his B.A. degree with Honours, he has to pass a special examination in addition.

C. S. BREMNER.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on April 15. Present: Dr. Wormell, Vice-President, in the chair; Mr. Barlet, Mr. Baumann, Mr. Bidlake, Rev. A. W. Boulden, Mr. Brown, Mr. Butler, Mr. Charles, Mr. Harris, Miss Jebb, Mr. Montgomery, Mr. Pinches, Mr. Sergeant, Mr. Armitage Smith, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

A memorandum on the statements in the Report which was adopted by the Medical Council in November last, was approved, and the Secretary was directed to forward it to the President of the General Medical Council, with a covering letter, setting out the grounds for revision of the Report.

The Report of the Finance Committee was adopted.

The following persons were elected members of the College:—

- Mr. E. Garnett, A.C.P., Newtown School, Waterford, Ireland.
- Mr. E. W. Harris, 27 Saxon Road, South Norwood, S.E.
- Miss E. R. Peckston, A.C.P., Convent of the Ladies of Mary, Croydon.
- Mr. L. R. Sapat, 1 Grove Villas, Muswell Hill, N.
- Miss L. M. Stoneman, 67 London Road, Croydon.
- Mr. F. M. Walker, B.A. Lond., A.C.P., 16 Surrey Street, Ryde, Isle of Wight.

The following books had been presented to the Library since the last meeting of the Council:—

- By the AGENT-GENERAL FOR NEW SOUTH WALES.—Annual Report of the Department of Mines and Agriculture, New South Wales, for the Year 1897.
- By MR. F. B. KIRKMAN.—Kirkman and Pécoul's Les Gaulois et Les Francs.
- By ALLMAN & SON.—Public School Writing Book, No. 4.
- By BLACKIE & SON.—Downie's Macaulay's Essay on Milton; Keene's First Oration of Cicero against Catiline.
- By the CAMBRIDGE LOCAL EXAMINATION SYNDICATE.—Report on the Local Examinations, December, 1898.
- By MACMILLAN & CO.—Cotterill's Macaulay's Essay on Milton.
- By OLIVER & BOYD.—Dick's Rudiments of English Grammar; Fairgrieve's The Child's French Grammar; Le Harivel's Principles of French Grammar.
- Calendar of King's College, London.

REVIEWS.

HISTORY A HANDMAID OF SCIENCE.

A History of Physics in its Elementary Branches, including the Evolution of Physical Laboratories. By Prof. Florian Cajori, Ph.D. (Macmillan.)

The development of every art and every science has been progressive and cumulative. Later discoveries have proceeded from, or have arisen in the consciousness of, those that were earlier; and it follows that there must be some correspondence, though not absolute, between the history of knowledge and its natural development. In other words, the mastering of an art or a science must be greatly facilitated by a knowledge of its history. It has been urged by more than one contemporary writer that a great defect in our present scientific education is the absence of the historical sense, and a want of knowledge of the main researches upon which the edifice of science rests. Prof. Cajori has written his survey of the progress of physics in the hope of remedying the defect. The necessary chapters of such a history were well marked out in advance. A preliminary chapter, indeed, might deal with indications of physical discovery and knowledge before the time of the Greeks, or in Asia and Africa up to the beginning of the Christian era. The materials for such a chapter would be scanty, and Prof. Cajori has not attempted to write it. Amongst the Greeks—who excelled in mathematics, metaphysics, literature, and art, there was com-

paratively little achievement in natural science; but, still, they had the elements of mechanics, light and sound, meteorology, and even magnetism. Slender, but at the same time very interesting, are the physical records of Rome and Arabia. It was not until the civilized northern and composite nations of Europe began, slowly and with difficulty, to reduce into possession the intellectual patrimony of Greece and Rome that the physical sciences gradually expanded with new sap, and put forth vigorous branches and foliage. From the Renaissance down to our own days the history of physics is more and more exact and progressive.

It is unnecessary to say that this volume, which brings together a multitude of scientific details from a great number of sources, is one of very considerable interest. All the notable inventors are here, by virtue of their inventions; and, if we had space for much in the way of extract, we should scarcely trouble ourselves to select where almost every page seems to be specially attractive. The interest is due to the facts rather than to the manner in which they are set forth. Prof. Cajori often does himself an injustice by hasty translation or quotation, when a paraphrase in his own words would have served his purpose far better. Here, for instance, is an anecdote execrably told, and, though it purports to be taken from a book published in London, it clearly ought not to have found its way into print again:—

Oersted tried to place the wire of his galvanic battery perpendicular (at right angles) over the magnetic needle, but marked no sensible motion. Once, after the end of his lecture, as he had used a strong galvanic battery in other experiments, he said: "Let us now once, as the battery is in activity, try to place the wire parallel with the needle." As this was made, he was quite struck with perplexity by seeing the needle making a great oscillation (almost at right angles with the magnetic meridian). Then he said: "Let us now invert the direction of the current," and the needle deviated in the contrary direction. Thus the great detection was made; and it has been said, not without reason, that "he tumbled over it by accident." He had not before any more idea than any other person that the force should be transversal. But, as Lagrange has said of Newton on a similar occasion, "Such accidents only meet persons who deserve them."

The author's account of successive experiments in what may be called competitive invention, is commendably exact and, so far as we have noticed, impartial. Speaking of the famous race for the electric light, he says:—

Lane-Fox, in 1879, being convinced that platinum and iridium were useless as bridges in lamps, used carbonized vegetable fibres. Swan, in February, 1879, made a public exhibition of a lamp with a carbon filament in a vacuous tube. Swan's success led Edison to abandon platinum and iridium; and, in October, 1879, he had constructed a vacuum lamp with a filament of lampblack and tar carbonized. In January, 1880, Swan prepared filaments from cotton twine, prepared by immersion in sulphuric acid and then carbonized. Edison sent out explorers into South America and into the Far East in quest of suitable fibres for lamps, and in 1880 employed a flat strip of carbonized bamboo for a filament. Most of the modern lamps have filaments prepared from parchmentized cellulose, afterwards carbonized.

The final chapter, on the gradual development of laboratory work in physics as an instrument of scientific education, is very much to the point, and fitly concludes a book which has many excellent features.

MORE "ARUNDINES CAMI."

Cambridge Compositions, Greek and Latin. Edited by R. D. Archer-Hind, M.A., and R. D. Hicks, M.A. (Cambridge University Press.)

This collection of classical verse and prose from Cambridge scholars is intended to meet the practical needs of schoolmasters, and it is admirably adapted for an advanced course of composition. The English pieces are, for the most part, simple and straightforward; the fair copies are always neat, and often very happy. It is all that a new Florilegium should be. In any case, we will forbear to criticize, and offer instead the tribute of free quotation.

These are Dr. Munro's first eight lines of "Fear no more the heat o' the sun":—

Immodicum solis fuge formidare calorem
nec faciat brumæ vis furibunda metum :
omne peregristi pensum mortale, larique
reddita mercedem sedulitatis habes.
aureus ipse puer, par a fulgine furvis,
et virgo fati foedere pulvis erit ;
triste supercilium fuge formidare potentum,
in te præventast plaga minacis eri.

Here is the beginning of Prof. Butcher's version of Wordsworth's Ode, from

Our birth is but a sleep and a forgetting
down to

Heaven lies about us in our infancy :—

Neo nos nascendo nisi somnum et pocula Lethes
ducimus ; ille animus qui se nascentibus astrum
extulit, ex obitu longinqua a sedo profectus
hic iterum exoritur ; non funditus illius aevi
gens oblita adeo, non denudata venimus ;
nubila nam trahimus longo splendentia, Patrum
linquentesque domum : caeli circumvolat annos
lux teneros.

Tennyson's "Eagle"—

He clasps the crag with hooked hands—

rendered by Mr. Postgate in a couple of sapphics :—

Sole qua fulgent propiore terrae
alta desertae, digitis reducibus
haeret ad rupem, mediumque cingunt
caerula caeli.

desuper rugas simulante lapsu
ire Neptunum specula superbus
respicit summa ; ruit inde praeceps
fulminis instar.

The famous Elgin epitaph—"Life is a city full of streets":—

Urbs est vita hominum : stat plurimus undique vicus :
est ubi conveniat tota caetera forum :
mors cluot : at si vitam emeres, neque vivere posset
servolus, et dominus nollet obire diem.

Here are a couple of verses from Heine, with Mr. W. G. Headlam's rendering in elegiacs :—

Es liegt der heisse Sommer
Auf deinen Wänglein ;
Es liegt der Winter, der kalte,
In deinem Herzchen klein.

Das wird sich bei dir ändern,
Du Vielgeliebte mein !
Der Winter wird auf den Wangen,
Der Sommer im Herzchen sein.

Nūn θερὸν μὲν σῆσι παρήσει θάλλος ἐπανθεῖ,
χειμῶν δ' ἐν κραδίῳ ψυχρὸς ἔτ' ἐρδίδει.
θάρσει μὲν, τὰ δ' ἐνάλλα γερήσεται, αὐτίκα δ' ἔσται
χειμῶν ἐν χροίῃ καὶ θέρος ἐν κραδίῳ.

The θάρσει scarcely appeals to us—but we said we were not going to criticize. Let us end our quotations with Mr. Archer-Hind's version of a stanza of Shelley's :—

Forget the dead the past ? O yet
There are ghosts that may take revenge for it :
Memories that make the heart a tomb,
Regrets which glide through the spirit's gloom,
And with ghastly whispers tell
That joy, once lost, is pain.

τῶν τότε, τῶν φθιμένων ἐπιλάσαι : ἀλλ' ἔτι γὰρ τοὶ
δαίμονες εἰσιν ἰσως οἱ ποτε τισόμενοι
μῦθαι σοὶ θήσουσι τάφρον περικάρδιον ἐντός,
κῆσονται θυμῷ τῷ σκοτούεντι πόθοι,
ἐν δ' ὀμφᾷ δύσφαιμος ἔσω στέρνων τὰδε φωνεῖ
τίκτει πῆμ' ὀπίσω τέρψις ἀποιοχόμενα.

THE ART OF GARDENING.

Wood and Garden : Notes and Thoughts, Practical and Critical, of a Working Amateur. By Gertrude Jekyll. (Longmans.)

It is not to be questioned that flower-culture and the love of gardening have received a great stimulus in the past few years, and the book before us comes as a timely and noteworthy illustration of the fact. It is so pleasantly natural and unconventional, and it has been so warmly welcomed as the unpretentious work of an enthusiastic practical gardener, that it stands in little need of further recommendation; but it may serve as a pretext for repeating what has more than once been said in these columns on the value of horticulture—and, more widely, of nature-study—as a medium of physical and moral, if not of mental, education. Horticulture does not make much of a figure in elementary codes or secondary curricula, unless it be in the technical programmes of some of the most rural of English counties. We have, indeed, our horticultural colleges, like the admirable institution at Swanley, and more than a few secondary schools in country districts where gardening is recognized as a serious pursuit, on the principle that a boy or girl should be taught to do well what in after

life he or she is certain to do somehow. We receive from time to time a sensible and well-written German publication called the *Schul- und Haus-garten*, which bears witness to a systematic attempt to encourage and assist the love of flower-culture; and from Ithaca, New York, we have a sheaf of papers describing the work of the College of Agriculture in the Cornell University. At this college they have, in addition to the director, professors and teachers of horticulture, gardening, botany, chemistry, entomology, sugar-beet culture, maple-sugar culture, dairy husbandry, and nature study. In New York State they do things very thoroughly when they take them up at all; and we observe that the Ithaca College prints a capital illustrated series of "Teachers' Leaflets," intended "for use in the public schools." There is perhaps nothing in England quite so comprehensive as this, though most of the subjects mentioned above may be found as adjuncts to the ordinary course of the agricultural colleges. One of the Ithaca publications is a collection of "Hints on Rural School Grounds," and it shows by many examples and pictures how the managers of rural schools, with or without the practical assistance of their scholars, may convert a bald acre or two into a flowering and even romantic environment.

What Miss Jekyll does for us is to describe how she converted her own few acres of ground into a wild and beautiful landscape garden. Her lines were cast for her in pleasant places, and she proceeded to make those places still more pleasant. She had the land, the leisure, and the taste; and by adding the indispensable labour she seems to have made the wilderness blossom like a rose. Her book chronicles her ordinary garden-work for a year, taking it regularly month by month; and it supplements the chronicle with a dozen chapters on "large and small gardens," "beginning and learning," "weeds and pests," and so forth. It is not, of course, designed for the formal work of teaching horticulture, nor does it enter into all the details which a serious student of gardening would have to master. But the book is none the less a wise teacher of the art and method of gardening. It shows how to make the best of opportunities, great or small, how to beautify a corner and tidy up a neglected patch. And in these days, when more and more women are taking to horticulture as a vocation and means of livelihood, it is good to have a plain account of what has been done by a practical woman in the way of decorative gardening. From this point of view Miss Jekyll's "Wood and Garden" is distinctly educational. There must be many a landowner and occupier of a fair-sized estate who would be glad to see a few wild acres converted as Miss Jekyll shows us how to do it, and who would commission a competent woman to set about the task. The difficulty is to introduce the competent woman to the sensible landowner.

A PRELIMINARY SKETCH.

An Outline of the History of Educational Theories in England.

By H. T. Mark, B.A. Lond., B.Sc. Vict. (Sonnenschein.)

Mr. Mark rightly takes a broad view: he extends his examination of educational theories to the point of origin in the national development. He pushes back beyond the Renaissance, taking advantage of the various results of recent investigation, and following the glints of the light of learning that have been discovered even in "the dark ages." The effects of the Renaissance itself he carefully analyses, giving particular prominence, of course, to the schools and educators and the general educational progress in England during the sixteenth century. Erasmus and Ascham are well known names; Mulcaster is scarcely so familiar; but, unreadable as his style is, he is very properly put forward by Mr. Mark as a man of ideas. Thus:—

On many points this Elizabethan schoolmaster is abreast of the thought of the nineteenth century. . . . The aim of education (according to him) was to be the development of all the faculties. . . . Precocious children should not be forced. . . . School hours were too long. . . . He introduced also for school use a set of systematic and carefully graduated physical exercises. But it is even more striking to find in him the pioneer of the modern application of psychology to education. . . . When Mulcaster says that things should be so taught that that which goes before may lead on to that which follows, he is only stating in other words Herbert Spencer's dictum, that the child, in learning, must, of necessity, pass "from the known to the unknown." And, again, in the statement that things should be brought under the observation of children in such way as to appeal to the senses, we have the spirit of Herbert Spencer's rule to proceed "from the concrete to the abstract."

And there are still more modern points in Mulcaster, who was simply a man with a strong head—the very kind of man needed for a teacher. Better if European educationists had taken their

cue from him than from Sturm, "the typical Renaissance school-master," whose too narrow and formal system Mr. Mark explains concisely and usefully in an appendix.

In subsequent chapters Mr. Mark reviews the English theories of physical education, from Bishop Latimer and his bow down to Manchester and its football shield competition; of intellectual education, in the varieties of method and gradual expansion of subjects; and of moral education, with the various and variously accentuated means of training character. Wherever Mr. Mark interposes among the authorities a modest opinion of his own, he seems to us to indicate a generous breadth of view and a sound judgment. Happily he does not spare to criticize the great masters, some of whom have laid down tolerably confident theories, without a tittle of his practical experience. One wonders how many of our teachers will con Mr. Mark's pages. Those who do will find them full of interest, and will probably be stimulated to go more deeply into the history of educational processes. If this volume meet with the encouragement it deserves, Mr. Mark may be expected to fill out the sketch into something like a history. He professes no more than an "outline," and this he has executed with great discretion and care. But he has no space to go beyond generalities, except on the leading points; and it seems desirable to deal in larger detail with all the main subjects of the schools. He would find a mine of suggestions in Prof. Bain's "Science of Education," though it is not historical, except occasionally and incidentally—a book he does not, we think, once mention. Fundamentally, the making of the teacher is the making of the man, and the original endowment is the prime factor; but, after all, the best of us is capable of being made better by due meditation on the opinions and examples of theorists and of practical teachers alike. We hope, therefore, that Mr. Mark's little book will be widely read, and that he will be encouraged to expand the treatment to a scale worthy of the matter and of the interests involved.

THE ART OF THE ORATOR.

Rhetoric and Oratory. By the Rev. J. F. X. O'Connor, S.J.

(London: Isbister; Boston: Heath.)

The strict subject of Dom. O'Connor's excellent volume is oratory, and rhetoric comes in only in so far as it bears directly upon the main theme. "The aim of this book," says the author, "is to give precepts for the building of a speech, and, at the same time, to place under the eye of both professor and student the speech built according to these precepts." That is to say, he sets forth the rhetorical principles applicable to oratory, and illustrates them by copious examples of the best quality. Mr. O'Connor justifies the prominent position he assigns to rhetoric by drawing a distinction between "rhetoric" and "the study of style," narrowing rhetoric to "the intelligent and scientific method of training the mind in the best way to build up a speech in accordance with the character of the human mind, in which the intellect follows the light of truth and the will seeks for truth as a good, and acts in harmony with the persuasiveness exerted." We do not see the necessity or the propriety of the distinction; but Mr. O'Connor makes it, and we take him on his own lines.

In Part I., the author handles successively what he calls the "parts of rhetoric"—namely, invention, disposition (or orderly distribution of materials), elocution, memory, and delivery. Incidentally he drags in certain elements of logic when he is expounding the principles of argumentation and refutation, and he dips into psychology and moral philosophy when he is treating the moving of the feelings. We will not quarrel with the mixture in view of the author's intention to concentrate all the materials and means of successful oratory. But we may remark that he gives (in another part) but scrappy elements of "the study of style," which operate in practice with just as much efficiency as logical discrimination or insight into human character. Perhaps also the full treatment would require him to enlarge his borders still further to meet Emerson's dictum that "there is no true eloquence unless there is a man behind the speech." But the line must be drawn somewhere, and Mr. O'Connor gives value for the money anyhow.

Part II. is a well selected series of examples taken from American and British orators to illustrate the different parts of a discourse as expounded in Part I. It is pleasant to see passages from Joseph Warren, John Hancock, Henry Clay, Daniel Webster, John C. Calhoun, Edward Livingston, James Wilson, Joseph Story, and Thomas Addis Emmet, alternated with passages from Chatham, Burke, Erskine, Curran, Grattan,

O'Connell, and Sheridan; while John Bright and Wendell Phillips supply the longer illustrations. Then, in Part III., comes the "application of precepts." Here the author offers a large collection of very sensible comments and suggestions gathered from a wide body of sources as well as from his own judgment, and illustrated from the practice of Greek and Roman and French, as well as American and British, orators. We do not know whether any of the great orators of the world ever heard of a "chria"—whether "verbal" or "historical" or "mixed"—but the budding orator of the future will be equipped with this knowledge if he study faithfully Mr. O'Connor's precepts. The final part contains short short biographical sketches: a couple of dozen of the more famous orators of all times and of all countries. The book is a thoroughly practical one, and cannot fail to be useful to all who wish to make an effort to rise to a distinctive ability in speech-making. But the effort is not to be put in practice without much personal discrimination under pains and penalties. There was once a personage called Dardalus. We leave aspirants to work out the "chria" by way of additional example.

A NEW HISTORY OF SCOTLAND.

"Cambridge Historical Series." Edited by Prof. G. W. Prothero.—*History of Scotland, Vol. I., to the Accession of Mary Stewart.* By F. Hume Brown, M.A., LL.D. (Cambridge University Press.)

There is, admittedly, ample room for a new and compendious history of Scotland. We certainly should not have expected to see the need supplied in Prof. Prothero's series, which was designed "to sketch the history of modern Europe, with that of its chief colonies and conquests, from about the end of the fifteenth century down to the present time." There is, however, no need to question the discretion of the editor in introducing, at his own risk, a work far more comprehensive than we had been led to expect, and starting with the very origins of the Scottish nation—or, to be more precise, with the Roman occupation of North Britain. The incongruity will be forgiven by most of those who possess the remainder of the series, in view of the unquestionable advantage of securing a complete, well told, and comprehensive history of Scotland by a competent writer.

This first volume of Mr. Brown's "History" carries us to the end of the reign of James V. The Battle of Flodden virtually marked the close of a long period of struggle between the Scottish kings and the old nobility. The period which follows is occupied by the sharp opposition of the French and English influences in Scotland.

In his preference of France to England [James V.] was supported by the clergy, but opposed by most of his barons; and the progress of events confirmed him in the policy he had adopted from the first. His two French marriages widened the breach between him and his nobles, and made him still more dependent on the Church. The quarrel of Henry VIII. with Rome had likewise an influence on Scotland which cannot be measured by any accumulation of details—the example of England being, in truth, a great fact that touched men's minds at a thousand points, and influenced them unconsciously to themselves. By the close of the reign of James V. two alternative courses lay clearly before the nation; and the fact that these alternatives had arisen distinguishes that reign from those that went before it. The course that commended itself to James and his ecclesiastical advisers was the continuance of the traditional policy of alliance with France and fidelity to Rome. To an increasing number of the laity, both nobles and commons, however, the wiser course seemed to be to throw in their lot with England, as a policy dictated by nature herself. Ambition and self-seeking, in the case of both parties, obscured the issues that had thus been opened up; but these issues were such as could not be put aside, and the overthrow of Mary Stewart at Langside, twenty-six years after Solway Moss, gave the definite victory to Protestantism and the English alliance.

The extract is a fair example of Mr. Brown's style. It is not rhetorical, and not very incisive; but it is adequate to the requirements of a straightforward narrative. We must defer anything like a critical estimate of this new history of Scotland until we can consider it as a whole.

SOME SOCIAL PROBLEMS.

The Foundations of Society. By J. Wilson Harper. (Ward, Lock, & Co.)

The title of this work does not adequately express the subject-matter of the author's labours. It would suggest an inquiry into the nature of the fundamental principles of physical and intellectual existence governing the action of the forces that

bind men together in societies. It is, however, of the effect of those various forces—ethical, economic, political, and religious—when in active operation that Mr. Harper treats. Without any claims to originality or fresh treatment, the book is a useful and complete survey of the conclusions of the most important modern writers who have dealt with the problem of the evolution of society, and it shows convincing proof of wide reading and careful analysis in every chapter.

It may be recommended as particularly useful to students who have passed their text-book days, to extend the horizon of their intellectual sympathies. The many instances given of the divergent views of great thinkers when dealing with the less surely ascertained facts of primitive civilization will be some protection against the dogmatism of specialists. All the principal unsolved or insoluble riddles of life, from that of the intellectual and moral condition of prehistoric man down to the latest problem of psychological research and current politics, are duly noted. Although, on the whole, the book is written in a fairly philosophical spirit, there are occasional lapses into vague generalizations and statements involving undefined terms, which detract largely from its true scientific value. It may be that "a revelation which contains a message of grace is necessary if man is to respond to the claims of conscience." Such considerations, however, do not tend to simplify the problem of a true adjustment of the claims of individualism and socialism, into a discussion of which they are brought. Ruskin's definition of wealth as "the things which make for life," requiring for its examination ethical considerations, is scarcely fitly illustrated by mere material economics.

The chapter on the political basis of society is perhaps the least satisfactory, being hardly more than a cursory treatment of modern views of the true limitations of government. The author's contention that it is the duty of Government to see that only fair contracts are legal is either a truism or dangerous. Lord Eldon has lived in vain if contracts unfair in the legal sense of fraudulent or inequitable are still enforceable by English law. The difficulty lies in the definition of "unfair," and money-lending contracts, to which the author refers as an example, are seldom unfair. They may be hard; and it is towards mitigation of their harshness that the investigations of the Special Commission are directed. In dealing with this social problem the author would have done well to include a discussion of the true place of State or municipal loan banks. The prevention which is better than the cure may perhaps here be found without that interference with the freedom of contract which is the basis of all industrial prosperity, and the keystone of a stable jurisprudence.

GENERAL NOTICES.

CLASSICS.

The Homeric Palace, by N. M. Isham (Providence, U.S.A.: Preston & Rounds Co.), is a very interesting "attempt to gather together the main facts about the palace of the Homeric time, and to explain them by illustrations." The drawings are "grouped in such a way as to facilitate and invite comparison, not only between the different examples of the Mycenaean time, but between those examples and the forms in use in other periods." The monograph will be found well worth perusal by all students of Homer. The author contrives to bring before the reader the Homeric stronghold as an actuality, not a mere fancy thing constructed out of books. He shows us a castle as imposing and as effectively protected as the great piles of the middle ages. Both as scholar and architect he is thoroughly equipped, and his book should become a standard work of reference on the subject.

The Seventh Book of the Odyssey, edited by C. W. Bain (Boston, U.S.A.: Ginn & Co.), is the right sort of book to interest those who are beginning to study Homer. There is abundance of information on archaeology, mythology, and literature; the illustrative quotations are specially noteworthy, while the grammatical points are sparingly dealt with. The editor has put a large quantity of work into the little volume, and we trust that the book will meet with due appreciation. It is certainly superior to the elementary editions of Homer in use in this country.

Vergil, Æneid IX., by A. Sidgwick (Cambridge University Press), belongs to the "Series for Schools and Training Colleges." It contains notes from the editor's complete edition, a vocabulary, and a brief introduction. The book is thoroughly satisfactory, and Mr. Sidgwick fully maintains the reputation he has won as an editor of elementary classics.

The First Oration of Cicero against Catiline, by C. H. Keene (Blackie), is in the publishers' new "Series of Elementary Classics." With its introduction, variant readings, notes, specimen of translation, exercises,

vocabulary, and illustrations, the book is remarkably complete. Indeed, if there is any fault in the editing, it is that Mr. Keene has overdone the thing a little. As arranged and "glossed" by him, the "First Catiline" looks a somewhat formidable undertaking for the juniors.

Easy Latin Passages for Translation, by F. Ritchie (Longmans), adds one more to the long list of collections of "Unseen Passages." Mr. Ritchie has collected upwards of two hundred and fifty passages from prose and verse. We decidedly do not agree with Mr. Ritchie that all the passages can fairly be described as "easy." Some of the verse passages are certainly hard enough for the fifth form. We may instance Horace, "Odes" III. xxiv., "O quisquis volet impias," which Mr. Ritchie does not make easier by putting a full-stop in place of a note of interrogation at the end. "Easy" is a relative term; but Mr. Ritchie interprets it to mean something above the standard ordinarily accepted by the teachers of middle forms, and far above the standard of the University passman.

A Primer of Latin Grammar: Accidence, by W. Modlem (Rivingtons), appears in a second edition. We spoke in terms of high favour of the book when it first appeared, and we need only add that a nearer acquaintance has confirmed the good impressions we then formed of it.

MODERN LANGUAGES.

French Conversations. By Mlle. Dohors de St. Mandé. Books. III.-VI. (Swan Sonnenschein.)

We have already noticed the first two books of the series. These are arranged on the same lines, and cover a great deal of ground. The various sections are brightly written, and in the hands of an energetic teacher they will be very useful in supplying pupils with an extensive vocabulary of the words required in everyday life. The booklets are well printed, but the price (a shilling for thirty-two pages) seems rather high. It should be added that these books are not suitable for classes of boys.

French Review Exercises. By P. B. Marcou, Ph.D. (Isbister.)

A volume in Heath's "Modern Language Series." The book may be useful in America, where Prof. Whitney's and Prof. Edgren's French Grammars are in use, to which constant reference is made. The exercises consist of sentences "written in French, and then done into English as literal as seemed consistent with intelligibility." The result is "English" of this kind: "Now we exhale (the) honesty a league off"; "Let us take, then, a carriage"; "No, all that will end before long by a new war." It will be seen that little more than word for word translating is required, and that is an exercise of very doubtful value.

French Selections for Advanced Sight Translation. Compiled by T. F. Colin, Ph.D. (Isbister.)

A cheap and handy selection of forty-four passages, taken from French writers of note, chiefly of the present decade—e.g., J. Lemaitre, R. Doumic, G. Rodenbach, Fr. Coppée, P. Loti. The book is correctly printed in clear type.

Goethe, Iphigenie auf Tauris. Edited by H. B. Cotterill, M.A. (Macmillan.)

A careful edition, but undoubtedly inferior to Dr. Brou's, which we noticed last month. The introduction contains much interesting information about the myth of Iphigenia in Greek literature, the inevitable comparison of Euripides' treatment of the story and that of Goethe, and a sketch of Goethe's life. The notes have been conscientiously compiled: we add some remarks on details. Note on line 24: cp. the "schriftdeutsch" von and auf seiten. Note on line 62: entgegen-tragen, -führen, -halten also take the accusative. Note on line 1,458: is einmal ever pronounced émal? If we are not mistaken, the abbreviated form is mal in the North and emol (with "neutral" e and accented long open o) in part of the South. The third appendix contains passages bearing on the subject-matter of the play, taken or adapted from such books as Holm's "History of Greece," Scherer's "History of German Literature," Lewes's "Life of Goethe." This is undoubtedly an improvement on the "passages for translation" in other volumes of Mr. Siepmann's series. The fourth appendix contains an interesting chapter on German words of foreign origin. On page 177 *crucem* should have been given as the source of *Kreuz* rather than *cruz*. The form *liege* on page 178 is misleading, and the original *legem* might have been added. *Sack* (page 182) is not derived from the Greek.

Kleist, Prinz Friedrich von Homburg. Edited by J. S. Nollen, Ph.D. (Boston: Ginn.)

This capital edition of Kleist's fine play deserves to be welcomed by all teachers of German who have been wishing for dramas adapted for class use, and not written by Schiller, Goethe, or Lessing. They will find here a good introduction, dealing fully with Kleist's life and his place in German literature, and with the play. The notes, also, are eminently satisfactory; due attention is paid to the literary aspects of the text, and very numerous parallels are quoted. The notes on grammar are brief, and happily leave unnoticed all that advanced students may be expected to know. We do not like "polyphonic dialogue" (page 128). Could editors of school texts not come to an agreement to cut down to the best of their power the large number of terms taken from Greek? That would save us from "onomatopoeia,"

"euphony," "protasis," "monopody," and many other superfluous expressions.

Grillparzer, Sappho. Edited by C. C. Ferrell, Ph.D. (Boston: Ginn.)

We are glad to find that in America, also, the works of Grillparzer are receiving attention. Mr. Ferrell, who complains in his preface (dated October, 1898) that not one of them has yet been edited in America or England, has not seen Mr. Rippmann's edition, which appeared early in 1898. The introduction gives a short account of the dramatist's life and of the exquisite play which he wrote at the early age of twenty-six. Mr. Ferrell believes that Grillparzer owed a good deal to Franz von Kleist, which was disproved some years ago. The notes are satisfactory on the whole, except for the renderings, which are in somewhat infelicitous English—e.g., "It is very uneasy standing on the heights of human greatness"; "It must be done after all"; "It moved with gentle undulations, also, in her breast."

The Easiest German Reading for Learners Young and Old.

By George Hempl, Ph.D. (Boston: Ginn.)

This well printed volume contains many familiar English nursery rimes translated into German, with questions for drill in speaking and writing, a vocabulary, and an introduction on the teaching of language. Mr. Hempl's introduction contains judicious and sound remarks; he has evidently studied the subject of the early teaching of modern languages with care. It is a little surprising to find that he has been led to consider translations of nursery rimes suitable for this purpose, for the English words must constantly present themselves, and interfere with the rapid acquisition of the *Sprachgefühl*. We notice also that "it is taken for granted that the learner has a start acquired in some other way—that is, he knows the meanings of a few words." Surely it would have been better to have given some elementary exercises containing the "few words." It cannot be denied that the book makes very amusing reading. We quote one of the passages:—"Hompte Dompte sass auf einer Gartenmauer; Hompte Dompte machte einen grossen Plumps. Alle Pferde des Königs und alle seine Leute könnten Hompte Dompte nicht wieder hinaufsetzen." The German is idiomatic throughout. Perhaps, however, Jack Horner would not have said: "Was ich für ein guter Junge bin ich!" but rather "Was ich für ein guter Junge bin!" or "Biu ich aber ein guter Junge!" We were not prepared to find in the vocabulary "Kroosoway" as representing the German pronunciation of Crusoe.

German Selections for Advanced Sight Translation. Compiled by Rose Chamberlin. (Isbister.)

A parallel volume to the "French Selections" noticed above, and also deserving praise. The thirty-eight passages are taken from Th. Fontane, E. von Wolzogen, Sudermann, R. zur Megede, and other recent writers.

MISCELLANEOUS.

Macaulay's Essay on Milton. Edited by John Downie, M.A. (Blackie.)

In this text-book, specially prepared for the Teachers' Certificate Examination, the editor has given his chief attention to the literary style, and appends a list of trifling alterations (sometimes only a matter of punctuation) made by Macaulay in his Essay, to serve as an exercise for the student in discovering the reasons for such changes. This is, perhaps, laying too much stress on mere niceties of style, considering the ignorance of literature on the part of a reader who is supposed to require a note as to how Agag died and who Othello was. The introduction on the life of Macaulay, the subject-matter and style of the Essay, are interesting, and thorough enough for the purpose in hand, and the specimen questions will no doubt help the private student.

Macaulay's Essay on Milton. Edited by H. B. Cotterill, M.A. (Macmillan.)

The value of Macaulay's Essay on Milton lies more in the intellectual vistas it opens up than in the finality of its criticisms and judgments. Mr. Cotterill has borne this continually in mind in writing his preface, general remarks, and notes, all of which, together with a list of books to be read in connexion with the Essay, are intended to stimulate to further study. The Chronological Summary is marred by the common mistake of noting a great man's birth, instead of the chief event of his life—e.g., it is misleading to associate John Locke with the date of Milton's M.A. degree. The notes are thorough and free from trivialities, but occasionally too condensed to be clear, and overloaded with quotations.

The Sir Roger de Coverley Papers from the "Spectator". Edited by Mary E. Litchfield. (Boston: Ginn.)

This little volume fulfils the first essential of a reprint of a literary treasure—it is attractively set forth. The print is good, the introduction briefly puts the reader into the atmosphere of the time; the notes are neither pedantic nor trivial, while dry facts for mere reference are given in smaller type. This edition will be found useful for older forms who are studying the same period in History as a basis for a few light half-hour lessons, or for private reading.

The Story of London. (Edward Arnold.)

London school-children will be interested in this reading-book. The short and clear accounts of the great streets and buildings, of the City

Companies, the parks, the Temple, and so forth, will certainly assist the growth of that intelligent pride in their city which most young Londoners feel. The map of Roman London is a happy illustration, and a very simple one of modern London on the same scale might have been added with advantage, for the ordinary maps of London are too full of detail for educational purposes. The poetical extracts and most of the notes would be better omitted.

De Quincey's "Confessions of an Opium Eater." Edited by G. A. Wauchope, M.A., Ph.D. (Isbister.)

Here we have a great deal in a small space: a life of De Quincey, an appreciation of his style, references in biography and criticism, hints to teachers who have no ideas of their own, copious notes, and an index. The editor has shown discretion in his choice of the text. The text is given as it originally appeared, and, where necessary, extracts are added from the expanded edition subsequently printed. In this way the author is allowed to annotate himself. We could wish that the editor had omitted some of his own notes. "Custos Rotulorum" is not an officer of the English Parliament.

A Code of Rules for the Prevention of Infectious and Contagious Diseases in Schools. Issued by the Medical Officers of Schools Association. (J. & A. Churchill.)

We are glad to record the publication of the fourth and enlarged edition of the most useful "Code of Rules for the Prevention of Infectious and Contagious Diseases in Schools," issued by the Medical Officers of Schools Association. The chief alterations in this edition are in the appendix on disinfection, and in the reduction of the "quarantine periods" allotted to scarlatina and to smallpox. The Code, based as it is on the collective experience of the medical officers of nearly all our leading schools, has long been regarded as the standard popular work on the subject of the diseases of children. Some years since, we are told, its more important recommendations were adopted by the Minister of Public Instruction in France, and officially applied by him to the management of the public educational establishments throughout that country. The volume is published in a neat form for eightpence. It seems hardly necessary to say that no schoolmaster or schoolmistress, and, indeed, no parent of young children, should be without a copy.

German Higher Schools: the History, Organization, and Methods of Secondary Education in Germany. By James E. Russell, Ph.D. (Longmans.)

Dr. Russell, of Columbia University, has done for his countrymen, and contingently for ourselves, what Mr. Sadler and others have recently done for English readers. He gives a sketch of German education (going scrupulously back to Charles the Great and Alcuin), and then takes a thorough survey of the existing provision of schools and professional training. The work has been very well done, and, though it is not necessary for us to indicate the general results of Dr. Russell's inquiry, which are by this time fairly familiar to students of comparative education, we can warmly recommend his volume as supplementary to those referred to above.

"Heroes of the Reformation." Edited by Dr. S. M. Jackson.—*Philip Melancthon, the Protestant Preceptor of Germany (1497-1560).* By J. W. Richard, D.D. (Putnam's Sons.)

The life of Philip Schwartzerd—a name which his fastidious friends, on the suggestion of Reuchlin, trimmed down into Melancthon, though he rarely called himself by the softer Greek word—is a natural complement to the life of Luther, who was the last reformer dealt with in this series. The two men were generally friends and condutors, but they had some differences in later life. One of their most striking collaborations was the truly papal dispensation which they issued to Philip of Hesse in 1539, permitting him to have two wives. After a while, the thought of what he had done nearly killed poor Philip Schwartzerd; he refused to eat, and, if Luther had not stood over him with a threat of excommunication, he would have starved himself to death. Dr. Richard tells us all this and a good deal more in his very acceptable volume.

Domestic Economy for Schools. By H. Major, B.A., B.Sc. Stages I., II., and III. (O. Newmann.)

These are three handy little paper-bound books of some sixty-four pages each, adapted to meet the requirements of class subjects of these stages in elementary schools. They are text-books for the use of the teacher, and, by a judicious use of italics and thick-printed headings, the subdivisions of the subject of each chapter can be quickly grasped, and the outline of a lesson can thus be sized without any difficulty. The text matter itself surprises one by its completeness and its pleasant style, and this fact, combined with the thoroughly practical way in which the subjects are handled, make these little handbooks not only useful school-books, but pleasant reading for any woman or girl who wishes to gain some knowledge of this important subject. One little defect must be noted, which is that in some cases—e.g., in Stage II., page 28—the letterpress gives no explanation of the illustration, nor has the latter any key to its different parts.

Spenser's Faerie Queene, Book V. By Kate M. Warren. (Constable & Co.)

This is a neat little volume, and it contains all that is needful for a

right understanding of the poem, though it does not enter upon critical disquisitions on the text or explain the metre. The introduction sets forth the chief characteristics of this fifth book, and embraces a careful analysis of each canto and a list of the chief persons, places, and events of the historical allegory. The text is printed clearly on a wide-margined page, and the glossary is not only a glossary, but it also contains all necessary notes, save textual ones, which arrangement is far more convenient in a little book than having them printed separately.

Shakespeare's Midsummer Night's Dream. By R. Scott, M.A. (Madras: Srinivasa, Varadachari, & Co.)

Mr. Scott's edition of the "Midsummer Night's Dream" is remarkable for its excessive length. The actual text takes 70 pages; the introductions and notes occupy no less than 330 pages. The critical portion does not seem to be justified by any originality. The notes are often of a most trivial character, as: "ll. i. 119: 'Cross her'—'Thwart her own dear.' 120: 'Do but beg'—'Only ask.'" We cannot too strongly protest that this is not the way to teach English literature, even to Indian students.

"Waverley School Series."—The Waverley Historical Reader, Sixth Book. (McDougall.)

Here we have, in three hundred octavo pages, a well written sketch of English history from the earliest times to the end of Elizabeth's reign, suitable for children between ten and fourteen years of age, as it is written in a bright style, and is replete with anecdotes and sayings. The most striking feature of the book is undoubtedly the good illustrations, all of which may deservedly be termed artistic, and many of which are copies of well known portraits and historical pictures. The biographies of eminent men are also a commendable feature. The cover would be improved, in our opinion, if the price were not printed on it in two conspicuous positions. We presume that it is purposely put there to make one marvel that such good print, beautiful paper, illustrations, maps, &c.—to say nothing of the information—can all be had for so little.

"Royal Osborne Geography Readers."—Book IV., Sea and Land. (Nelson & Sons.)

This book contains a fund of information on the chief facts of physical geography, physiography, and geology in the form of easy chapters written in an agreeable narrative style. It ought to arouse the observation and curiosity of children when in the country or at the sea-side, and teach them to use their eyes and ears. The chapters on "A Day's Fishing," "Lighthouses," and "Volcanoes," for instance, would be appreciated by any boy. Books of this stamp, with good illustrations, are calculated to give children a taste for sensible reading if they are encouraged to read them at home first, and not taught to regard them as lesson-books only.

Object Lesson Handbook of Natural History. (W. & A. K. Johnston.)

This is specially adapted to Johnston's series of "Natural History Plates"; but it can be equally well used with any natural history pictures, or even without where plates are not obtainable, as each chapter is headed by a good illustration of the animal spoken of therein. Most of the lessons are subdivided into (a) the description, (b) the habits, and (c) the uses of the animal, and hints for comparisons with other animals are suggested by remarks placed in brackets. In short, this handbook, if placed in the hands of any intelligent junior mistress, ought to enable her to give most interesting, as well as instructive, talks on natural history. At the beginning is a kind of analysis of the relation between "Education and the Child Mind" and upon "The Use of Pictures in Education."

Easy Stories for Infants. (W. & R. Chambers.)

These little tales are printed in a distinct, large type, which is the first requisite for an infant's reading-book. The collection is well adapted for its purpose.

"Pearson's School Series."—The Attractive Readers: Infants' Reader I.; Primer I.—II., and Book I. (C. A. Pearson, Limited.)

The "Attractive" Series of Readers is well named. Printed in large type, well bound, with plenty of illustrations, plain and coloured, of unusual excellence, these little books cannot fail to "attract" children. The first three volumes are in words of one syllable, with lists of words for spelling. Book I. contains some interesting stories of heroism, two fairy tales, and a good deal of verse of a higher quality than the rhyming jingle too often used in such books. Among the latter we are glad to see Lord Houghton's charming song, "Good Night and Good Morning."

"Bell's History Readers."—Early English History in Twelve Stories. (Bell & Sons.)

In many respects Messrs. Bell & Sons' "Early English History" is to be commended. In a series of twelve "readings" a clear and interesting account is given of the outlines of the history of our island from Julius Cæsar to William of Normandy, with descriptions of the social life of Britons and Saxons, and the engineering works of the Romans. The work is fairly accurate; but legendary history is not excluded, and not always noted as legendary. For instance, King Arthur is spoken of as if the facts about him were as certain as those about King Alfred. We have also the tale of Alfred and the cakes.

This is a pity. There is enough picturesqueness in the history of these eleven hundred years to make recourse to fable unnecessary. In the map of the Roman roads the Fosse Way is omitted. The Battle of Brunanburgh is located, without authority, in Yorkshire. There is a misprint of "Arthur" for "Alfred" on page 66. The book is illustrated by pictures of moderate quality and by a good deal of verse, which, with the exception of some well known pieces by Cowper and Whittier, is also of moderate quality.

The Story of the Rise of the Oral Method in America. By the late Hon. Gardiner G. Hubbard. (Washington, D.C.: W. F. Roberts.) *Address upon the Condition of Articulation Teaching in American Schools for the Deaf.* By Alexander Graham Bell. (Boston: Nathan Sawyer & Son.)

Two pamphlets on the teaching of deaf children in the United States and the recent great development of the oral method. The first is an interesting account of the labours of the Hon. Gardiner G. Hubbard from 1862, first to get his own deaf child taught to speak, and then to extend the advantages to others. Up to that date the deaf had only been taught the language of signs; and in Massachusetts there was no school for the deaf of any kind. From the first this gentleman had been convinced of the superiority of the oral method over the sign method as enabling children to receive the same degree and kind of education as others. Through his efforts the Clarke Institution at Northampton, Mass., was formed—as an oral school—and there are now ninety-five schools, with nearly ten thousand pupils. The story is compiled by the daughter on whose behalf Mr. Hubbard commenced his investigation of the subject. It is a very strong testimony to the value of the oral system—that is, the system of teaching the deaf to read from the lips of others—that this lady incidentally records that at the age of nine she had not discovered that, though stone deaf, she differed from other children. Mr. Graham Bell's address was delivered as long ago as 1892 to a conference of teachers. He enforces the importance of this system, and shows how it had recently spread by elaborate statistics from each state.

Cameos from English History. By the Author of "The Heir of Redclyffe." Ninth Series: The Eighteenth Century. (Macmillan.)

These forty "cameos" make up a very pleasant reading-book of historical word-pictures, fairly covering the annals of our history during the last century. Miss Yonge's bright and interesting chapters are not at all a bad substitute for the formal "history" when one has not to reckon with an examination in the near future. We note an occasional defect in the proof-reading, as in the following sentence: "Latterly Wesley and Whitfield were reconciled. Whitfield breathed nothing but peace in his latter years, and they came very soon, for, when Wesley met him, it was *as hock* to see how aged and worn out he looked at fifty years old."

"The Story of the Nations."—*China.* By Prof. Robert K. Douglas. (London: Fisher Unwin. New York: Putnam's Sons.)

Prof. Douglas begins his account of modern China "from the time of Marco Polo," leaving "the earlier history of the country" to appear later. That being so, his first chapter on "the early history of the Empire," its Akkadian affinities, and the teaching of Confucius, might have been dispensed with. There is quite enough of matter and interest in the last five or six centuries, and the author has given us a very readable volume, three-fifths of which deals with events of the last hundred years. This is a discursive story, and any book on Chinese history by a European writer must be more or less discursive.

"University Tutorial Series."—*The Intermediate Text-Book of English Literature. Part II.* (1660-1832). By W. H. Low, M.A., and A. J. Wyatt, M.A. (Clive.)

We have here the continuation of a very serviceable text-book, closely analytic throughout, with fairly safe judgments and adequate provision of specimens. Two more competent editors of a text-book on English Authors it would have been difficult to find.

"Golden Treasury Series."—*Rubā'iyāt of Omar Khayyām.* Translated by Edward FitzGerald. (Macmillan.)

The astronomer-poet of Persia was a great find of FitzGerald's, and in the past few years he has been a great find of English readers and publishers. We welcome this little casket of gems in the "Golden Treasury Series," and, if we are absolved from making many words on a book which has latterly been almost vulgarized by excess of wordy comment, we none the less commend it heartily to every lover of refined poetry. There are only 101 quatrains; but their quality atones for their paucity. We open the pages at hazard:—

"I sometimes think that never blows so red
The rose as where some buried Cæsar bled;
That every hyacinth the garden wears
Dropt in her lap from some once lovely head."

Again:—

"And not a drop that from our cup we throw
For earth to drink of, but may steal below
To quench the fire of anguish in some eye
There hidden—far beneath and long ago."

Oliver Cromwell and His Times: Social, Religious, and Political Life in the Seventeenth Century. By G. Holden Pike. (Fisher Unwin.)

This is one of a crop of books on Cromwell called forth by the fact that the great Protector was born on April 25, 1599, three hundred years ago. Mr. Pike's contribution to the crop is a respectable piece of book-making, dictated by a spirit of natural hero-worship, and written, no doubt, as impartially as the author's point of view would allow. The pictures would have been better away, especially two or three modern buildings, which have nothing to do with the life and times of Cromwell. The second part of the title is barely justified by Mr. Pike's hurried, but generally readable, survey.

The History of Protestantism. By the Rev. J. A. Wylie, LL.D. Vol. I. (Cassell & Co.)

It must be admitted that the republication of this somewhat venerable history is well timed in the present period of stimulated zeal. Dr. Wylie's history is straightforward, and not more one-sided than a history of a protest must of necessity be.

"University Tutorial Series."—*Practical Lessons in Book-keeping.*

By T. C. Jackson, B.A., LL.B. (Clive.)

A well arranged and well explained treatise, adapted for use in schools, and for commercial and other candidates. There are a hundred exercises, which supply a good drill in the general principles of book-keeping.

"Nutt's Conversation Dictionaries."—*English-Spanish Conversation Dictionary.* (David Nutt.)

A welcome addition to an admirable series of little phrase-books. A large number of simple sentences are given under the subject-words, alphabetically arranged. There are also a Spanish-English vocabulary and a grammatical appendix.

Handbook of Composition Exercises. (Philip & Son.)

A well selected series of anecdotes and fables for Standard V. composition, with some specimen letters and subjects for essays for the higher standards. The book seems fairly well done, but we doubt whether a pupil in English composition should be taught to say: "I have never been absent from school once with illness."

Artistic Colour and Brush Work for Higher Standards. By W. Schofield. (W. & A. K. Johnston.)

This is a series of demonstration sheets of cardboard, suitable for class teaching, and arranged in two sets, each sufficient to cover a year's work. The first set contains designs for panels, and the second consists of advanced artistic designs, intended to illustrate the practical application of brush work. The sheets are well produced, and appear to be admirably adapted for their purpose.

British Possessions and Colonies. By W. B. Irvine, B.A. (Reife Brothers.)

A good small quarto shilling atlas, with text, covering the whole of our disjointed Empire in various parts of the globe.

From Messrs. Blackie & Son we have a set of "Standard Class Maps," *England and Wales*, which will be of the utmost utility in the class-teaching of geography. There are fourteen maps, printed in colours on strong manilla paper, 37 inches by 23, and eyeleted at the corners. Different maps are devoted to different features—physical, relief, counties, industries, railways and canals; others take the counties in groups, and others show the principal river basins. It is an excellent series, and we feel safe in recommending it.

WE HAVE ALSO RECEIVED the following publications and new editions:—

Shakespeare's Handwriting: Facsimiles of the five Authentic Autograph Signatures of the Poet, extracted from Sidney Lee's "Life of William Shakespeare" (Smith, Elder, & Co.)—a most interesting brochure, which we are glad to see separately published in this popular form.

A new edition (eighteenth thousand) of *The Classics for the Million*, by Henry Grey (Sonnenschein)—a laborious and generally accurate epitome of the works of the principal Greek and Latin authors.

A Key to the Waverley Novels, by Henry Grey, F.R.B.S. (Sonnenschein.)

The Ipané, by Cunninghame Graham (Fisher Unwin)—a budget of eccentric travel sketches, the first volume of a new series under the name of "The Overseas Library."

A reprint of *Newton Forster; or, The Merchant Service*, by Captain Marryat (Macmillan)—with an introduction by David Hannay and illustrations by E. J. Sullivan.

A reprint of *Ned Myers*, by J. Fenimore Cooper (Blackie & Son). *Synopsis of English Literature*, by A. E. Rowe, M.A. Lond. (University Examination Postal Institution)—a folded chart, somewhat on the lines adopted by the late Henry Morley, showing the chief English authors from 1688 to 1760.

Decorative Designs, edited by Paul N. Hasluck (Cassell)—a serviceable little volume of simple designs.

"The Raleigh Geography Readers."—No. V., *Geography of Great Britain and Ireland* (Blackie & Son).

MATHEMATICS.

Practical Problems in Arithmetic: Course B, Standards I. and II. (Blackie & Son).
Word Building, Derivation, and Composition, by Robert S. Wood, Book VII. (Macmillan).
 "Heath's Pedagogical Library."—*The Contribution of the Oswego Normal School to Educational Papers in the United States*, by Andrew P. Hollis (Isbister).
Dryden's Palamon and Arcite, edited by W. H. Crawshaw, A.M. (Isbister).
Lessons for Beginners in Reading, by Florence Bass (Isbister).
Children's Songs, by Carl Reinecke, translated by E. D'Esterre-Keeling (Breitkopf & Härtel).
 The first volume of *The New Penny Magazine* (Cassell & Co.)—780 pages, 650 illustrations.
Seed Dispersal, by W. J. Beal (Boston: Ginn & Co.).
The Bird World, by J. H. Stickney and Ralph Hoffmann (Boston: Ginn & Co.).
Warwick Head and Hand Geographies (A. G. Dawson)—ten half-penny maps, with accompanying text.
Rational Manual of Spelling, Standard IV., by F. H. Shoosmith (A. G. Dawson).
The Methodic Memory Map Book, by Arthur T. Flux (Nelson & Sons).
The New Code and Pocket Diary for 1899-1900, for the Use of Teachers in Elementary Schools (Jarrold & Sons)—the seventeenth year of publication.

CORRESPONDENCE.

INTERNATIONAL PHONETICS.

To the Editor of the Educational Times.

DEAR SIR,—I am much obliged to your reviewer for the kind way in which he has spoken of the "Elements of Phonetics." He has commented on some details, about which I should like to make a few remarks. No one, I know, is more ready to accept correction than Prof. Viator; and I shall be glad if your reviewer will give me his own pronunciation of *holiness, memory, almoner*, in the transcription of the Association Phonétique Internationale. We are hoping before long to issue a circular, inviting expressions of opinion on many moot points of English pronunciation; and we should like to include all important words where the pronunciation of educated speakers differs. As for the "particularly unfortunate" statement with regard to "the idea of," your reviewer concedes that the slipping of the *r* "is sometimes heard even in educated speech"; we quite agree that it may be put down to carelessness. When he goes on to say that "no educated person could entirely ignore *r* in final *er* or *or*, or sound the *a* in 'idea' like the *o* in 'of,'" I cannot help suspecting that he has not listened carefully to pure Southern English pronunciation, to which these statements certainly apply, as far as I have been able to judge.—I am, yours faithfully,

WALTER RIPPMMANN.

[I must decline to disguise such simple English words as "holiness," "memory," and "almoner" in any transcript whatsoever. I contend that the first two are pronounced by educated people precisely as they are spelt—that the *e* in "holiness" and the *o* in "memory" ought to have their natural and distinct effect; that "holi-nis" is absurd, and "memery" a loose slur. In "almoner" a correct English speaker unquestionably sounds the *r*, or at the very least ends the word by disposing his tongue for the liquid consonant. Would Prof. Rippmann say "Miste Speake, Se"? I did not write that an *r* was ever slipped in between two vowels "in educated speech." Such a thing is impossible. If an educated man slips in the sound "through carelessness or a defective organ"—these were my words—he is using uneducated speech. Prof. Rippmann begs the question when he speaks of "pure Southern English." If the International Phonetic Association intends to transcribe into its forbidding symbols all the careless inexactness of uneducated speech, it may startle a few of us into a more careful pronunciation, but I fail to see what other good purpose it can serve.—YOUR REVIEWER.]

PHONOGRAPHY.

To the Editor of the Educational Times.

SIR,—Mr. P. E. Kingsford has not disproved a single statement made in our last letter relative to the gross inaccuracies contained in his communication published in February. Your readers are, happily, not dependent for their knowledge of the history and development of phonography on scraps picked by Mr. Kingsford from a long speech by Sir Isaac Pitman, presented in an entirely misleading fashion, and accompanied by equally misleading annotations.—Yours, &c.,

SIR ISAAC PITMAN & SONS, Limited.

Phonetic Institute, Bath.

[This correspondence must now cease.—EDITOR.]

14111. (Professor A. DROZ-FARNY.)—Menons par l'orthocentre H d'un triangle ABC deux transversales Δ et Δ' perpendiculaires l'une sur l'autre. Il s'agit de démontrer que ces perpendiculaires déterminent sur chaque côté du triangle un segment dont les points milieux α, β, γ sont en ligne droite.

Solutions (1) by C. E. HILLYER, M.A.; (2) by Professor SANJANA, M.A.

(1) Let the transversals Δ, Δ' meet the sides in PQR, P'Q'R' respectively. Let the circles RHR', QHQ' meet again in h , and let CH meet AB in F and the circle RHR' in f , and BH meet CA in E and the circle QHQ' in e .

Then, since $Ff = FH$ and $Ee = EH$, e and f are on the circumcircle. Also $\angle fhH = \angle fRH = 2FRH$ and $\angle ehH = \angle eQH = 2EQH$; therefore $\angle fhe = 2A$ and $\angle fAe = 2FAH + 2EAH = 2A$; therefore $\angle fhe = \angle fAe$; therefore h is on the circumcircle.

Similarly the circle PHP' passes through the same point h on the circumcircle.

Therefore the circles are coaxial and their centres collinear.

COE.—Since the mid-point of HA is on the nine-points circle and the line of collinearity is the perpendicular to HA through this point, it touches the ellipse of which H is a focus and the nine-points circle the auxiliary circle; i.e., the inscribed ellipse with foci H and O .

(2) This proposition depends on the following important theorem, which I have not seen in print:—If three points A, B, C be referred to two axes meet in O , the intersections of BC, CA, AB with the isogonal conjugates with regard to the axes of OA, OB, OC , respectively are collinear.

In the present case, if AB meet the axes in R and R' , and the mid-point γ of RR' be joined to H , we have

$$\angle \gamma HR = \angle R'RH = \angle CHR';$$

thus $H\gamma$ and HC are isogonally conjugate. If BC, CA intercept PP', QQ' on the axes, and α, β be the mid-points of the intercepts, we have, similarly, $H\alpha, H\beta$ conjugate to HA, HB . Hence the proposition.

14104. (Professor ELLIOTT, F.R.S.)— X, Y, Z, O_1, O_2 are five points on any cubic; O_1X, O_1Y, O_1Z meet the cubic again in A, B, C respectively, and O_2X, O_2Y, O_2Z in A', B', C' . Prove that the points P, Q, R , where BC' and $B'C, CA'$ and $C'A, AB'$ and $A'B$ respectively intersect, also lie on the cubic; and that PX, QY, RZ meet in a point on the cubic.

Also prove conversely that, if O be a tenth point on any cubic of the pencil which passes through six points A, B, C, A', B', C' and through P, Q, R derived from the six as above, and if PO, QO, RO meet the cubic again in X, Y, Z respectively, then AX, BY, CZ meet in a point on the cubic, as also do A'X, B'Y, C'Z.

Solution by the Rev. J. CULLEN.

Let the lines O₁X, O₁Y, O₁Z be a₁, b₁, γ₁, and O₂X, O₂Y, O₂Z be a₂, b₂, γ₂. Then the equation of the cubic is

$$pa_1b_2\gamma_2 + qa_2b_1\gamma_1 + r\beta_1a_2\gamma_2 + s\beta_2a_1\gamma_1 + t\gamma_1a_2\beta_2 + u\gamma_2a_1\beta_1 = 0,$$

with a₁ + b₁ + γ₁ = 0 and a₂ + b₂ + γ₂ = 0.

Hence we have the intersections of the lines as follows:

$$r\gamma_2 + q\gamma_1 - t\beta_2 = 0, \quad a_1 = 0 \dots\dots A; \quad p\gamma_2 + s\gamma_1 - u\beta_1 = 0, \quad a_2 = 0 \dots\dots A';$$

$$t\alpha_2 + s\alpha_1 - p\gamma_2 = 0, \quad \beta_1 = 0 \dots\dots B; \quad r\alpha_2 + u\alpha_1 - q\gamma_1 = 0, \quad \beta_2 = 0 \dots\dots B';$$

$$p\beta_2 + u\beta_1 - r\alpha_2 = 0, \quad \gamma_1 = 0 \dots\dots C; \quad t\beta_2 + q\beta_1 - s\alpha_1 = 0, \quad \gamma_2 = 0 \dots\dots C'.$$

$$\text{Therefore } BC' \equiv t\alpha_2 + s\alpha_1 - p\gamma_2 - q\beta_1 = 0 \dots\dots\dots (1),$$

$$B'C \equiv r\alpha_2 + u\alpha_1 - p\beta_2 - q\gamma_1 = 0 \dots\dots\dots (2).$$

Now the cubic may be written in the form

$$BC'\beta_2\gamma_1 + B'C\beta_1\gamma_2 = 0.$$

Therefore P lies on the curve; in like manner, also do Q and R.

[The rest in Volume.]

14163. (I. ARNOLD.)—Given the length *l* of an inclined plane, and its height *h*. A body descends from the top of the plane. Find at what distance from the top of the plane the body will begin to describe a space equal to the height in the same time that it would have fallen perpendicularly through the height.

Solution by the Proposer; and Lt.-Col. ALLAN CUNNINGHAM, R.E.

Let *l* = length of plane AB, and *h* = AC the height; also let *x* = AD, the distance from top of plane to where the body begins to descend through DE = AC, and in the same time that it would fall perpendicularly through AC, and let *g* = gravity; then

$$\left(\frac{2(x+h)}{\sin B \cdot g}\right)^{\frac{1}{2}}$$

= the time it descends through *h* + *x* = AE;

and $\left(\frac{2x}{\sin B \cdot g}\right)^{\frac{1}{2}}$ = time it descends through *x*.

Consequently $\left(\frac{2(x+h)}{\sin B \cdot g}\right)^{\frac{1}{2}} - \left(\frac{2x}{\sin B \cdot g}\right)^{\frac{1}{2}}$ = time of descent through DE;

and Time through AC = $\left(\frac{2h}{g}\right)^{\frac{1}{2}}$;

or $\left(\frac{2(x+h)}{\sin B \cdot g}\right)^{\frac{1}{2}} = \left(\frac{2x}{\sin B \cdot g}\right)^{\frac{1}{2}} + \left(\frac{2h}{g}\right)^{\frac{1}{2}}$.

Whence, substituting for sin B its equal *h*/*l*, we get

$$h^2 - 2h^2l + h^3 = 4xhl, \quad \text{or } l^2 - 2hl + h^2 = 4xl;$$

therefore $x = AD = (l-h)^2 / (4l)$.

14156. (J. WATSON.)—In a given circle is a fixed chord equal to the radius, and also a point (not the centre). Describe a second circle that shall touch the given circle and the chord whilst passing through the given point.

Solution by A. E. LAYNG.

Let ABC be the given circle, CD the given chord, P the point. From O, the centre of circle ABC, draw ON perpendicular to CD and produce to meet the circumference in A and B.

Join AP, cutting CD at K. Through NPB describe a circle cutting AP at E.

From KD cut off KM such that

$$KM^2 = KE \cdot KP.$$

Through P, E describe a circle touching CD at M; this is the circle required.

For, let Q be its centre, join AM and produce to meet the circumference of ABC at F.

Then, since ∠BFA is a right angle, the triangles BFA, MNA are similar; therefore AM · AF = AN · AB.

But, since B, P, E, N are points on a circle, therefore AE · AP = AN · AB.

Hence AM · AF = AE · AP, and F is a point on the circle PEM. Join QF, OF, QM. Then, since QM is perpendicular to CD, therefore QM, ON are parallel; therefore ∠QMF = ∠OAF.

But ∠OAF = ∠OFA, and ∠QMF = ∠QFM.

Hence ∠OFA = ∠QFM, and OQF is a straight line; therefore the circle PEM touches the circle ABC at F.

[The length of the chord CD need not have been given. Without this restriction, the question is a particular case of one of the "Tangencies," in which the given point is *within* the given circle.]

14080. (D. BIDDLE.)—Prove that N is factorizable (N = 6n ± 1) when (N-1)² - 576λ = □ and (N+1)² - 576λ = □ (α, β), provided λ > 0 and integral, of the same value in each equation. [(α) represents the square of the difference of the factors, (β) represents the square of their sum. When N is prime, both equations hold good *only* when λ = 0.]

Solution by H. A. WEBB.

Let N ≡ xy, x and y integral. x and y are both of the form 6m ± 1. Therefore

$$(x^2-1)(y^2-1) = (36x^2 \pm 12x)(36y^2 \pm 12y) = 16 \times 3l(3l \pm 1) \times 3m(3m \pm 1) = M(16 \times 6 \times 6) = M(576).$$

Therefore (x²-1)(y²-1) = 576λ,

where λ is integral, and λ > 0 unless x or y = 1. Whence

$$(N-1)^2 - 576\lambda = (y-x)^2, \quad (N+1)^2 - 576\lambda = (x+y)^2 \dots\dots (\alpha, \beta),$$

where λ is an integer.

Also, if λ > 0, neither x nor y = 1, and N is not prime. If N is prime, either x or y = 1, and λ = 0.

[The rest in Vol.]

14048. (Professor THOMAS SAVAGE.)—"No integral values of x, y, z can be found to satisfy the equation xⁿ + yⁿ = zⁿ, if n be an integer greater than 2." (FERMAT: W. W. ROUSE BALL's *Short History of Mathematics*.) Prove the truth of this when x is any prime, y any positive integer not greater than x—the proof to hold for n = 2.

Solution by H. W. CURJEL, M.A.

If xⁿ + yⁿ = zⁿ, then xⁿ = (z-y)(zⁿ⁻¹ + zⁿ⁻²y + ... + yⁿ⁻¹).

If y ≠ x and x is a prime, y cannot be equal to x, for then 2xⁿ would = zⁿ, which is clearly impossible if n > 1; therefore y < x. Also z is clearly less than x + y, since (x + y)ⁿ > xⁿ + yⁿ; therefore z - y < x, and it is a factor of xⁿ; therefore z - y = 1; therefore z = y + 1; but z > x; therefore y = z - 1 > or = x; therefore y = x, which is impossible.

14077. (Professor SANJANA.)—If the arcs joining the mid-points of the sides of a spherical triangle be each 90°, the sum of the squares of the cosines of the half-sides of the triangle shall be unity. (Suggested by Quest. 13661.)

Solution by R. TUCKER, M.A.; and Prof. A. DROZ-FARNY.

$$0 = \cos \frac{1}{2}b \cos \frac{1}{2}c + \sin \frac{1}{2}b \sin \frac{1}{2}c \cos a,$$

$$\text{and } \cos a = \cos b \cos c + \sin b \sin c \cos a.$$

Hence 2 cos² $\frac{1}{2}a$ + 4 cos² $\frac{1}{2}b$ cos² $\frac{1}{2}c$ = 1 + cos b cos c

$$= 2 + 4 \cos^2 \frac{1}{2}b \cos^2 \frac{1}{2}c - 2(\cos^2 \frac{1}{2}b + \cos^2 \frac{1}{2}c);$$

$$\text{i.e., } 2 \cos^2 \frac{1}{2}a = 1.$$

14124. (G. H. HARDY.)—Prove that

$$\int_0^{1/\pi} \log \tan \phi d\phi = \frac{1}{2} \int_0^{1/\pi} \log \tan \phi d\phi = -4 \int_0^{1/\pi} \tanh^{-1} \tan \phi d\phi.$$

Solution by the Proposer.

$$\text{We have } \int_0^{\pi/2} \frac{du}{\cos^2 u - p} = \frac{1}{\sqrt{\{p(1-p)\}}} \sinh^{-1} \frac{\sqrt{p} \sin u}{\sqrt{(\cos^2 u - p)}};$$

i.e., putting

$$p = \cos^2 x,$$

$$\int_0^{\pi/2} \frac{2 \cos x \sin x}{\cos^2 u - \cos^2 x} du = 2 \tanh^{-1} (\tan u \cot x),$$

$$\text{whence } \int_{x_0}^{\pi/2} \frac{2 \cos x \sin x}{\cos^2 u - \cos^2 x} du dx = 2 \int_{x_0}^{\pi/2} \tanh^{-1} (\tan u_0 \cot x) dx.$$

Let u₀ = $\frac{1}{2}\pi$; then

$$\int_0^{1/\pi} \log \frac{\cos^2 u - \cos^2 x_0}{\cos^2 u - \cos^2 x} du = \int_{x_0}^{\pi/2} \log \frac{1 + \cot x}{1 - \cot x} dx.$$

[The rest in Volume.]

13635. (The late Professor WOLSTENHOLME, M.A., D.Sc.)—On the sides of a given triangle ABC are erected equilateral triangles aBC, a'BC, &c.; A, a being on the same side of BC, A', a' on opposite sides of BC, and similarly for b, b', e, e'. It is well known that Aa = Bb = Ce, Aa' = Bb' = Cc'; but prove the following properties:—(1) Aa, Bb, Cc are each equal to three times the difference of the semiaxes of the maximum ellipse inscribed in the triangle ABC. (2) Aa', Bb', Cc' are each equal to three times the sum of the semiaxes of the maximum inscribed ellipse; and to the altitude of the maximum equilateral triangle circumscribed about the given triangle. (3) The straight lines bisecting the angles

between the three pairs $Aa, Aa', Bb, Bb', Cc, Cc'$ are all parallel to the axes of the maximum inscribed ellipse. In fact, if G be the centre of this ellipse, A', B', C' the points of contact (the mid-points of the sides), and if on the straight line drawn through A' at right angles to BC be taken points a, a' , such that aa' is bisected in A' , and is equal to the diameter parallel to BC , Ga is parallel to Aa and $= \frac{1}{2}Aa$; Ga' is parallel to Aa' and $= \frac{1}{2}Aa'$; and, by the well-known construction for the axes of an ellipse from a given pair of conjugate diameters, Ga is equal to the difference, and Ga' to the sum of the semiaxes, and Ga, Ga' are equally inclined to the axes.

Solution by LIONEL E. REAY, B.A.

The maximum ellipse in the triangle touches the sides at the middle points, and its centre G is the centroid. Let its principal semiaxes be λ, μ . By the construction quoted in Question [for proof see SALMON'S *Conic Sections*, § 181 (a)], the principal axes bisect the angles between Ga, Ga' , and $Ga = \lambda - \mu, Ga' = \lambda + \mu$.

Diameter conjugate to $GA' = A'a$ and is parallel to BC ; then

$$\frac{1}{4}(B'C/A'a)^2 + \frac{1}{4} = 1;$$

therefore $B'C' = A'a\sqrt{3}$;

therefore $BC = 2A'a\sqrt{3}$;

therefore $aA' = 3A'a$;

therefore Aa is parallel to Ga and $= 3Ga = 3(\lambda - \mu)$.

Similarly, Aa' is parallel to $9a'$ and $= 3(\lambda + \mu)$; therefore the lines bisecting angles $aAa', \&c.$, are parallel to the axes of the ellipse.

[The rest in Volume.]

Fig. 1.

14161. (W. C. STANHAM, B.A.)—If the tangents to a conic from any point on one of its directrices intersect any fixed straight line at points P and Q , the other two tangents to the conic from P and Q intersect on a fixed straight line.

Solution by the PROPOSER.

The theorem follows by reciprocation from the following theorem:—

The straight lines— CA, CT in the figure—joining a fixed point to the extremities of any diameter of a fixed circle meet the circle again at points the join of which passes through a fixed point.

For BC is the polar of F ; therefore the pole of RS lies on BC . But, if I is the mid-point of RS , the pole of RS lies on OI ; and O, I, N , being the mid-points of the diagonals of $ARTS$, are collinear. Therefore N , the locus of which is a fixed straight line parallel to BFP , the polar of C , is the pole of RS . Therefore RS passes through a fixed point.

QUESTIONS FOR SOLUTION.

14192. (Professor CROFTON, F.R.S.)—Two points are taken at random in a triangle ABC , the line joining them dividing the triangle into two parts: show that the mean value of the part containing the vertex A is $\frac{1}{4}$ of the triangle. Hence it may be shown that the mean value of the triangular part is $\frac{1}{4}$ of the whole.

14193. (Professor G. B. MATHEWS, F.R.S.)—Given the general equation of a conic referred to rectangular axes, find the locus of (ξ, η) , first, when $x - \xi = 0, y - \eta = 0$ are conjugate with respect to the conic; and, secondly, when $x + y - \xi - \eta = 0, x - y - \xi + \eta = 0$ are conjugate. Hence show that the equation of the axes of the conic may be written in the form

$$(a - b)\{Cxy - Fx - Gy + H\} - h\{C(x^2 - y^2) + 2Fy - 2Gx + A - B\} = 0.$$

14194. (Professor FRANZ ROEHL.)—Prove that

$$S_r = q + \sum_{s=3,5,\dots}^{\infty} \frac{(-1)^{\frac{s-1}{2}} (2\pi m)^{s-1}}{x!} B_s(x) y^{r-s} \dots \dots (1),$$

where $S_r = \sum x^r, t$ divisor of $m \leq q$, and B_n denotes the "Bernoullian function" of the n th order.

$$E\left(\frac{m}{n}\right) = m + \frac{1}{2\pi} \sum_{s=3,5,\dots}^{\infty} \frac{(-1)^{\frac{s-1}{2}} (2\pi)^s}{x \cdot x!} B_s(m+1) B_s(n) \dots (2),$$

where $E\left(\frac{m}{n}\right)$ represents the greatest integer $\leq \frac{m}{n}$.

14195. (Professor NEUBERG.)—Soit $A'B'C'$ la projection du triangle ABC sur un plan faisant l'angle ϕ avec le plan ABC . Démontrer que les angles des deux triangles vérifient la relation

$$\frac{1}{2}(\cos \phi + \sec \phi) = \cot A \cot B' + \cot B \cot C' + \cot C \cot A' + \cot A' \cot B + \cot B' \cot C + \cot C' \cot A.$$

14196. (Professor THOMAS SAVAGE.)— $ABC \dots WXA$ is a rectilinear figure inscribed in a circle; the sum of A and any angle other than B or X is equal to two right angles: show that the figure is a quadrilateral.

14197. (Professor COCHEZ.)—On donne un cercle fixe O et un point A . Par A on mène une sécante variable ABC et sur BC comme diamètre on décrit une circonférence Σ . Les tangentes communes à O et à Σ se coupent en M . Lieu de M quand la sécante pivote autour de A .

14198. (Professor SANJANA, M.A.)—If p_1, p_2, p_3 be the parameters of the three parabolas which respectively touch one side of a triangle at its mid-point and the other two sides produced, then

$$\Sigma p^{-1} = \frac{1}{2} \frac{\cot \omega}{(2\Delta)^{\frac{1}{2}}} \text{ and } \Sigma p^{-2} = \frac{1}{2} \frac{\cot^2 \omega - 1}{(2\Delta)^{\frac{1}{2}}}.$$

[See Quest. 13002, Vol. LXV.]

14199. (Professor UMES CHANDRA GHOSH.)— ACB is a quadrant of an ellipse, and CP any central radius vector. If x and y are the distances of the centre of gravity of the segment BCP of the ellipse from the major and minor axes, show that

$$ay = bx \cdot \cot \left\{ \frac{2ab^2x}{3(a^2y^2 + b^2x^2)} \right\}.$$

14200. (D. BIDDLE.)—Describe an ellipse which shall touch the base of an equilateral triangle, pass through the apex, and have its foci on the two sides (one of which is inclined at an angle θ to the major axis); then inscribe to the triangle another ellipse, touching the base in the same point, and having its major axis on the join of the nearest vertex to the mid-point of the opposite side. Find the ratio between the areas of the two ellipses and the triangle.

14201. (R. TUCKER, M.A.)— P, Q, R are points on a parabola, such that PQ, QR are normals to the curve. If SP^2, SQ^2, SR^2 are denoted by r_1, r_2, r_3 , prove $(r_3 - r_1)^2 = (r_1 + r_2)^2(2r_2 - r_1 - r_3)$; hence they cannot be in $A.P.$ Show that the circle PQR is given by

$$m^2(m^2 + 2)(x^2 + y^2) - 2pqax - 4pmy + m^2(m^2 + 2)(m^2 + 4)qa^2 = 0,$$

where P is the point $(am^2, 2am)$ and p, q stand respectively for $m^4 + 4m^2 + 2, m^4 + 6m^2 + 4$. Find also when the circle passes through the focus.

14202. (H. FORTEY, M.A.)—A uniform chain is suspended by its ends from two points at the same level and at a known distance apart, and its length is such that the tension at the ends is the least possible. Find (1) the tension at the ends; (2) the length of the chain; (3) the dip of its lowest point beneath the straight line joining the points of support; and (4) the angle which a tangent to the curve at either extremity makes with a vertical line.

14203. (V. R. THYAGARAGAIYAR, M.A.)—Show that the roots of the equation $32x^5 + 16x^4 - 32x^3 - 12x^2 + 6x + 1 = 0$ are $\cos \frac{1}{5}\pi, \cos \frac{3}{5}\pi, \cos \frac{4}{5}\pi, \cos \frac{2}{5}\pi, \text{ and } \cos \frac{1}{5}\pi$.

14204. (J. MACLEOD, M.A.)— B, E are the remote points in which the line of centres of two unequal circles which intersect meets the circumferences; A one of the points of intersection of the circles; $BF = BA$; $ED = EA$; $\angle FAO = \frac{1}{2}\angle BAE$. The radius AO produced meets the circumference in G ; AD produced meets the same circumference in H , and AC meets in K . Prove $AKGH$ a parallelogram.

14205. (Rev. W. ALLEN WHITWORTH, M.A.)—If convergents to $\sqrt{3}$ be formed in the usual way by a continued fraction, show that the

$$n\text{th convergent is } \frac{(2 + \sqrt{3})^n + (-1)^n}{(2 + \sqrt{3})^n - (-1)^n} \sqrt{3}.$$

14206. (R. F. DAVIS, M.A.)—If AP bisect the angle BAC of a triangle and be a mean proportional between AB, AC , then

$$BP^2 = 2AB \cdot DP \text{ and } CP^2 = 2AC \cdot DP.$$

14207. (B. N. CAMA, M.A. In continuation of Quest. 14177.)—In the case when $\beta = \frac{1}{2}\pi$, it is evident that a parabola can be described touching the spiral at the points of contact, and having the chord of contact for a focal chord. Prove that (1) the latus rectum of the parabola is $PQ \sin^2 \phi$, PQ being the chord of contact and ϕ the inclination of PQ to the axis of the curve; (2) the angle ϕ is constant for all pairs of orthogonal tangents to the spiral, it being equal in fact to $2(\psi - \alpha)$, where ψ is as defined in Question 14177; (3) the locus of the focus of the parabola for varying positions of PQ is a copolar spiral.

14208. (Rev. T. ROACH, M.A. Suggested by Quest. 13173.)—Six circles are described, each passing through the incentre and touching one side of the triangle at one of its extremities. (1) Show that the centres of the six circles lie on the radii ID, \dots , on three circles concentric with the incircle. (2) Show that the product of the radii of three alternate circles $= 2R^2r$.

14209. (G. H. HARDY.)—Prove that

$$\int_0^{\infty} \frac{x^2 dx}{\cosh x + \cosh \lambda} = \operatorname{cosech} \lambda \int_0^{\infty} \left(\log \frac{x - \alpha}{\beta - x} \right)^2 dx = \frac{1}{2} \lambda (\pi^2 + \lambda^2) \operatorname{cosech} \lambda \quad [\lambda = \log(\beta/\alpha)].$$

Deduce the values of

$$\int_0^{\infty} \frac{x^2 dx}{\cosh x + \cos \lambda}, \int_0^1 \frac{(\log x)^2 dx}{1 + 2ax + x^2} \quad (-1 < a).$$

14210. (H. MACCOLL, B.A.)—Given that a and b denote real chances, and that k is positive, within what limits must k , a , b lie so that the fraction $k(1-a-b)/(1-b-bk)$ may denote a real chance? The limits of b are required to be expressed in terms of a , the limits of a in terms of k , and the limits of k numerically.

14211. (Rev. J. CULLEN.)—Given $\rho, \rho_1, \dots, \rho_n$, the radii of curvature at the corresponding points on a conic and its n successive evolutes, prove that the radius of curvature of the $(n+1)$ th evolute may be expressed in the form $\rho_{n+1} = \sum a_r \rho_r \rho_q \rho_t / 9\rho^2$, and in the case of a parabola $\rho_{n+1} = \sum a_r \rho_r \rho_q / 3\rho$.

14212. (G. N. BATES, B.A.)—In tripolar coordinates ($x = PA^2$, &c.) find the conditions that the general equation of the second degree should represent a conic, and additional conditions for (1) a parabola, (2) a rectangular hyperbola.

14213. (ROBERT W. D. CHRISTIE.)—If

$$A_n = m^n - n \cdot m^{n-2} + \frac{n \cdot n-3}{2!} m^{n-4} - \frac{n \cdot n-4 \cdot n-5}{3!} m^{n-6} + n$$

for all integral values of m and n , then

$$X^{2n} - A_n X^n + 1 = (X^2 - mX + 1)(a_1 X^{2n-2} + a_2 X^{2n-4} + \dots + a_n X + 1),$$

where $a_n =$ a series allied to A_n . *Ex. gr.*—If $m = 5$, $n = 3$, then

$$x^6 - 110x^3 + 1 \equiv (x^2 - 5x + 1)(x^4 + 5x^3 + 24x^2 + 5x + 1).$$

There are two other allied theorems for positive values of A_n and m ; it is required to establish them.

14214. (H. J. WOODALL, A.R.C.S.)—At A and B in the straight line AB are erected two perpendiculars AN, BM to AB . Through any point P , AP, BP are drawn to meet BM, AN in Q, R , respectively. Given the locus of P , find the envelope of QR . Also, in the case where Q' is the intersection of AP and $M'N'$, where $M'N'$ is parallel to AB and at an assigned distance.

14215. (W. C. STANHAM, B.A.)—(1) If P is any point on a rectangular hyperbola which passes through four points A, B, C, D , whose coordinates are $(x_1, y_1), (x_2, y_2), (x_3, y_3), (x_4, y_4)$,

$$P(ABCD) = \frac{(x_2-x_1)(x_4-x_3) + (y_2-y_1)(y_4-y_3)}{(x_3-x_2)(x_4-x_1) + (y_3-y_2)(y_4-y_1)}$$

(2) If A, B, C, D are concyclic, and Q is any point on the circle,

$$Q(ABCD) = \frac{(x_2-x_1)(x_4-x_3) - (y_2-y_1)(y_4-y_3)}{(x_3-x_2)(x_4-x_1) - (y_3-y_2)(y_4-y_1)} \\ = \frac{(x_2-x_1)(y_4-y_3) + (y_2-y_1)(x_4-x_3)}{(x_3-x_2)(y_4-y_1) + (y_3-y_2)(x_4-x_1)}$$

The axes of coordinates are considered to be rectangular in both (1) and (2), and $E(ABCD)$ to represent the ratio

$$(\sin AEB \cdot \sin CED) / (\sin BEC \cdot \sin AED).$$

14216. (R. KNOWLES, B.A.)— S, H are the foci of an ellipse; from S perpendiculars SY, SZ are drawn on tangents to the ellipse from the same point O . Prove (1) that HO and YZ are at right angles; and (2) show that this is also true of the parabola.

14217. (J. J. BARNVILLE, B.A.)—In the two series

$$u = 1, 3, 7, 19, 49, \dots \quad \text{and} \quad v = 1, 3, 8, 20, 53, \dots,$$

having $u_n = u_{n-1} + 3u_{n-2} + 3u_{n-3}$, &c.,

prove that the ratio $u_n : v_n$ ultimately = $2 : \sqrt{10}$.

14218. (Rev. T. MITCHESON, B.A.)—If

$$(p/q) \tan \theta = (r/s) \tan 2\theta = (t/u) \tan 3\theta,$$

then show $(p^2su)/(q^2rt) = 2 \{ 4\sum (3 \tan^2 \theta)^{n-1} - \sum (\tan^2 \theta)^{n-1} \}$.

14219. (I. ARNOLD.)—If a and b be the two parallel sides of a trapezoid, and h the line which bisects those sides, the centre of gravity G of the trapezoid is in this line. It is required to find the distance of G from a in the line h in terms of a, b , and h .

14220. (Rev. Dr. FREETH.)—Discussion is invited as to the propriety of the expression $x^2 + px + q = 0$. The q , it is submitted, is not homogeneous, and might rather be $\pm q^2$. So as to the q in $x^3 + px + q = 0$.

[Dr. FREETH desires also to correct one or two slight errors in his last Question (14174). In the note appended to that Question, for "by either trisectrix an isosceles triangle of 20° is obtainable," read "by either trisectrix an equilateral triangle, being as to 60° trisected, an angle of 20° is obtainable." Also, for "thus," &c., read "thus, an angle of 1° being quinquesectioned, there results an angle of $12'.$ "]

14221. (Professor F. MORLEY.)—Let $\sigma_0, \sigma_1, \sigma_2$ be three positions of a sheet of paper σ lying on a table σ' . Let O_{01}, O_{12}, O_{20} be the three centres of rotation in the paper; O_{01}, O_{12}, O_{20} the centres of rotation in the table. Let H and H' be the orthocentres of these triangles. Prove that, when the three positions of a point of the paper lie in a line of the table, this line goes through H' ; and that, inversely, when the three positions of a line of the paper pass through a point of the table, the line goes through H .

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

5804. (Rev. W. A. WHITWORTH, M.A.)—A man plays $3n+2$ times, for an even stake, winning $2n+1$ times and losing $n+1$ times. Show that the chance that throughout the play he is never either worse off than at the beginning, or better off than at the end, is $n/(4n+6)$.

5810. (J. L. MCKENZIE, B.A.)—Given two points P_1, P_2 on a fixed circle, and three points A_1, A_2, A_3 in a straight line. A circle is drawn through either of the points P , and any two of the points A , cutting the given circle again in H ; and a line is drawn joining the remaining points P and A , and cutting the given circle in K . Prove that the six lines HK thus obtained all cut the line ABC in the same point.

5812. (R. A. ROBERTS, M.A.)—Prove that the locus of the centroid of a triangle inscribed in one conic and circumscribed about another is a conic.

5822. (Sir W. THOMSON, F.R.S., now Lord KELVIN.)—A cylindrical rod hangs down vertically so as to be partly above and partly below the surface of a liquid resting in a large vessel. Show that its apparent weight is equal to its weight in air increased by the (positive or negative) quantity by which the weight of the volume of liquid drawn up above the plane level exceeds the weight of a quantity of liquid equal in volume to the portion of the solid below the plane level. Alter the statement to suit cases in which the solid depresses the liquid. Explain, in accordance with LAPLACE'S theory, the forces by which the equilibrium is maintained.

5825. (Professor CLIFFORD, F.R.S.)—If, in regard to a system of n quadric surfaces, the two systems of n polar planes in regard to any two points of space are projective to one another, either the quadrics have a common Jacobian or each of them is a doubled plane.

5826. (Professor BALL, F.R.S.)—A rigid body, capable of rotating around a fixed point, is in stable equilibrium. If the body, when slightly displaced from its position by being rotated around an axis, continues for ever to vibrate around this axis, this line is called a normal axis. Prove that there are, in general, three normal axes; that, when forces have a potential, the three normal axes are conjugate diameters of the momental ellipsoid, and that they may be completely determined by a geometrical construction.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXX. of the "Mathematical Reprint"

is now ready, and may be had of the Publisher,

FRANCIS HODGSON, 89 Farringdon Street, E.C. Price,

to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, April 13, 1899.—Lt.-Col. Cunningham, R.E., V.P., in the Chair. Ten members present.

The following were elected members of the Society:—Prof. B. F. Finkel, Drury College, Springfield, Missouri; H. T. Kelsey, M.A., The Grammar School, Leeds; Prof. E. O. Lovett, Ph.D., University of Virginia; A. L. Pedder, M.A., Fellow of Magdalen College, Oxford; and A. J. Wade-Gery, B.A., Assistant Lecturer in Mathematics, University College, Cardiff.

The Chairman briefly alluded to the loss the Society had sustained by the recent death of its foreign member, Professor Sophus Lie.

Mr. Kempe, F.R.S., having taken the Chair, Lt.-Col. Cunningham read a paper "On Conformal Division"; Major MacMahon, F.R.S., Messrs. Lawrence and Western, and the Chairman took part in a discussion on the paper.

The following communications were made in abstract:—

"Note on the Characteristic Invariants of an Asymmetric Optical System": T. J. P.A. Bromwich, B.A.

"Concerning the Four Known Simple Linear Groups of Order 25920, with an introduction to the Hyper-Abelian Linear Groups": Dr. L. E. Dickson.

(1) "On the Direct Determination of Stress in an Elastic Solid, with application to the Theory of Plates"; (2) "On the Stress in a Rotating Lamina"; (3) "The Uniform Torsion and Flexure of Incomplete Torsors, with application to Helical Springs": J. H. Michell, M.A.

"The Theorem of Residuation, Noether's Theorem, and the Riemann-Roch Theorem": Dr. F. S. Macaulay.

Impromptu communications were made by Messrs. Hargreaves, Heppel, Roseveare, Western, and the Chairman. This last called attention to the following curious properties of the number 7, viz.:

$$18^3 \equiv +1, \quad 19^3 \equiv -1 \quad (\text{mod } 7^2 \text{ and } 7^3);$$

$$1353^3 \equiv +1, \quad 1354^3 \equiv -1 \quad (\text{mod } 7^4 \text{ and } 7^5);$$

$$82681^3 \equiv +1, \quad 82682^3 \equiv -1 \quad (\text{mod } 7^6 \text{ and } 7^7);$$

but these properties do not extend to 7^8 and 7^9 .

Works by CHARLES PENDLEBURY, M.A.

Small crown 8vo, 192 pp., 1s. Or with Answers, 1s. 4d.

A

SHILLING ARITHMETIC.

BY

CHARLES PENDLEBURY, M.A., F.R.A.S.,
Senior Mathematical Master of St. Paul's School,

AND

W. S. BEARD, F.R.G.S.,
Headmaster of the Modern School, Fareham.

This book is intended for the lower and middle forms of Secondary Schools. It will be found adapted especially for the use of candidates for the Oxford and Cambridge Junior Local Examinations, the Scotch Universities' Locals, County Council Scholarships, and for Examinations conducted by the College of Preceptors, the Board of Intermediate Education for Ireland, &c., &c.

Eleventh Edition.

ARITHMETIC FOR SCHOOLS.

Complete, with or without answers, 4s. 6d. Or in Two Parts, 2s. 6d. each. KEY to Part II., 7s. 6d. net.

Ninth Edition. 3s.; or in Two Parts, 1s. 6d. and 2s.

EXAMPLES IN ARITHMETIC.

8,000 Examples extracted from the above Arithmetic. With or without Answers.

Third Edition. Crown 8vo. 2s. 6d.

EXAMINATION PAPERS in ARITHMETIC.

KEY, 5s. net.

Second Edition. Crown 8vo. 4s. 6d.

ELEMENTARY TRIGONOMETRY.

Fourth Edition. Crown 8vo. 1s. 6d. With or without Answers.

ELEMENTARY ARITHMETIC.

By C. PENDLEBURY, M.A., and W. S. BEARD, F.R.G.S., Headmaster of the Modern School, Fareham.

BY THE SAME AUTHORS.

GRADUATED ARITHMETIC.

For Private and Junior Schools. In cloth. Parts I., II., and III., 3d. each; IV., V., and VI., 4d. each; VII., 6d. Answers to Parts I. and II., 4d.; III., IV., V., VI., and VII., 4d. each.

Second Edition. Crown 8vo. 2s.

COMMERCIAL ARITHMETIC.

Cloth, 3d. In Paper Cover, 2d.

LONG TOTS AND CROSS TOTS.

(SIMPLE AND COMPOUND.)

Answers. Cloth, 4d.

BELL'S ENGLISH CLASSICS.

Edited for use in Schools, with Introductions and Notes. Crown 8vo.

Browning's Strafford. Edited by E. H. HICKEY. With Introduction by S. R. GARDINER, LL.D. 2s. 6d.

Selections from Browning. Edited by F. RYLAND, M.A. 2s. 6d.

Burke's Letters on a Regicide Peace. I. and II. Edited by H. G. KEENE, M.A., C.I.E. 3s.; sewed, 2s.

Byron's Childe Harold. Edited by H. G. KEENE, M.A., C.I.E. 3s. 6d. Also, in Two Parts, Cantos I. and II., and Cantos III. and IV., sewed, 1s. 9d. each.

Byron's Siege of Corinth. Edited by P. HORDERN. 1s. 6d.; sewed, 1s.

Carlyle's Hero as Man of Letters. Edited by MARK HUNTER, M.A. 2s.; sewed, 1s. 6d.

Carlyle's Hero as Divinity. Edited by MARK HUNTER, M.A. 2s.; sewed, 1s. 6d.

Chaucer's Minor Poems, Selections from. Edited by J. B. BILDERBECK, M.A. 2s. 6d.; sewed, 1s. 9d.

De Quincey's Revolt of the Tartars and The English Mail Coach. Edited by CECIL M. BARROW, M.A., and MARK HUNTER, M.A., Principal of Coimbatore College. 3s.; sewed, 2s.

*. The Revolt of the Tartars, separately, sewed, 1s. 3d.

De Quincey's Opium Eater. Edited by MARK HUNTER, M.A. 4s. 6d.; sewed, 3s. 6d.

Goldsmith's Good-Natured Man. Edited by K. DEIGHTON. 2s.; sewed, 1s. 6d.

Goldsmith's She Stoops to Conquer. Edited by K. DEIGHTON. 2s.; sewed, 1s. 6d.

*. The Good-Natured Man and She Stoops to Conquer may also be had bound together in one volume. Sewed, 2s. 6d.

Goldsmith's Traveller and Deserted Village. Edited by the Rev. A. E. WOODWARD, M.A. Cloth, 2s.; or separately, sewed, 10d. each.

Irving's Sketch-Book. Edited by R. G. OXENHAM, M.A. Sewed, 1s. 6d.

Johnson's Lives of the Poets. Edited by F. RYLAND, M.A.

Life of Addison. 2s. 6d.

Life of Pope. 2s. 6d.

Life of Swift. 2s.

*. The Lives of Swift and Pope, together, sewed, 2s. 6d.

Life of Milton. 2s. 6d.

Life of Dryden. 2s. 6d.

*. The Lives of Milton and Dryden, together, sewed, 2s. 6d.

Lives of Prior and Congreve. 2s.

Lamb's Essays of Elia. A Selection, with Introduction and Notes, by K. DEIGHTON. 3s.; sewed, 2s.

Longfellow, Selections from, including Evangeline. Edited by M. T. QUINN, M.A. 2s. 6d.; sewed, 1s. 9d.

*. Evangeline, separately, 1s. 3d.

Macaulay's Lays of Ancient Rome. Edited by P. HORDERN. 2s. 6d.; sewed, 1s. 9d.

Macaulay's Essay on Clive. Edited by CECIL M. BARROW, M.A. 2s.; sewed, 1s. 6d.

Massinger's A New Way to Pay Old Debts. Edited by K. DEIGHTON. 3s.; sewed, 2s.

Milton's Paradise Regained. Edited by K. DEIGHTON. 2s. 6d.; sewed, 1s. 9d.

Milton's Paradise Lost. Books III. and IV. Edited by R. G. OXENHAM, M.A. Sewed, 1s. 6d.; cloth, 2s. Or separately, sewed, 10d. each.

Pope's Essay on Man. Edited by F. RYLAND, M.A. 1s. 6d.; sewed, 1s.

Pope, Selections from. Edited by K. DEIGHTON. 2s. 6d.; sewed, 1s. 9d.

Scott's Lady of the Lake. Edited by the Rev. A. E. WOODWARD, M.A. 3s. 6d. [With the Notes at the foot.] The Six Cantos separately, sewed, 8d. each.

Shakespeare's Julius Caesar. Edited by T. DUFF BARNETT, B.A. Lond. 2s.

Shakespeare's Merchant of Venice. Edited by T. DUFF BARNETT, B.A. Lond. 2s.

Shakespeare's Tempest. Edited by T. DUFF BARNETT, B.A. Lond. 2s.

Wordsworth's Excursion. Book I. With Introduction and Notes by M. T. QUINN, M.A. Sewed, 1s. 3d.

THE ROYAL SCHOOL SERIES.

The New Method of Teaching Modern Languages.

1. **Conversational**, as suits a spoken language.
2. **Systematic**, keeping in view both the form and the meaning of words.
3. **Concrete**, being based throughout on objects and pictures and actions.
4. **Pictorial**.—Large Wall Sheets, containing the pictures in each book, are issued separately for Class Teaching and revision work.

JUST ISSUED.

By **ALBO CRAN, M.A.**, Senior French Master, Royal High School, Edinburgh;
Examiner in French and German for the University of Aberdeen.

ELEMENTARY

OBJECT LESSONS IN FRENCH.—Book I.

Post 8vo, cloth. With many Illustrations. Price **1s. 6d.**

This book contains a carefully-graded series of easy Conversation Lessons, which are fully illustrated by pictures and diagrams. To each Lesson is appended a Grammar Section, in which the simpler forms of the language are explained and illustrated. The book also contains Exercises in Phonetics, a Synopsis of Grammatical Rules, and French-English and English-French Vocabularies.

* * A German Edition of the above Work is in Preparation.

OBJECT LESSONS IN FRENCH.—Book II.

This book contains a series of somewhat more advanced Conversational Lessons, which are fully illustrated by pictures and diagrams.

Post 8vo, cloth, price **1s. 6d.**

By **J. J. TROTTER, M.A.** (German Master, Royal High School, Edinburgh), and
ALBO CRAN.

OBJECT LESSONS IN GERMAN.

(Being a Translation of "Object Lessons in French"—Book II.)

Post 8vo, cloth. With many Illustrations. Price **2s.**

FRENCH AND GERMAN

OBJECT LESSON WALL SHEETS.

A Series of Eleven Sheets, 21 in. by 31 in., printed in Tints on strong Manilla Paper, and mounted on Roller. Price **15s.**

These Sheets contain the pictures (with names in French and German) from "Object Lessons in French"—Book II., printed without the text, to serve as subjects for oral conversation.

FRENCH AND GERMAN OBJECT LESSON WALL SHEETS FOR BOOK I. (ELEMENTARY) *in the Press.*

JUST PUBLISHED.

MÉTHODE NATURELLE POUR APPRENDRE LE FRANÇAIS.

Fondée sur l'Enseignement Intuitif.

By **GEORGE HOGGEN, M.A.**

Post 8vo, cloth. Illustrated. 332 pages. Price **3s. 6d.**

"The main idea underlying the lessons in this book is that a foreign language should be learned as the mother tongue was, by using it as the direct vehicle of expression of the common facts of life."—*Extract from Preface.*

* * Prospectus, with specimen pages, post free on application.

ROYAL WALL ATLASES.

Of Combined Teaching and Test Maps.

Each Atlas consists of a number of Maps attached to a Roller in the manner generally adopted for Reading Sheets. The Maps are printed in Colours on strong Manilla paper.

NEW NUMBER, WITH FRESH EDUCATIONAL FEATURES.

Now Ready. 9 Maps, attached to one Roller. Price **12s. 6d.**

ROYAL WALL ATLAS—INTRODUCTORY:
Geographical Terms, &c. For Standards I. and II. Size, 28 in. by 39½ in.

LIST OF SHEETS.

- | | |
|--|--|
| 1. Cardinal Points. | 6. Picture and Map—Geographical Terms (inland district). |
| 2. Picture and Plan. | 7. A River. |
| 3. Picture and Plan—Scale. | 8. Physical Relief Map of England. |
| 4. Picture, Plan, and Map—Scale. | 9. Form and Size of the Earth. |
| 5. Picture and Map—Geographical Terms (sea-coast). | |

ALREADY PUBLISHED.

12 Maps, attached to one Roller. Price **12s. 6d.**

ROYAL WALL ATLAS No. I.—The British Isles.

For Standards III. and IV. Size, 31 in. by 41½ in.

12 Maps, attached to one Roller. Price **17s. 6d.**

ROYAL WALL ATLAS No. II.—Europe.

For Standard V. Size, 34 in. by 38 in.

12 Maps, attached to one Roller. Price **17s. 6d.**

ROYAL WALL ATLAS No. III.—The British Empire.

Size, 34 in. by 38 in.

NELSON'S SUPPLEMENTARY READERS.

A New Series of **Specially Edited, Specially Annotated, and Specially Cheap** Supplementary Readers, designed to give that
Range and Variety of Good Reading

now so much desired in schools.

A Specimen free to Head Teachers.

Price **3d.** each, Stiff Paper Cover; or Limp Cloth, **4d.**

1. THE STORY OF THE NORTH-EAST PASSAGE,
AS TOLD BY THE EARLY EXPLORERS. 96 pages. Map and 10 Illustrations.
With Introduction and Notes.

2. THE STORY OF THE NORTH-WEST PASSAGE,
AS TOLD BY THE EARLY EXPLORERS. 80 pages. Map and 7 Full-page Illustrations.
With Introduction and Notes.

These books consist of Extracts from the collections of Voyages made by **Hakluyt** and **Purchas**, which have now been adapted for children's reading for the first time. Froude calls them "*The greatest prose epic of the modern English nation.*"

3. RICHARD OF THE LION HEART.
A STORY OF THE CRUSADES. Adapted from Sir Walter Scott's famous novels
"The Talisman." 80 pages. 3 Full-page Illustrations. With Introduction and Notes.

* * Others in preparation.

THE ROYAL CROWN READERS.
ST. GEORGE HISTORY READERS.
ROYAL SCIENCE READERS.
ROYAL COPY BOOKS. 3 Sets.
OBJECT LESSON PICTURES.

* * For full particulars of the above Series,

THE SECRETARY,
(University Correspondence College London Office,
32 Red Lion Square, Holborn, W.C.)

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)
Principal—H. R. REICHEL, M.A.

Next Session begins October 4th, 1898. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the Subjects for the Degrees of London University. Students may pursue their first year of Medical Study at the College. There are Special Departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts Student, £11. 1s.; ditto for Intermediate Science or Medical Student, £15. 15s.

The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students, in Upper Bangor (Fee, Thirty Guineas for the Session), is now open. At the Entrance Scholarship Examination (beginning September 20th) more than twenty Scholarships and Exhibitions, ranking in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates. For further information and copies of the Prospectus apply to **JOHN EDWARD LLOYD, M.A., Secretary and Registrar.**

THE TAUNTON FREE CHURCH SCHOOL FOR BOYS (formerly INDEPENDENT COLLEGE).

HEADMASTER for the above School wanted. September next (the present Headmaster having been appointed Headmaster of the Leighton Park School, Reading). Applicant must be a member of a Protestant Trinitarian Free Church, and a Graduate of a British University. Age over 30 and under 45. The premises provide accommodation for 150 Boarders. Salary (in addition to residence) £250, and a Capitation Fee of £2 for every boarder and £1 for every day pupil. On the present number of pupils, this would amount to £372. Application, with qualifications and original testimonials, to be sent to the undersigned on or before the 15th June next. **ALBERT GOODMAN, Secretary.**

3 Hammet Street, Taunton.
Dated May 20th, 1899.

THE HYGIENIC HOME AND COLLEGE OF PHYSICAL CULTURE

provides a thorough training for ladies (as teachers) in the principles and practice of **Hygiene, Swedish Gymnastics, and Vegetarian Cookery.** The course extends over two years, and complete theoretical, as well as practical, training is given. Examinations are held and certificates given to successful students.

There are good openings for qualified teachers, who after training here are assisted to obtain posts. The College is situated in Worcestershire, six miles from Birmingham, and half-a-mile from Halesowen Station; the old historic mansion, **The Leasowes**, having been adapted for this purpose.

The Leasowes stands in its own extensive grounds, and is surrounded by beautiful woods. Its bracing air, elevated position, and charming situation make it an ideal place for a College of Health. It has an excellent Gymnasium fitted with Swedish apparatus, also fine Gardens.

Elocution, Dancing, Gardening, Games, &c., are also taught as a means of Health and Physical Culture.

Students are admitted in September, age 18 to 30. Apply for particulars to Miss ANSTBY, **The Leasowes**, near Halesowen, Worcestershire.

TO HEADS OF SCHOOLS AND FAMILIES. THE SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS

Can recommend fully qualified and competent **French Teachers and French Governesses.** Apply for Teachers to the **SECRETARY, 20 Bedford Street, W.C.;** and for Governesses to the **LADY SUPERINTENDENT, Maison Nationale Française, 93 St. George's Square, S.W.**

MR. H. A. NESBITT (joint-author of "The Science and Art of Arithmetic," by A. SONNENSCHNIG and H. A. NESBITT, M.A.) has a few hours at his disposal for Lessons in Ladies' Schools in Mathematics, History, and Literature. Mr. Nesbitt also gives Lectures on the Teaching of Arithmetic.—18 South Hill Park Gardens, Hampstead, N.W.

BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.
Principal—Miss ETHEL HURLBATT.

ENTRANCE SCHOLARSHIPS.

One Arnott Scholarship in Science, annual value £48, and One Reid Scholarship in Arts, annual value 30 guineas, each tenable for three years, will be awarded on the result of the Examination to be held at the College on June 27th and 28th.

Names to be sent to the **PRINCIPAL** not later than June 15th.

F. MABEL ROBINSON, *Secretary.*

BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

Vice-Principal—Miss PENSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers' Diploma of the College of Preceptors. A Cambridge Higher Local Class for intending Teachers.

THE FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.
Chairman of the Committee—Mr. W. MATHER.
Treasurer—Mr. C. G. MONTEPIORE.
Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

Principal—Madame MICHAELIS.

KINDERGARTEN AND SCHOOL.

Headmistress—Miss M. BOYS SMITH.

Further particulars may be obtained on application to the **PRINCIPAL.**

ST. GEORGE'S TRAINING COLLEGE, FOR WOMEN TEACHERS.—

This College provides a complete course of training for well-educated women who intend to become Teachers. The Course includes attendance at Professor Laurie's Lectures on Education at the University of Edinburgh, and practice in Class-Teaching in several schools. Several Bursaries of £30 are offered annually. The College year begins in October. Apply to the **PRINCIPAL, 5 Melville Street, Edinburgh.**

THE DATCHELOR TRAINING COLLEGE,

CAMBERWELL GROVE, S.E.
(In connexion with the Datchelor Collegiate School for Girls.)

Governing Body—The Worshipful Company of Clothworkers of the City of London.
Principal—Miss RIGG.

Mistress of Method and Lecturer—Miss CARPENTER. Assisted by other Teachers and Lecturers.

This College provides a full course of professional training for Women Teachers, together with abundant opportunity for regular class teaching in a school of over 400 pupils. Special provision is made for instruction in Physiology and Hygiene, Elocution, Drawing, and King's Swedish Drill.

Students are prepared for the Examination of the Cambridge Teachers' Training Syndicate. Fees moderate.

A COLLEGE HALL OF RESIDENCE is provided for Students in the Training College. Terms moderate. Apply—**PRINCIPAL.**

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant-Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.
Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Preceptors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- &c. &c.

The rates of commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the **REGISTRAR.**

ENGINEERING AND CHEMISTRY. CITY AND GUILDS OF LONDON INSTITUTE.

SESSION 1899-1900.

The Courses of Instruction at the Institute's **CENTRAL TECHNICAL COLLEGE** (Exhibition Road) are for Students not under 16 years of age; those at the Institute's **TECHNICAL COLLEGE, FINSBURY**, for Students not under 14 years of age. The Entrance Examinations to both Colleges are held in September, and the Sessions commence in October. Particulars of the Entrance Examinations, Scholarships, Fees, and Courses of Study, may be obtained from the respective Colleges, or from the Head Office of the Institute, Gresham College, Basinghall Street, E.C.

CITY AND GUILDS CENTRAL TECHNICAL COLLEGE.

(EXHIBITION ROAD, S.W.)

By JOHN WALMSLEY, B.A.

New Edition. Fcap. 8vo, cloth, price 5s.

PLANE TRIGONOMETRY AND LOGARITHMS. FOR SCHOOLS AND COLLEGES. Comprising the higher branches of the subject not treated in the elementary work.

"This is an expansion of Mr. Walmsley's 'Introductory Course of Plane Trigonometry,' which has been already noticed with commendation in our columns, but so greatly extended as to justify its being regarded as a new work. . . . It was natural that teachers, who had found the elementary parts well done, should have desired a completed treatise on the same lines, and Mr. Walmsley has now put the finishing touches to his conception of how Trigonometry should be taught. There is no perfunctory work manifest in this later growth, and some of the chapters—notably those on the imaginary expression $\sqrt{-1}$, and general proofs of the fundamental formulæ—are especially good. These last deal with a portion of the recent literature connected with the proofs for $\sin(A+B)$, &c., and are supplemented by one or two generalized proofs by Mr. Walmsley himself. We need only further say that the new chapters are quite up to the level of the previous work, and not only evidence great love for the subject, but considerable power in assimilating what has been done, and in representing the results to his readers."—*Educational Times*.

GILL'S

"CARTOGRAPHIC"

WALL MAPS

FOR SECONDARY SCHOOLS.

Edited by **GEORGE GILL, F.R.G.S.**

Size,
80 × 60 in.

NOT OVER-CROWDED, NOT UNDER-SIZED, BUT BOLD AND CLEAR.
MOUNTED ON STOUT LINEN, ROLLERS, AND VARNISHED.
Compiled from the latest statistics, artistically coloured, and thoroughly reliable.

Price 16s.

NOW READY.

ENGLAND AND WALES.
SCOTLAND.

IRELAND.
EUROPE.

INDIA.
AFRICA.

ASIA (nearly ready).

THE SERIES, CONSISTING OF TWELVE MAPS, WILL BE COMPLETED SHORTLY.

THE CARTOGRAPHIC WALL MAPS have already been adopted in the following Schools:—

Wellingborough Grammar School.
Central Foundation School, E.C.
King Edward VI. Schools, Birmingham.
Girls' Grammar School, Maidstone.
Bury Grammar School.
Skerry's Civil Service Colleges.
Congregational School, Caterham.
Royal St. Anne's Schools, Redhill.
Kendrick School, Reading.
The S.W. Polytechnic, Chelsea.
Tiffin's School, Kingston.
Bedford County School.
Sevenoaks School.
University School, Southport.
Carnarvon County School.

Mathematical School, Rochester.
King's High School, Warwick.
Buxton College.
High School, Bury.
Queen's School, Basingstoke.
Clark's Civil Service Colleges.
Ipswich Middle School.
Handel College, Southampton.
Towcester Grammar School.
Bourne College, Birmingham.
Ashby-de-la-Zouch School.
Kent College, Canterbury.
Convent of Notre Dame, Clapham.
Festiniog County School.
Wigan High School.

St. Martin's High School, W.C.
Cardiff County School (Girls).
Birkenhead Institute.
Girls' Grammar School, Rochester.
Girls' High School, Formby.
Clark's College High School.
Church Middle Schools, Leeds.
Girls' Collegiate School, Leicester.
Bury St. Edmunds School.
Simon Langton School, Canterbury.
Tenison's School, W.C.
Marlborough College, Buxton.
Literary Institute, Edinburgh.
Trafalgar House, Winchester.
Endowed Schools, Watford.

Head Teachers' Criticisms.

Rev. W. H. HOWLETT, M.A. Oxon., Headmaster of Bury School, writes:—"I have much pleasure in bearing testimony to the excellence of your wall map of Africa. It is well printed, with sufficient, and yet not excessive, detail. The caravan routes and spheres of influence are carefully and accurately marked. It is extremely useful."

G. E. CLARK, Esq., Principal of Clark's Civil Service College, writes:—"The Cartographic Wall Maps serve our purpose admirably, and, having now arranged for their use in the central college, we shall introduce them into our branch establishments."

Miss RUNDLELL, Headmistress of the Kendrick School, Reading, writes:—"Your maps are excellent."

J. C. UNDERWOOD, Esq., F.R.G.S., writes:—"Admirable maps for teaching purposes, in fact, models of what school maps should be."

S. LEIGH, Esq., B.A. Lond., writes:—"A splendid production at the price."

A. S. TETLEY, Esq., M.A. Cantab., writes:—"A really artistic production. I have never seen a map so beautifully coloured."

H. MATHWIN, Esq., M.A., writes:—"Your maps are excellent, and a marvel of cheapness."

Rev. H. E. MOCATTA, M.A. Oxon., writes:—"The maps supply a decided want, being extremely clear and well arranged, and can easily be seen by pupils sitting at a distance."

Miss ETHELWYN M. AMERY, B.A. Lond., writes:—"Yours are quite the clearest maps we have."

Rev. A. W. CALLIS, M.A. Oxon., writes:—"The map of England and Wales is an excellent one. I have never seen a coast line and the names upon it so well brought out."

CLARENDON PRESS, OXFORD.

BLACKIE'S STANDARD CLASS MAPS.

Just Published.

Set A.—ENGLAND AND WALES.

Fourteen Maps, beautifully printed in colours, on strong manilla paper, 28 inches by 37 inches, and eyeletted at the four corners. In strong leather-board box. Price Sixteen Shillings.

Messrs. BLACKIE & SON, Limited, have pleasure in announcing the issue of their New Series of Standard Class Maps.

The aim is to provide a series of School Maps which will set before pupils the geographical facts in a clear and intelligible manner, and, by the exclusion of unnecessary names, avoid the so prevalent error of overcrowding. While care has been taken to leave out whatever is unnecessary, everything that is required has been included.

A particular feature of this New Series is that some of the Maps are devoted to one or two geographical features only, and the special prominence thus given has the effect of implanting in the minds of pupils the picture of the lesson.

The Series contains Sectional Maps, the large scale of which gives prominence to detail.

The method of arrangement, the clearness of lettering, and the general get-up render this New Series eminently suitable for Class Teaching, while the bright colours in which the Maps are printed will excite the interest of the pupils.

LIST OF THE MAPS.

1. ENGLAND AND WALES—Relief Map.
2. ENGLAND AND WALES—Physical Features.
3. ENGLAND AND WALES—Counties and County Towns.
4. ENGLAND—Six Northern Counties.
5. ENGLAND—Nine Eastern Counties.
6. ENGLAND—Five South-eastern Counties.
7. ENGLAND—Five South-western Counties.
8. ENGLAND—Fifteen Central Counties.
9. WALES.
10. ENGLAND—Basin of Humber.
11. ENGLAND—Basin of Thames.
12. ENGLAND AND WALES—Basin of Severn.
13. ENGLAND AND WALES—Industrial Map.
14. ENGLAND AND WALES—Railways and Canals.

London: BLACKIE & SON, Limited, Old Bailey.

---	---

The Educational Times.

The Crux of Inspection. PUBLIC business in the House of Commons is in such a forward state, and the hands of the Government are, speaking comparatively, so free, that it would surprise nobody if the Board of Education Bill were moved into Committee before the end of June. Though we scarcely suppose that the House will be as quick about its work as this would imply, we will take the opportunity of making one or two observations on the Bill whilst it is in a state of suspended animation between the two Houses, when the Lords have said their last word about it, and the Commons have not yet taken it into consideration.

The Bill which the Duke of Devonshire introduced into the House of Lords represented, as far as it went, the result of long deliberation, conclusions arrived at with much difficulty, and not without a certain compromise of opinion and a balance of interests which had finally commended itself to most of the professional experts. An instrument under such circumstances is wont to be of a somewhat delicate construction, easily disturbed and thrown out of gear. It is no new thing for either House of Parliament to unsettle by a chance vote or a snatched division the terms of an arrangement which has been accepted before the drafting of a Bill by those whom the Bill is more or less seriously to affect. The only important thing which the House of Lords has done with the Board of Education Bill is to disarrange it in this fashion, and to disturb a balance which had been very carefully adjusted. We do not believe that the Lords, or the majority of six lords, intended to disturb the balance. The little rally which took the Duke of Devonshire by surprise in Committee and put him in a minority had a definite intention; but the intention was not quite so definite as the effect of the vote. It is easy to demonstrate this.

The third clause of the Bill runs as follows:—

3.—(1) The Board of Education may, by their officers or by any University or other organization approved in that behalf by the Board, after taking the advice of the Consultative Committee hereinafter mentioned, inspect any school supplying secondary education and desiring to be so inspected, for the purpose of ascertaining the character of the teaching in the school and the nature of the provisions made for the teaching and health of the scholars, and may so inspect the school on such terms as may be fixed by the Board of Education with the consent of the Treasury.

Lord Spencer's amendment, carried against the Government by a combination of peers of both parties, secured the omission of the words "or other organization approved in that behalf by

the Board." Now, the combination aforesaid was brought about by a little pulling of the strings outside the House, and those who pulled the strings have been good enough to tell us why they did so. The words of the clause, they say, were so vague that, if they had been enacted, there would have been nothing to prevent the Board from approving a score of different organizations as inspecting bodies, and we might have witnessed a wholesale delegation of authority such as has already taken place under Clause 7 of the "Science and Art Directory." The object of Lord Spencer and his friends was to render this impossible. Not long before the date on which the Standing Committee of the House of Lords met the following resolution had been passed by the National Education Association—a body of which we will only say that it was not without influence on some of the peers who voted with Lord Spencer:—

That the incidental delegation of powers of inspection in Clause 3 prejudices the important question of the constitution of Local Authorities; fails to define such Authorities; and leaves too great latitude to the Department's power of delegation; and we recommend that the provision should be omitted from the Bill, and the matter should be dealt with specifically in a separate measure.

The object was clearly to guard against a supposed danger of indiscriminate delegation. The Duke of Devonshire, as will be seen from our summary of the discussion, said that, so far as he knew, the College of Preceptors was the only body contemplated in addition to the Universities. By a special proviso he has recognized the Central Welsh Board as another. But the words under which the College could have been approved by the Board as an inspecting authority are gone; and, if what we have called the disturbing of the balance is to be remedied, it will be necessary in the House of Commons to move the insertion of fresh words in Clause 3 for that purpose. We have no doubt that the Government will be prepared to accept them.

The inspection of schools in England, as the text of the Bill now stands, may be undertaken by inspectors directly nominated by the Board of Education, or, with the sanction of the Board, by the Universities. The clause applies to "any school supplying secondary education and desiring to be so inspected." Now, it is to be presumed that the wish of the Government and the nation, of those who drafted the Bill, and of Parliament, which is considering it, is that as many schools as possible shall desire and be encouraged to submit to inspection, and shall thus come within the legislative scheme of secondary organization. Do they suppose, or would Lord Spencer and his friends suppose, that the schools which retain the option of coming into the scheme or remaining outside of it will be encouraged to

choose the former alternative if they are told that their methods and circumstances, "the provisions made for the teaching and health of the scholars," must be submitted either to a Government inspector or to an Oxford or Cambridge man, who may never have had the opportunity of tempering his academic theories—not to say prejudices—with the experience of the more comprehensive and judicious world without? Most of the schools which would retain the option of accepting or rejecting inspection under the new Act are private and proprietary. Many of them have been inspected by the College of Preceptors for the satisfaction of their headmasters, or of the parents of their scholars; but, rightly or wrongly, they would not be much disposed to call in a Government inspector, or a resident M.A. of Oxford or Cambridge, freshly nominated to inspect under a Government scheme. The reason is easy to understand, whether we hold it a wise reason or an unwise one. The inspectors of the College, we need hardly say, are men not only of proved attainments, but also of wide experience; and their decisions have for many years been recognized by the Commissioners who exercise control over endowed schools. Their work as performed for the College is in every respect as thorough and efficient as that of any other set of inspectors in the country; but they are men with an exceptional knowledge of all classes of non-endowed secondary schools. Is it—we repeat the question—to be supposed that these schools will be attracted to the new organization if they are alarmed to begin with by what they may consider an increase of stringency, though in fact it would be nothing of the sort?

This is only one of the considerations which are raised by the Lords' amendment of the third clause. It points, we do not hesitate to say, to a distinct menace of danger in the prospects of the Bill now before Parliament, which would lose a great deal of its value if it were made less equitable in its scope, and less generally acceptable to the various sections of the profession of secondary teachers. We do not wish, and we are sure there is no need, to labour this point any further. No one has a better grasp of the whole situation than the Duke of Devonshire, Sir John Gorst, the officials of the Education Department, and we cannot doubt that the Government will do all that lies in their power to remedy the mischief which was introduced by Lord Spencer's too sweeping amendment.

NOTES.

WE have no clear or satisfactory statement as to the future location of London University. Appearances still point to its being boarded out in the Imperial Institute; in which case, inevitably, one of two things will happen: either the University will be permanently crippled, or it will gradually swallow and assimilate the Institute, converting it into a sort of faculty of empire-knowledge. That would be a consolation for such as do not like the boarding-out plan. For our part, we do not agree with those who think that South Kensington is no place for a University. The *Daily News* says that there are two buildings outside Burlington Gardens which would be much more suitable in every way than the Imperial Institute for the requirements of the University. One is University College, in Gower Street; the other is King's College, in the Strand. "It is intended that both these Colleges shall be integral parts of the Teaching

University, and all possible use should be made of them. One of them is near the British Museum, the other is in the centre of London. The Imperial Institute stands just where a University ought not, and is in all respects unsuitable." This is going too far. The museums and colleges lying near the Imperial Institute are already magnificent, and they will soon be more so. All that is necessary is that the University of London shall be supreme in its own house.

MR. CHAMBERLAIN has certainly been a good friend to Birmingham, and to the Birmingham University in particular. Also he has shown to some of the rest of us how to evolve "pious donors," and how to raise six-figure funds for the endowment of education—namely, by creating an idea, and setting up a standard, and disseminating faith and confidence. The raising of a Quarter of a Million Fund has been a kind of endowment "by suggestion," and Mr. Carnegie is only the latest of the hypnotized. There are two theories as to the other, and anonymous, donor of £50,000—one that it is Mr. Chamberlain himself, and the second that it is a compatriot of Mr. Chamberlain's wife. Whoever it may be, his stipulation that the quarter of a million shall be stretched into £300,000 is shrewd enough. There is nothing like striking while the iron is hot.

THE offer of the Government to Ireland in the new Agriculture and Industries Bill seems to be very liberal. The handing over of the Irish section of the administration of the Science and Art Department is in itself an educational revolution, and we imagine that Irishmen will be eager to profit by this concession. It is recognized that, if the Bill becomes law, the great interests connected with industrial applications of science and of art will be looked after in Ireland by an Irish Department closely in touch with Irish opinion as expressed by elected representatives of the people, seeking constantly to study their needs and having abundant opportunities of doing so. It will inherit the funds, the buildings, the equipment, and the experience of the South Kensington Department, and it will inherit them at a period when the South Kensington staff in Ireland, as we see is admitted by the Dublin daily papers, is at a high pitch of efficiency and zeal for the public service.

THERE is still, apparently, no satisfaction for the students of the Russian Universities. Higher education in the dominions of the Czar is, to a great extent, paralysed, and one of our latest items of news is to the effect that nine professors of the St. Petersburg University have resigned their posts, with an expression of sympathy for the grievances of the students. It is stated that M. Witte, one of the most liberal-minded Ministers of Nicholas II., witnessed the original whipping scene on the banks of the Neva, and "sympathized altogether" with the victims; but still there is no *amends*. At Tomsk, in Siberia, the students have been rusticated *en masse* for a year, and are taking the opportunity of putting in their term of military service. This is a quiet and business-like way of taking their punishment; and, in fact, the Russian students are decidedly more moderate over their treatment than French or German students would be.

A CORRESPONDENT writes to us as follows:—There will, as usual, be a Holiday Course for modern language teachers at Marburg this year. Those who took part in previous courses held in this charming University town need not be told of the many advantages offered. The list of lectures to be delivered promises many good things. Thus, M. Paul Passy will discourse on Phonetics, and Prof. Victor has promised to lecture on Method. The English section will be much more strongly represented than in former years; Prof. Herford, Prof. Moore-Smith, and Dr. Heath are all expected to help, either during the whole course, or for the second part. The course is to consist of two series of lectures, each complete in itself; the first lasting from July 17 to 29, the second from August 2 to 15. A detailed prospectus is now ready, and can be obtained of Mr. Lipscomb, of University College School, Hon. Secretary of the Modern Language Association. The Hon. Secretary of the Marburg Committee is Herr Privatdozent Dr. Finck (Frankfurterstr. 20), to whom those should apply who wish to take part in either or both of the courses, or who desire to have any further information.

An excellent example is being set to other counties by the Lancashire and Cheshire Society for the Permanent Care of the Feeble-minded. The fact is that feeble-minded children are a serious danger to the community, and one which is likely to increase if they are allowed to grow up without proper supervision, and to perpetuate the evil by marriage. It is a matter of experience that mental deficiency and moral weakness go hand in hand, and that our criminal classes are largely recruited from these unfortunates. As a result of Miss Mary Dendy's inquiry into the number and condition of feeble-minded children in the Manchester Board schools, it was decided to start special classes on their behalf on the model of those already existing under the London School Board. But it was strongly felt that these classes stopped short of being a sufficient remedy for the existing evil. Permanency in the care of such children is a necessary element of such a remedy; otherwise the work already done would be hopelessly wasted. Miss Dendy's words at the recent meeting in Manchester put the case very simply and forcibly: "We stand here for the recognition of a great new principle—for the recognition of our duty to the future. We demand the stoppage of the transmission of a terrible evil to the future; an evil in which all other evils are involved. We ask you to let us take care of these children *for always*, so that they shall not become the fathers and mothers of children as wretched as themselves." The plan by which this end is to be attained is the establishment of boarding-houses, into which the worst cases will be drafted from the special classes under the Board. Here they are to be helped to live and work and play for the rest of their natural lives. It is suggested that in the first instance a boarding-house shall be established to accommodate about fifteen boys, and one for a corresponding number of girls. It is further proposed to establish a boarding-school for adults, and it is hoped that these institutions will be to a large extent self-supporting. At the present time about £2,000 has been raised to meet the necessary expense of starting the scheme; but until £4,000 is obtained the work cannot begin. If this matter is begun by individual and voluntary effort, there is no doubt that it will soon have to be recognized as a national duty,

and the Duke of Devonshire has already promised a Bill dealing with it. In the meantime action is imperative, and all success is to be desired for the pioneers of a work which so much needs doing.

THE new County Schools in Wales inaugurated by the Welsh Intermediate Education Act are rapidly covering the Principality. The last of these is the Hawarden County School, founded two years ago under the Act, and formally opened on May 18 last by Miss Helen Gladstone. Mr. Gladstone himself gave not only his warm sympathy but very substantial financial help to the scheme before his death, and the Hawarden Estate Trustees returned to the Governors £100 of the £250 for which they had sold the school site. Miss Helen Gladstone, who is a member of the Board of Governors, has rendered most valuable help in organizing the school, coming over repeatedly from Newnham College, before she left, to consult with the other members of the Board. The school, a handsome block of red-brick buildings, is designed for the accommodation of fifty-four boys and forty-four girls, and the wings are so built as to allow easily of future extension. The ceremony of opening the school was only a formal, not a real, one, as the actual buildings have been in use since January last, and for the past two years the school has been at work, using as temporary quarters the Hawarden Gymnasium and Institute.

SUMMARY.

THE MONTH.

THE Board of Education Bill has passed the House of Lords, after modification in one important particular. In the Standing Committee on May 9 Earl Spencer moved to have out from Clause 3 the words "or other organization approved in that behalf by the Board," which follow the provision that the Board of Education may inspect "by their officers or by any University." He thought that the Bill proceeded too rapidly in this matter. At present one of the most important things connected with secondary education was the question of the Local Authority, and that point the Bill did not deal with in any way. It was most desirable, therefore, that the inspection should be limited to the Department's own officers, in order to create as favourable an impression as possible among the schools to be inspected. The Duke of Devonshire said that the inspection by the Universities was a most important provision. As to the words proposed to be struck out, they were put in because in the future the Board might find it desirable to recognize some other organization as an inspecting body. There was none other that he knew of, except the College of Preceptors, which already examined and inspected certain schools. There was no intention of recognizing any other existing organization. Lord Tweedmouth said that inspection by the Universities would be generally acceptable; but inspection by other organizations, not named in the Bill, might be the reverse. It would be better, at any rate, to name specially the inspecting bodies. The Earl of Kimberley said that the objection to the words proposed to be struck out was that they anticipated what was to be done in the future. They might set up an organization which would conflict with a uniform system hereafter. The Duke of Devonshire said that inspection was not to be imposed on schools against their wishes. The clause was permissive. The omission of the words would prevent schools now inspected by the College of Preceptors from being so inspected in the future. Lord Davey urged that the words were very vague. Was it worth while introducing them in a Bill which was necessarily of a temporary and tentative character? On a division the amendment was carried by 22 votes against 16.

A MEETING of Convocation of the University of London was held on May 9. Mr. E. H. Busk, the Chairman, replying to

Prof. Silvanus Thompson, stated that he could not say that, in the ordinary use of the word, negotiations were in progress for the transference of the business of the University to the Imperial Institute. If there were negotiations in progress, they were only in a preliminary stage. The position of the matter was this: A communication was received from the Government requesting that a conference might take place between three representatives of the Treasury, three representatives of the University, and three representatives of the Imperial Institute—nine persons in all—who were to inspect the buildings and the grounds belonging to the Imperial Institute at South Kensington, and to consider whether those premises either were suitable or could be made suitable for the headquarters of the University in any way; and, if so, it was thought that the Government might enter into an arrangement with the authorities of the Imperial Institute which would enable them to make a proposal to the University. The nine representatives were duly appointed; they had inspected the building, but they had not yet reported.

On May 10, which was Presentation Day, the Earl of Kimberley presided for the first time as Chancellor of London University. After some sanguine anticipations as to the future of the University, and especially as to its connexion with secondary education and science teaching, Lord Kimberley said:

The future prosperity of this country, and its maintenance in the highest position as the greatest manufacturing country in the world, depended upon their neglecting none of those advantages which a sound education could bestow, and upon giving greater attention to economic and commercial education. The University in its new capacity would pay special attention to this most important object. They had an example of what could be done; they had the Economic School, founded under the County Council, doing a good work. Mr. Passmore Edwards had announced his intention of bestowing £10,000 upon that institution. There were some who had a sanguine expectation that that institution would have with the new University a special and close connexion. What they wanted was to bring together, as far as possible, various agencies provided for higher education in the metropolis. No nobler task could be imposed upon any institution than that imposed upon the University in this matter; and he believed that the exertions made, and the distinguished men who would be connected with the University, gave fair promise that success would be assured. With reference to the housing of the new University, the question, as they were aware, was whether they should migrate to that handsome building at South Kensington. The matter had been referred to a conference composed of three members appointed by the University, three by the Government, and three by the Imperial Institute. He had the honour to be one of the three representing the University. They were not at present in a position to make a report, but he had no doubt that it would not be long before the Senate received their report. It would be for the Senate to decide upon any proposals that might be made.

LORD JAMES OF HEREFORD, the new Chairman of the governing body of the Imperial Institute, threw a little more light on the subject of the proposed migration of the University at a business meeting of the Board on May 15. The Institute, he said, is looking forward to a new lease of life—

Those responsible for its management had been approached by the Government, who had to find accommodation for the London University. In the Institute they possessed a very great area of accommodation not needed by them, which could be devoted, with very little adaptation, for the purposes of the University. In the first place, to bring a great seat of learning under the roof of the Institute seemed to the governing body to be in accordance with the objects for which the Institute came into existence. But it was only right that he should tell them that in affording this accommodation to the London University they were receiving from the Government a very substantial return. He was not in the position to enter into any details, because all the arrangements had not yet been completed; but he might say that the negotiations were proceeding, and that by the financial return for the provision of the necessary accommodation for the University the governors of the Institute would be relieved of many burdens. The real result would be that they would have all anxiety removed with regard to the future conduct of the Institute.

The Lord Chancellor presided at the annual meeting of the City and Guilds of London Institute, held at the Mercers' Hall, and, in moving the adoption of the report, referred to the correspondence which had taken place with the London University Commission. The Institute had stated that it was willing to accept the position of a school of the University for its Central

Technical College, under conditions which included the creation of a special faculty of engineering; and, although no official information had been received from the Commissioners, they had, he believed, determined that there should be such a faculty, and also one of economics and industry. Remarking that in the past the Institute had been criticized for its expenditure, he pointed out that, whereas last year the average net cost per student in the thirteen colleges in receipt of Government aid was £26, the net cost at the Institute's Central Technical College was only £24, that at Finsbury being £26. The students at the Central Technical College continued steadily to increase, the total number attending the winter term of the current session (240) being above that of any previous complete session.

On May 17 the Queen laid the foundation-stone of the buildings which are to complete the South Kensington Museum—henceforth to be known as the Victoria and Albert Museum. The grand new façade will occupy the corner formed by Brompton Road and Exhibition Road.

In an address to students of the London Society for the Extension of University Teaching, delivered on May 6 at the Mansion House, Dr. Hill, Master of Downing College and Vice-Chancellor of the University of Cambridge, made the following remarks with reference to science teaching:—

The too early teaching of science is not productive of permanent excellence in that department. The classical boys do far better, for they approach the new subject with an intelligence well drilled, with mental sinews well exercised and developed. The true way of approaching science at school is not to prepare boys for science scholarships, but to let scientific interests run like a thin line through school life—to induce a love of Nature and beautiful objects. Experience in examining for the Science Tripos and the medical examinations is discouraging, and, astonishing as is the knowledge of facts displayed by candidates, their mental grip and conception of principle are unsatisfactory. But it is still to be remembered that a Wrangler cannot be turned into a biologist, and mathematics dealing with abstractions are not well calculated to make a man a good observer of nature. The qualities needed for a man of science are many—quickness of observation, tenacity of memory, ratiocinative power—and no one course of study can be trusted to produce those results. The individual, however, is the main element, and there is needed in the several cases presented as great variety of mental as of physical nutriment. In any case, wide sympathies are needed; the literary man would be the better for some knowledge of science, and the scientific man for a keen interest in literature.

THE International Congress on Commercial Education was opened at Venice on May 4 in the Senate Hall of the Doges' Palace. Signor Pascolato, the President, delivered the opening address. Dr. L. Saignat, representing France, gave a review of the work accomplished in the five previous congresses on commercial education, after which the Congress discussed the subject of a commercial school, its purpose, its limits, and its organization. Other cognate subjects were considered at subsequent meetings. On the teaching of modern languages, nine of the delegates addressed the Congress, and most of them recognized that the deficient results obtained in the study of languages were chiefly to be attributed, not to the method employed, but to lack of organization. On the question of the training of pupils for office duties, M. Paul Hemelryk spoke, amid much applause, of the practical instruction given in the Liverpool Commercial School. The Congress passed a series of resolutions, the more important of which were that primary instruction should be general, that youths should be trained in secondary education for immediate employment, that foreign languages should be taught by foreign professors in their own tongue, and that an international system of translation should be adopted by mercantile firms. Some of the official delegates abstained from voting. The next Congress will be held in Paris on August 6, 1900.

THE £250,000 required for the equipment of the new Midland University has now been raised, thanks to a donation of £50,000 by Mr. Carnegie, of Pittsburg, U.S.A., and of £37,500 by an anonymous donor. The latter has written to Mr. Chamberlain to say that, as the endowment of a quarter of a million, though "sufficient for a starting point," must soon be largely augmented, he will increase his contribution to £50,000 if a total of £300,000 be raised by the end of June. Counting in the original gift of

good Josiah Mason, Birmingham will start her University on a foundation of half a million sterling.

THE Endowed Schools Commissioners have appointed one of their Assistant-Commissioners, Mr. Selby Bigge, to visit Grantham Grammar School with a view to holding an inquiry into the circumstances of the wholesale dismissal of the assistant-masters, to which we referred some time ago. It seems that the Commissioners have already intimated to the Governors of the school that there is, in their opinion, no ground for the contention that the appointments of assistant-masters in an endowed school are *ipso facto* terminated by the occurrence of a vacancy in the headmastership. It will be a decided gain to assistant-masters to have this principle authoritatively laid down by the Commission, and supported, if it can be supported, by legal decision. Mr. Selby Bigge suggested May 30 as a convenient date for the opening of the inquiry at Grantham.

MR. GERALD BALFOUR has introduced a Bill to establish a Department of Agriculture and other Industries and Technical Instruction in Ireland. Describing the principal provisions of the Bill, he stated that, as far as concerned the transfer to the new Department of existing Governmental functions, the measure closely resembles its predecessor, but that to the powers and duties formerly proposed to be transferred are now allied those of the fishery inspectors and most of the functions exercised by the Science and Art Department, and the provisions with respect to technical instruction are new. For the purposes of the Bill, there will be placed at the disposal of the Department, in addition to certain moneys annually voted by Parliament, a total income of between £160,000 and £170,000 a year. Fifty-five thousand pounds are to be allocated to technical instruction of an urban character, and £10,000 will go to purposes connected with sea fisheries. The rest of the money is to be used in connexion with rural industries. The Department is to be assisted by an Agricultural Board and a Board of Technical Instruction, and only a minority of the members of these Boards will be nominated by the Government. It is to be a general rule that no money is to be spent by the Department on any local object without some contribution from local sources.

At the last meeting of Convocation of London University, Dr. H. F. Morley moved a resolution requesting the Senate to adopt for the Matriculation Examination a scheme of subjects which was in complete accordance with the scheme unanimously adopted by the meeting of delegates from the Board of Studies in the Faculty of Arts. After some discussion, the scheme of subjects was adopted in the following form:—(1) Latin (two papers); (2) English (two papers); (3) mathematics (two papers); (4) any two of the following five languages: Greek, French, German, Sanskrit, Arabic; and (5) one of the following five sciences: Elementary mechanics, elementary chemistry, elementary sound, heat, and light, elementary mechanism and electricity, and elementary botany.

MR. PASSMORE EDWARDS has intimated his intention of giving £10,000 upon trust to equip a school and building for the teaching of economics and commercial science in the new London University. The Trustees, who are to carry out the trust and offer the building when ready to the new University Senate, are the Bishop of London, Mr. Sidney Webb, and Mr. Haldane, Q.C., M.P. The work of the London School of Economics will probably be continued there. Further endowments, says the *Times*, "will, of course, be wanted for chairs of banking, commercial history and geography, commercial law, insurance, and other special subjects; and this munificent gift by Mr. Passmore Edwards should encourage other wealthy Londoners to imitate his generosity."

A MEETING of the shareholders of Bath College has resolved to wind up the company voluntarily. The work of the school will be carried on during the present term, and it is hoped that arrangements will be made for its continuance. The possibility of starting a new company is being talked of, and a scheme will shortly be considered by some of the leading citizens. Bath College has never been a "paying" concern to its proprietors,

owing to the heavy ground rent and charges for interest on mortgage.

A SCHOLARSHIP offered by Girton College, in connexion with the last Cambridge Senior Local Examination, has been awarded to Miss E. M. Newberry, Slepe Hall School, St. Ives, Hunts; the Mary Stevenson Scholarship, tenable at Newnham College, to Miss M. K. Welsh, the High School, Knutsford; and the Reid Scholarship, tenable at Bedford College, London, to Miss M. G. Fisher, Queen Elizabeth's Grammar School for Girls, Mansfield.

ON May 10, at the public meeting of the Senate of the University of London, the following students of Bedford College for Women were presented for degrees:—For the degree of M.A., Miss E. H. Whishaw; for the degree of B.A., Miss F. C. Johnson, First Class Honours French, Third Class Honours German; Miss Grace Greenwood and Miss Jennifer Turner, First Class Honours English; Miss M. Trienen, Third Class Honours English; Miss Bishop, Miss Goodes, Miss Tracy, Miss Atcherley, Miss Lloyd. For the degree of B.Sc., Miss Annie E. A. Baker; for the Teachers' Diploma, Miss R. R. Reid. Two students for degrees and four for the Teachers' Diploma were unable to be present. The usual reception was held later in the afternoon at the College, when the following were among those who accepted invitations:—Sir John Lubbock, Baron and Lady Davey, Sir J. and Lady Fitch, Mrs. Scharlieb, M.D., M.S., Dr. Garrett-Anderson, Miss Penrose, Mrs. H. Tennant, Mrs. Bryant, D.Sc., Mrs. James Bryce, Sir John Evans, K.C.B., and Lady Evans, and a large number of headmistresses of schools in London and the neighbourhood.

OUR Welsh correspondent writes: During May there have been but few events of interest in connexion with Welsh education. A meeting of the Executive Committee of the Central Welsh Board for Intermediate Education was held at Shrewsbury on May 12, and also a meeting on the same date of the Court of the University of Wales. The main business of the Central Board Executive was the preparation of the General Report of the Board for the past year. The University Court held a special meeting for the sole purpose of bringing about a modification of one of the University Statutes so as to enable the Senior Certificate Examination of the Central Welsh Board to be accepted in lieu of the Matriculation Examination of the University.—In the University of Wales the latter half of the month of May is very largely occupied with meetings of examiners (external and internal) for drawing up the papers of questions for the Degree Examinations in June. Most of these meetings have this year been held at Shrewsbury, owing to its convenience as a meeting-place of North, South, and Mid-Wales.—The opening of Hawarden School took place on May 18. The ceremony of opening the school was performed by Miss Helen Gladstone (one of the first governors of the school), who was presented with a silver key. Mr. Sidney Taylor, one of the governors of the school, presided, and the speakers included the Rev. Stephen Gladstone, the Rev. Principal Dyson, of Liverpool, Mr. Samuel Smith, M.P., the Rev. Richard Jones, Chairman of the governors, and Colonel Howard. Lady Frederick Cavendish, Mrs. Stephen Gladstone, and Mrs. Drew were also present.—The recently published Report of Mr. Legard, Her Majesty's Chief Inspector of Primary Schools in Wales, has attracted considerable attention. Mr. Legard points out the importance of recognizing frankly that, in many parts of Wales, English is practically a foreign language, and that the best methods of linguistic teaching should be adopted in teaching it. He recommends, too, that in such districts infants and the children in the lowest forms should receive their earliest teaching in the language which they understand.

(For Universities, see page 260.)

THE BOARD OF EDUCATION BILL AND SECONDARY EDUCATION.

At the Evening Meeting of the College of Preceptors, on May 17, Mr. H. W. Eve, Dean of the College, took the chair. Dr. R. P. Scott, Headmaster of Parmiter's School, read the following paper:—

Last year I had the honour of placing before the members of the College of Preceptors the provisions of a private Bill on the organization of secondary education. That Bill dealt only with a part of the subject

of education, and, in consequence, was attacked almost as much for what it omitted as for what it contained. The main attack concentrated itself on the provision which, in consonance with Continental practice, distinguished secondary from technical as well as from primary education—distinctions which then, as now, I think fundamental and essential in the interests of education and of national welfare.

To-night it is my function to open a discussion upon the Board of Education Bill, and that duty is at once more easy and more difficult than my task of last year. It is more easy because the present Bill does not explicitly raise the difficulties involved in dealing with one branch only of the subject of education. It deals with the subject as a whole, and the inevitable distinctions and delimitations are matters of administration, and (so we learn from the Duke of Devonshire) will not be set out in the Bill. My task is difficult because the organization of secondary education has become much nearer than it was last year, and, owing to a difference of standpoint, does not receive the same welcome from us all.

I need not in this meeting dwell upon the importance of education to the individual. When we ourselves look back upon our own education, and realize both where it came short and what we owe to it, or whether we look forward to the education of our children, and strive to obtain for them greater advantages than we enjoyed ourselves, we cannot but feel that for the individual no seed yields a more abundant crop for good or for evil than that which is sown at school.

But the importance of education is only matched by its complexity. The more we discuss the subject, the more this fact comes home to us. To take an instance: Is the chief aim of education acquisition of knowledge, development of faculty, or discipline of character? And, if a combination of these aims is desirable, as we shall all be ready to affirm, what is the relativity of their value, and—most important consideration of all—under what conditions can the best combinations be made effective? A question by no means easy to answer.

As if these difficulties were not sufficient, another difficulty is superadded in England: the whole subject is singularly ill-defined. There are no recognized lines of distinction between elementary and secondary, between secondary and technical, as, indeed, there are none between elementary and technical, education. Nothing of this kind is yet officially determined, nor does a legal definition exist of "public school," or "secondary school," or "school." The Government Bill—more wisely, perhaps, than the Lockwood Bill—makes no attempt to supply these definitions; it leaves the necessary task to be worked out by administration. Thus, in the manner which commends itself to most Englishmen as practical, we act first and think afterwards, a habit pleasantly referred to by our friend Alice in Wonderland—"verdict first, evidence afterwards." From this characteristic arise, in educational matters, uncertainties, misunderstandings, and excessive delays.

This is not the time, nor is this the occasion, to deal with the difficulties I have raised, but they should be borne in mind in all discussions on the Bill. As for myself, my aim is not exhortation, but exposition. I do not desire, even if it were in my power, to be eloquent, but to be clear, and to ask your consideration of this Bill not merely from the point of view of the teacher, but from the standpoint of the citizen interested in the welfare of his country.

The subject of the Board of Education Bill is educational organization—incomplete organization, it is true, and organization on a small scale, but the organization which begins, the parent of more organization. To clear our minds, then, on organization, it will be necessary to ask ourselves what is meant by the term, and what we might reasonably expect such organization to do. I use the term "organization," rather than "reform" or "systematization," because, in the mind of most persons, "reform" seems almost exclusively concerned with improvements of existing materials. "Systematization" implies, perhaps, mere machinery, a theoretic arrangement which might not sufficiently correspond with actual needs; but "organization" implies, first, a conception of the subject as a whole, and its bearing on other subjects; next, an economic use of existing materials; and always an insistence on the relationship between the various organs. Its fitting symbol is the relation of the parts in the living body—"a body which is not one member, but many: where the eye cannot say to the hand, 'I have no need of thee,' or the head say to the feet, 'I have no need of you.'"

Before discussing details it is well to ask: What is the aim of this organization? How will it affect us as individuals, and especially how will it affect us if we consider ourselves (a) as parents of boys and girls, (b) as ratepayers and taxpayers, (c) as citizens of this great Empire?

(a) A parent may reasonably ask that the State should see that a sufficient number of public or private schools are provided for its citizens, such schools being easily accessible, and not, as at present, lacking in some districts and overcrowded in others. They must be at reasonable fees, and have a curriculum or course of study planned out and made available for parents who wish to understand the course of instruction through which their children will be taken if they remain to the end of the course. And these schools must be properly linked by curriculum to the other schools of the national system, so that the

circulation of able children necessary for the welfare of individual and nation alike may become practicable. But, above all, the parent will ask guarantees from the State that the school, whether they be few or many, shall be efficient. It is round this question of efficiency that the battle of organization will be fought, for the word has a general use which for purposes of administration must be reduced to definiteness; and in that process it will be well to bear in mind the aphorism with which the French Senate once began an address to the first Napoleon. "Sire," they said, "the desire for perfection is one of the worst maladies that can afflict the human mind." We must not expect perfection; yet we must not pitch our standard of expectancy low. The subject of efficiency, technically speaking, may be regarded under three heads—the building, the teacher, the school. The building must be sanitary; its arrangements as to light and air must be satisfactory. The teacher must possess qualifications which are sufficient for the work he has to do; he must know his subjects and also know how to teach them. The school must be sufficiently staffed, so that the classes are not too large for individual attention. The results of the teaching must satisfy any reasonable test. When these conditions have been fulfilled, then, and then only, should a certificate of efficiency be forthcoming.

(b) The ratepayer and the taxpayer may reasonably ask for economy—an economy, it is to be hoped, not merely of cheapness, but of wise expenditure, which regards the quality of the work as of the first importance, but which makes use of all available material. Such a claim can only be met by stopping that waste of money which is produced when two sets of Local Authorities attempt to do the same work. This claim will also require the recognition of private and proprietary schools as part of our national system, provided only that they be efficient. Such recognition would imply the same amount of local protection as may be extended to public schools, and a sharing of any central grant that might become available for secondary education.

(c) The citizen will reasonably ask that a wise education policy shall be adopted, to stop the waste of living material which is now going on to an incredible extent. To do this, it is necessary to look upon national education as a whole, to endeavour to realize all the needs of the nation—industrial, commercial, and professional alike—as far as education can meet them. Primary education, secondary education, technical and commercial education are not rivals from this aspect, and, though different, are all necessary to the good of the body politic. It is little short of a disgrace to England that the hand-to-mouth policy in educational matters should have been so long continued. We want, in fact, an educational Budget which, from year to year, will tell us how much the nation is spending upon the various branches, and will enable us to compare the expenditure of England with that of other nations. If this be done, we shall soon realize why other nations are forging ahead in the race for the markets of the world. We shall find that our national expenditure both on technical education proper and on secondary education proper is miserably inadequate for the respective services which these branches of education, and these alone, can perform for the nation.

But, besides this, the conception of education as a whole would lead, in time, to a recognition of the higher aims of education. It will be recognized that, if the school does a good service to the State in making good business men, it does a still higher service in making good citizens and good men and women. I cannot better summarize the aim of national education than by quoting from Mr. Sadler's preface to the "Handbook of the Education Section of the Victorian Era Exhibition":—"Education, it is often said, is one line of national defence, and, like a strong navy, good education is a costly thing. But its worth cannot be simply measured in terms of money, though money is indispensable to its maintenance. Its real value turns not merely on equipment or apparatus, but on the worth of the teachers who impart it; on their attainment and width of culture; on their skill, experience, and *esprit de corps*; but still more on their insight and sympathy; on the elasticity of their spirits; on their personal example and moral influence; on their love for their work and for the children committed to their care. True education, as we know it in its best tradition, is not cram, but discipline. It does not merely aim at imparting information or at the gymnastics of the memory, but it seeks, while training the body in healthy and noble exercise of varied powers, to touch the temper of the mind; to mould principle and character; to purify and deepen belief. And on education in this sense depends not the welfare only, but the very existence, of a free State."

Having discussed the aim of organization, we may now ask what framework of organization is best calculated to realize these aims, and our best guide is the Report of the Royal Commission on Secondary Education, which sets out as the essentials for complete organization the establishment of the following:—(a) A Central Authority under the charge of a responsible Minister; (b) Local Authorities; (c) Authoritative tests of efficiency applied to schools and to teachers; (d) Proper linkages between the different parts of the national system.

It is clear that it is not necessary to set up all four things at once, and, as a matter of fact, some have held that it would be sufficient to begin with the registration of teachers; but there is, I think, general agreement that the Government has been well advised both in not proposing to set up a complete organization at once, and in not con-

tenting itself by an attempt to deal with the registration question alone.

We come now to a consideration of the Board of Education Bill, and the four above-named essentials in organization provide the touchstone by which the scope of the proposed measure can be tested.

(a) The Bill provides a Minister of Education. If it did nothing more than this, it would be worthy of our support because, for the first time in our history, the State assumes some measure of responsibility for the whole of education, and, in the interest of the nation, assigns to a single person the responsibility of looking at education as a whole. Further, it establishes a Central Authority by bringing together at once the Education Department and the Science and Art Department, and by arranging that the educational powers of the Charity Commission shall be taken over in the new Office as occasion may arise. It is to be hoped that in this matter occasion will soon arise, so that the inconvenience which schools may experience of being placed under one authority for education, and under another authority for finance, will be of short duration. Furthermore, the Bill makes provision that the Central Authority shall not err for want of knowledge. A Consultative Committee is to be appointed to advise.

(b) The Bill leaves over the constitution and powers of Local Authorities as a difficulty not yet ripe for solution. There can be no doubt that in so doing the passage of the Bill through Parliament has been made more easy. This omission has been regarded by some as a wasted opportunity on the part of the Government. It is objected, and with truth, that organization cannot be largely effective until Local Authorities be constituted; but, before completeness, a preliminary survey of the educational field is desirable; such a survey needs time, guidance, and care, and it seems wiser, though perhaps less heroic, to deal with these educational difficulties one by one.

(c) The Bill arranges for the making of tests for teachers and for schools. It explicitly gives power to the Consultative Committee to frame regulations for the registration of teachers which the Education Office is to carry into effect. Implicitly it arranges for the registration of schools, under Clause 3, which empowers the Board to inspect secondary schools which desire to be inspected. The effect of this inspection cannot fail to be of the utmost value to efficient secondary schools. It will give a guarantee to parents and to the public, and will thus serve to strengthen public confidence in secondary schools. If the confidence generally accorded at this time to secondary schools of the middle type is not of a particularly robust kind, the fact is largely due to the lack of authoritative certification. It is not possible at present to distinguish among schools between the good and the not so good; schools lack the stimulus which would be afforded by right inspection. It is this certificate of efficiency which will protect private schools from over-zeal on the part of Local Authorities in establishing new schools. The results of the preliminary survey to be made by the Inspectors of the Education Office and to be communicated to Local Authorities will make clear what provision for secondary education actually exists and can be made available; it may then be hoped that private schools will, in general, accept this inspection and so make firm their claim as an integral part of the national system when completed.

I cannot leave this subject of inspection without expressing a regret that the amendment proposed by Lord Spencer, to limit the power of appointing inspectors to the State and the Universities, was carried in the House of Lords. The House of Commons must be pressed to reinsert in Clause 3 the phrase "other organizations approved in that behalf by the Board of Education," in order that the College may continue its inspection of schools. This phrase, the Lord President explained, had exclusive reference in his mind to the College of Preceptors, and he urged the retention of the words. After such a testimonial, the College may well press for the reinsertion of the phrase, not only because of its importance to the College, nor because of the claim on the State which in this respect the College has established for excellent work in the past, but because there is every reason to believe this work of inspection would, under the regulations of the Board, be thoroughly well done in the future. The claim of the College in this particular seems to me largely to correspond with the claim of the private school in the national system, and in so far as it is a claim based on public service, on efficiency, and on freedom of equivalent options, it is, I believe, indefeasible.

(d) With regard to the necessity of a proper organization to deal with the linkages between the different parts of the national system, it might appear, on a casual reading of the Board of Education Bill, that no such provision is made; but a more careful study will show that this question is implicit in the administrative arrangements which the Bill will set up. The Office will have a permanent secretary at its head, but under him will be assistant secretaries for the various sections of the Office. It is important to know whether there will be, as the Duke suggested in August last, three principal sections for primary, secondary, and technical education respectively, or, as some suggest, only two—one for primary and one for higher, the latter being subdivided, according to those who favour this view, into secondary and technical. In the one case, there would be three co-ordinate assistant secretaries; in the latter, two assistant secretaries and two sub-assistants—an arrangement expressly contrived, it would

appear, to set up friction and to foment official rivalries. The Lord President refuses to give assurances on this point, but has declared that he will abide by the decision of the Treasury Committee which will be appointed in due course to recommend which arrangement is the more desirable. But in either case it is clear that reasonable lines of demarcation must be laid down, or the working of the system would be impossible. The former arrangement seems to me to be the only reasonable one. It is essential that there should be three inspectorates, since the aims of each branch of education and their criteria of excellence are absolutely distinct. The inspectors must be responsible to one branch alone, and, further, the post of assistant secretary for the suggested higher education branch demands an impossible combination of qualities: he must be equally competent in scientific and in classical learning; he must not, in his zeal for simplicity of administration, sacrifice the school to the adult class, or *vice versa*, or general development to over-specialization. It is true that secondary and technical have much in common, and that it is not easy (except administratively) to separate them. But so, also, have primary and secondary much in common, and all adjustments between possibly conflicting claims should be made by the head of the Department in consultation with the officers concerned.

Thus the Bill, dealing as it does with a great subject in an undefined and tentative way, is by no means a small Bill. It is true that it does not arrange for a public grant to secondary schools, nor for any rearrangement of grants, and the officers it appoints (except the new inspectors) are presumably already in the public service. Thus the Bill seems to do little, but it prepares the way; and, although it does not seem to excite public interest, yet it is a Bill of the first degree of importance. Its importance is one not of actuality, but of potentiality, a potentiality in the sense used by Dr. Johnson, when, as executor, he sold the brewing business of Mr. Thrulo: "We are not selling a parcel of tubs and vats; we are selling the potentiality of growing rich beyond the dreams of avarice."

But even in actuality it appoints a Minister of Education, and brings all schools under supervision from one centre. Let no one envy the new Minister of Education his task, for, taking into account what must be done, what exists, and what means are likely to be at his disposal, that task will be neither easy nor simple. He must be content to innovate gently, and to persuade at every step; he must evolve order out of confusion; he must create an organic and yet intelligible system; he must take into consideration the diversified needs of a complex community. He will have, in fact, many responsibilities, but, at the outset at least, will find it difficult to secure that liberal financial support which most civilized nations accord to secondary education, and which, even in England, is not denied to primary education.

But these will not be his only cares. As an administrator, he will have to insist that the broad external uniformity necessary for intelligibility shall be accompanied by the elasticity of detail necessary for individuality; he will have to make large use of the experience of teachers and of officials, but he will have to form his own judgment; he will have to devolve largely upon local bodies the details of administration, but, in the interests of the nation, he will have to firmly retain in his own hands the direction of educational policy; and, hardest task of all, he must endeavour to create a wide and intelligent interest in education, in order that the system as it grows into completeness may be thoroughly and continuously tested.

No individual statesman, perhaps, will do more than build a single story of an edifice which requires at least fifty years' labour for its completion; but the mere planning it out on a noble scale would ensure for him an undying reputation and constitute a lasting claim on the gratitude of his fellow-countrymen.

The danger of the Bill lies in the fact that it remains largely an outline. Whether, educationally speaking, its effects will be satisfactory or otherwise depends almost entirely upon the practical application of the large powers which it confers upon the Education Office when re-organized; and, apart from assurances as to the interpretation which the Government intends to place upon its more important provisions, it is impossible to say whether the potentiality which it undoubtedly possesses will prove ultimately to be for the national welfare or not. But in this we are fortunately able to rely on the wisdom and sympathy of the present heads of the Education Department and on their constant readiness to adjust the practice of administration to the real needs of the scholars and the schools.

The points in the Bill which to me seem specially worthy of consideration are:—

1. Clause 4, which deals, in a general way, with the constitution and powers of the Consultative Committee. The clause provides that a Consultative Committee of a permanent and representative character shall be appointed, and that it shall advise the Minister on all points referred to it, and that in particular it shall have charge of the regulations for the registration of teachers. The clause does not indicate the number of persons who shall compose this body; it is to consist "as to not less than two-thirds of persons representing Universities and bodies interested in education." But the Lord President, in answer to the Bishop of Winchester, has told us that probably the Committee would consist of not less than twelve and not more than about twenty-five persons. The Registration of Teachers Bill of 1898 is

evidently to be the model for this Committee. The number of persons nominated by professional bodies to represent the profession proportionately to the nominees of the Crown remains unchanged, and there can be no doubt that at least those educational bodies specified in the Registration Bill to act in the first instance will be included in the Order in Council which appoints the Committee.

It will be agreed that the Consultative Committee is an extremely important part of the proposed machinery of the new Education Office. It is not too much to say that the teaching profession has been encouraged to welcome the Board of Education Bill largely in consequence of assurances that the Consultative Committee will be regarded by the heads of the Office as a really important means of ascertaining and focusing educational opinion on the many difficult matters which will come up for settlement. English secondary education is so complex that any reorganization of it will necessarily call for diplomatic rather than coercive methods. It will be much easier to persuade interests which might otherwise stand aloof to fall into a general scheme of reorganization if the heads of the Office can learn the details of the present state of things, good and bad, in confidence from a representative of the Committee, and the friction inevitable in reform will be minimized if the sections of opinion represented on the Committee can be indirectly convinced through their representatives.

Such a Committee is admittedly an experiment, an experiment which is due to the peculiar relations which exist between the State and education: relations which have been thus lucidly set forth in the Report of the Royal Commission (Vol. I., Part 3, page 190, paragraph 107):—"The fact is that the body of teachers must necessarily occupy a somewhat anomalous position in the economy of national life. The service which they render is one over which the State must in self-defence retain effective oversight; the provision of teaching and the conduct of education cannot be left to private enterprise alone. Nor, on the other hand, do the teachers stand in the same relation to Government as does the Civil Service. Education is a thing too intimately concerned with individual preference and private life for it to be desirable to throw the whole of it under Government control. It needs organization, but it would be destroyed by uniformity; it is stimulated by inspection, but it would be crushed by a code. In the public service, where the chief object is administrative efficiency, the individual officer is necessarily subordinate: in education, where a chief object is the discovery of more perfect methods of teaching, the individual teacher must be left comparatively free. Every good teacher is a discoverer, and, in order to make discoveries, he must have liberty of experiment."

It cannot be doubted that the experiment involved in the establishment of the Consultative Committee will be narrowly watched and freely criticized, and it will be a bad day for teachers and for education if the experiment be discredited in the official mind through difficulty in working it. The Committee offers a splendid field for the display of sweet reasonableness on the part of the teaching profession, whose knowledge and experience will thus for the first time be brought to bear at the centre of most influence and in the most effective manner. But the influence and usefulness of the Committee will entirely depend upon the wisdom with which it sets about its work and the spirit in which it approaches the questions placed before it. Its aim will be to win and to retain the confidence both of the teaching profession and of the administrators appointed by the State, and in so doing to construct an organization at once vigorous and elastic as well as free from bureaucratic uniformity.

It must not be forgotten that the Consultative Committee, among other purposes, will serve to connect the present with the past, for through its agency, the old traditions and influences which the Universities represent may become widely operative and may deeply affect the schools of to-day. No system would be English which broke with the past, and no system would be really national which disregarded the relationship and the consequent mutual action and reaction of the University on the school. One aspect of this question is thus touched upon by Dr. Whewell in "The Principles of English University Education":—"Universities and colleges have for their office not to run a race with the spirit of the age, but to connect ages as they roll on, by giving permanence to that which is often lost sight of in the turmoil of more bustling scenes. In order to introduce real improvements, we must bring to the task a spirit, not of hatred, but of reverence, for the past; not of contempt, but of gratitude, towards our predecessors. If we are able to go beyond them, it must be by advancing in their track, not by starting in a different direction. We must continue their line of instruction and study their academic constitutions."

2. But, important as Clause 4 is to the profession as a whole, it is the working of Clause 3 which will be most watched by the individual schoolmaster. Clause 3, which deals with inspection, is the key-stone of the Bill. On inspection depends the success or failure of the organization attempted. The terms in which the Bill deals with this subject deserve, therefore, the closest scrutiny. What strikes us most, perhaps, is the fact that inspection is made voluntary; but this, like so much else in the Bill, is but a beginning, and it cannot be doubted that, if the method of inspection adopted be successful in winning the confidence of the public, schools which do not accept inspection will come to be regarded as placing themselves in an inferior category.

When this fact is widely recognized the step to compulsory inspection will be virtually unnecessary.

But "inspection" is a term which, like so many other educational terms, needs defining. It has at least three distinct significations even for schoolmasters. It includes, for instance, what has been styled "administrative inspection," which relates to the building, the school apparatus, and what may be called the environment of teaching. But this is distinct from educational inspection, which deals with the actual teaching process as going on in the school. And, again, both these differ from the examination of pupils, which, in most cases, is the only test, and that a singularly incomplete one, which schools at present are able to afford. It is only because there has been no effective demand for inspection that examination results have assumed their present undue importance. If inspection succeeds, then, in the future, examination results will form a smaller part than at present in the repute of a school, and examination will be largely superseded by inspection conducted on reasonable lines, and dealing with the work of all the school, and not merely of a few picked pupils.

3. But, important as are both the Consultative Committee and inspection, they are but means to an end—the due evolution of a national system of education, which includes in its purview public and endowed schools, private and proprietary schools, denominational and undenominational schools alike, and which encourages among teachers and schools that feeling of solidarity and community of interest which, in a great cause like that of education, dignifies the work and inspires the worker.

The attainment of this end depends almost entirely on the kind of attitude which the great public schools may take up towards the Bill. On them, more than on Ministers and Departments of State, depends the actual filling out of the outlines of the Bill to the scope of its possibility. On this matter, fortunately, we are not left in doubt. The headmasters of the great public schools have risen to the opportunity afforded them by the Lord President, and individually have declared themselves willing that the schools over which they preside should form part of the national system, and not be the subject of exceptional and privileged legislation.

In replying to inquiries addressed to them by the Lord President on behalf of the Government, they have stated that they are so impressed with the public advantage of a general inspection of secondary schools by a competent authority that, although they may have little or nothing to gain by it themselves, yet, on certain conditions, they would be willing to come under a system of general inspection by the Board of Education.

The conditions laid down by the headmasters, and very properly laid down, as the Lord President remarked in his speech in introducing the Bill, were as follows:—(i.) That there should be a Consultative Committee, to serve as a guarantee against the imposition of uniformity of instruction or curriculum. (ii.) That inspectors of recognized competence should be appointed. (iii.) That University inspection should be recognized as an alternative to State inspection.

The conditions (iii.) as to the Consultative Committee and as to University inspection are satisfied in the Bill, and, although the condition as to the new Inspectorate for Secondary Schools at the moment seems to present difficulties, it cannot be believed that these difficulties will prove insuperable, and it may indeed be hoped that assurances to this effect will be given in the House of Commons during the passage of the Bill. The reply of the headmasters referred to is important, because it serves to indicate the alternatives which the situation offers. With the adhesion of the public schools, a really national system becomes possible; without that adhesion, a dual system of secondary schools would inevitably grow up in which boarding schools and day schools would come to be regarded as differing not only from the administrator's point of view, but, in the long run, from the educational standpoint also. This divorce would over-emphasize the present characteristics of such schools, especially on their social side, and the development of each would proceed on divergent lines. The day school, conducted more under the public eye than at present, might tend to attract more than its due share of public attention, and would endeavour to justify its new importance by increased attention to success in examinations. Its temptation would be to make its chief aim the cultivation of the intellect rather than an all-round development—in a word, to exalt cleverness rather than character. Yet, as has been well said, it is character—not intellect—which governs this world and inherits the next. Specially then, at a time when international trade-rivalry is becoming more acute, and when help in the struggle is looked for from the school, we need all the help the great schools can give to make the higher and not the lower aim prevail, and to make it possible for day schools also to aim at that ideal of education which through the public schools has done so much for England.

If, under these conditions, a national and inclusive organization of schools be established as the outcome of the Board of Education Bill, then, although as a system it may perhaps lack logical symmetry, yet without doubt it will be characteristically English, both in its merits and in its defects; it will be seen to be not a system "made in Germany," but rather an organization which has to adapt itself to our national needs, and which will in the best interests of England seek

to extend to the preparation for commerce and industry that conception of public duty and of public service which makes our public schools at once the pride of England and the envy of the world.

The CHAIRMAN said the members were much indebted to Dr. Scott for his lucid and interesting exposition of the Bill and the problems it had to face. He was particularly struck with the concluding passages of the lecture, referring to the action of the public schools and the danger of dividing the secondary schools of England into two classes. One of the great improvements in education of recent times had been the spread of a public-school spirit, which was somewhat limited in its range in a large number of schools for both boys and girls. With regard to girls' schools, nothing was more striking than the growth of that public spirit, which was the pride of English public schools, and Dr. Scott had dwelt very happily on the necessity of building up a community of character in all schools, which might be endangered if a great gap were fixed between day and boarding schools. So complex were the problems to be dealt with that he hesitated to express any opinions of a definite character as to how the provisions of the Bill were to be worked out.

Mr. G. Brown was pleased that Dr. Scott had pitched so high a keynote in dealing with the Bill, though he could not help thinking that it was too high for realization. The Bill itself was an outline to be filled up hereafter, everything depending upon the Minister of Education. The public had, he thought, hardly realized what the passing of the Bill meant. Dr. Scott had pointed out the difficulty of drawing the line between primary, secondary, and technical education. If the limits could not be fixed now, they would not be fixed later on. Elementary education had always been very well defined in the public mind as that which was to be provided by the State for those unable to obtain it for themselves. If secondary schoolmasters had experienced the organization and methods of Government Departments, they would not have been so ready, as stated by the Duke of Devonshire, to welcome inspection. As Dr. Scott had said, this was a Bill of potentialities, and that was precisely where the danger lay. The Lord President of the Council admitted that he could not give any explanation of Clauses 3 and 4, for fear that too many amendments might be induced. If teachers allowed this Bill to pass without knowing its details, they could not afterwards complain if its provisions did not work satisfactorily. The lecturer had spoken of the rights of parents and of citizens as ratepayers; but what about the rights of the teachers? As for the right claimed for parents to have a sufficiency of secondary schools provided for them, the State might as well be asked to pay people's tram-fares, or to fix the price at which tradesmen should sell their goods. Elementary education had to be provided, in order to prevent the population growing up in ignorance; but the State might as well provide jackets, coats, boots and shoes, as higher education for those who could afford to pay for it. That was the Archbishop of Canterbury's reply, when asked if parents had a right to make the demand. He denied altogether the alleged rights of parents to have secondary education provided by the State. In reference to linking schools and guarantees of efficiency, the middle classes of this country were not so crassly ignorant that they could not be trusted to see that they get their money's worth. Here and there a charlatan might flourish for a time, but he was soon found out, and he was a rapidly diminishing quantity. Too much must not be expected from inspection. Twenty-five years' experience had shown, in the case of public elementary schools, that it was not a real test of efficiency, and the Government had at last discovered that they had been working in a wrong direction, and that the children had not been really educated, but only instructed. Higher education would not make successful men of business. Instruction was of little use without elevation of the moral character; and it was time to return to elementary methods, which this Bill did not propose. Considering the great variety of secondary schools now in existence, no Minister of Education could ensure that variety. If a Bill must be passed, they might accept this one, if on no other ground than that it would reform the Education Department. But, if it were to go beyond that, some guarantees were wanted, and the country should keep a careful watch on what was going to be done. In the absence of details, those guarantees should be demanded when the Bill reached the House of Commons. So far from attacking the lecture, he thought Dr. Scott's ideas, on the whole, were too good for the Government to carry out, and it was to be hoped that the "sweet reasonableness" he had spoken of would be as fully shown in other quarters.

The Rev. G. E. MACKIE hoped that the opinions expressed by the last speaker did not fairly represent the opinions of most members of the College. He had poured scorn on the proposed arrangement of sub-departments under the Minister of Education on the ground that it was impossible to draw the line between primary and secondary education. It was equally impossible to draw the line between light and darkness; but were they therefore unable to distinguish between light and darkness? In all large public offices a system of departments was found, and the few matters which touched two or more departments presented no practical difficulties. Then the speaker

had said that headmasters were welcoming inspection because they did not know what it meant, and that his own experience had taught him to dread it. But all the best teachers in the elementary schools were agreed that the inspector was their best friend: their chief protector from the ignorance of parents, the crotchets of managers, and the red tape of a department. And when the inspection of secondary schools was established, such schools, and especially the smaller and poorer of them, would find inspection their best protection, since it would give a test of efficiency which would not depend, as now, solely on the production of a list of successes in examinations. Further, the last speaker had denied the right of parents to claim the interference of the State in the matter of education any more than in the supply of provisions. The parallel was unfortunate; for the State did interfere to secure for the citizen that they should not be poisoned with unwholesome food, and the grocer who adulterated his goods might be prosecuted and fined; and had not the State equally the right to see that those who professed to purvey education were doing what they professed to do? Such a narrow and selfish view of the question was short-sighted; and he hoped that members of the great educational profession would realize that in this matter parents had rights, and the State had rights, and that, while teachers had rights, they had duties also.

Mr. ORCHARD thought they had been greatly advantaged by one so conversant with secondary education as the lecturer bringing before them so clear a *résumé* of the Bill. While pointing out merits, he had not ignored blemishes. Probably the conclusion arrived at would be that the Bill was good, but not perfect. The provisions for— (1) a responsible Minister of Education, (2) a Consultative Committee, (3) registration of teachers and schools, were three steps, and three long steps, in the path of educational reform. On the other hand, as had been well remarked, it was unfortunate that we were left without definitions of the terms "primary" and "secondary," as applied to schools. It was a serious detraction from the usefulness of the Bill that inspection was not made compulsory. The notion that the public would send their children to inspected schools only, and thus the non-inspected would be weeded out, was unduly optimistic, and was not borne out by experience in regard to schools at present existing. Bad and indifferent schools might prefer not to avail themselves of inspection; but it was precisely those schools which, in the interests of the people, ought to be inspected. Nothing short of compulsory school inspection could prevent our present system of educational inequality and inefficiency being largely perpetuated. This, and other deficiencies in the Bill, could be remedied, and ought to be remedied, in its Committee stage. The Duke of Devonshire deserved, and would receive, the thanks, not of the teaching profession only, but also of the numerous community of the taught, for this attempt to grapple with a most important problem.

Mr. SHIPHAM thought that inspection should not only be compulsory, but should eventually be carried out entirely by the State. The elasticity and variety of instruction given in the schools demanded high qualities in the inspectors to be appointed. They should be men of wide experience of educational principles and methods in this and other countries. Efficient inspection should constitute a man's profession and life's work. University inspectors often had little practical experience, and took up the work for a few years merely as a stopgap till something else turned up. They could not claim to be educational experts. It would be desirable for the unity of our educational system that all inspection should proceed from one body. At the same time the English character was opposed to such uniformity as had been spoken of, but more so to the existing haphazard system.

Mr. SAPAT doubted whether the Bill was in the direction of freedom. As he did not look to the State to supply him with boots and shoes, so he did not see how he could be rightly called upon to pay out of his earnings for what he did not approve. He remarked on the great difficulties there would be in finding men with the exceptional qualities, moral and intellectual, required of inspectors, and on the impossibility of coming to a just conclusion on the work of a teacher in the short time that could be allowed for the inspection.

Mr. KIRKMAN would have liked the lecturer to explain the distinction he desired to draw between secondary and technical education. Different inspectors should be appointed for each class of schools. They need not necessarily be either classical scholars or men of science, as had been stated would be probably the case. At present the responsible authorities were at loggerheads, each having its own aim; and a third body would destroy all idea of unity in our educational system.

Dr. SCOTT, in reply, urged the necessity of a wide outlook in deciding the details of educational administration: he commended for this purpose the "Special Reports" which had been issued by the Education Department. It is not possible rightly to judge what is best for England till what is being done for the rising generation in Germany, in France, in Switzerland, had been understood and considered. The Board of Education Bill should be accepted on account of the potentialities for good which it undoubtedly possessed; assurances as to the manner in which it would be worked should be asked for in the House of Commons, and every effort should be made to influence the working out of the Bill on wide and reasonable lines.

MACMILLAN & CO.'S NEW BOOKS.

GREEK.

AN INTRODUCTION TO GREEK PROSE COMPOSITION for use in Preparatory Schools and the Lower Forms of Public Schools. By H. PITMAN, M.A., late Scholar of Oriel College. Globe 8vo, 2s. 6d.

FRENCH.

MACMILLAN'S PRIMARY SERIES. NEW VOLUME.

LES VIOLETTES BLANCHES. By EMILE RICHEBOURG. Edited, with Grammatical and Explanatory Notes and a French-English Vocabulary, by F. JULIEN. Globe 8vo, 1s. 6d.
Educational News.—"A very suitable book for a primary class both in matter and editorial skill."

GERMAN.

KEY TO EXERCISES IN SIEPMANN'S GERMAN PRIMER. By T. H. BAYLEY, M.A., Assistant-Master at Loreto School. Globe 8vo, 3s. 6d. net.

SCHILLER'S JUNGFRAU VON ORLEANS. With Introduction and Notes by WILLARD HUMPHREYS, Ph.D., Professor of the German Language and Literature in Princeton University. Globe 8vo, 3s. 6d.

MATHEMATICS AND SCIENCE.

A NEW SCHOOL ARITHMETIC.

A SCHOOL ARITHMETIC. By R. F. MACDONALD. Globe 8vo, 2s. 6d.

Guardian.—"The grouping of miscellaneous examples at different stages of the book is a good point not often seen. Besides, the examples are numerous and very well chosen, and the price of the book, which is much below others containing the same amount of material, should guarantee it a trial for school use."

GRADUATED TEST PAPERS IN ELEMENTARY MATHEMATICS. Modelled on Subject V., Stage I of the Science and Art Department Examinations. By WALTER J. WOOD, B.A., late Mathematical Demerit, Magdalen College, Oxford, Senior Mathematical and Science Master of Tettenhall College, Staffordshire. Globe 8vo, sewed, 1s.

Nature.—"The papers are primarily intended to test the progress of students preparing themselves for the examination on in first stage mathematics of the Department of Science and Art, and Departmental teachers will find them of real value for that purpose. In the lower mathematical forms of secondary schools, also, the papers should be of service, as many of the questions have been selected from the papers of public examining bodies mostly favoured by such schools."

New Edition, now ready.

WOOLWICH MATHEMATICAL PAPERS for Admission into the Royal Military Academy, for the years 1889 to 1898. Edited by E. J. BROOKSMITH, B.A., LL.M. Crown 8vo, 6s.

ELEMENTARY PHYSICS AND CHEMISTRY. First Stage. By R. A. GREGORY, Professor of Astronomy, Queen's College, London, Oxford University Extension Lecturer, and A. T. SIMMONS, B.Sc. Lond., Associate of the Royal College of Science, London. Globe 8vo, 1s. 6d.

Educational.—"The arrangement and methods of the book are precise, accurate, scientific. A teacher ignorant of science would have little difficulty in working through it with his pupils. The language is simple, and the book has many illustrations, most of them new, graphic, and of real value to the novice."

GEOMETRICAL DRAWING FOR ARMY AND NAVY CANDIDATES AND PUBLIC SCHOOL CLASSES. By EDMUND C. PLANT, C.B., Instructor in Geometrical and Mechanical Drawing, Military Side and Naval Class, Chifon College. Vol. I. PRACTICAL PLANE GEOMETRY. With an Appendix on the Construction of Scales. Demy 8vo, 7s. 6d.

TWENTY-FOUR TEST PAPERS in PRACTICAL, PLANE, AND SOLID GEOMETRY (Science Subjects), Elementary Stage. By GEORGE GRACE, B.Sc. Lond., A.R.C.Sc. Lond., First Class Honours in Solid Geometry, &c. Printed on cartridge paper, price 2s.

Educational Times.—"They are all that could be desired for a practical preparatory course."

Number Five now ready.

RECENT PUBLICATIONS.

An Entirely New and Enlarged Edition.

OPTICS. By Prof. HAUGHTON. Revised and, to a great extent, Re-written by the Rev. ISAAC WARREN, of Trinity College, Dublin. With additional Illustrations. 2s. 6d.

This important educational work originally appeared in "Galbraith and Haughton's Scientific Series," when it obtained a considerable popularity. In the present edition it has been brought thoroughly up to date. It is the book appointed in this subject for the Sophister Classes, and for the ordinary Degree Examination (i.e., B.A. Degree in Arts) in the University of Dublin.

From R. H. JUDGE, Esq., D.Sc., Rutherford College, Newcastle-on-Tyne:—"I am greatly obliged by the little book on Optics which you have sent me. I think it gives a very clear and succinct account of the most important theorems in the 'geometrical' part of the subject."

An Entirely New and Revised Edition.

CASSELL'S LESSONS IN FRENCH. Part I. Containing 240 pp., crown 8vo, bound in cloth, 2s.

This work, which reached a sale of 141,000 copies in its original edition, has been revised throughout by Mr. JAMES ROELLE, B.A., Examiner in French Language and Literature in the University of London. It is now in all respects suitable for the Oxford and Cambridge Local Examinations, and the College of Preceptors' Examinations, or the Queen's Scholarships. The type has been re-set in a bold style, and each lesson, with the exercises bearing upon it, has been brought within the compass of an hour's work.

* The Revised Part II. will be ready in the autumn.

IN DANGER'S HOUR; or, Stout Hearts and Stirring Deeds. With Introduction by H. O. ARNOLD-FORSTER, M.P. With Four Coloured Plates and numerous Illustrations. Price 1s. 8d.; or, handsomely bound in cloth gilt, 2s. 6d.

"Forty years' experience of reading books, for boys both in large and small schools, tells me that no book will prove to be more popular than 'In Danger's Hour.'"—PRINCIPAL, High School, Thirsk.

CASSELL'S POETRY FOR CHILDREN. Six Books, containing numerous Illustrations, with Notes and Short Biographies of the Authors. 1d. each; or, complete in One Vol., cloth limp, 6d.

"Your 'Poetry for Children' will, I feel sure, become very popular. In selection, paper, type, and general 'get up' the series is a distinct step in advance on anything I have seen, and I have examined most in the market."

(Signed) J. OVENDEN, The School, Colton, Rug-ley.

A HISTORY OF ENGLAND. By H. O. ARNOLD-FORSTER, M.P. Fully Illustrated. Extra crown 8vo, 816 pp. Third Edition, Revised. Price 5s. *The Scotsman* says:—"The picturesqueness of its manner, its fine national spirit, its insistence on those parts of the story that have most use and interest for the modern world, its numerous choice of appropriate and interesting illustrations—all these things make it a book not for the cloistered student, but for everybody who wishes, not merely to be instructed, but to be won to an interest in a study too often made repellent by the Dryasdusts. . . . Few popular histories, if any, have been better done."

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & CO., LIMITED, LUDGATE HILL, LONDON, E.C.

Seventh Edition.

MODERN SIDE ARITHMETIC. EXAMPLES ONLY.

By the Rev. T. MITCHESON, B.A., Assistant-Master in the City of London School.

PART I., crown 8vo, cloth, pp. 119, 1s. (Answers, 1s.; Teachers' Copy, with Answers, 1s. 6d.)

PART II., crown 8vo, cloth, pp. 200, 1s. 6d. (Answers, 1s.; Teachers' Copy, with Answers, 2s.)

COMPLETE IN ONE VOLUME, crown 8vo, cloth, 2s. (Answers, 1s. 6d.; Teachers' Copy, with Answers, 3s.)

Specimen Copies sent post free to Teachers for half the price.

ALSO, BY THE SAME AUTHOR.

FORECASTS AND COMMENTS.

June 1, 1899.

THE Midsummer Certificate Examinations of Fixtures. the College of Preceptors will begin on Tuesday, June 27. The Junior Forms Examination will be held simultaneously.

* * *

THE first of June is the last day of entrance for the Intermediate Examinations at London University, and for the July Examinations of the Guildhall School of Music. June 6 is the last day of entrance for the Diploma Examinations of the College of Preceptors.

* * *

ON June 2, Sir George Gabriel Stokes, LL.D., F.R.S., will be presented with an address from Cambridge University and a commemoration gold medal on the occasion of his completion of fifty years' service as Lucasian Professor of Mathematics. Sir George, who is in his eightieth year, will be subsequently entertained at a banquet. Prof. A. Cornu, of the Ecole Polytechnique of Paris, has been appointed Rede Lecturer for the present year. The lecture will be delivered in the Senate House on June 1, as a part of the proceedings relating to the jubilee of Sir George Stokes.

* * *

A MEETING of the Teachers' Guild will be held at the Westminster Town Hall on Saturday, June 3, at 3 p.m. The Right Hon. James Bryce, M.P., will take the chair.

* * *

THE Royal Institution will celebrate its centenary next week by two commemorative lectures. The first will be delivered at three o'clock on Tuesday, June 6, by Prof. Lord Rayleigh, when H.R.H. the Prince of Wales will preside. The subject of Lord Rayleigh's lecture will be the physical work of the Institution during its hundred years of existence. The second lecture will be delivered on Wednesday evening, June 7, at nine o'clock, by Prof. James Dewar, when the Duke of Northumberland, the President of the Royal Institution, will preside. Prof. Dewar will take as his text the chemical work of the Institution during the century.

* * *

THE examinations in Agricultural Science for the Cambridge Diploma will extend from June 12 to June 19.

* * *

ON November 7 two groups of colleges will hold examinations for entrance scholarships and exhibitions in natural science. One group includes Pembroke, Caius, King's, Jesus, Christ's, St. John's, and Emmanuel; the other, Trinity, Clare, and Trinity Hall. The scholarships are of the value of £80 a year and under. In the first group the subjects of examination are:—(1) chemistry, (2) physics (including dynamics and hydrostatics), (3) physical geography (as introductory to geology), (4) animal physiology, (5) biology (including zoology and botany). In all branches of natural science there will be an examination in practical work. In the second the subjects are physics and chemistry.

* * *

A TABLE of Holiday Courses on the Continent for instruction in Modern Languages has been prepared by Mr. Fabian Ware for the Special Inquiries Branch of the Education Department. We

mention below the places and principal subjects of instruction; further information may be obtained at the Education Department Library in Cannon Row.

* * *

COURSES will be held at Bonn on Philosophy, History, Art, Geology, and Botany; at Greifswald, on German and French Literature, Methods of Modern Language Teaching, Phonetics, Pedagogy, Natural Science; at Jena, on Pedagogy, Natural Science, History of Art, Mental and Moral Science, Religion, German Language and Literature, Education of Defective Children; at Lisieux, on French Literature, History, Language, Political, Social, and Economic Aspects of France; at Tours, as above; at Paris, on Classical and Modern French Language and Literature, Elocution and Pronunciation, Phonetics, Institutions and Arts of France; another at Paris, on Study of French in groups of three or four, visits to places of interest in Paris, also lectures on Literature, Art, Educational and Social Life of Paris; at Geneva, on Modern French Literature, special classes for study of spoken language, and methods of teaching; at Lausanne, on History, Literature, and Philology, Phonetics, special study of spoken language, Psychology; and at Neuchâtel, on the general study of French Language and Literature.

* * *

THE following is the programme as at present arranged for the Bedford College Jubilee:—Thursday, June 22, 3 p.m., Students' Conference in the Portman Rooms, Baker Street, Miss Anna Swanwick in the chair. Speakers: Prof. Jebb, Miss H. Busk, Miss Manning, Mrs. Morgan Williams, Mrs. Bryant, D.Sc., and others. After this meeting there will be tea at the College, York Place. Friday, June 23, 3 p.m., meeting at the Theatre of the University of London, Burlington Gardens, Prof. Jebb, Visitor to the College, in the chair. Speakers: His Grace the Duke of Devonshire, the Lord Bishop of London, the Right Hon. James Bryce, Mrs. Fawcett, and Mrs. Henry Sidgwick. To this meeting will be invited two representatives of all women's colleges and colleges which admit women as students, all educational bodies, headmistresses, &c., and all members of the Students' Association. 9 p.m., *Société* at Bedford College, York Place, to guests invited for the afternoon meeting. Saturday, June 24, 7 p.m., a Garden Party arranged by the Students' Association in the Royal Botanic Gardens.

* * *

THE Entrance Scholarship Examination at Bedford College will be held on June 27 and 28. There will be two scholarships offered for competition: the Reid Scholarship in Arts, 30 guineas a year for three years; the Arnott Scholarship in Science, of £48 a year for three years. The successful candidates will be required to take a full three years' course in arts or science. Entrance forms must be returned not later than June 15.

Education Gossip. A CIRCULAR relating to the English Education Exhibition from January 4 to 27, 1900, preparatory to the French Education Exhibition in the same year, has been published. It is to be hoped that the exhibit at Paris will be a worthy one. The strong and representative Committee who will be responsible for the English Education Exhibition may be trusted to ensure that our country's interests are adequately represented. In addition to this exhibition, and to one which will be held simultaneously in Edinburgh, there is to be a display of Welsh apparatus and work for the same purpose, between July 15 and August 5 of the present year.

* * *

THE fixing of dates for our far too numerous examinations, so as to produce the minimum of overlapping, has become a matter of considerable difficulty. We are not surprised to see that the London Chamber of Commerce, finding that no fewer than three other examinations had been fixed for the same week as the Junior Examination of the Chamber, has postponed the latter for a fortnight, until July 10–15.

THE *University Correspondent* expects the immediate publication by the London University Commission of a draft statute, embodying its first conclusions on the problems which were submitted to it. "The draft statute referred to is a very lengthy document, and is the result of an enormous amount of almost daily close and controversial work. When it is published will be the time for the friends of the external student (who have been lying low hitherto, there being nothing to do) to propound their proposals and criticisms. Those members of the Statutory Commission who are also members of the Senate and its Committees have not had a sinecure. Many are curious to see whether the examiners have been restored to the Faculties and whether the External Council has its full powers."

* * *

MR. J. W. MACKAIL is giving a course of three lectures on the "Dramatic Art of the Greeks," under the auspices of the London School of Ethics and Social Philosophy, at University Hall, Gordon Square. At short notice he undertook to supply the place of Prof. Gilbert Murray, who had been obliged through ill-health to cancel his engagement to lecture for the School on Euripides.

* * *

THE *University Extension Gazette* gives the complete arrangements for the Summer Meeting at Oxford. The Literature Course will contain some thirty lectures. Prof. York Powell has made himself responsible for his friend William Morris, Mr. Frederic W. H. Myers for his friend George Eliot, Mr. Arthur Sidgwick will lecture on Mrs. Browning, and Mr. Churton Collins and Mr. Ronald Bayne on Robert Browning. Mr. Herbert Paul, equally at home in the *Nineteenth Century*, in the *Daily News*, and in the House of Commons, will deal with Modern Journalism, Mr. Hudson Shaw with John Ruskin, Dr. Bailey with Tennyson, Mr. Boas with the Pre-Raphaelite Poets, Mr. de Burgh with Carlyle, Mr. Ashe King with R. L. Stevenson, and Mr. Shaw Jeffrey with Pierre Loti and Alphonse Daudet.

* * *

MR. SADLER has promised a lecture on Dr. Arnold, of Rugby, and Mr. Arthur Hassall one on his old master, Edward Thring, of Uppingham. Prof. Earl Barnes will, it is hoped, lecture on some aspects of Child Study, and Mr. Keatinge will hold daily classes in the Theory and Practice of Education.

* * *

THE most attractive section of all to many students will be that devoted to Hellenic studies. Prof. Jebb has promised to lecture in this section, together with such distinguished specialists as Prof. Sayce, Mr. Wells, and Profs. Percy and Ernest Gardner; whilst the exceptionally strong list of lecturers who will illustrate the more remarkable contributions to scientific knowledge during the present century includes such names as those of Prof. Francis Gotch, Dr. Ransome, Prof. Miers, Prof. Sollas, and Mr. G. C. Bourne.

* * *

THE Cambridge Local Lectures Syndicate have decided to hold a Summer Meeting of University Extension students at Cambridge in August, 1900. It is proposed that the lectures should deal with "Some Great Influences on English Life and Thought." Further particulars will be announced in due course.

* * *

THE London Guilds are being urged to give a helping hand to the City of London School for Girls, by endowing scholarships and exhibitions. At present the school stands in this respect at a great disadvantage in comparison with the several other schools of a kindred character that are associated more or less closely with the City.

* * *

THE Charity Commissioners recently promulgated a scheme of administration for the Leeds Grammar School, and £12,000 was set apart from the capital fund for the education of girls in the city. The Governors have given the whole sum to the existing Girls' High School in Woodhouse Lane. It is further

proposed that a Grammar School for Girls shall be constituted and conducted under a new scheme, with a separate governing body—this to include representatives of the Girls' High School, the Yorkshire Ladies' Council of Education, the School Board, the City Council, and the Governors of the Boys' Grammar School, the latter to be in a majority. What did the Commissioners think would be done with the £12,000?

AN Association of Graduates in the Royal Irish University has been formed, "in order to secure united action for the furtherance of higher education in Ireland in its relation to Catholic and national interests."

THE Hall of Residence for Women Students in connexion with Owens College, Manchester, is to be opened next session. The Wardenship of the Hall has been offered to Miss Helen M. Stephen, daughter of the late Sir James Fitzjames Stephen, and niece of Mr. Leslie Stephen. Miss Stephen has accepted the post, and will enter on her duties as Warden after the Long Vacation. Miss Stephen's sister, Miss Katherine Stephen, is one of the Vice-Principals of Newnham College at the present time, and will be able to give her the valuable help of her own experience in dealing with women students.

THE Edinburgh Summer School of Modern Languages will meet this year, as usual, in August. The purpose of the School is "to extend the knowledge and advance the teaching of modern languages by means of an international meeting for intellectual, educational, and friendly intercourse." This year, as last year, the languages of the meeting will be French and English, and, as before, the classes will not merely deal with the practical side of language study, but will include courses of lectures on the geography, history, social life, institutions, and literature of France and England. Special opportunities for the practice of foreign languages are afforded by the associated life of the residential halls in which the students board during the meeting.

WE greatly regret to note the death of Mr. W. J. Reynolds, for many years a member of the Council of the College of Preceptors, who possessed the confidence and esteem of all associated with him. The College has further to lament the death of the Rev. Dr. Schoell, one of its Examiners in German.

At a meeting of the Council of the College of Preceptors held on May 17, the following were appointed to the vacant Examinerships: In English Language—J. Lawrence, D.Lit., M.A. Lond., B.A. Oxon.; and Miss B. M. Skeat, Med. and Mod. Lang. Tripos, Cambridge, Ph.D. Zürich. In French—V. Spiers, M.A. Oxon., B.-à-L. Paris., Professor of French Language and Literature in King's College, London, Examiner in French in the University of London; and J. G. Anderson, B.A. Lond., French Master at Merchant Taylors' School.

THE Chair of History in Edinburgh University, vacant by the resignation of Prof. Prothero, will be filled at a meeting of the University Court on July 17.

THERE are vacancies in the Jodrell Chair of Zoology at University College, London—applications by June 5; in the Chair of Pathology at St. Andrews—applications by June 1; in the Clark Lectureship in English Literature at Trinity College, Cambridge—applications by June 1; in a Theology Lectureship at St. David's, Lampeter, and in an Assistant Lectureship in German at Mason College—applications for the last two posts to be sent in by June 10.

THE Headmasterships of the Schools of Art at the Worcester Victoria Institute and at Hartley College, Southampton, are vacant. Applications should be sent in by June 5 and June 12 respectively.

THE Egyptian Government require five assistant-masters in the Cairo Secondary School—one for physics, two for mathematics, and two for English. Applications by June 30.

THERE are also vacancies in the Headmasterships of Sheffield Grammar School and the West Somerset County School, Wellington—a layman preferred. In both cases the last day for applications is June 1.

Literary Gossip. It seems that there is an extraordinary competition for the Secretaryship of the Cambridge University Library. Over eight hundred persons applied for information as to the conditions of the appointment, and the electors have had a hard task sifting the testimonials of several hundred applicants.

THE report of the Bodleian Library mentions that the number of publications received last year is the greatest on record—66,817. This total, however, does not represent very much in reality. One-fifth of it consists of maps, and the number of volumes received under the Copyright Act, or in other ways, is not much more. Among the donations is a guitar which Shelley presented to Mrs. Jane Williams, and about which he wrote a poem. The Library already possesses some Shelley papers; but the guitar is a novelty.

DR. S. R. GARDINER, who has lectured on history at Toynbee Hall for twenty years, was presented with a testimonial by his former students. Dr. Creighton, Bishop of London, himself a distinguished historian, in the course of his speech on the occasion, passed a high eulogium on his friend, saying that he thought England did not generally know what a really great man Dr. Gardiner was. The life of the simple, whole-hearted student, who devoted himself absolutely to his work, asking for no popularity and requiring no recognition, was a life often for a time overlooked, but, in the long run, it shone out brightly in the annals of mankind.

THE *Oxford Magazine* says that, properly punctuated, and adorned with at least one ingenious emendation by the editor of the *Classical Review*, the thirty-four lines recently discovered in "Canonicianus 41" begin to look more like Juvenal than they did; and certainly, as Mr. Postgate says, they do not look like an imitation. Forgeries are generally translatable. However, we cannot anticipate the verdict of scholars. The passage has now been thrown to the young lions of the *Classical Review*, and will no doubt provide excellent sport for explainers and emenders who are tired of the rather cheap fascinations of Bacchylides and have nothing more to say about the *Ἀθηναίων Ἰστορία*. But the evident moral is that we must go more to the Bodleian and save our tickets to Egypt. It is very curious, and perhaps not altogether creditable to a learned University, that a known MS. of Juvenal (for Juvenalian scholars have seen it before) should never have been thoroughly collated till an undergraduate happened to "glance at" (as Mr. Winstedt rather quaintly puts it) its version of some disputed passages.

WE have received an extra thick "Annual Report of the Board of the Smithsonian Institution," containing more than a thousand pages. The Smithsonian volumes are wont to strike us as a little heavy—which is doubtless our own fault; but this one is just the reverse. It consists of a report from Mr. Brown Goode, the Secretary of the Smithsonian Institution, who is also Curator of the National Museum of the United States, together with many interesting and richly illustrated papers describing the national collections.

By an Act of Congress, passed in 1846, the Smithsonian Institution became the only lawful place of deposit for "all objects of art and of foreign and curious research, and all objects of natural history, plants, and geological and mineralogical

specimens belonging to the United States." Hence the National Museum, which for many years was supported entirely out of the Smithsonian Fund, but now receives liberal appropriations from the State.

* * *

WE learn from Mr. Frowde, of the Oxford University Press, Amen Corner, on behalf of the Delegates of the Press, that the extent of the "New English Dictionary on Historical Principles" has now been determined, and that it is proposed to publish a new issue in monthly parts, and on terms accommodated to the often slender purse of the scholar and student—to wit, three shillings and sixpence for the monthly part.

* * *

THE "Oxford Dictionary," when completed, will consist of from twelve thousand to thirteen thousand pages, contained in ten volumes. Of these volumes, three have been issued, and the fourth and fifth (of which many parts and sections have appeared) will be completed in 1900. Half of the entire work will thus be finished with the century; the second half (Vols. VI.—X.) will be produced more rapidly than the first, so as to reach the end of the alphabet in 1909.

* * *

THE Religious Tract Society has celebrated its centenary by a certain amount of legitimate mutual congratulation, and, more practically, by raising another fund of nearly £50,000. When the Jubilee was celebrated, it was reported that the Society's works had been published in one hundred languages. Now the number has risen to two hundred and thirty. Then its annual circulation had risen to twenty millions. Now it stands at 59,053,360. The Jubilee Fund amounted to £6,345; the Centenary Fund amounts to nearly £50,000. The grants of money, paper, and publications in the Jubilee year amounted to £6,180. 1s. 7d.; last year to £21,419. 0s. 1d.

* * *

MESSRS. MACMILLAN are to issue, in the autumn, a limited *édition de luxe* of Canon Ainger's well known edition of the works of Charles Lamb, together with the memoir which appeared in the "English Men of Letters" series. The whole work will be carefully revised by the editor, who will be able to incorporate some important new letters and also make interesting additions to the notes. Arrangements have been made to include the letters from Lamb to Charles Lloyd which appeared last year in a volume edited by Mr. E. V. Lucas. It is further announced by Messrs. Macmillan that a new volume is about to be added to their "Foreign Statesmen" series. It will be a Life of Cosmo de Medici, by Miss K. Ewart.

* * *

THE issue of the "Higher Latin Grammar," which is to form a sequel to the "Tutorial Latin Grammar," has now been completed by the author, Mr. F. G. Plaistowe, late Fellow of Queens' College, Cambridge, and it is expected that it will be ready for issue during the autumn. The book is specially intended for candidates for Pass Degrees at the Universities. Its aim being entirely practical, comparatively little philology has been introduced; but care has been taken that no statement shall appear which is contrary to scientific principles.

* * *

THE second volume of Mr. Stout's "Manual of Psychology" has been for some time in the printer's hands. Volume I., which was published last December, has met with a favourable reception. As one of the objects of the "Manual" was to provide a text-book for candidates for the London University B.A. Examination, it is interesting to note that Mr. Stout has recently been appointed Examiner in Mental and Moral Science at that University. The publisher is Mr. Clive.

* * *

IN order to meet the needs of teachers who desire to requisition their books in time, a special effort has been made by the Committee of the National Home Reading Union to prepare and issue the Book List for the Young People's Section for the next

season, commencing in October. Teachers can receive this List by return of post on payment of 1s. 6d., which will also secure to them the monthly Magazine containing the articles on these books, with suggestions and questions especially useful to teachers.

UNIVERSITIES.

(From our Correspondents.)

THE most stirring event of the current term—Oxford, except the Eights week, which undoubtedly "stirs" us more than anything else—has been the migration of our Vice-Chancellor to Westminster. It is no surprise to those who know him best to find that Sir William Anson has political as well as academic ambitions, and that he could not resist the temptation of an unchallenged election to the House of Commons. The first step rendered necessary by his candidature was the resignation of his office of Vice-Chancellor, which was followed by the nomination of Dr. Fowler, of Corpus, to succeed him. In Convocation, on May 4, Sir William regretted that circumstances had caused his resignation, leaving various tasks incomplete. He referred to Sir John Mowbray, whose services to the University and the State had been discharged with such unflinching industry and semblance of perpetuated youth. He paid a tribute to the memory of Mr. Olley Wakeman, his friend and colleague. The President of Corpus, Dr. Fowler, then took the seat vacated by Sir William. The four pro-Vice-Chancellors were admitted to office in the following order:—The Provost of Queen's, the Rector of Lincoln, the Warden of All Souls', and the Provost of Oriel. It is a hundred years since a President of Corpus filled the office of Vice-Chancellor. The actual election of a Burgess took place a week later, and, judging by the very small attendance of graduates, it did not excite much interest or curiosity. Dr. Fowler stated that the business before the House was the election, and asked if any one wished to nominate a candidate. Thereon the Sub-Warden of All Souls' (Mr. W. P. Ker) nominated Sir William Anson, and Prof. Montagu Burrows, Senior Fellow of All Souls', seconded the nomination. The Vice-Chancellor inquired if any other candidate was nominated, and, in default of such, declared the Warden of All Souls' elected. The House then ordered the University Seal to be affixed to a document attesting the election, and the proceedings closed hardly ten minutes after they had begun.

Mr. Lyttelton Gell is another of our academics who have recently manifested a craving for wider interests than the University has been able to afford them. He has joined the Board of the British South Africa Company, and his undoubted business capacities ought to find ample scope in assisting to develop the new province of Rhodesia.

Sir John Stainer has expressed a desire to resign the Professorship of Music. According to the *Oxford Magazine*, he is in the habit of going abroad for a portion of every year, and found the ties of his appointment inconvenient. This is no doubt true, but there is reason for believing that it is not the whole truth. He has filled his Chair for ten years, and thinks that to be the limit of time for which it ought to be held, the idea being that eminent musicians throughout the country should have the opportunity of succeeding to it. There is much to be said for periodical change, and, at any rate, the suggestion does him credit. The favourite nominee for the vacancy is Sir Hubert Parry, the present Choragus; and the general opinion is that, if he would consent to stand, he would be elected unopposed. But his duties in London may be in the way, and, in that event, the Rev. Dr. Mee, the Precentor of Chichester Cathedral, for whom, in 1890, the office of Coryphaeus was revived at Oxford, will almost certainly be a candidate. Dr. Mee has in many ways rendered good service to music in the University, in which he is a popular figure.

Mr. Arthur Thomson, M.A. Exeter College, has been appointed to the Professorship in Human Anatomy for five years, from June 30, 1899. The Reader in Rabbinical Literature, Mr. Adolf Neubauer, M.A., Hon. Fellow of Exeter College, has also been reappointed for a period of five years. Mr. Arthur A. Macdonald, M.A. Corpus Christi College, has been appointed to take charge of the teaching of members of the University in Sanskrit.

THE arrangements for celebrating the jubilee of Cambridge. Sir George Stokes are now practically complete.

It is intended to commence the proceedings on June 1 with the delivery of the Rede Lecture in the Senate House by Prof. Cornu, of the French Institute. In the evening

a conversazione will be held at the Fitzwilliam Museum. The morning of June 2 will be devoted to the reception of the guests in the Senate House, with the inevitable presentation of addresses. At 2.30 an address and a gold medal will be presented to Sir George Stokes on behalf of the University. At this Congregation the honorary degrees will be conferred, so that the spectacle will be an imposing one. A garden party at Pembroke College and a dinner in the Hall of Trinity, at which latter function the Duke of Devonshire hopes to preside, will close the proceedings.

It has been decided to establish a University Lectureship in Russian, a language which, from an educational and linguistic standpoint, is worthy of serious cultivation in any University. The Caius College authorities, with their usual enterprise, have announced their intention of founding an exhibition in the subject, and doubtless other colleges will soon follow suit. As at present there is a rage for things military in Cambridge, it is likely that intending candidates for the Army will avail themselves of the opportunity of learning Russian, and thus materially increase their chances with regard to pay and promotion. It should be noted that the new Lectureship has been established entirely at the expense of Sir David Salomons.

A very important statement has been issued by the General Board of Studies as to suggested increases in the emoluments of certain Readerships and Lectureships. The changes may be summarized as follows:—The Professor of Chinese, who receives no emolument, is to be eligible for a Professorial Fellowship; the Disney Professor of Archaeology is to receive an additional £100 a year in return for extra work; the offices of University Lecturer in French and German are to be merged in new Readerships of Romanic and Germanic languages respectively, the salary in each case being £300 per annum; the salary of the Readership in Botany is to be raised from £150 to £300; the Lecturer in Organic Chemistry, £100 to £200; the Lecturer in Experimental Psychology, £50 to £150.

A new oral examination to test the power of speaking French and German has been proposed, and will probably be established. At present it is customary to examine candidates for the Modern Language Tripos as to their conversational powers, and it is now proposed to institute an entirely separate examination open to any one who has passed either the Tripos or the Special. Mr. Roberts, of Caius, in a letter which was read by the Vice-Chancellor at the discussion in the Senate, pleaded for throwing open the examination to successful candidates in all Triposes, but the opinion of the Senate seemed adverse to the step. If the matter is carried to a division, it is possible that Mr. Roberts's opinion will prevail.

The state of the weather has militated very much against the prospects of the May term amusements, and work has not suffered so severely as usual. The first function of the term was the Volunteer inspection, which was a great success, from both the professional and social sides; a distinguished retired officer, a great authority on tactics, has written an independent criticism in the *Granta*, and speaks in the very highest terms of the manner in which the attack evolutions were carried out. The corps is actually over regulation strength, and the officers are able to pick and choose among would-be recruits. The number of University men seeking commissions in the Army has doubled, and it is now possible for such candidates to do the whole of their work in Cambridge, every phase of preparation, both military and literary, being now obtainable in the place itself. It is known that the authorities at the Horse Guards are desirous of attracting University men into the Army, while recent developments at Cambridge have removed some of the objections felt by the college authorities to the removal of their men from University discipline during the interval between the qualifying and final tests.

Great schemes are in the air for new buildings on the recently acquired sites. One much-needed improvement has already been put in hand—the narrow part of Corn Exchange Street is to be widened, and, as a result of the University and Town authorities laying their heads together, there is to be a wood pavement as well.

Residence for the Long Vacation term begins at most colleges about July 1, an arrangement which will permit the working bees of the academical hive to get some holiday during the enjoyable time of this vacation.

INTENDING candidates and others will be interested in the appointments to the vacant Examinerships. In Latin, the Senate have elected Dr. J. S. Reid, M.A. Lond. who has previously acted as Examiner for two periods of five years, and who has recently been appointed Professor of

Ancient History at Cambridge; in English, Prof. Napier, M.A., Ph.D., Merton Professor of English at Oxford; in French, Prof. F. Spencer, M.A., Ph.D., of University College, Bangor, and, like one of the examiners in German, an Englishman; in Mental and Moral Science, Prof. G. F. Stout, M.A., who holds Chairs both at Aberdeen and at Oxford; in Teaching, Mr. Oscar Browning, M.A., Principal of the Day Training College, Cambridge; in Chemistry, Prof. Percy Frankland, Ph.D., F.R.S., of Mason College; in Jurisprudence, &c., Prof. Pawley Bate, LL.D., M.A., of University College, London; in Common Law, Dr. Blake Odgers, Q.C., who has previously examined for five years in the same subject; and, in Obstetrics, Sir John Williams, Bart., who also has similarly examined before.

Convocation meeting on May 9, and the ceremonial of Presentation on the 10th, passed without any noteworthy contribution to the history of the University. On the latter occasion, however, Lord Kimberley made his first public appearance in the capacity of Chancellor, but had to leave early in the proceedings, his place being then taken by the Vice-Chancellor.

The vacancy in the Medical Council caused by the death of Sir William Roberts has been filled by the election of Dr. Pyc-Smith, F.R.S., as representative of the Senate upon the Council. An important instruction of the Senate requests their representative to attempt the removal of a difficulty which has arisen out of the recent alterations in the regulations for Matriculation. By those alterations candidates now need pass in one language only (viz., Latin) besides English. But the Council require that a candidate, in order to be registered as a medical student, shall also have passed either in Greek or in a modern language. As some candidates, not being aware of this requirement, have exercised and will exercise the option allowed by the University, of taking up a science instead of a second language, the Council have specially relaxed their rule in favour of such candidates, up to and including January 1900. The efforts of the new representative are to be directed towards getting this relaxation made permanent.

THE ART OF READING.

DR. ARNOLD's oft-quoted advice to his sixth form at Rugby, "Remember that you are here not so much for the purpose of reading as to learn how to read," may be taken in a double sense. Dr. Arnold meant, of course, that his pupils, whilst under his care, were to prepare themselves for their later and severer studies and to have their minds expanded so that, at the University and afterwards, they might derive real profit from books. Still, there is a more literal and lower meaning of these words, which he would not have thought unimportant.

We have not long since been reminded by high authority of the necessity of teaching the future teachers of the young to read aloud articulately and intelligently. The circulars addressed by the Education Department, the one to the inspectors, the other to training colleges and pupil-teachers' centres on the subject of reading, have drawn particular attention to it, and they are worthy, especially the latter, of being carefully considered by all interested in education. Many of the remarks in them apply not only to elementary scholars and teachers, but also to those engaged in the higher walks of scholastic life.

It has been often said, and with too much truth, that the English as a nation do not pay sufficient attention to the form and style of their public utterances. The French and other nationalities may go to the opposite extreme of a stilted, artificial, affected manner of reading and speaking, which to us matter-of-fact people is painful and repellent. We are more concerned about the matter than the form. Yet this does not justify our too-often slovenly and slipshod or monotonous way of reciting the writings of others, or of expressing our own thoughts. Most educated men and women are liable to be at times called upon to read or speak in public, and should be prepared to do so correctly and effectively. This, however, cannot be done, unless our boys and girls in all ranks of society are early trained to use their voices to good purpose.

It may be with regard to the scholars in our elementary schools that the Departments and the inspectors expect too much. The early age at which they leave school and the environment of their daily lives make it most difficult for such children to read and speak with that "careful articulation at all times, that modulation of tone and intelligence," which "My Lords" would insist upon, and such as all well cultured people desire to have, and more or less aim at, for themselves.

It is, no doubt, well that this and the like methods should have been again urged by the Department upon teachers and the trainers of teachers, and we hope more care will consequently be bestowed upon this very essential part of education. They had also wisely tracked these defects to their fountain head in the training colleges and pupil-

teacher centres, though it would be unjust to suppose that in the former, at least, much has not been done for many years in this direction. However this may be, the true remedy is certainly to teach the teachers more thoroughly the art of reading—for it is an art, which does not come by intuition or without labour and study.

At the same time, the subject admits of a much wider application. If this be so with regard to our primary schools, it is still more important in our secondary schools and colleges, and, we may add, in our Universities. Here there ought to be far less difficulty, because hereditary and home influences, as well as social surroundings, are more or less favourable to the desired result. Nevertheless, the question arises whether the actual results do not fall greatly below a reasonable standard in the Courts of Law, the Church, and the Senate, not to speak of the less conspicuous walks of life. Of course, the stage is above criticism in this matter. In our public schools and Universities our youths enjoy comparatively few opportunities of learning how to read or speak in public. The theological colleges of both the Church of England and Nonconformists have, indeed, of late years devoted much time and effort to the training of the voice, elocution, and extempore speaking, and with excellent results. Notwithstanding what is done there, and in many private seminaries, it is a lamentable fact that not a few youths go forth into public life well instructed and with well disciplined minds; and yet, knowing little of the right way of imparting their knowledge or convictions to others, they are left to flounder about in a sea of perplexity, until, perhaps after many failures and blunders, and by the use of special natural gifts, they at length achieve success. But all this delay and misdirected energy might have been prevented if in their earlier days they had learned to read and speak with distinct articulation and in an impressive manner.

One of our daily contemporaries, in a recent article on this subject, somewhat severely observed: "It is something that 'My Lords' have at last realized that reading does not come by nature, and that, like other things, it can and must be taught. There was a time when the three R's were supposed to comprise the whole duty of the elementary teacher. We have changed all that, happily enough; but, after all, the three R's embody a not unimportant principle. Education must begin with them, though it cannot end with them; and a system which neglects one of them, or at least leaves it in a state which is generally admitted to be unsatisfactory, is to that extent faulty in principle. Hence, the Department has none too soon resolved to take the matter seriously in hand." The principles here laid down are by no means counsels of perfection for the few, but such as all that have the training of the young cannot too carefully adopt. The rules are so obvious that they are the more in danger of being overlooked and neglected. All will admit that the main things to aim at in reading aloud or speaking are audibility and intelligent expression; but is it not just the combination of these two qualities that is so often wanting in public readers and speakers, as well as in professional teachers? Shouting and screaming or declaiming on one note are, by some even cultured persons, mistaken for "clear, audible, and impressive" utterance. But we thereby inevitably miss our aim, for, by an unnecessarily loud or monotonous delivery, we rather distress, confuse, and fatigue the minds of the hearers. As it is well put in one of these circulars, "an easy, pleasant-sounding speech secures the attention of those whom shouting and stridency distract and tire." More than this, the speaker or reader does himself a positive injury. "Good reading," we are again reminded, "is an exercise in voice economy, and voice economy is useful in degrees. It is always a saving of physical effort, at least it is a protection against common forms of throat disease, to which those who live by talking are prone, and at best it is an admirable and health-giving gymnastic."

It did not concern "My Lords" to refer to the malady so well known as "clerical sore-throat," though to do so would have strengthened their argument. The ailment may be usually traced to an unnecessary playing, as it were, on one string of the voice, and so irritating and exhausting some one of the vocal organs. We seldom hear of barristers, and never of actors, being affected in this way. They speak in a natural tone, expanding the chest and regulating the breath so as to be heard without any sensible effort. Not so is it, according to the circular, with many elementary teachers, for, with reference to this, it is added: "It is a most painful fact that a substantial number of teachers suffer from more or less developed and recognizable forms of throat disease, which exact knowledge and careful practice in the earlier stages might have cured, if not avoided; and experiments have satisfactorily shown that, even in cases of advanced deterioration, carefully graduated exercises have gone far to mitigate the mischief already done." Accordingly, besides other things, the Department recommends exercises in breathing, in the management of the lungs, throat, mouth, and lips, so as to get the maximum of work out of them with the minimum of exertion and the most unconstrained use of every available organ; these exercises to be carefully graduated and taken at appropriate stages for a short time before every reading lesson. These are unquestionably admirable suggestions, and, if more generally adopted, would hardly fail to effect a great improvement.

It is the same with reading as with singing. Those who have had

any experience in teaching others to sing will tell us how important is the right use of the vocal organs. Some pupils have a tendency to close their teeth like a comb, and thus, of course, greatly impede the emission of sound, or produce a rasping, strident effect. Others will keep their mouths partially shut, and so send forth unnatural, muffled, woolly tones. The same is to a great extent true in reading or speaking. An extreme case will illustrate this point. A few years since, the present writer had the pleasure of visiting an institution for the deaf and dumb near Lille, in the north of France, where the Brothers of the Order of St. Gabriel have continued the noble work of the Abbé de l'Épée by teaching the dumb that have no organic defect to speak by lessons in articulation and watching the teacher's lips. Wonderfully successful have been their efforts. The burden of their instruction was "Ouvrez la bouche," the very thing which these unfortunates find it so difficult to do, and inattention to which often prevents those who have the gift of speech from really articulate and expressive utterance. But this is by no means the whole of their method. These devoted Brothers work on thoroughly scientific principles, from an intelligent study of the various organs, for each of which they have devised appropriate exercises.

At the same time they insist upon "a calm, full, strong inspiration" as not only conducive to health, but as essential to the emission of distinct sounds and to articulate speech. One rule, on which they especially rely, is that of inspiring freely by the nose, and respiring gently and slowly by the mouth. This method will not be accepted by all experts, and it may be more applicable to French as an essentially nasal language than to our own. Any one, however, who has visited such schools, and heard those who had been isolated mutes speaking distinctly and correctly, if not in altogether pleasing tones, will acknowledge the success of the work and the soundness of the principles on which it is based. Should not, we would ask, the same principles be applied, *mutatis mutandis*, to the development of the organs of speech in those who are blessed with a full power of using them? Many of the defects in utterance, which are so prejudicial to public and professional usefulness, and almost incurable in later life, may be overcome by a judicious and practical application of such simple rules.

WILLIAM BURNET.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on May 17. Present: Dr. Wormell, Vice-President, in the chair; Mr. Barlet, Rev. A. W. Boulden, Mr. Brown, Mr. Charles, Miss Dawes, Miss Day, Mr. Eve, Mr. Harris, Rev. Dr. Hiron, Rev. R. Lee, Sir Philip Magnus, Mr. Millar Inglis, Rev. Dr. Scott, Dr. R. P. Scott, Mr. Sergeant, and the Rev. T. W. Sharpe.

The minutes of the last meeting were read and confirmed.

The Secretary reported the death of Mr. W. J. Reynolds, a member of the Council, and of the Rev. Dr. Schoell, one of the Examiners in German.

Saturday, July 22, was fixed as the date of the next Ordinary General Meeting of the members of the College.

The Report of the Examination Committee was adopted, and the following additions were made to the examining staff of the College:—*English Language*: J. Lawrence, D.Lit., M.A. Lond., B.A. Oxon.; and Miss B. M. Skeat, Med. and Mod. Lang. Tripos, Camb., Ph.D. Zürich. *French*: V. Spiers, M.A. Oxon., B.-ès-L. Paris; and J. G. Anderson, B.A. Lond.

The Report of the Education Committee was adopted.

The following persons were elected members of the College:—

Mr. L. C. Brooks, 63 High Street, Marylebone, W.
Miss A. M. Butcher, A.C.P., 53 Wendover Road, Harlesden, N.W.
Mr. F. E. Butcher, A.C.P., 53 Wendover Road, Harlesden, N.W.
Mr. J. H. Ellis, 87 Guilford Street, Russell Square, W.C.
Miss L. M. Morris, A.C.P., 27 Seaside, Eastbourne.
Miss E. Nash, A.C.P., 12 Seafeld Road, Hove.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—Meiklejohn's Art of Writing English.
By the AGENT-GENERAL FOR NEW SOUTH WALES.—Coghlan's The Seven Colonies of Australasia, 1897-98.
By ALLMAN & SON.—Blonet's Preparatory French Lessons; Davidson and Alcock's Arithmetic (Junior Students).
By G. BELL & SONS.—Stories from the History of England, 1066-1485.
By BLACKIE & SON.—Brockington's Elements of Prose.
By C. J. CLAY & SONS.—Sanderson's Geometry for Beginners; Sidgwick's Vergil's Aeneid, Book IX.
By W. B. CLIVE.—Jackson's Practical Lessons in Bookkeeping; Thompson and Mills' Platon.
By MACMILLAN & CO.—Cotterill's Goethe's Iphigenie auf Tauris; Julien's Richelieu's Les Violettes Blanches; Pitman's Introduction to Greek Prose Composition. Register of Veterinary Surgeons, 1899.
Joint Scholarships Board Year Book, 1898-99.

REVIEWS.

GREEK AND ROMAN HISTORY PRIMERS.

- (1) *Nicias and the Sicilian Expedition.* By A. J. Church.
 (2) *Hannibal and the Great War between Rome and Carthage.*
 By W. W. How. (Seeley & Co.)

These two little volumes—the one by an acknowledged historian, the other by a skilful story-teller for boys—are likely to make the ancient history lesson at least less wearisome for master and pupil than it is apt to be. It has long seemed to us desirable to give greater prominence to the concrete in ancient history for the benefit of young learners. We have an excellent series of ancient history epochs; but of biographies or sketches of the great men of antiquity—the statesmen, soldiers, and teachers—we have scarcely any account that is suitable for the needs of beginners. Where is the simple monograph on Pericles, on Cæsar, on Demosthenes, on Socrates? Messrs. Seeley will confer a boon on teachers if they are able to extend a series of which the foundations have been most competently laid by Mr. Church and Mr. How.

Mr. Church takes a studiously moderate view of Nicias. He is not enthusiastic, like Aristotle; but neither is he, like Grote, bent on proving the incompetence of the unfortunate general. The virulence of Grote almost transcended the bounds of decency. To win sympathy for Demosthenes he seemed to think it necessary to write his colleague down an ass. It is well that Mr. Church declines to follow him. To be sure it is impossible to praise enthusiastically a man who failed so signally in the greatest undertaking of his life; but it is equally impossible to withhold sympathy from him when we remember the cruel disease from which he was suffering at the time. If Nicias had been listened to, he would have been recalled from Sicily before any irrepairable loss had been incurred; as it was, it was the Athenian people far more than the poor invalid that deserved the blame. We are not able to follow Mr. Church altogether in his account of this pathetic business. "We happen to know from the sufferer," he says, "the nature of his disease. It was an affection of the kidneys. There is no ailment that is more apt to cloud the brain. In some trouble of this kind, it is believed, may be found the mysterious cause which from time to time in Napoleon's latter days seemed to paralyze the great soldier's energies." As regards Napoleon we may refer Mr. Church to M. Houssaye's account of the Emperor's life during the days preceding Waterloo, after reading which it becomes simply incredible that Napoleon was afflicted with disease of the kidneys. The Emperor rested nineteen hours out of ninety-six, and that is the strongest proof that, whatever he may have been suffering from at the time, his kidneys were sound. Neither do we see any signs that Nicias's brain was clouded. That dread disease by no means invariably affects the head; but it must, from its very nature, make a man incapable of commanding an army. The general's bodily energy was gone; his strength had dwindled away under the tyranny of that cruel affliction. But his head remained clear enough to enable him to sustain his army during the eight days of the awful retreat from Syracuse. The note on "Ostracism" at page 32 does not seem to accord with the "*Respublica Atheniensium*," and there is an odd misprint on page 145.
